The NYC Stands with Standing Rock Collective contributors are:
Audra Simpson (Kahnawake Mohawk), Crystal Migwans (Anishnaabe of Wikwemikong Unceded), Elsa Hoover (Anishnaabe-kwe), Jamey Jesperson, Jaskiran Dhillon, Margaux L Kristjansson, Maria John, Matthew Chrisler, Paige West, Sandy Grande (Quechua), Sheehan Moore, Tamar Blickstein, and Teresa Montoya (Diné)

The NYC Stands with Standing Rock Collective would like to thank the following people for suggestions and guidance:
Alyosha Goldstein, Cynthia Malone, Dean Saranillio, Jerry Jacka, Jessica Barnes, Karl Jacoby, Kim TallBear (Sisseton-Wahpeton Oyate), Manu Vimalassery, and Nick Estes (Lower Brule Sioux)

Preface

This syllabus project contributes to the already substantial work of the Sacred Stones Camp, Red Warrior Camp, and the Oceti Sakowin Camp to resist the construction of the Dakota Access Pipeline, which threatens traditional and treaty-guaranteed Great Sioux Nation territory. The Pipeline violates the Fort Laramie Treaty of 1868 and 1851 signed by the United States, as well as recent United States environmental regulations. The potentially 1,200-mile pipeline presents the same environmental and human dangers as the Keystone XL pipeline, and would transport hydraulically fractured (fracked) crude oil from the Bakken Oil Fields in North Dakota to connect with existing pipelines in Illinois. While the pipeline was originally planned upriver from the predominantly white border town of Bismarck, North Dakota, the new route passes immediately above the Standing Rock Sioux Reservation, crossing Lake Oahe, tributaries of Lake Sakakawea, the Missouri River twice, and the Mississippi River once. Now is the time to stand in solidarity with Standing Rock against catastrophic environmental damage.

The different sections and articles place what is happening now in a broader historical, political, economic, and social context going back over 500 years to the first expeditions of Columbus, the founding of the United States on institutionalized slavery, private property, and dispossession, and the rise of global carbon supply and demand. Indigenous peoples around the world have been on the frontlines of conflicts like Standing Rock for centuries. This syllabus brings together the work of Indigenous and allied activists and scholars: anthropologists, historians, environmental scientists, and legal scholars, all of whom contribute important insights into the conflicts between Indigenous sovereignty and resource extraction. While our primary goal is to stop the Dakota Access Pipeline, we recognize that Standing Rock is one frontline of many around the world. This syllabus can be a tool to access research usually kept behind paywalls, or a resource package for those unfamiliar with Indigenous histories and politics. Share, add, and discuss using the hashtag #StandingRockSyllabus on Facebook, Twitter, or other social media. Like those on frontlines, we are here for as long as it takes.

The NYC Stands for Standing Rock committee is a group of Indigenous scholars and activists, and settler/ PoC supporters. We belong and are responsible to a range of Indigenous peoples and nations, including Tlingit, Haudenosaunee, Secwepemc, St'at'imc, Creek (Muscogee), Anishinaabe, Peoria, Diné, Maya Kaqchikel, and Quechua. We have joined forces to support the Standing Rock Sioux in their continued assertion of sovereignty over their traditional territories. We welcome the support and participation of Indigenous peoples and allied environmental/community/social justice organizations in the New York area. If you can offer your organization's support, please email NYCnoDAPL@gmail.com to let us know how you would like to be involved. Connect with us on Twitter @NYCnoDAPL and our Facebook page, NYC Stands with Standing Rock.

—NYC Stands with Standing Rock Collective, Lenape territory, September 5, 2016

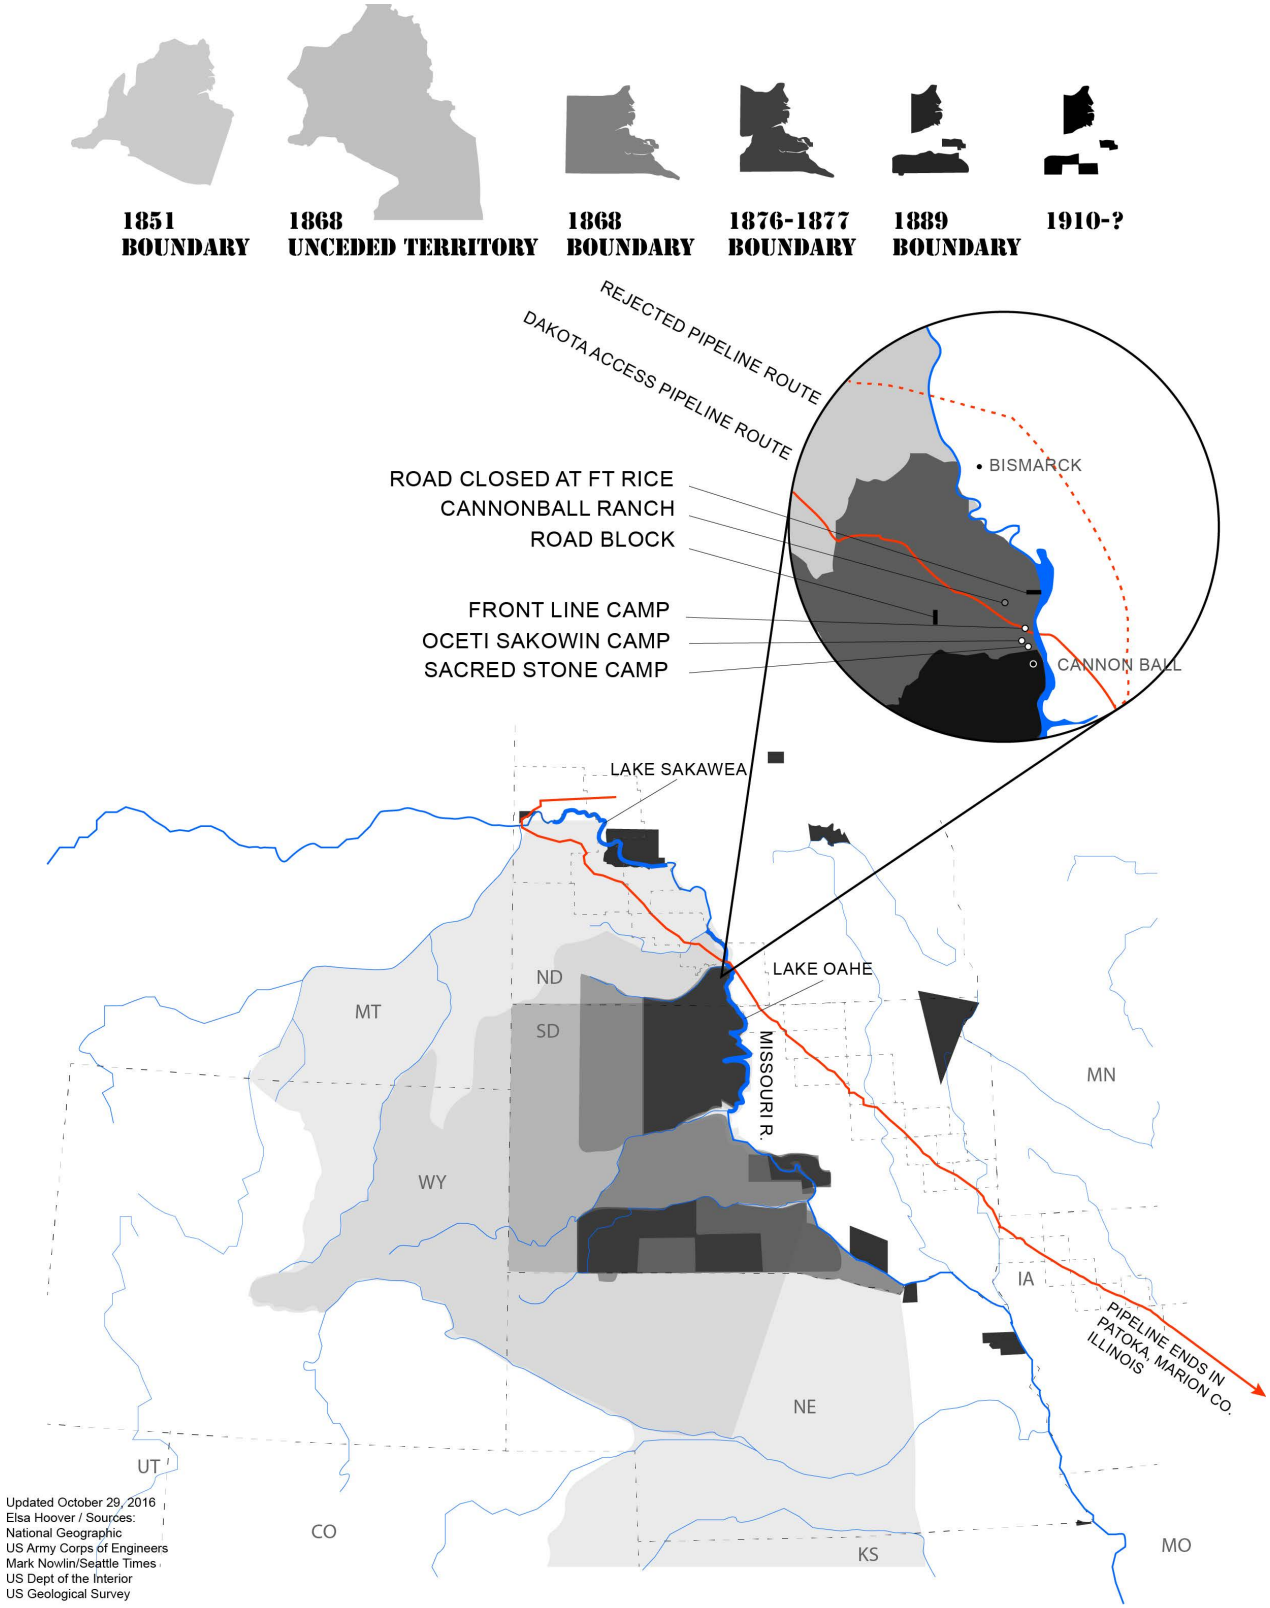
- Repatriation
- Residential schools
- Settler colonialism
- Sovereignty
- Treaty

Oceti Sakowin Oyate Territory and Treaty Boundaries



Timeline of United States settler colonialism

1492-1502 Columbus leads expeditions to the "New World," where he and his ships seeking a passage to trade ports in India establish colonies in the Antilles/Caribbean. In the pursuit of gold, Columbus and the colonists enslave and terrorize Indigenous inhabitants across the Antilles/Caribbean.

1493 Papal decrees establish that Catholic monarchs may claim the "New World" as part of their sovereign territory and dominion over peoples living there.

1500s-1888 Britain, Denmark, France, the Netherlands, Portugal, and Spain colonize the Antilles/Caribbean, Turtle Island/North America, and Central and Southern Americas. Indigenous peoples are enslaved and killed, but also resist, trade, and move in relation to European empires. European empires, the United States, and later independent Caribbean and Latin American states establish plantation economies relying on enslaved Black labor. Up to the abolishing of the slave trade, European empires capture and transport approximately 15 million Indigenous people from Africa, primarily to the Caribbean and Latin America. The capital generated by the slave trade and plantation economy fuels Europe's industrial revolution.

1676 British settlers in Virginia led by Nathaniel Bacon revolt against the Governor in order to drive out local Doeg (Algonquian) Indians. During the rebellion, indentured Europeans and enslaved Africans united, provoking elites to enact the strict Virginia Slave Codes in 1705 to divide the colonial labor force by the racial status of inheritable enslavement.

1763 Following France's loss of the Seven Years War/French and Indian War to Britain in 1763, Britain gains the Ohio territories around the Great Lakes region, and attempts to make Native peoples of those territories subjects of British rule. To forestall Native wars, Britain passes the 1763 Royal Proclamation, forbidding the purchase of Indian lands and British settlement past the Appalachian Mountains. Elite land speculators from Southern colonies, including George Washington and Thomas Jefferson, begin to build opposition to British rule.

1763-1766 A confederation of Native warriors from numerous tribes begin Pontiac's War against the British settlers and government, capturing military forts and taking back territory claimed by settlers. After two British military expeditions retake many of the forts, the fighting reaches a stalemate and the British government makes

concessions to end the conflict, though does not give up claim to the Ohio territories.

1776-1791 The American Revolution ends with independence from Britain, and the Constitution of the United States lays the foundation of the new government, including the enslavement of African-descendant peoples. The new government rejects the British Proclamation of 1763 as a basis for Indigenous sovereignty.

1787 United States Northwest Ordinance opens land for white settlement in allotments, provoking Indigenous resistance.

1791-1804 Toussaint L'ouverture leads the Haitian Revolution against French plantation rule, which ends in the establishment of Haiti as an independent republic.

1803 Thomas Jefferson approves the Louisiana Purchase, purchasing from France land west of the Mississippi River to the Rocky Mountains.

1804 Lewis and Clark venture into Oceti Sakowin territory on the Missouri River on an army expedition to map and expand United States territorial claims. After refusing to pay tribute for their passage, they are rebuffed by the Oceti Sakowin. The US explorers take hostage two headmen—Black Buffalo and Buffalo Medicine— to secure their passage on the river and label the Oceti Sakowin "the vilest miscreants of the savage race."

1812-1815 United States declares war with Britain in part to move beyond established western boundaries of the new nation-state. In the Northwest, Shawnee brothers Tecumseh and Tenskwatawa form a confederacy and ally with the British. The treaty of Ghent establishes firm borders between British Canada and the United States, ignoring Native land claims. The end of the war marks the last time a European or American state forms an alliance with a Native nation or confederacy.

1815 No longer checked by British competition, the United States begins removing Indians to western lands.

1816 Congress restricts licenses for trade with Indians to American citizens, effectively preventing foreign trade relations with European empires.

1823 The John Marshall Supreme Court, in its first decision on nation-to-nation relations with North American indigenous peoples, rules that "Indians had no right of soil as sovereign, independent states."

1824 The Bureau of Indian Affairs is created within War Department of the Executive Branch.

1831 The John Marshall Supreme Court issues a second decision that "Indian tribes" are "domestic dependent nations."

1832 The John Marshall Supreme Court issues a third decision that the United States federal government, through the commerce clause of the Constitution, had the authority to govern relations between indigenous nations and states.

1835 After the discovery of gold in Georgia, the state of Georgia pressures the Cherokee to move westward. The Treaty of New Echota provides the legal basis of Cherokee removal, though not approved by Cherokee National Council or Principal Chief.

1836-1839 The United States Army forcibly removes Cherokee along the "Trail of Tears."

1836-1840 A smallpox epidemic in the Missouri Basin carried by American fur traders spreads to the Blackfoot, Assiniboine, Arikara, Crow, and Pawnee.

1846-1848 The Mexican-American War and Treaty of Guadalupe Hidalgo ceded land east and north of the Rio Grande to the United States. Article XI of the Treaty stipulates that the United States must secure the new frontier lands against Indian raids, targeting Apache and Comanche who resisted both Mexican and United States expansion. Between 1850 and 1912 the Mexican Cession land is turned into ten new states.

1848 Gold discovered in California, settlers scramble West.

1849 Department of Interior is created and adopts the Bureau of Indian Affairs from the War Department.

1851 Treaty of Traverse des Sioux signed by the United States and the Dakota nations of what was Minnesota Territory. The treaty, although broken by the United States, stipulated Dakota peoples would live sedentary, agricultural lifestyles apart from white settlers and adopt Christianity in exchange for government rations and annuities for ceded lands.

1851 First Fort Laramie Treaty (the Horse Creek Treaty) signed by the United States and representatives of Arapaho, Arikara, Assiniboine, Cheyenne, Crow, Hidatsa, Mandan, and Sioux nations to guarantee safe passage of settlers to California in exchange for goods and services. Ten to fifteen thousand gathered in what is the largest gathering of Plains Nations in history. Many nations never receive payment from the United States. (See Map)

1852 California passes bounty law for Indian scalps, encouraging settlers to kill local indigenous people.

1861 The Civil War begins, leading to an increasing professionalization of the United States army. Native nations and forces fight for both the Union and Confederacy in order to preserve their lands and sovereignty.

1862 The Homestead Act opens 270 million acres of land west of the Mississippi for settlement. Settlers who lived on the land for five years, improved it, and filed an application were given ownership of the land.

1862 - 1864 Dakota frustrated by the lack of payments from the federal government, settler encroachments onto Dakota land, and other treaty violations begin the Great Sioux Uprising. Bands of Dakota attack settlers, and the United States Army is called in to protect them. United States military tribunals charge 303 Dakota of murder or rape of civilians and 38 Dakota men are sentenced to death in the largest penal execution in American history. The following year, the Bureau of Indian Affairs abolishes the Dakota reservation and forcibly moves the Dakota to Nebraska and South Dakota.

1863 The transcontinental railroad begins construction between Council Bluffs, Iowa and Sacramento, California – almost all of it on land controlled by Indigenous people.

1864 The Colorado Volunteer Cavalry destroy a Cheyenne and Arapaho village in Southern Colorado, killing more than a hundred, and display the maimed and disfigured bodies as trophies.

1864 Union Army Captain Kit Carson begins total war against the Navajo, destroying orchards, livestock, and Hogans. Carson forces the Navajo from eastern Arizona and western New Mexico to march 300 miles without aid to Fort Sumner/Bosque Redondo. There, they are interned with little support, vulnerable to weather and raids, until allowed to return to a portion of their homelands in 1868.

1865 The Civil War ends with surrender of the Confederacy. There is an increasing need for land as slavery becomes outlawed and migration to large Northern cities increases the national population. The 14th Amendment provides citizenship for Black and white people born within the United States.

1868 The Fort Laramie Treaty guarantees Sioux reservation land including the Black Hills, and hunting rights in Montana, Wyoming, and South Dakota. (See Map)

1871 The Indian Appropriation Act is passed with an amendment ending treaty making with Native nations – the United States moves to deal with Native nations as internal minorities rather than sovereign nations.

1876-1877 The Great Sioux War begins after gold is discovered in Black Hills and settlers rush to the area, prompting the United States Army to violate the 1868 Fort Laramie Treaty. Colonel Custer attacks Sioux and seizes the Black Hills. During the Battle of Greasy Grass (Little Bighorn), Lakota, Northern Cheyenne, and Arapaho forces kill Custer and a large portion of the U.S. 7th Cavalry.

1877 The United States Army is directed to kill buffalo, which are a threat to the railroad and cattle industries as well as a primary resource for Plains nations.

1877 The Black Hills Act (also known as "the Agreement of 1877," the "Sell or Starve Act," or the Indian Appropriations Act of 1876) cuts off government rations until the Oceti Sakowin cease hostilities and cede the Black Hills. The Black Hills were ceded but there is no record that the United States purchased the land.

1883 The United States Supreme Court rules in *Ex Parte Crow Dog* that, unless Congress authorizes it, federal courts have no jurisdiction over offenses tried at the tribal councils for Indian on Indian crimes. This decision began the plenary power doctrine used to limit Indigenous sovereignty (See 1885 Major Crimes Act).

1884 In *Elk v. Wilkins*, the United States Supreme Court holds the 14th Amendment's guarantee of citizenship to all persons born in the U.S. does not apply to Indians, even those born within geographic confines of U.S.

1885 The Major Crimes Act establishes major Indian on Indian crimes committed in Indian Country fall under federal jurisdiction and are prosecutable by federal courts. The initial seven were murder, manslaughter, rape, assault with intent to kill, arson, burglary, and theft of personal property. In addition, eight more were added, to

include kidnapping, maiming, sexual abuse, incest, assault with a dangerous weapon, assault against a minor, child abuse or neglect, and robbery.

1887 The Dawes Act grants the President authority to survey and divide Indian tribal reservation lands held in trust by the federal government and sell them to individual Indians. Those who accepted allotments and lived separately from tribes would be granted U.S. citizenship.

1889 United States violates the 1868 Fort Laramie Treaty by breaking up the Great Sioux Reservation into five smaller reservations, enforcing private property ownership, agriculture, and residential schools without adequate resources. (See Map)

1890 In response to the United States breaking up of the Great Sioux Reservation, Lakota Sioux take up the Ghost Dance. The Bureau of Indian Affairs calls in the Army, which assassinates Crazy Horse and Sitting Bull. A small band of Lakota is forced to camp outside Pine Ridge Reservation at Wounded Knee Creek, where the army attempts to disarm them. The U.S. army escalates a confrontation and kills 250 to 300 Lakota, mostly women and children.

1908 In *Winters v. United States*, the United States Supreme Court clarifies Indian reservation rights to water by ruling that Indian reservations have water use rights that cannot be blocked through water projects.

1921 Congress passes the Snyder Act, allowing appropriation of money for Indians (regardless of blood quantum/residence) under broad authority given to the Secretary of the Interior. This greatly expands funds for Indians by releasing the federal government from a strict adherence to treaty provisions.

1924 Indians are unilaterally made citizens of the United States, furthering the project of assimilating Native nations into the United States rather than recognizing their sovereignty.

1934 Indian Reorganization Act ends allotment and replaces traditional governance structures with Western, electoral system and tribal constitutions modeled after the United States Constitution.

1944 Indian Claims Commission is set up to settle outstanding claims against the United States. Generally viewed as the beginning of the termination era.

1944 Congress passes the Pick-Sloan Missouri Basin Plan, a massive water infrastructure project meant to increase hydropower, navigability, fishing and wildlife, and recreation along the Missouri River and its tributaries. In building these projects, the Army Corps of Engineers violates the Fort Laramie Treaties and Winters doctrine supporting the sovereignty of tribal lands, consultation, and access to water.

1944 National Congress of American Indians is established (Denver, Colorado) in anticipation of federal termination and assimilation policies in order to resist the elimination of tribal status.

1945 President Truman enters office and directs the Bureau of Indian Affairs to focus on termination and the assimilation of Indians into American Cold War society. From 1945-1960 the federal government terminates over 100 tribes and bands.

1948 Construction begins on the Lake Oahe dam for the Pick-Sloan Missouri Basin Program, and is completed in 1962. The Lake Oahe dam destroys more Native land than any other water project in the United States, and eliminates 90% of timber land on the Standing Rock Sioux and Cheyenne Sioux Reservations, along with grazing and agricultural land.

1949 The Hoover Commission recommends "termination" of Native reservations, and assimilation of Indians into American cities and society, reversing the Roosevelt New Deal policies and returning to 19th century politics of assimilation.

1952 House Joint Resolution 698 establishes criteria and guidelines for the termination of trustee status of Indian tribes and reservations. This is followed by several standalone termination resolutions, some of which immediately terminated dozens of tribes.

1953 Public Law 280 moves authority and jurisdiction over tribal lands and resources from the Bureau of Indian Affairs to the states in which tribes and reserves are located.

1961 Over 200 tribes gather in Chicago at the American Indian Chicago Conference. The Declaration of Indian Purpose is drafted for submission to Congress.

1961 From the Chicago Conference, the National Indian Youth Council is formed in Gallup, New Mexico, beginning the Red Power Movement.

1968 Congress passes the American Indian Civil Rights Act (loosely modeled on the protection the U.S. Constitution provides against state and local governments). It provides individual Indians with some statutory protection against their tribal governments.

1969 Occupation of Alcatraz by American Indian Movement to reclaim traditional land. Simultaneously, sit-ins are staged at the offices of the BIA.

1960s-1970s Creation of tribal colleges.

1970 In a special message to Congress on Indian Affairs, President Richard Nixon calls for the repeal of termination laws and the inauguration of the era of self-determination through self-help and community programming.

1971 The Alaska Natives Claims Settlement Act is passed. This saw 90% of Alaska Natives' land claims exchanged for a guarantee of 44 million acres and $1 billion.

1972 Trail of Broken Treaties Caravan. Several Indigenous-led groups (close to 200 Indians in total) began caravanning from the West coast to Washington D.C. to present President Nixon with a 20-point position paper demanding the United States respect the sovereignty of Indian nations. After Nixon refuses to meet with the Caravan, they occupy the Bureau of Indian Affair headquarters for a week until Nixon aides agreed to treaty negotiations.

1973 Wounded Knee Occupation. Oglala Lakota and American Indian Movement members occupy the town of Wounded Knee in the Pine Ridge Indian Reservation to protest against the corrupt reserve governance structure. The Occupation lasts for 71 days and calls for re-establishment of United States treaty obligations and nation-to-nation relations with Indian nations in the United States. AIM member Leonard Peltier is held in federal prison for the murder of two FBI agents despite evidence that his trial was unconstitutional and unfair.

1974 First meeting of the International Indian Treaty Council, the international arm of AIM, meets in Standing Rock Indian Reservation. More than 2000 people from 90 Indigenous Nations attend and issue "The Declaration for Continuing Independence."

1975 The Indian Self-Determination and Education Act is passed. Tribal governments get more control over their tribal affairs and can appropriate more funds for education.

1978 In *Oliphant v. Squamish Indian Tribe*, the United States Supreme Court reverses lower court decisions and decides that Indian tribes do not have jurisdiction over non-Natives on tribal or reservation land.

1980 U.S. government rules that the U.S. illegally seized the Black Hills in 1877, and offers $15.5 million (1877 price of the land) plus $105 million (5% interest on the land over 103 years). The Lakota refuse and demand return of land from the United States.

1980 The Penobscots and Passamaquoddies accept monetary compensation from the US Government for their lands (now the state of Maine), which the Massachusetts government took illegally in 1970.

1986 Congress amends the Indian Civil Rights Act and grants tribal courts the power to impose criminal penalties.

1988 Congress officially repeals the Termination Policy.

1993 Ada Deer is appointed Assistant Secretary for Indian Affairs by President Bill Clinton. She is the first Indian woman to hold the position.

1994 Three hundred representatives from the 556 federally recognized tribes meet with President Bill Clinton. This is the first time since 1822 that Indians have been invited to officially meet with a US President to discuss Indian affairs.

1994 The Violence Against Women Act is passed, which does not have provisions for tribal prosecution of domestic and sexual crimes against Native women by non-Native men.

1996 The University of Arizona creates the first PhD program in American Indian Studies.

1998 Four thousand Alaska Natives march in Anchorage in protest of Alaska legislative and legal attacks on tribal governments and Native hunting and fishing traditions.

1998 President Clinton issues Executive Order No.13084 (“Consultation and Coordination with Indian Tribal Governments”). This pledges that the federal government will establish and uphold meaningful consultation and collaboration

with Indian tribal governments in matters that will significantly impact their communities.

1998 The Makah Nation of Washington State renews its traditional practice of whaling after a respite of seventy years, despite protests from many environmentalists and other groups.

1999 President Clinton visits the Pine Ridge Sioux Reservation in South Dakota. He is the first sitting President since Calvin Coolidge in 1927 to make an official visit to an Indian Reservation.

2000 The United States Supreme Court declines to review a religious freedom case centering around the use of Devils Tower in Wyoming, a sacred site to several Indian nations. This decision upholds a federal court ruling that supported the religious rights of Indians against challenges from recreational rock climbers.

2002 In a blow to the Makah Nation, the 9th U.S. Circuit Court of Appeals rules in Anderson v. Evans, in a case brought by animal advocacy groups, that the government had violated the National Environmental Policy Act by failing to prepare an environmental impact statement prior to approving the whaling quota and also held that the Marine Mammal Protection Act applied to the tribe's proposed whale hunt.

2002 President Bush signs an executive order reaffirming the federal government's commitment to tribally-controlled colleges and universities.

2004 In *United States v. Lara* the Supreme Court holds that tribal courts had the inherent sovereign power to criminally prosecute nonmember Indians and that such power did not violate the U.S. Constitution's Fifth Amendment double jeopardy clause.

2004 In *Boneshirt v. Hazeltine*, a Federal district court rules that South Dakota violated the 1965 federal Voting Rights Act when it approved a statewide redistricting plan that had the effect of diluting the voting power of Indians in two districts.

2006 Congress enacts the Esther Martinez Native American Languages Preservation Act of 2006 (PL 109-394) to ensure the survival and continuing vitality of Native American languages.

2007 The United Nations adopts the Declaration on the Rights of Indigenous Peoples. The United States, Canada, New Zealand, and Australia vote against the Declaration's adoption.

2008 The Supreme Court in *Plains Commerce Bank v. Long Family Land and Cattle Company Inc*. holds that tribal courts lack jurisdiction to decide a discrimination claim concerning a non-Indian bank's sake of fee land that it owned within a reservation.

2009 President Obama signs a presidential memorandum seeking to renew and enhance the spirit of tribal consultation and collaboration previously outlined by the Clinton administration.

2010 The North Dakota Supreme Court supports a Board of Higher Education decision to retire the University of North Dakota's Fighting Sioux nickname and logo.

2012 HEARTH Act allows tribal governments to approve leasing of tribal lands: The Helping Expedite and Advance Responsible Tribal Home Ownership Act of 2012 (the HEARTH Act) creates a voluntary, alternative land leasing process available to tribes by amending the Indian Long-Term Leasing Act of 1955, 25 U.S.C. Sec. 415.

2012 The Oglala Sioux Tribe of South Dakota sued some of the world's largest beer makers for $500 million claiming they knowingly contributed to alcohol-related problems on the Pine Ridge Indian Reservation.

2013 The Violence Against Women Act is reauthorized, and includes provisions where tribal governments may prosecute non-Natives, but only those who are accused of sexual or domestic violence against Natives with whom they have intimate relationships or other close ties. The legislation excludes Alaska Natives.

2013 Members of Congress took part in a ceremony bestowing the Congressional Gold Medal to honor 33 tribes for their WWI and WWII contributions as code talkers.

2014 President Obama speaks at the Standing Rock Sioux Reservation in North Dakota promoting the need to help reservations create jobs. At the time, some 63% of able workers at Standing Rock were unemployed on the 2.3 million-acre reservation, which is home to some 850 residents.

2015 In February, the US Army Corps of Engineers (USACE), the federal government body in charge of the nation's waterways, initiates the Dakota Access Pipeline Project. By December, The Corps publishes an environmental assessment stating that "the Standing Rock THPO had indicated to DAPL that the Lake Oahu site avoided impacts to tribally significant sites." The Corps eventually receives critical letters on the assessment from the Environmental Protection Agency, the US Department of Interior, and the American Council on Historical Preservation (ACHP). Other tribes whose ancestral lands are slated to be crossed by the pipeline voice their concerns in solidarity with Standing Rock, including the Osage Nation and Iowa Tribe THPO, who wrote to the ACHP: "We have not been consulted in an appropriate manner about the presence of traditional cultural properties, sites, or landscapes vital to our identity and spiritual well-being."

2016 In August, the Standing Rock Sioux, represented by Earthjustice, file an injunction, suing the Army Corps of Engineers. Eleven days later, Energy Transfer Partners, the parent company of Dakota Access LLC, sues the Standing Rock Sioux chairman and other tribal members for blocking construction.

A Statement of Support for the Standing Rock Sioux Tribe

We the faculty of Columbia University stand in peaceful and politicized solidarity with Chairman Dave Archambault II, tribal members of the Standing Rock Sioux Tribe, and their allies against the construction of the Dakota Access Pipeline, a project of Dallas-based Energy Transfer Partners. This project is not only a violation of treaty rights, but federal law. Although federal law requires The Army Corps of Engineers to consult with the tribe about its sovereign interests, construction began without meaningful consultation. The Army Corps of Engineers disregarded the concerns outlined by the tribe and issued permits to Dakota Access LLC to dig under the Missouri River. Such a move signals the US government's ongoing disregard for tribal nations and their communities—a relationship that has been marked by genocide and structural injustice since the violent founding of the United States—in favor of corporate interests and profit. This is, and has always been, entirely unacceptable.

The Dakota Access Pipeline is an imminent threat to those living on the Standing Rock Sioux Reservation, as well as those who live near the pipeline and rely on water from the Missouri River. The pipeline is a dangerous, grave risk to a primary water source and would be an environmental assault on the community if a spill were to occur. Energy Transfer Partners has

assured the people of Standing Rock that the pipeline would be closely monitored, but given the historical relations between Indigenous peoples and the United States, the tribe has little faith that their safety and interests will be upheld. The record on spillage is bleak. In 2012-2013, there were 300 oil pipeline breaks in North Dakota alone. The pipeline will also disturb burial grounds and sacred sites on the tribe's ancestral treaty lands—its proposal marks violation on multiple fronts.

As a collective of scholars, some of whom come from and/or work alongside Indigenous communities, we understand the stakes associated with the propagation of US colonial interests; interests that place the extraction of fossil fuels over a fundamental right to access clean water and a desire to preserve and protect the planet. The Standing Rock Sioux Tribe are not just fighting for their own existence, but for those who are unable to do so and for all the future generations that follow.

Construction of the Dakota Access Pipeline has been temporarily halted, due to the resistance efforts at Standing Rock (and pending a US federal court decision to be released on September 9th, 2016), but we know this fight is far from being over. The faculty of Columbia University will continue to stand with Chairman Archambault, the tribal members, and their allies who are heroically holding the line to stop the pipeline construction. This fight is the fight of all Native peoples and their allies struggling against the imposition of neoliberal development projects that continue to harm humans and homelands alike.

Chairman Dave Archambault II
Standing Rock Sioux Tribe
Building 1 North Standing Rock Avenue
Fort Yates, ND 58530

September 12th, 2016

A Statement of Support for the Standing Rock Sioux Tribe

We the faculty of The New School stand in peaceful and politicized solidarity with Chairman Dave Archambault II, tribal members of the Standing Rock Sioux Tribe, and their allies against the construction of the Dakota Access Pipeline, a project of Dallas-based Energy Transfer Partners. This project is not only a violation of treaty rights, but federal law. Although federal law requires The Army Corps of Engineers to consult with the tribe about its sovereign interests, construction began without meaningful consultation. The Army Corps of Engineers disregarded the concerns outlined by the tribe and issued permits to Dakota Access LLC to dig under the Missouri River. Such a move signals the US government's ongoing disregard for tribal nations and their communities—a relationship that has been marked by genocide and structural injustice since the violent founding of the United States—in favor of corporate interests and profit. This is, and has always been, entirely unacceptable.

The Dakota Access Pipeline is an imminent threat to those living on the Standing Rock Sioux Reservation, as well as those who live near the pipeline and rely on water from the Missouri River. The pipeline is a dangerous, grave risk to a primary water source and would be

an environmental assault on the community if a spill were to occur. Energy Transfer Partners has assured the people of Standing Rock that the pipeline would be closely monitored, but given the historical relations between Indigenous peoples and the United States, the tribe has little faith that their safety and interests will be upheld. The record on spillage is bleak. In 2012-2013, there were 300 oil pipeline breaks in North Dakota alone. The pipeline will also disturb burial grounds and sacred sites on the tribe's ancestral treaty lands—its proposal marks violation on multiple fronts.

As a collective of scholars, some of whom come from and/or work alongside Indigenous communities, we understand the stakes associated with the propagation of US colonial interests; interests that place the extraction of fossil fuels over a fundamental right to access clean water and a desire to preserve and protect the planet. The Standing Rock Sioux Tribe are not just fighting for their own existence, but for those who are unable to do so and for all the future generations that follow.

Even though the construction of the Dakota Access Pipeline may be temporarily halted (and this remains to be seen), due to the massive resistance efforts at Standing Rock, we know this fight is far from being over. The faculty of The New School will continue to stand with Chairman Archambault, the tribal members, and their allies who are heroically holding the line to stop the pipeline construction. This fight is the fight of all Native peoples and their allies struggling against the imposition of neoliberal development projects that continue to harm humans and homelands alike.

Fort Yates, ND 58530

September 15, 2016

A Statement of Support for the Standing Rock Sioux Tribe

We, the undersigned Stony Brook University (SUNY) faculty, staff, and graduate students stand in solidarity with the sovereign Oceti Sakowin Oyate (the Great Sioux Nation), the Standing Rock Sioux Tribe, and the many other tribal nations and Native and Indigenous peoples in strongly opposing the construction of the Dakota Access Pipeline.

The construction of the oil pipeline, stretching across Standing Rock Sioux lands on its 1,172mile path from North Dakota to Illinois, crosses the sacred ancestral lands of the Standing Rock Sioux Tribe and the Missouri River–a major source of water for the Tribe. This pipeline violates historic treaties between Oceti Sakowin and the United States, and also violates terms of the National Environmental Policy Act, the National Historic Preservation Act, as well as the collective human rights of the Standing Rock Sioux Tribe and its people. The US Army Corps of Engineers did not consult with the tribal government or affected communities before granting permits and allowing construction to begin.

The Standing Rock Sioux Tribe filed a preliminary injunction to cease construction of the pipeline, but a US District Court ruled against them on Friday, September 9th. The Justice, the Army, and the Interior issued a joint statement after the decision to halt construction on part of the pipeline at the Missouri River Crossing for further study. This is a temporary victory and

can be directly attributed to the resistance efforts by the Standing Rock Sioux, together with other tribes and allies in the US and beyond its borders. A camp has been set up to block construction, and despite the intense militarization of the area, there are plans to keep the mobilization going until the US Government respects the rights and desires of the Standing Rock Sioux Tribe. We state our support with them and call for the respect of the sovereign rights of the Oceti Sakowin and the Standing Rock Sioux Tribe, and for the permanent halt to the construction of the Dakota Access Pipeline.

A Statement of Support for the Standing Rock Sioux Tribe

Dear Chairman Archambault,

The Center for the Comparative Study of Race and Ethnicity (CCSRE) and allied faculty, staff, and students stand in solidarity with you, the tribal citizens of the Standing Rock Sioux Tribe, Oceti Sakowin and allies against the construction of the Dakota Access Pipeline. This pipeline, a project of the Dallas-based Energy 'Fransfcr Partners, was approved by the Army Corps of Engineers without proper consultation, as is required by federal law. As such, we understand that it is not only in violation of treaty rights, federal law, and human rights but also an infringement of Articles 25, 28, 32, 38, and 40 of the United Nations Declarauon on the Rights of Indigenous Peoples (UNDRIP).

We recognize that the Dakota Access pipeline poses an imrninent threat to those living on the Standing Rock Sioux Reservation and others who rely on the Missouri River. And that it will also disturb burial grounds and sacred sites on the Tribe's ancestral Treaty lands. As such, the CCSRE and our albes stand With you, the tribal citizens of the Standing Rock Sioux Tribe, and

all the water protectors assembled at the Sacred Stone and Red Warrior Camps who are heroically holding the line to stop the pipeline construction. Your fight is a fight shared by other Native peoples struggling against destructive development projects that not only threaten Indigenous lifeways but also the well being of the earth and all of its inhabitants. Any threats to water are threats to life itself.

With respect,

Chairman Dave Archambault II
Standing Rock Sioux Tribe
Building 1 North Standing Rock Avenue
Fort Yates, ND 58530

A Statement of Support for the Standing Rock Sioux Tribe

We, the undersigned faculty of Binghamton University in the great state of New York, stand in peaceful solidarity with the Standing Rock tribe and their allies against the construction of the Dakota Access Pipeline. Binghamton University as an institution is deeply committed to sustainable communities and energy forms. We applaud the leadership of LaDonna Brave Bull Allard, tribal Chairman Dave Archambault, the Water Protectors, and many others in their fight for clean water for the tribe and surrounding communities.

The Dakota Access Pipeline, a project of Dallas-based Energy Transfer Partners, violates federal law, treaty rights, and tribal sovereignty. It also presents an imminent danger to the water supply of the tribe. A potential leak would be an environmental disaster for millions more who depend on the water of the Missouri River. Such leaks occur regularly in oil pipelines across the nation. Louisiana and Alabama are currently in a State of Emergency due to pipeline spills and 300 pipeline breaks occurred in North Dakota in 2012-2013 alone. Finally, the tribe has documented that construction will destroy sacred sites and burial grounds. More than 1200 archeologists, museum directors, and other specialists have condemned such wanton destruction of invaluable cultural heritage.

As our colleagues at SUNY Stony Brook have noted, "the construction of the oil pipeline, stretching across Standing Rock Sioux lands on its 1,172 mile path from North Dakota to Illinois, crosses the sacred ancestral lands of the Standing Rock Sioux Tribe and the Missouri River—a major source of water for the Tribe. This pipeline violates historic treaties between Oceti Sakowin and the United States. It also violates terms of the National Environmental Policy Act, the National Historic Preservation Act, as well as the collective human rights of the Standing Rock Sioux Tribe and its people. The US Army Corps of Engineers did not consult with the tribal

government or affected communities before granting permits and allowing construction to begin." Furthermore, private security companies have unleashed attack dogs on peaceful protectors, injuring many including a pregnant woman and a child who was bit in the face. This is neither honorable nor just.

As a collective of scholars deeply committed to innovation and visionary thinking towards new sustainable futures, we stand with Standing Rock. Rather than continue to invest in damaging fossil fuels, we believe in pursuing a future of clean and sustainable energy. We also support the sovereign rights of the aboriginal peoples of the Americas and join the United Nations, Columbia University, the New School, and our colleagues at SUNY Stony Brook in calling for the Standing Rock Sioux to have a say in construction that crosses their treaty territory, threatens their water and their sacred sites, and imperils the entire region. Because of the actions of the tribe and allies thus far, construction has been temporarily halted while the courts and the US government investigates the process and impact further.

In support of the sovereign rights of the Standing Rock Sioux Tribe and the Oceti Sakowin, we join the Protectors in calling for a permanent halt to construction of the Dakota Access Pipeline and a collective commitment to honor indigenous rights and find alternative sources of energy to sustain the environment on which we all depend.

With gratitude for your leadership we join you in affirming that Mni Wiconi, Water is Life.

Settler Colonialism Then and Now

A conversation between J. Kēhaulani Kauanui and Patrick Wolfe[1]

Abstract

This conversation originated in a radio interview of Patrick Wolfe conducted by J. Kēhaulani Kauanui on her public affairs show, «Indigenous Politics: From Native New England and Beyond» from July 13, 2010. The article is an expanded version of that interview, updated to reflect our ongoing dialogue. Kauanui invites Wolfe to lay out the central features of his approach to settler colonialism, which he views as a project of eliminating and replacing Native societies on their land. Mindful of the approach's implications for both activism and scholarship, Kauanui guides the conversation through such key issues as: Settler colonialism's cultural logic of elimination – how is it defined and what are its various modalities (ethnic cleansing, spatial confinement, blood quantum, etc)? Who is a settler – are enslaved and/or indentured people settlers? What is the difference between colonies with settlers (Algeria, South Africa, etc) and settler colonies (Australia, Hawai'i, Palestine, the USA, etc)? What uses does this approach have for the campaign to liberate Palestine from Zionism (especially BDS)?

Keywords: settler colonialism; logic of elimination; Palestine; comparative colonial studies; blood quanta.

J. Kēhaulani Kauanui: Aloha. Before we dive in, I want to ask if you'd be willing to share a bit about your personal and professional background.

[1] This conversation has its origins in a radio interview of Patrick Wolfe conducted by J. Kēhaulani Kauanui on her public affairs show, "Indigenous Politics: From Native New England and Beyond", from July 13, 2010. What appears here is an expanded version that is updated to reflect our ongoing dialogue into 2012.

J. Kēhaulani Kauanui, Center for the Americas, Wesleyan University, Middletown, CT 06459 – jkauanui@wesleyan.edu.
Patrick Wolfe, Faculty of Humanities and Social Sciences, School of Historical and European Studies , DMB E126, Melbourne (Bundoora) – patrick.wolfe@latrobe.edu.au.

Patrick Wolfe: Yes, certainly, I'm a professional working academic, I'm afraid. I set up the teaching of Koori history – that's Indigenous southeast Australian history – at the University of Melbourne and introduced elders being paid proper money to give lectures. I gave up after a few years because I'm a Gubbah – a White guy – and it seemed wrong to me that a White guy should be teaching Aboriginal history when there weren't any Aboriginal people also teaching it. I don't mind White guys teaching it so long as they're not the only one.

So I left that, and I'm glad to say that the University of Melbourne Aboriginal history section subsequently thrived quite well. I've since written about a lot of comparative Indigenous issues, partly because of the experience of teaching Koori history in Melbourne – there's a lot of American students there because exchange students tend to look for something they can't do at home. The University of Melbourne offers very few things you can't do in California. Koori History – that's one thing you can't do even in San Francisco. So I used to get a disproportionately large number of U.S. students and when I'd say to them: «Why are you doing this course? – Where is your interest in Aboriginal history coming from?», ninety-five percent of them, even the Black ones, would say: «Well, I'm interested in civil rights and maybe doing some kind of work with Black groups and I wanted to come and do some work with Black groups in Australia».

To which I would say: «Yeah, but how about Indigenous people? – How about Native Americans? That's the parallel. Just because Aboriginal Australians are called Black – that's just some kind of shared name, misleadingly bracketing them together on the basis of skin color. The real parallel is dispossessed Indigenous people, you know about them? Where's your interest there?». And their eyes would glaze over and they'd say: «Well, I don't think I ever met one», to which I'd say: «Well probably not knowingly, but I bet you have». And it would go from there.

So that led me to think that there's more to this than – when I say "just", I don't mean in a belittling way – there's more to this than just Indigenous history in southeast Australia. There's a whole thing going on here around Indigenous politics and the consequences of invasion and dispossession and genocide and it's not limited to Australia. I wanted to see what we can say that's universal about Indigenous dispossession everywhere and what's particular to local situations.

JKK: "Black" is a term used to describe Indigenous peoples in Australia and that comes out of a British colonial history, right?

PW: I wouldn't like to say it only comes out of a British colonial history, because Indigenous people in Australia very happily call themselves Black. If you go to a party – on occasions I've been to a party where I've been the only non-Indigenous, Gubbah person – and they call it a "Black Out". Kooris call themselves Blackfellas, and we're Whitefellas. No doubt it also came out of some kind of colonial background but it's been taken over and made their own by Indigenous people for their own ends and for their own identity purposes.

JKK: I know from time that I've spent in graduate school in Aotearoa/New Zealand, at the University of Auckland, Maori also now self-identity, or did more strongly in an earlier period in the seventies and eighties, as Blacks. And you mention *Gubbah* or Whitefella. In terms of you self-identifying that way, that is really unusual for a lot of White men. Could you speak a little bit more to that in terms of that self-identification and that acknowledgment, especially in the midst of Indigenous peoples?

PW: I am an Australian settler. That doesn't mean that I have voluntarily dispossessed anybody, it doesn't mean that I've stolen anybody's child, it doesn't mean that I've participated in any massacres – it's not about my individual consciousness and free will. In terms of my individual free will, I'm a reluctant settler. I would rather not be existing on somebody else's stolen land. But the fact of the matter is that I wouldn't have had a university job if Indigenous people hadn't had their land stolen from them in Australia.

So, in a structural sense, in terms of the history that has put me where I am and Indigenous people where they are, my individual consciousness, my personal attitude has got nothing to do with this. I am a beneficiary and a legatee of the dispossession and the continuing elimination of Aboriginal people in Australia. As such, whatever my personal consciousness, I am a settler, which is to say *Gubbah* in Indigenous terminology, so I am happy to accept that terminology.

JKK: In Hawaii there is some debate about theorists of what is being termed "Asian settler colonialism" that deals with the contentious history of Asian immigrants coming in as plantation labor under coercive or exploitative conditions. Here I am referring namely, but not exclusively to the edited volume by Candace Fujikane and Jonathan Okamura titled *Asian Settler Colonialism: From Local Governance to the Habits of Everyday Life in Hawaii*. It prompts questions as to whether or not we should discern different kinds of settlers, and it begs the question of whether all settlers are colonialists. This leads me to ask, where you see race fitting into your analysis of what constitutes settler colonialism, especially whiteness.

PW: Okay, that's a really tricky and interesting one, as you know. When I'm in Hawaii, I'm a *Haole*, obviously. I may only be a *Haole* for three days visiting but I'm a *Haole*. Yes, of course, Japanese indentured people, Filipinos, a whole lot of other non-U.S., non-White people from the Pacific were put to work in horrific conditions on pineapple and other plantations in Hawaii two or three generations ago, so those people have endured colonial exploitation, there's no question about it whatsoever.

I think a parallel there would be, for instance, enslaved Africans in the U.S. Now, looked at from their point of view, they have experienced a colonial history, and it is therefore not right to lump them with together with the colonizers, the White folks who brought them there under oppressive and coercive conditions in the first place. Now of course I accept that, that degrees exist within the population that dispossessed and replaced Native peoples, of course I accept that. But can we just bracket that off for a moment and come back to it?

JKK: Yes, but I want to point out that Chinese, Japanese, and Filipinos were drawn to the continental US for agricultural labor – and with the Filipinos, they came as colonial subjects – so wouldn't that be the parallel in the US and not enslaved Africans? Isn't the question of chattel slavery different here?

PW: From the Native point of view, when it's a zero-sum contest – you or me, for land, for livelihood, for the places that are special, sacred to you that keep your society alive, culturally, spiritually and

every other way as well your economic subsistence, just putting food on your table – it doesn't matter if the people are enslaved or coerced or co-opted, they are still taking your food. They are still part of the invasive society that is taking your land over and driving you off. They may be an unwilling part, just as I said to you I'm a reluctant settler. They may be a lot more reluctant than I am in so far as they may be forced – I chose to go to Australia, after all.

But nonetheless, structurally, in the terms I was talking about before, like it or not, whether or not they collaborate with Indigenous people, they remain part of the settler project. *Asian Settler Colonialism* is edited by a couple of Japanese-descended settlers who have had the courage to come out and say: «We have come through the colonial plantation experience, our people have suffered, but nonetheless, vis-a-vis Natives, vis-a-vis Kanaka Maoli, we are settlers. Which is to say, structurally, we are part of the social process of dispossession». That doesn't mean that they haven't suffered, that doesn't mean they're bad guys. Willingly or not, enslaved or not, at the point of a gun or not, they arrived as part of the settler-colonial project. That doesn't make them settlers in the same sense as the colonizers who coerced them to participate – of course not – but it does make them perforce part of the settler-colonial process of dispossession and elimination. I can't stress strongly enough that it's NOT a matter of volition on their part, and certainly not of culpability. It's just a structural fact.

JKK: Also, I want to note that what I think is really important about what that they are doing and you've just mentioned it, in terms of the social process of dispossession – they do talk about settler *practices*. And that's of course part of the subtitle – *The Habits of Everyday Life*. And I think that that's what's so striking about your work is that you insist that settler colonialism is a practice.

PW: Okay, well why don't we go back to something I've already said, which is the number of U.S. students that would come to Australia and say that they saw a comparison between the politics of Indigenous people in Australia and the politics of African-Americans, of Black people in the United States, the descendants of African slaves? I found myself thinking: «Well, what IS the difference?». And, of course, the difference is that, in order to establish the European colo-

nial society, two entirely different contributions were extracted from these separate populations. So far as enslaved people, or you may say convicts to Australia, or indentured people – South Asians going to Guyana or Fiji, wherever it may be – the coerced, subordinated labor that is brought in by the Europeans to work the land in the place of the Natives – they're there for their labor. It's their bodies that are colonized in the case of enslaved people who are subject to being bought and sold, that's what they provide. Indigenous people, by contrast, provide the land. Their – Indigenous people's – historical role in settler colonialism is to disappear so far as the Europeans go, to get out of the way, to be eliminated, in order that the Europeans can bring in their subordinated, coerced labor, mix that labor with the soil, which is to say set it to work on the expropriated land and produce a surplus profit for the colonizer.

So there are three points to this triangle. There is the colonizer – and I won't just say European because say, for example, in the case of the Japanese, the same kind of thing has applied. I'm a European colonizer, though, so let's talk about European colonialism, which in any event is the bigger global phenomenon. So we'll say Europeans in that sense. The European applies coerced and/or enslaved labor to the land which has been expropriated, which has been taken away, which has been stolen from Indigenous people. So at first you can say: invasion generally is a violent process because nobody gives up their land voluntarily. Whatever the Europeans say about Natives rolling up their blankets and fading away, like the Israelis say about the Palestinians, dissolving into the night – that doesn't happen. People do not give up places where their old people are buried, where they have been born and bred for generations, where they've lived, where their gods are. They do not give that up easily, so it's invariably a violent process.

Europeans usually win, helped by alien diseases and cannons and all the rest of it. Europeans usually win in that violent confrontation. Let's call that the frontier, though the frontier is a very misleading term because it suggests a nice clear black and white line – Natives on one side, Europeans on the other. It doesn't work that way. The frontier, it seemed to me the more I thought about it, isn't just a line in space, albeit a misleading line in space – there are all sorts of transitions going on backward and forward across it so it's not a hard and

fast line – but it's also a line in time. What happens once the Natives have been violently suppressed, assuming they have been – have been pacified, depending on whose terminology you use – there are still some left around.

Now, the colonizers have to establish a colonial society in their place, on their land. To do that, you have to have a system of laws and regulations – the playing field has got to look level. You're bringing migrants in. They can be unruly, they can want rights that they're often not given first off. A rule of law has to be applied and applied consistently, otherwise the incoming settler society would get out of order. Therefore the Natives who have survived the initial catastrophe of invasion and violent dispossession – you can't just carry on shooting them on sight. It doesn't work for the settler rule of law that has to appear to be conducted fairly and legitimately.

Therefore the way in which remaining Natives are eliminated shifts – it becomes more legal and more genteel. It looks better. It is necessary for settlers to continue eliminating Natives for all sorts of reasons, but one is a very important political one. If you're a settler, theoretically at least, you've come with a social contract, you've done all those European things involving subjecting yourself to the rule of the sovereign and you've consented, the whole deal. Natives never did that – their rule of law was prior to colonial rule, independent of it. It springs from a separate source. The colonizers' legal system simply can't deal with that. It can't deal with something that originates outside of itself. So, even on a political level, quite apart from the economic competition, all traces of Native alternatives need to be suppressed or contained or in some way eliminated. This continues after the so-called frontier era but, as I said, in all sorts of genteel ways. Territorially, Natives tend to get banged up on reservations or stations or missions or whatever it is. Now, they may be still alive, and the rhetoric might well shift so that, instead of being marauding savages who are going to rape the White man's women and all this sort of stuff, which is the justification for killing them on the frontier, instead of that they become a kind of romantic dying race and it's the job of the missionary to smooth the pillow of their passing. The rhetoric shifts radically, but the outcome remains consistent with elimination.

When you gather people together and contain them in a fixed locale, you are still – you the colonizer – you are still vacating their erst-

while territory and rendering it available for colonization, whether it's farming or pastoralism or plantations, whatever it is. They're not on the land anymore. They're confined to a mission. So, even though the missions (or stations or reservations) are held out as a process of civilizing – «We are giving them the boons, the benefits of this superior culture that we have historically invented» – even though the rhetoric shifts, just by confining them, you continue to eliminate them, to clear their territory to make way for colonial settlement.

You go further down the track, and assimilation begins to kick in, whether it's in the U.S. or Australia – and, I think, in Hawai'i. Native identity gets compromised – as, in your wonderful book, *Hawaiian Blood*, you've shown in the Hawaiian case, and in other cases as well – with blood quantum regulations. Blood quantum eliminates Natives from the reckoning of authentic Natives who count. Of course, in the colonial situation, any Native person is liable to have non-Native relatives somewhere in their ancestry. That's a routine outcome of being invaded. It's used as another way of excluding Natives or eliminating them.

JKK: Yes, the contemporary legal definition of "native Hawaiian" as a "descendant with at least one-half blood quantum of individuals inhabiting the Hawaiian Islands prior to 1778" originated in the Hawaiian Homes Commission Act of 1921 (HHCA) in which the US Congress allotted approximately 200,000 acres of land in small areas across the main islands to be leased for residential, pastoral, and agricultural purposes by eligible "native Hawaiians". Many Kanaka Maoli (indigenous Hawaiians) contest the federal and state definition of "native Hawaiian" at fifty-percent not only because it is so exclusionary, but because it undercuts indigenous Hawaiian epistemologies that define identity on the basis of one's kinship and genealogy. Thus, I emphasize the strategic, socially embedded, and political aspects of these indigenous practices.

The blood quantum rule operates through a genocidal logic in both cultural and legal contexts and undermines identity claims based on genealogy that are expansive. In the blood quantum and legal debates about property during the debates that lead to the passage of the HHCA, issues of where the Chinese and Japanese stood in Hawai'i – in relation both to whites and Hawaiians – were prominent. Eventu-

ally, I realized that in many ways, some subtle, others crude, the racialization of Hawaiians was co-constructed in relation to Chinese and Japanese presence in the Islands. As I detail in the book, both elite whites and Hawaiians framed the post-overthrow push to rehabilitate Kanaka Maoli in anti-Asian terms by contrasting Kanaka Maoli as US citizens and the Chinese, and especially Japanese as "aliens". During the early Twentieth Century, the whiteness of American citizenship was sustained by a series of Asian exclusions and this racialization of Asians as perpetual "outsiders" would play a key role in the outcome of Hawaiian blood quantum debates.

In Hawai'i at this time, Asian groups occupied a racial place somewhat similar to African Americans in their structural relationship to whites during the Reconstruction in that they were considered an economic and political threat. The emancipation of black slaves motivated Southern whites to search for new systems of racial and economic control and by the 1890s, they passed Jim Crow segregation laws to isolate and intimidate African Americans. In Hawai'i, like the US continent, white Americans perceived the Japanese as a distinct danger as both a as a source of labor competition and a nationalist threat in the emerging world order. Their presence in Hawai'i was seen as antithetical to the goals of Americanizing the Islands, especially after World War I, a concern that only grew by the time of the HHCA debates, when their numbers were increasing in the islands.

So, with that in mind as a particular context, let us turn back to the question of slavery, whiteness, and indigeneity.

PW: This, I think, is where you can get the contrast between enslaved people and Indigenous people very clearly, and also how you can get the way that the process of elimination continues. It's a structure. It's an ongoing process, not a one-off event. It continues right through colonial society. And in the case of blood quantum, it comes through very clearly. Let's think of the U.S. example. As I said, the enslaved and their descendants who were bought and sold were used for one purpose, and that purpose was labor, whereas Indigenous people were there for one purpose, that was to disappear, to surrender their land. Given that Africans were valuable property, you wanted as many as you could get. So the offspring of an enslaved person and a White partner, it doesn't matter what their skin color is, how they present

phenotypically, how light or dark they are, they remain a slave, they're valuable property. But, of course, if you're out on the western frontier of the United States, the last thing you want is more Indians, so you're murdering them, or you're cooping them up on reservations.

But what happens racially? What happens to the offspring of a Native, usually a woman – ninety-nine times out of a hundred it's a woman, right? – the offspring of a Native woman and a colonizer experiences the opposite of what happens to Black people. With Black people, any amount of African blood whatsoever makes you a slave. Initially, this meant that offspring inherited the status of their mothers (though Maryland was an early exception) but, as time went by, slavery became the lot of everyone with African ancestry. After emancipation, this situation became racialized, so that anyone with African ancestry was classified as Black, a situation that reached its apogee in the one-drop rule, which continues into the present in an informal, unstated kind of way. You can have blue eyes and blond hair but, if somewhere back in your ancestry there's any Black person – bam, you're a slave or, today, under the one-drop rule, you're a Black person. Compared to that, let's look at what happens to Natives – whose role, as we've said, is to vanish from the land rather than to provide labor. In their case, the opposite applies. The colonial system wants fewer and fewer Natives, and guess what? – it seeps through into the way they're racialized, into their very identities, the identities the colonial society tries to impose upon them.

So the Native case is opposite to the one-drop rule, which makes (isn't this fantastic? – there's a real irony here) makes Black blood absolutely powerful in relation to White blood. In the case of Native blood, by contrast, any admixture of White blood compromises your indigeneity, makes you a half-blood or a half-caste or whatever racist term serves to eliminate people. So my point is that invasion doesn't stop at the frontier. It carries right on, right through colonial society in these less violent – that's what I meant by more genteel – ways, more thoroughly legal, bureaucratic ways. But the end outcome, which is eliminating the alternative, prior Native presence, is consistent. Is that clear enough?

JKK: Yes it is. And you did mention earlier that settler colonialism, you call it a zero-sum game, and I know that elsewhere you've referred to the dominant feature of its exploitative nature as a winner-take-all

project. And that's what you mean by total replacement. So thinking through in terms of the legal disappearance or things that are based on legal mechanisms of civilizing Indigenous peoples, it's precisely through that rather than, say, through massacres that settler colonial societies can continue to describe their projects as ones based on progress or that they're supposed to be seen as benign or kind to the Native.

PW: Absolutely – «We have come bearing you a gift, the gift of civilization and advancement». And assimilation, which ultimately has the effect of destroying Native society, reducing them demographically, is invariably – and I haven't come across a single settler colony where this doesn't happen – invariably, assimilation is held out as giving Natives the same opportunities as the White man. You steal children at the age of three and you put them in boarding schools and you abuse them, often sexually as well as psychologically, for years on end. Very often – except in the case of a few remarkable people – you put people out at the other end of that system who suffer for the rest of their life with appalling social and psychological pathologies. They'll still be prejudiced against, picked on in the street by cops because they look different, and all the rest of it. They won't actually get any of the advantages that they were promised would be the fruits of the civilizing experience. They will rather have been completely messed up, their families and the wider Native society will have suffered as a consequence, and this is held out as a special gift of civilization, giving the Native the same opportunities as the White man.

JKK: We have been discussing a couple examples of Anglo-settler societies, Australia and the United States, and can also obviously bring Canada and Aotearoa /New Zealand into the picture more. Yet I would suggest that the average American would probably be reluctant to see the U.S.A. alongside the other three nations, given their ongoing ties to the British monarchy. Can you speak to that in relation to the persistent myth of American exceptionalism, that idea that the formation of the U.S.A. was about liberation, freedom and equality framed as the opposite of any monarchical society?

PW: Right. Firstly, perhaps this illustrates the answer I'm trying to give: when Chief Joseph and the Nez Perce were fleeing California,

they were ultimately tracked down, with appalling consequences, by the U.S. Cavalry. But when they made their great trek, where were they headed? The answer is Canada, so they had no doubt as to who was the worse settler colonizer between the republican and democratic U.S. or a monarchy. And they were by no means – this is not in defense of monarchy, by the way – they were by no means the only colonized people who tried to escape across the Canadian border. African people did too. So, without defending monarchy, let's just say that republican egalitarianism is not a good thing for people who are not part of the club.

The problem with republican citizenship and popular democracy is that those who are outside the realm of this citizenship have no rights. It's a profoundly dehumanizing segregation of the rest of the world from yourself – you citizens, who participate in all these contractual deals to run your society equally and all the rest of it. In terms of what political system is involved, the important question is not whether you speak English, French or Dutch, not whether you've got a king or a queen or you're republican. The only thing that really counts in regard to settler colonialism is the outcome for the Natives.

I can't imagine a Native confronting a poisoned water hole or a bayonet or whatever instrument of violence they're forced to confront... I can't imagine them saying: «Well, at least I'm being killed by a republican rather than a monarchist». I mean, what sort of difference is that going to make? So let's get below the surface of those political distinctions to the real concrete relationships that are applying here. This leads us to the distinction between what I call settler colonialism, which refers to a foreign society invading a Native society and trying to take over all of it so as to replace the Natives rather than use them as labor. Settler colonialism brings its own labor. It tries to eliminate the Natives and do something completely new with the land that was theirs.

JKK: So, this gets at what makes a settler society different than, say, British relations to India.

PW: The situation in India was quite different. There, the colonizers didn't go to get rid of Indians and import English people in their place. Quite the contrary, the colonizers went to sit on top of

native society and set it to work for them on their own land. So it's a bit like the relationship of slavery insofar as natives were valuable. They were indispensable to the project of extracting surplus value through colonialism. The British went to India for mining and to do things like grow jute and opium and tea and cotton and a whole lot of primary products that would then be made up in the metropolis – Manchester cotton mills and so on. The industrial revolution, which in most European history books is represented as something that was internal to Europe and proves how superior Europeans are, was a global phenomenon that took raw materials that were made up in these factories from the situation of colonial exploitation, whereupon it used the same colonies as expanding markets for these factories' finished products. Primary production may have been going on in the deep south in the U.S., it may have been going on in India, it may have been going on in Egypt – to cite three that reference cotton, since I mentioned Manchester. The point is that the industrial revolution not only required settler colonialism in order to function. It also required other forms of colonialism, as in the case of the British-Indian colonial regime, which I call franchise colonialism. Franchise colonialism required a situation where Whites oversaw a system in which natives worked for them. Now that means that the natives remain a large majority, so Whites had to have native collaborators to help run the system. They had to have superior access to violence and all the rest of it, better troops. It's always a kind of fragile, vulnerable situation colonizing somewhere like India, or, for that matter, a franchise colony like the Dutch East Indies – today, it's Indonesia – was for the Dutch. When the colonial-nationalist movement gets under way, resists the Europeans, and finally throws them out, the Whites turn out not to have been established in the same way that settler colonizers have been established. As I've said, in going to wherever, Australia, settlers didn't go to get Aborigines to work for them – at least, not as their first priority. They went to Australia to replace Aborigines and themselves become Australians, so their children would be Australians and Australia would then go on forever.

Europeans in franchise colonies like India, they go to sit on top of native society. England remains home. They send their children back to boarding school in England. When they turn sixty, they retire back to England before encroaching senility can spoil the illusion

of their superhumanity. They remain based in England, overseeing the natives in a different kind of colony. Therefore, come the success of the colonial-nationalist movement, when finally the English get thrown out and they go back to London, they vanish, and the faces on the legislative benches change color. Indians take over. They tend, unfortunately, not to alter the system that the British imposed on them too much because the elites who ran the nationalist movement were educated at Oxford and Cambridge and the British knew who they were handing over to. Basically, they were handing over to brown Englishmen, so they weren't the kind of changes that you'd hope for from a national independence movement. Nonetheless, the fact is that the British had remained a minority dependent upon native labor and therefore native society was ultimately in a position to throw them out. By contrast, the victims of settler genocide, all the programs of elimination that have gone on in settler colonies, those Natives become a minority and can't realistically dream of sending the Whitefellas home.

So it's a different situation. And if I may say at this point, what I mean by settler colonialism is precisely this drive to elimination, this system of winner-take-all. I don't just mean that settler colonies are colonies that happen to have settlers in them. There were tea planters in British India. People go on and on at me about the French in Algeria, and rather like we said earlier, what difference does it make if you're monarchical or republican? In the case of French colonialism, the French colonies aren't just places that we rule from outside. They're part of France. In formal political terms, Algeria was meant to be part of mainland France, so the French settlers who went there were seen as somehow different to settlers elsewhere. It was a settler society that somehow was more organically wedded to the mother country than somewhere like Hawai'i (at least, prior to statehood) or the United States or Aotearoa/New Zealand. All the same, the fact of the matter is that the French settlers relied on native labor. Come the Algerian independence movement, they get thrown out. Whatever the constitutional niceties, whether they're meant to be part of France or not doesn't matter. They're there to be thrown out because they're a minority dependent on native labor. You can say something similar about South Africa, where Whites are something like fifteen, sixteen percent of the population. Yes, they're settlers, yes they stayed there,

but it's just a colony that happens to have settlers in it. It's not a settler colony in my sense. Does that make sense?

JKK: Most definitely. And also, I am thinking it through in terms of the notion of progress and the notion of the past, one of the most cited passages in your work is that «invasion is a structure and not an event». I would like it if you could speak to the persistent ideological notion of settler colonies that settler colonialism was just an event, that invasion was merely an event, and that that is how they are able to maintain the farce that it's long past, rather than an ongoing process.

PW: As an Indigenous person, you're very well aware of these things. These are some of the best targeted questions I've ever had, so if I could just thank you for that and also acknowledge that, because you're Indigenous, you know what you're talking about in a way that so few scholars do.

So, yes, settler invasion is an ongoing process. That's why I remain a beneficiary and a legatee of the invasion of Australia. That's why I categorize myself as a settler. The Prime Minister of Australia, the then Prime Minister John Howard, refused to apologize to Indigenous people for the abduction of the so called "stolen generations" of Aboriginal people, generally of mixed ancestry, who were taken away by the Australian state. We're not sure how many. It's somewhere around one in five to one in seven Aboriginal children were stolen from their families by the Australian state or by various states within the Commonwealth of Australia throughout the twentieth century.

And a great movement arose to get Mr. Howard to apologize on behalf of the Australian state for what happened. I personally think that movement was a great mistake, because what happened was that the whole issue of Aboriginal rights came to depend on whether or not one man would apologize for the stolen generations – not for the frontier homicides, not for the initial seizure of land or two centuries of systematic destruction, all the rest of it. And also the problem was that an apology would enable them to say: «Okay, now we've apologized, now everyone can go home, forget about it and move on». This is exactly what the subsequent Prime Minister, Kevin Rudd, did say when he issued his apology. He didn't ask whether or not Aboriginal people would accept his apology. He just unilaterally declared that his

apology meant that Australia should now move on. No question of compensation, no question of reparations, nothing like that. In fact, the reverse – the apology provided Rudd with a pretext to rule reparations out, explicitly and deliberately, at the same time. So I think that there are all sorts of problems with the whole apology business.

But nonetheless, to get back to your question, the reason that John Howard refused to apologize (which actually was tactically very stupid – as I said, if he realized he could get away with an apology and have it all over within a week, that would have suited him much better) but anyway, the reason that this bull-necked man refused to apologize was, as he kept saying over and over again: «Yes, bad things went on in the past, but I wasn't there, I didn't do anything wrong, I didn't kill anybody, I didn't steal any children. It's a later time now», failing to recognize that history results from causes and from preconditions, and that the cause and the precondition for contemporary Australian affluence and democracy and all the rest of it is the initial robbery, genocide and continuing elimination of Aboriginal people. Without that happening, as I said, I couldn't have had a job in History at La Trobe University.

So that's the sense in which it's very important to acknowledge that invasion is something that reverberates through continuing history in all sorts of ways. And the Indigenous presence, the Indigenous alternative needs to be suppressed. Either that, or we come to a fair deal. Now, coming to a fair deal doesn't mean finding a bunch of coconuts – brown on the outside and White on the inside – and setting them up in state-designed bureaucracies that just become yet another organ of the settler state. It doesn't mean that. It means handing over to Native sovereignty. How are you going to run your affairs? Who are you going to choose, as opposed to elect? – you don't need to go through the Westminster system. Whatever your system of choosing – an elder who will speak for you, or elders who will speak for you, whatever you choose – you go for it, and when you're ready, we'll talk together about what we can agree on. Anything less than that is a state-fabricated charade which is not only running parallel to the real challenge of an open negotiation between an invaded people and their invaders. Actually, these pre-fabricated, pretending-to-be-Native but actually part of the White colonial system bureaucracies are part of the invasion, because they take away Native initiative. They channel it

into areas, into bureaucratic zones, that are always already pre-dominated by being part of the colonial bureaucracy.

JKK: And that actually resonates with what you said earlier in the interview around the colonials themselves really not wanting to acknowledge anything that exists prior to their own system. And that's what Indigenous scholar from Australia Aileen Moreton-Robinson, who's a premier scholar of Whiteness studies there talks about: the anxiety of settler colonial societies regarding that persistent Indigenous sovereignty question.

PW: That anxiety is crucial and very telling. I think it has huge political potential. Aileen Moreton-Robinson nails it perfectly.

JKK: Now, I want to go back to something – you mentioned Palestinians earlier. And we've been talking a bit about American exceptionalism. Certainly there is a question, especially as of late, with the recent attack on the Gaza Freedom Flotilla – the persistent question of Israeli exceptionalism undergirded by American power. I wonder if you could speak to the question of Israeli-occupied Palestine and perhaps in relation to not only settler colonialism as a process but also the Boycott, Divest and Sanction movement.

PW: Well firstly, blinded in ways that one can sympathize with by the Holocaust, people look at Israelis as victims. And, of course, those who died in the Holocaust were victims, as well as their families, and the children who have been subjected to the memories of Auschwitz survivors and so on, and who've had to live with their guilt. Of course those people are victims. But, it's rather like saying the Japanese in Hawai'i suffered terribly in the plantations but that doesn't stop them being part of the settler-colonial process.

We're not talking about whether individuals are victims or not. We're talking about the fact that, from 1882 on, which is when the first Zionist settlement in Palestine was established, the first so-called *aliya*, which means "uplift", which means "ascent to the Promised Land", European Jews who were suffering pogroms and oppression and all sorts of horrific things in Europe that one should never understate, European Jews' solution to that – or the Zionist solution to

that, I'm sorry, not all European Jews' – the Zionist solution to that was: «We are being persecuted, especially within eastern Europe – the so-called Pale of Settlement, the Polish/southwest Russian border, but also traditionally throughout Europe – we are being persecuted because we haven't a got a nation. We haven't got a place that we can call our own, with our own sovereignty and independence. So, like the other peoples around us in nineteenth-century Europe, we need a nation with its own territory».

The only problem is there's no land left in Europe to found a nation in, so, initially they were thinking Argentina, then they thought Uganda, at one point the Portuguese offered them Angola, but increasingly it became Palestine – the place, they claimed, that Jews originated from, before being driven out by the Romans in seventy A.D., when the Second Temple was destroyed, this whole mythology. It actually is mythology, in the erroneous sense – there were Jews all over the Diaspora well before seventy A.D. Moreover not all of those who were in Palestine left, but that's a different story. The point is, that some of the European arm of world Jewry who were generally called Ashkenazim, meaning European Jewry – as opposed to Sephardim, who are the Jews who were driven out Iberia, out of Spain and Portugal in the fifteenth century and tended to settle in places like Morocco, as opposed to Yemenis and other Mizrahim who were in places like Iraq and Libya and so on – the point is that some members of the Ashkenazi branch of Jewry decided upon Zionism – though Zionism largely remained a minority tendency until the Nazi era. Zionists decided they would establish a civilized, secular, European colonial nation-state like France or Germany, which had ceased being monarchies and had united themselves and become secular, church- and state-separated states in the nineteenth century. They were going to have one of those in Palestine. So they set out to establish an autonomous state based on agricultural communities that would be self-sufficient. Of course, having been excluded from agriculture and productive industry in Europe, so that they'd been forced into parasitic occupations like money-lending and condemned as such – this is where the racist image of the Jew as greedy hoarder came from – these people arrive in Palestine quite incompetent as agriculturalists.

Yet they want to exclude the Natives. They want to build a Jewish-only nation-state in somebody else's country, Palestine. That's

what settler colonialism is. So they set about firstly persuading colonial authorities who ruled Palestine, first the Ottoman Empire and then, after World War I, the British Empire under a mandate granted by the League of Nations. The so-called *Yishuv*, the Jewish settlers in Palestine, set about firstly getting the colonial powers to allow more and more Jewish immigration into Palestine from Europe and, secondly, expanding their contiguous land base so as to build a colonial state-in-waiting there.

So they're different to an ordinary settler colony in that they had to proceed through legal channels. This they did, until they reached the point where they were strong enough to throw out both the colonial authorities, in this case the British mandate authorities, and complete the job of driving Palestinians off their land. This happened in the *nakba*, the calamity, the catastrophe as it's called, of 1948, that overtook Palestinians, when something like sixty-five percent of the Palestinian people were violently driven from their homes, driven to flee outside Mandate Palestine. Their houses were taken from them – either bulldozed or blown up or, more often than not, had Jewish settlers put into them, these people in many cases being Holocaust victims who had been brought from Europe.

So there's tremendous world sympathy – indeed, the United Nations vote to divide Palestine into Jewish and Palestinian sectors, which took place on November 29, 1947, only happened because the Soviet Union finally came around and cast its votes in favor of Israel. Why did they do that? Because they chose to read Israel as an anti-British colonial movement rather than as a settler-colonial movement. Zionism has these two faces. Now, it is very odd, is it not, that the last European settler colony to be established on Earth – which is Israel, which has displaced Palestinians from their own country and replaced them with Jews, has stolen their country – that the last one on Earth (Tibet isn't a European colony) should have been set up in 1948, after the U.N. declaration, and at a time when decolonization was the international climate of the moment?

After World War II, the United Nations was all about the British leaving India, the British and French and Portuguese and Spanish leaving Africa, the French and the British leaving southeast Asia, the Dutch leaving the East Indies, that's the mood of the moment. Yet Israel is set up at the same time. A settler colony is established in an

anti-colonial atmosphere. That is bizarte until one understands that Zionism has two faces: one is it's a resistance to persecution, the Holocaust being the ultimate extreme, but it's a persecution that goes on in Europe. The other is, it's a settler colonial movement, so it's as if the abused child has grown up to be an abuser – the Zionist tesponse to the persecution of Jews in Europe being to steal somebody else's country outside of Europe.

So, once it's understood in that dual way – as having two faces, I mean – that Zionism is both a response to persecution and a settler-colonial movement – then you're partly back to the situation of Hawaiians in relation to the Japanese or Native Americans in relation to enslaved Africans: «Yes, these people have suffered but, hullo, they're driving me off my country, they're killing me». They're patt of a settler system, regardless of their personal history and their consciousness. Palestinians own that country. They're being driven out of it and being replaced, with the approval, the sanction and the military and economic support of the West.

We, as Australians, as people from the United States – I distinguish Hawai'i from that, and I distinguish Native Americans from that because you're not part of the system – but people like me, like it or not and I certainly don't like it, are responsible for the contemporary, current-day Israeli colonization of Palestine. Now, in terms of the time-scale I talked about previously in places like the U.S. and Australia, that is like going back before the missions and before the assimilation. It's still the frontier eta in Israel/Palestine. There's no assimilation going on. Palestinians aren't being given land rights in certain places. They're still at the frontiet invasion stage, and it's in this day and age, in the twenty-first century.

When genocide was going on in the nineteenth-century United States, international communications were different. There weren't cell phones that you could film with, there wasn't a whole global communications framework whereby what was going on could be seen. I'm not justifying it, but it's pretty different to something going on under the nose of the world, in full view of the world and still being suppressed and successfully lied about, which is what's happening to the settler colonization, the invasion, of Palestine as we speak.

When students or people who've heard my talks ask me: «How did the Europeans ever get away with the atrocities that they committed on the Australian and American frontiers? – How could a Wounded Knee or a Coniston massacre go unavenged? – How could whole peoples be driven from their ancestral homelands in broad daylight?». When they ask me this question, which they very often do, I have to answer: «Why are you surprised? They didn't even have the internet or satellite TV in the nineteenth century. We have those things today, we have instant global communication, events relayed live into people's living rooms, but settler-colonial outrages are being perpetrated, nineteenth-century style, under our noses in Occupied Palestine every day of the week. So why should the nineteenth century have been any different? There's no reason for surprise».

JKK: Yes that's right, and does that suggest to me that you do support the BDS campaign?

PW: Absolutely, I have nothing to do with anything Israeli whatsoever. And anti-Zionist Israeli Jews, they support it too. They're saying: «This is wrong – not in our name, don't help it».

JKK: As you know, I serve on the advisory board for the U.S. Campaign for the Academic and Cultural Boycott of Israel (USACBI) as well as the broader boycott movement for sure.

PW: Again, absolutely, I'm completely in support of it. Actually, in the contemporary U.S. and Australian academy, that does involve a risk. The Zionist lobby – please don't call it the Jewish lobby, by no means all Jews are Zionists and, by the way, not all Zionists are Jewish. We're talking about a political movement – Zionism. Anti-Zionism and anti-semitism have nothing to do with each other. The Zionist lobby in countries like the U.S. and Australia is so strong. Helen Thomas is a recent example, even though I think her remarks were ill-judged and stupid. Nonetheless, what's happened to her so quickly, this grand old lady of United States journalism, how that day she was suddenly forced to resign – doesn't that show the power and the risk that you take when you speak out in favor of the oppressed, invaded Palestinian nation?

JKK: Yes, and when you mention that in Palestine right now it is the frontier era, I mean this for me really highlights the issue.

I saw for myself in January 2012 when I traveled there as part of a 5-scholar delegation. Obviously within settler colonial studies as a field of study for intellectual work in the academy, you know, comparative studies are important, but the settler colonials themselves undertook and still undertake a comparative approach to their own policies, their own military tactics. And I think that Israel modeling its occupation of Palestine in ways similar to what early Americans did to tribal nations throughout the nineteenth century in North America is really key. Speaking to a different comparative angle, could you offer your analysis of analogies between Israel and South Africa?

PW: Yes, I don't accept that apartheid and what's going on in Palestine are the same thing, for the reason that the Bantustans, the special native places that the South African government set up, were set up for the purpose of exploiting native labor. You were confined to your Bantustan unless you were being domestic labor, or you were working the mines or the farms or the factories of White South Africa, in which case you had to run around with a pass showing you were on your way to or from work, you had permission to be there. But the Bantustans were pools of labor which the workers would be taken out of and used as suited the White authorities, the apartheid authorities.

Palestinians are just being driven out. They're no pool of labor. Sure, they come in handy as cheap and hyperexploitable labor so long as they're still around, but Israel's primary goal is not to exploit them but to get rid of them. This is why they're energetically and systematically being replaced by anybody but a Palestinian. Bring in a million Russians, call them Jews, it's fine. A significant portion of them are Christians. They end up growing up and getting arrested in Israel running around in Nazi uniforms. Doesn't matter – they're not Palestinian. That's very different to South Africa, where segregation was for the purposes of exploitation for labor. For Palestinians, segregation is being marginalized. Israel is doing everything it can to free itself from any hint of dependence on Palestinian labor because it wants to get rid of them. So Zionism IS a form of apartheid in that it's racist, exclusive and oppressive. Israel's behavior squarely fits the international definition of the crime of apartheid under the 1973 International Convention on the Suppression and Punishment of the Crime of Apartheid and so on. All the same, it's not premised on the same basis as South African apartheid was – it's premised on elimination rather than exploitation. We have to recognize different forms of apartheid. They're all unacceptable.

JKK: And that really gets back to the core which is the Indigenous sovereignty question rather than a color line. I want to ask you something else as we're wrapping up the interview. Since your book, *Settler Colonialism and the Transformation of Anthropology*, was published just over a decade ago, the field of settler studies has grown to focus on collaborative and comparative theories of this process. I want to ask you how you see this new field developing.

PW: Well with mixed feelings. As you say, that book came out rather early – embarrassingly early, actually, seeing as I haven't done another book since. As a result, since it was fairly early, and it keeps getting quoted and cited, people quite often ask me: «What do you think?» – almost as if they're asking me: «What's happened to your offspring?», which is completely inappropriate. I didn't invent settler-colonial studies. Natives have been experts in the field for centuries.

I have mixed feelings, to be honest. What for me is a political practice – my intellectual practice is an activist practice so far as I'm concerned, which is not to say that I skimp on the facts. It's not to say that I cut corners. It's rather to say that I think the more you look at the facts, the more they stand up. The more rigorously you conduct your research, the more you establish that dispossessed Indigenous people have got the most substantial grounds for complaint and the most substantial claim for reparations and reversal of anyone on Earth. So I'm an activist-intellectual because I think that the truth speaks for itself and I believe you should keep uncovering the truth.

The problem is that I'm not sure that this applies to a mushrooming academic industry which spawns new theories and new buzzwords at the drop of a hat. I have that kind of concern.

JKK: Yes, and in conclusion, is there anything in particular with which you would like to close?

PW: Yes, there is one thing, and this applies to all settler-colonized peoples but I want to select the one we've been talking about last, the one that is so central and at the frontier stage as we speak. The last thing I want to say is: «Viva Palestine! Long live Palestine! Palestine will be free, from the river to the sea!».

Settler Logics and Writing Indians Out of Existence

A conversation between J. Kēhaulani Kauanui and Jean M. O'Brien[1]

Abstract

This conversation originated in a radio interview of Jean O'Brien conducted by J. Kēhaulani Kauanui on her public affairs show, «Indigenous Politics: From Native New England and Beyond» from September 21, 2010. The article is an expanded version of that interview, updated to reflect our ongoing dialogue. Kauanui invites O'Brien to lay out the central features of her newest book, *Firsting and Lasting: Writing Indians Out of Existence in New England*, which is a history of settler colonial processes central to the formation of the United States. O'Brien explains how 'writing Indians out of existence' bolstered their settler project of claiming nativity for themselves and their attempts to replace Native people on their land. The dialogue also explores the contemporary implications of this historical formation. Finally, O'Brien also discusses two current projects – one regarding her forthcoming book on historical images of American Indians in children's literature, and a contemporary co-edited volume of essays on federal recognition struggles among tribal nations in the United States. The conversation concludes with a brief discussion of the current state of Native American and its relation to Indigenous Studies.

Keywords: U.S. settler colonialism; logic of elimination; American Indians; historical erasure; New England.

J. Kēhaulani Kauanui: I would like to ask how you came to be a scholar working in Native American history.

Unsettling settler colonialism: The discourse and politics of settlers, and solidarity with Indigenous nations

Corey Snelgrove

Rita Kaur Dhamoon
University of Victoria

Jeff Corntassel
University of Victoria

Abstract
Our goal in this article is to intervene and disrupt current contentious debates regarding the predominant lines of inquiry bourgeoning in settler colonial studies, the use of 'settler', and the politics of building solidarities between Indigenous and non-Indigenous peoples. Settler colonial studies, 'settler', and solidarity, then, operate as the central themes of this paper. While somewhat jarring, our assessment of the debates is interspersed with our discussions in their original form, as we seek to explore possible lines of solidarity, accountability, and relationality to one another and to decolonization struggles both locally and globally. Our overall conclusion is that without centering Indigenous peoples' articulations, without deploying a relational approach to settler colonial power, and without paying attention to the conditions and contingency of settler colonialism, studies of settler colonialism and practices of solidarity run the risk of reifying (and possibly replicating) settler colonial as well as other modes of domination.

Keywords: *settler colonial studies; solidarity; Indigenous resurgence; place-based solidarity*

Introduction

Our goal in this article is intervene and disrupt current contentious debates regarding the predominant lines of inquiry bourgeoning in settler colonial studies, the use of 'settler', and the politics of building solidarities between Indigenous and non-Indigenous peoples. These three themes are not only salient in scholarly debates but also in practices of Indigenous resurgence, decolonization, anti-racism, feminist and queer work, and in alliances that challenge corporate pipeline expansion, resource extraction, colonial environmentalism, neo-liberal exploitation of temporary foreign workers, and violence against women, transgendered, and queer people. Through our own particular engagements with these issues, the three of us came together to think through our different relationships to settler colonial studies, debates about the term 'settler', and decolonizing relations of solidarity, with a shared commitment to practicing and/or supporting Indigenous resurgence. By Indigenous resurgence we mean ways to restore and regenerate Indigenous nationhood (Corntassel, 2012) and the "repatriation of Indigenous land and life" (Tuck & Yang, 2012). By centering Indigenous resurgence, we resist the disavowal of a colonial present still defined by Indigenous dispossession, we center transformative alternatives to this present articulated within Indigenous resurgence, and we remain attentive to the very ground upon which we stand. Indigenous resurgence, then, is our organizing frame for responding to the three themes of this essay, namely settler colonialism, settlers, and solidarity.

First, our process of thinking together revealed some uncertainty about the emerging institutionalization of *settler colonial studies* and its relationship to Indigenous studies; at the same time, the practice, structure, governmentality, and politics of settler colonialism distinctly sharpens the focus on ongoing colonialism, the dispossession of Indigenous lands, and the actual/attempted elimination of Indigenous peoples. It is this focus on power, land, and Indigenous bodies that we centre in our approach to the study of settler colonialism. But our understanding of settler colonialism is not one-dimensional; instead, we begin from the position that it is intrinsically shaped by and shaping interactive relations of coloniality, racism, gender, class, sexuality and desire, capitalism, and ableism. This multi-dimensional understanding of settler colonialism enables specificity in the ways to which place, culture, and relations of power are approached; reflects the ways in which the State has governed subjects differently; and emphasizes that the disruption of settler colonialism necessitates the disruption of intersecting forces of power such as colonialism, heteropatriarchy and capitalism. Second, our analysis and dialogue about the term '*settler*' illuminated that, whether using Indigenous words for 'settler' or the English word 'settler', these terms should be discomforting and provide an impetus for decolonial transformation through a renewed community-centered approach. This decolonizing praxis requires what Kanaka Maoli scholar Noelani Goodyear-Ka'ōpua (2013, pp. 30, 36) calls "land-centered literacies" which are "…based on an intimate connection with and knowledge of the land." At the same time, our concerns go beyond the proper assignment of 'settler', where we are vigilant of those who adopt and legitimize a "way of thinking with an imperialist's mind" (Alfred, 2009, p. 102). Third, while the language of *solidarity* does not fully capture the way we approach social struggles as interconnected, our collective conversations highlighted for us that

solidarity between Indigenous and non-Indigenous peoples must be grounded in actual practices and place-based relationships, and be approached as incommensurable but not incompatible.

We came together to think through the organizing concepts and politics of this paper together after a roundtable discussion at a Canadian political science conference that included two of the authors, with the third in the audience. The roundtable topic was broadly on settler colonialism, territorialities, and embodiments. Because of our pre-existing interests in anti-colonialism and decolonization, we were already aware of each other's scholarly and non-academic work and commitments to the politics of Indigenous resurgence. In particular, we were aware that as a methodology, a collective interview between a cis-gendered Tsalagi (Cherokee) man (Jeff Corntassel), cis-gendered white male (Corey Snelgrove), and cis-gendered woman of colour of Sikh origin (Rita Dhamoon) with different vantage points and interests would prompt multiple, albeit circumscribed, perspectives on settler colonialism, settler, and solidarity.

Given the proliferation of academic and non-academic sources on these topics over recent years, we had already been engaging together in these conversations informally (we have been at the same institution for two years, on Lekwungen and W̱SÁNEĆ territories) and it was a natural step to co-author a paper. We began first by assessing some of the recent literature on these concepts, and then started with the same questions for each concept, which we posed to one another in a series of face-to-face meetings over a period of a year. Our guiding questions were: how did we assess the current debates/literature on settler colonialism, and how can we disrupt some of the hegemonies that inevitably arise in the theory and practice of solidarity work between Indigenous and non-Indigenous peoples. Flowing from these questions emerged other sub-questions that reflected the debates in the relevant literature and our understanding of Indigenous resurgences. We recorded the interviews, and Corey transcribed the interviews (it is not lost on us that he was the student among us!). Two important methodological and epistemological points are worth emphasizing in our choice to conduct our collective interviews over an extended period of time: first, that it disrupted some (certainly not all of) the power dynamics of 'the expert scholar', where we each learned from one another and shifted our thinking collaboratively, challenged one another about our power differentials, and were constantly reminded of practicing our politics in theoretically-rich and action-oriented ways. Second, we unexpectedly built new kinds of relationships with one another that will travel with us as we take social action across issues and navigate the academy. This relationship building was an important reminder to us that good relations across differences take time and care, and a willingness to live in contention. As Nishnaabeg scholar Leanne Simpson points out, "Resurgence cannot occur in isolation. A collective conversation and mobilization is critical to avoid reproducing the individualism and colonial isolation that settler colonialism fosters" (2011, p. 69). Similarly, for Tsalagis (Cherokees), there is a word, digadatsele'i, which means 'we belong to each other'. If we take these relationships seriously, we must be willing to work through contention and, at times, disrupt discourses that reinscribe the colonial status quo.

As a way to anchor our power differentials and our various approaches to decolonization and resurgence, we begin by locating our social and cultural positions. This form of self-location

is already a common practice among some feminists and Indigenous peoples, but we specifically self-locate in relation to conceptions of 'settler' and settler colonialism and in response to the Oxford English Dictionary (OED) definitions (see Appendix), which Corey reviewed in tracing the etymology of these terms. This self-location exercise is a political practice that, while susceptible to performativity, ultimately reveals how each of us is coming to the paper differently and differentially. The rest of the paper is organized around the three major concepts of settler colonialism, settler, and solidarity. While somewhat jarring, because our collective interviews are in part responding to the respective literature on each of these concepts, we provide an assessment of that literature followed by the interview on each. Our overall conclusion is that without centering Indigenous peoples' articulations, without deploying a relational approach to settler colonial power, and without paying attention to the conditions and contingencies of settler colonialism, studies of settler colonialism and practices of solidarity run the risk of reifying (and possibly replicating) settler colonial, as well as other, modes of domination.

Self-locations: Locating settlement

Jeff Corntassel: What does it mean to acknowledge the Indigenous territory you're on? Are you coming to community, place-based relationships as a settler or as an Indigenous person? Additionally, how are you entering Indigenous homelands – as an invited guest, uninvited, trespasser, visitor, resident, immigrant, refugee etc.? How you situate yourself and your level of awareness about colonial occupations of Indigenous homelands brings new responsibilities to the forefront. Awareness of colonial realities requires us to go beyond a simple acknowledgement of the Indigenous nations and peoples of the territories you are visiting. It is a call for justice and the return of stolen lands/waterways to the Indigenous peoples who maintain special relationships to these places. Ultimately, what we are arguing for is a responsibility-based ethic of truth-telling to identify and act upon new pathways to Indigenous resurgence.

As a Tsalagi (Cherokee), the connection and responsibility to our homelands is unbroken, despite forced removal and dispossession. From our family history living in the Tsalagi homelands of Toquo, Tennessee, Lookout Mountain, Georgia, and Westville, Oklahoma, the Corntassel family's living historical legacy is to defend these places and honor our ancestral relationships. Like many Cherokee families, the consequences of forced removal and the Dawes Act (1901, 1906 amendments), which broke up collectively held land and distributed plots of land to individual Cherokees (and other Indigenous nations across the U.S.), led to further forced migrations; today my family is dispersed from Tennessee to California, all the way up to Alaska.

How do we carry our community consciousness and responsibilities with us even when we're not on our own territory? When visiting another Indigenous nation's territory, as Cherokees and Indigenous nations, we carry our communities and sense of place with us. According to Cherokee Elder Benny Smith, when arriving at another nation's territory, you are to come in the calmest, gentlest state of your being. This exemplifies to'hi dyanisti, or a call to

peaceful or healthy relationships. You only approach another Indigenous nation after you have thought it through, over and over again, and if there is willingness on the part of the host nation(s) to include or accept strangers.

How do our ancestors recognize us as Cherokee or Indigenous even when we're not living on our homelands? Ultimately it's about how we honor our place-based responsibilities and live our values and principles, as Tsalagi in everyday life, even when the land we're on does not recognize us. While the land may not recognize us, the goal is to be known not as strangers but as welcome visitors with accountability to the Indigenous nations and peoples of the territory.

Corey Snelgrove: I come from a family of predominantly English, Scottish, and German ancestors who arrived to the Eastern coast of what is now known as the United States from the early 17th century onwards, moving west and north in search of "opportunity" until arriving, at various times and in various places, on Anishinaabe and Haudenosaunee homelands around Lake Ontario. I come from a family of white settlers. And like my ancestors, I too have moved in search of "opportunity" and I now find myself occupying Lekwungen and W̱SÁNEĆ homelands. I too am a white settler, a colonizer. This recognition though is not meant to signal any innocence. There are no good settlers; there are no good colonizers. Instead, it signals complicity in the on-going processes of dispossession and eschewal of Indigenous nationhood. It necessarily connects me to histories and presents which shape how I came and come to be(ing) here. It is a sign that demands, that alludes to an accounting of, responsibility for, and nothing less than the destruction of settler colonialism. But a sign can also obscure, acting as an illusion, and disavow, operating as an elusion…

As the OED definition (in the Appendix) states, "to settle" involves both subject-formation and governance. Settlers have to be made and power relations between and among settlers and Indigenous peoples have to be reproduced in order for settler colonialism to extend temporally and spatially. Part of this subject formation involves disavowal of the processes of dispossession and disavowal of Indigenous governance structures. If we do not want to, my family and I do not have to think about, let alone experience, the violent processes that condition(ed) how we came and come to be here. Conversely, when we do choose to think about this, we are often able (and even encouraged) to think of it in terms of a celebratory, benevolent past. Yet, are all settlers able to ignore the processes of how one come's to be here or to think of it in terms of a celebratory past?

The subject formation and governance inherent to settling also involves processes of ordering, which govern the very notions of belonging. These processes of ordering, such as those based on white supremacy, not only enhance our privileges through exploitation, but also further enable my family and I to feel at home in other's homeland(s), or as the case may be, to disparage and even flee at the sight of Other(s). Belonging, after all, requires the discursive production and circulation of those who do not belong. "To settle" then remains differentiated in terms of race, national-origin, religion, class, dis/ability, sexuality, and gender. All of these

differentiations though are underwritten by the dispossession of Indigenous lands and eschewal of Indigenous governance orders. So while all non-Indigenous peoples residing in settler states may be complicit in settlement, making us all settlers, not all settlers are created equal. Subject-formation in settler colonies works in multiple ways, privileging in multiple ways, and settler colonialism's conditions of possibility rely on the differentiated forms of subject-formation and privilege. For myself, as a white, class-privileged, temporarily able-bodied, heterosexual, university-educated cis-male, the social world really is crafted in my image…

In spite of this worldly reflection, it is not the world that I want to live in. Thus, the term "settler" and the reason for its use, which brings forth the intimate and affective relationships to ancestral, social, cultural, economic, and political histories and presents which shape this world, necessarily leads not to pride, but rather to shame, frustration, alienation, and anger towards myself, other settlers, as well as the structures of settler colonialism. These feelings though also potentially signal an opening, a recognition of an un(der)realized interdependence. However, alone, these feelings are not sufficient. After all, I cannot just critique or declare that this world falls short of my desires and expect it to transform itself. Nor can I ignore the power differentials between settlers, as such willful acts risk stalling the decolonial engine. Instead, if these desires and simultaneous feelings of shame, frustration, alienation, and anger are to be at all transformative, they must be accompanied by thought and practice attentive to their respective sources; they must be guided by accountability and respect, care and renewal, with urgency and insurgency, to address and destroy the parasitical relations that exist between and among settlers and Indigenous peoples, as well as to support those (potentially) good relations that already exist, and those that we wish to establish between and among settlers and Indigenous peoples.

Rita Dhamoon: To settle in Canada, first on the traditional territories of Ojibway-Anishinaabe, then Musqueam and Qay'qayt First Nations, and now Lekwungen and W̱SÁNEĆ territories is, for me, linked to the global colonial context in which the British planted themselves, which includes now partitioned India and Pakistan. My family is from Punjab, India. I am from Punjab, India. This is a place where my great grandparents and grandparents struggled against British colonialism, and died for their struggle, and also where the seeds of colonizing fantasies were planted in the imaginations of my parents. The Brits were good at planting seeds, or should I say getting brown and black people to plant for profit. In the case of my parents, and many from their generation, moving westwards, moving to England was part of that colonizing fantasy, where 'progress' was supposedly available to everyone in European societies. After that fantasy collapsed with racial employment discrimination, displaced masculine violence, and attacks on my family from white supremacists, we moved further west, to Canada. This 'unsettling' move across continents, a move I made as a 'woman of colour' (a term I learned in Canada, as I was 'Black' in 1970s and 1980s England), means that I am structurally located as a settler.

When reflecting on the meaning of 'settle' (see Appendix), I think about what it means to materially take up residence, to take up abode in a foreign country, which I have done. 'To settle' is an attitude, a way of being that gets fixed in one's heart and mind, such that I don't have to

think about the violence against Indigenous peoples if I choose not to; it is to presume permanency, a temporality without an end; it is a way to establish authority over others, as the State and its settlers seek to do over Indigenous peoples; it is a mode of masculinity in which the land is married to exploitative capital; to settle does not require all settlers to own private property, but like many settlers I do. I now have citizenship in Canada, I was born and educated in the UK, and later further educated in Canada, I speak English with a western accent, I have a middle-class income, I carry no overt religious markings, and I have settled on stolen Indigenous land. Are these just performative declarations…

And, I do not have a "firm foundation" in this place, I have not "ceased from migration," am not resting "after agitation" or occupying a place that represents an "end of a series of changes", I am not seeking to secure "permanent regulations" upon others by "decree, ordinance, or enactment". But it doesn't matter. Settler colonialism does not work at the individual level, or need my consent or the consent of other individuals even, for it is a way of governing through a naturalized nation-state that erases Indigenous peoples and implicates us all, however well-intentioned we are, or differentially located. Like Corey, the white man among us, I am a settler, but the structural location of colonizer is more complex for me. My family, especially my great grandparents and grandparents were anti-colonialists in India, during formal British imperialism. Being anti-colonial is in me. I work to honour the struggles of my people against white supremacy and in my ongoing responsibilities towards other Others. I am suspicious of white men, and also know that the relationship with them cannot just be instrumental. I am suspicious of cis-men active in social struggles more generally, and also have obligations to Jeff, our Indigenous cis-male co-author, who symbolically legitimizes this collective paper, and in other ways to Corey who is also seeking a different way of being in the world. What holds us together, I think, in writing this paper, is our willingness to build relationships that centre power, anger (against what we each represent to the other), and the possibilities of love. With others, and in the context of interwoven struggles of social justice, I seek to unsettle.

Disrupting the institutionalization of settler colonial studies

Indigenous activists and scholars have long centred the constitutive features of settler colonial studies – land and the attempted elimination of Indigenous peoples – but now there is increasingly a body of work that signals the core of what has become known as settler colonial studies. Settler colonial studies as a distinct emerging field of study (rather than a site of struggle already critiqued by Indigenous peoples) has been centrally defined by Lorenzo Veracini's 2010 book, *Settler Colonialism: A Theoretical Overview*, Patrick Wolfe's 1999 book, *Settler Colonialism and the Transformation of Anthropology,* and his 2006 article "Settler Colonialism and the Elimination of the Native," and more recently with articles in the *Settler Colonial Studies* journal.

The bourgeoning field of settler colonial studies has made several important contributions, both theoretically and politically. First, settler colonialism is conceptually distinct

from other kinds of colonialism, in that it is rooted in the elimination of Indigenous peoples, polities and relationships from and with the land (Wolfe, 2006). Building on this, the distinctiveness of settler colonialism works to highlight the incommensurability between Indigenous struggles and, for instance, civil rights projects (see Byrd, 2014; Tuck & Yang, 2012). This has led Grande (2013), Macoun and Strakosch (2013), and Morgensen (2011c) to note the convergence of conservative and progressive goals by revealing settler investments in the dispossession of Indigenous lands. Second, conceptualizations of settler colonialism have provided ways to articulate its operations and effects. For instance, settler colonialism is being conceptualized in terms of its everyday modalities, what Rifkin (2013) calls 'settler colonial common sense'. Adam Barker (2012) draws on Wolfe and Veracini's definitions but also identifies settler colonialism as "a distinct method of colonizing" that involves " the creation and consumption of a whole array of spaces by settler collectives that claim and transform places through the exercise of their sovereign capacity" (p. 1). Settlement, then, is not led by elites alone (Barker, 2012, p. 1). Third, critics of settler colonialism have sharpened critiques of dominant power. Moreton-Robinson (2007, 2008), for instance, situates patriarchal white sovereignty as a constitutive feature of settler colonialism and the premise of settler logics of property; Byrd (2011) centres the deployment of Indianness as a constitutive feature of settler colonialism; Morgensen (2011b) centres settler colonialism in theories of biopower, state(s) of exception, and global governance; while Jackson (2014), King (2014), and Smith (2014) discuss the complex relationship between anti-blackness and settler colonialism. Fourth, studies of settler colonialism have also generated intellectual and political synergies between queer and feminist theories, Indigenous studies, and critiques of settler colonialism (Driskill et al., 2011; Morgensen, 2010, 2011a, 2012; Smith, 2010; Tuck et al., 2013), illuminating intersections and interactions, while simultaneously acknowledging the incommensurability of forces of colonial, gendered, and heteronormative power that Indigenous feminists (Green, 2007; Barker, 2008; Simpson, 2014) and postcolonial feminists have long emphasized.

In the tradition of critical approaches, scholars of (or engaging with) settler colonialism have also identified several challenges or weaknesses of this burgeoning field of study. Joanne Barker (2011), on the blog *Tequila Sovereign*, questioned the specificity of settler colonialism. Drawing on the etymological origins of "settle" as 'to reconcile', as well as in light of settler state apologies, Barker warns that settler colonialism may signal a nation-state that has moved "beyond its own tragically imperial and colonial history to be something else, still albeit colonial, but not quite entirely colonial." Second, Macoun and Strakosch (2013) note that settler colonial theory "is primarily a settler framework" that is largely about settler intentions to think through colonial relations (p. 427). This in itself may not be a problem, but as Macoun and Strakosch warn, settler colonial studies can re-empower non-Indigenous academic voices while marginalizing Indigenous resistance (2013, p. 436). Third, while settler colonialism is posited as both a condition of possibility (Rifkin, 2013) and a site of potential hope (Barker, 2012), there is an underlying "colonial fatalism" (Macoun and Strakosch, 2013, p. 435) that posits a structural inevitability to settler colonial relations. Macoun and Strakosch (2013) in particular note that

settler colonialism is unable to transcend itself precisely because it is conceptualized as a structure, where the only polarizing choices available to Indigenous peoples are either to be co-opted or hold a position of resistance/sovereign, while anti-colonial action by settlers is foreclosed. Fourth, the framework of settler colonialism has fostered over-characterizations of binary positions. Saranillio (2013), for instance, notes two common charges against settler colonial studies: that it affirms a binary of Indigenous and non-Indigenous, and that it leads to a neo-racist form of politics that requires non-Natives leave Indigenous territories (arguments that Sarinillo rejects). Moreover, we note that this binary, at times, has the effect of treating settler colonialism as a meta-structure, thus erasing both its contingency and the dynamics that co-constitute racist, patriarchal, homonationalist, ablest, and capitalist settler colonialism.

The institutionalization of settler colonial studies is quite remarkable. While some Indigenous journals have struggled to receive institutional support and funding, the journal *Settler Colonial Studies* – first published in 2011 in an open access format (entirely run on volunteer labour) to bring together critical scholarship on settler colonialism as a distinct social, cultural and historical formation with ongoing political effects (Edmonds and Carey, 2013, p. 2) – moved to a large academic publishing house, Taylor & Francis, within two years of being established. This institutionalization has been coupled with a proliferation of academic conferences, workshops, courses, and has also moved beyond academic confines through blogs, websites, workshops and teach-ins.

The institutionalization of settler colonial studies (rather than Indigenous studies) is on the one hand a significant shift in the academy. On the other hand, as de Leeuw, Greenwood, and Lindsay (2013) rightly argue, even when (and perhaps because) there are good intentions to decolonize and to "cultivate a culture of 'doing the right thing,'" there are no "fundamental shifts in power imbalances between Indigenous and non-Indigenous peoples or the systems within which we operate" (p. 386). Settler colonialism and the *study* of settler colonialism, in other words, cannot be decolonized because of good intentions. Following this, paradoxically and in deeply troubling ways, settler colonial studies can displace, overshadow, or even mask over Indigenous studies (for example, see Veracini, 2013) and variations within Indigenous studies, especially feminist and queer Indigenous work that is centred on Indigenous resurgence. Indeed the link between Indigenous studies and settler colonial studies is still in process. The synergies between the literature by/on two-spirited Indigenous identities, queer theory, Indigenous studies more broadly, and settler colonial studies are notable in their interwoven conversations across fields of study. But at times, Indigenous peoples and issues are de-centred in settler colonial studies (for example, Rifkin, 2013, p. 323). Furthermore, while Rifkin is right to argue that settler colonial practices and processes operate in everyday ways, are these practices really in the "background" (2013, p. 331), and for whom? Is settler colonialism "largely invisible", as Barker (2012) claims?

Yes, settler colonialism is naturalized, pervasive, and not just state-centred, but for whom is settler colonialism in the background and invisible? These kinds of claims seem to presume white settler subjectivity as the monolithic lens through which to examine settler colonialism and

dispossession, both in the context of whites and people of colour, in ways that obscures differentials of power. For Indigenous peoples, settler colonialism may not be the primary lens of living or theorizing, but it is also neither in the background or invisible.

Discussion

Jeff: What is the role of settler colonial studies in Indigenous studies? How should this conversation take place?

Corey: A recent issue of *Settler Colonial Studies* (3:3) came out with a corresponding issue in *American Indian Culture and Research Journal* (37:2), though both issues were edited by Patrick Wolfe. This makes me wonder about whether this is a way of building bridges between settler colonial studies and Indigenous studies, or instead, given that Wolfe edited both issues, is this a 'talking at?' I also wonder whether settler colonial studies is isolating itself, talking to the same crowd? What's more useful, isolation or disruption?

Rita: It does seem self-sustaining on some level – which may be inevitable since we're operating within an academic industrial complex. It seems complicated because on the one hand it's really good that settlers are taking this on as a project both theoretically and in practice. My concern is that it resonates with the emergence of critical whiteness studies and men's studies in the 1980s and 1990s, where there is some sort of anxiety at play for dominant groups. I wonder what anxieties are being masked over in the emergence and legitimacy of settler colonial studies, as a field distinct from Indigenous studies.

Jeff: It is interesting to see where *Settler Colonial Studies* thinks this is going to go. Are there legitimate linkages that they are trying to make? Or is it just about establishing their legitimacy as a field of inquiry?

*Rit***a**: Those scholars building queer critiques of settler colonialism who are working with Indigenous peoples in collaborative ways seem to make linkages in ways that is not as well reflected in settler colonial studies more generally. It's hard to assess at this stage, as in some ways it is early days for this field of study, although as Veracini notes in his work, settler colonial studies has a long history.

Corey: One reaction I have to these questions is that, for myself at least, it wasn't reading settler colonial studies that triggered anything for me, to begin to look critically at myself, my family, Canada. I can't help but think that in these works, the work and resistance of Indigenous peoples is overshadowed. For example, we

can look at Veracini's history of the concept [of settler colonialism] where Indigenous studies and Indigenous resistance is pretty much erased. Veracini briefly names both on the second last page, but then immediately goes on to credit white historians.

Rita: What you say Corey reminds of Black feminist bell hooks, who made the same point in the 1980s around the ways in which white feminists talk about critical whiteness studies, about how she was always doing critical whiteness studies – that was always her work. She's not a black feminist just talking about women of colour, for whiteness constitutes how we understand 'women of colour'. And so I wonder at the same time whether the claiming, or the framing of settler colonial studies itself, casts a shadow over the work that is being done by Indigenous scholars, who have been talking about the centrality of land, the specific nature of Indigenous experiences, and the role of settlers in dispossession for a long time now.

Jeff: I saw that when I was a grad student in political science. In the early 90s, political science scholars were just beginning to discuss Indigenous self-determination when Indigenous scholars and activists had been acting on it for decades by asserting their self-determining authority within United Nations' forums and on their homelands (for example, Akwesasne Notes, 1978). Yet it was non-Indigenous folks writing about this that received the acclaim… the other Indigenous research didn't conform to what was conceived of as Political Science… so when settlers take up these questions, it's suddenly considered a legitimate field of study.

Rita: Right. Exactly.

Jeff: Before it's viewed as a bunch of native activists…as I was called once, "an activist posing as an academic." And now with the involvement of settler academics it's viewed as a legitimate field of inquiry.

Rita: And there's something interesting too as people of colour are entering this discussion, often on terms set by white scholars and activists. This is a really interesting, ambiguous moment I think for people of colour, generating an anxiety that has prompted new ways of making declarations of solidarity. It is not Indigenous peoples who are anxious whether people of colour are defined as settlers. And while I think this moment serves to relieve white anxiety, for people of colour it has become about which side we are on, where do we place ourselves as non-Indigenous people who are trying to navigate racism and be accountable to

Indigenous peoples in the context of white supremacy and settlement. It can be a very tense moment, but one that can also tend to mask over the ways settlement happens through patriarchy, homophobia, transphobia, anti-Black racism, Islamaphobia.

Jeff: That's the really interesting part. It becomes about, like you said, how does settler colonial studies fit into Indigenous studies?

Rita: It seems that the current debate forces us to answer a question that, first of all, requires us to ask a very sort of positivist type of question: who's a settler. And it is also a necessary question when deciphering actual activist struggles against colonization… but it almost feels like a red herring. I just keep coming back to that. If our preoccupation becomes 'who is a settler', if that's what social justice activists (broadly defined) are fighting over, then who is dealing with white supremacist capitalism and heteropatriarchy, what's our target of critique? Where are we putting our energies? It's an important question and way to build relations, but such declarations can only take us so far.

Jeff: Well you see it in different ways, with the definition of Indigeneity. There's still this preoccupation with defining the term versus the implication of that term and the power of that term can be wielded to promote justice. It's a form of control – as I see it. You've got to narrow it down to a certain point where you can easily define it. It's only viewed as a legitimate field of study if you can define Indigenous in accordance with the UN Declaration on the Rights of Indigenous Peoples. Now that settler scholars are attempting to define the word settler, they are beginning to see the futility of such an exercise.

Rita: Right. Contain it. That's a modern liberal impulse…

Jeff: And the response to defining Indigenous has been a reliance on self-identification – 'okay, we're not going to fall into that definitional trap' – but then it creates other problems as well – groups just using that label of Indigeneity as an opportunistic way to distinguish themselves in the world system.

Rita: So what do you see as the work of that requirement to name, to categorize? How would you characterize that move to name, categorize – is that a process of delegitimizing? A process of containment?

Jeff: I see it as more containment. It's kind of that policy impulse – you've got to define your target.

> *Rita*: Right. Manage it, with the effect of depoliticizing the gendered nature of dispossession.
>
> *Jeff*: And if we have 5000-8000 Indigenous nations around the world trapped within 77 different countries, we become peoples for states to 'manage'. The underlying logic is that of an "Indigenous problem" to be contained. Locate the problem, and…
>
> *Rita*: Eradicate it…
>
> *Jeff:* Spatially locate it, ideologically, temporally all these things…

The questions we raise here on settler colonialism and power, prompted us to further reflect on the scholarly and activist debates on conceptions of 'settler' and how we understand this positionality.

'Settler' anxieties

Who is a settler? And why does it matter? These questions have been a preoccupation in activism and theory over recent years, especially for non-Indigenous peoples engaged in anti-colonial work, rather than Indigenous peoples. It is an anxiety that has manifested itself among white allies and, it seems more recently, communities of colour. Yet, despite the discussion and debate within the academy and beyond, there is ambiguity in regards to what is meant by 'settler'.

In examining the definition of 'settler' in the hegemonic site for English definitions and etymologies – that is the Oxford English Dictionary (OED), in comparison with other, critical articulations of 'settler', we can observe some resonances with and perhaps even a foreshadowing of the contemporary discussions and debates around the term. Perhaps most importantly in terms of its utility, throughout both the OED definition and other articulations, the occupation of land is central. In the OED definition of "settle", "place" and "property" are central in a number of usages. This is echoed by a number of other articulations. For example, Wolfe (2006) states that access to land is the primary motive for eliminating the native, and in settler colonialism "settler-colonizers come to stay" (p. 388); Bonita Lawrence and Ena Dua (2005) locate people of colour as settlers by virtue of living and owning land appropriated from Indigenous peoples, as well as exercising and seeking rights that are collectively denied to Indigenous peoples; Veracini (2011b) notes that "settlers do not discover: they carry their sovereignty and lifestyles with them. As they move towards what amounts to a representation of the world, as they transform the land into their image, they settle another place without really moving" (p. 206); and Eve Tuck and K. Wayne Yang (2012) similarly conclude that settlers are those who make Indigenous land "their home and source of capital." In addition, the OED also gestures to the relationship between settler colonial power and other forms of power, such as

capitalist property regimes and heteronormativity. Importantly signalling that this political positioning is not outside of other dominant discourses and State formations of masculinist, patriarchal, capitalism; in other words, while settlers are not without agency, they are variously and systemically positioned according to the shifting terms of State hegemonies.

However, the OED usage also differs in a number of respects. For example, the OED obscures the existence of Indigenous peoples and at times colonization, thereby performing terra nullius in the lexical register as well as portraying a perfection of settler colonialism. This is in stark contrast to other articulations, such as Lawrence and Dua (2005), Alfred (2009), and Tuck and Yang (2012) which center Indigenous sovereignty. Moreover, in other articulations, such as those just noted, 'settler' is deployed as a counter-performative term; not as containment, but as a demand for the transformation of 'settlers' through subjective *and* objective transformations. Furthermore, the OED also foreshadows some contemporary concerns through its emphasis on certainty. Once again, do all marginalized people feel certain, naturalized in white settler colonies? At the same time, how does that uncertainty lead one to disrupt complicity in Indigenous dispossession?

Discussion

Corey: So the question of 'who is a settler?'

Rita: I think about the work I've done with Indigenous peoples – we've had the conversations around about being on stolen land, or treaty land, where treaties have not been honoured by colonizers, and the obligations of non-Indigenous peoples, but I've not had Indigenous peoples express anxiety about the term settler. There has been an anxiety that I think has long existed among non-Indigenous peoples about how to be accountable about being on colonized land. The anxiety about 'settler' is just a recent manifestation of that.

Jeff: And also what is your set of criteria in defining a settler…

Rita: It's in activist spaces for sure – these kinds of declarations – 'I'm a settler, I'm pro-Palestinian, I support gays'… it can become a kind of mantra if we don't explain why we are making these statements. The term can be paralyzing for some non-Indigenous people who are absorbed by guilt, or it can mobilize action. 'Settler' certainly situates non-Indigenous peoples in a structural relationship to dispossession of Indigenous land and within imperialistic nation-building projects that require ongoing settlement. But it's contentious. Some folks are using different terms altogether: Scott Morgensen (2010) uses the term 'non-Native' in his piece on 'Settler Homonationalism' and Jodi Byrd (2011) references 'arrivants' in *Transit of Empire* to make distinctions between white settlers and settlers of

colour. It's also become clear that statements of 'I am settler' can become performative.

Jeff: Exactly. The thinking or mindset seems to be that settlers are in a different category, that they've shifted the terrain of discussion.

Rita: Yes. This seems especially heightened among people of colour since Bonita Lawrence and Ena Dua published their 2005 piece on decolonizing antiracism, which criticizes people of colour for failing to centre our implication in Indigenous dispossession. From their perspective, while there are differences among differently positioned people of colour (refugees, migrant workers, economic immigrants etc.), we are settlers. Sharma and Wright (2009) have responded to this by arguing that people of colour are not settlers, but they make their argument by denying Indigenous peoples relationship to their traditional lands. Then a third kind of response has emerged from some people of colour to say that we are settlers but not the same as white settlers. I find this third response more compelling, but I think the debate about types and degrees of settler is a distraction from critiques of how gendered dispossession, neo-liberal migration policies, and masculinist, capitalist white supremacy are linked.

Corey: I'm hesitant on the analogy between white declarations of anti-racism, and settler declarations of being a settler. Mostly because a declaration of being an anti-racist is different than saying one is a settler. The former is a move to innocence, the latter is not necessarily so. Yet, at the same time, I don't mean to argue that moves to innocence aren't happening with these declarations. For instance, we can see it on social media around 'upsettler'.

Rita: Tell us about this concept.

Corey: I think it was actually Eric Ritskes who said this phrase 'upsettler'[1] is a form of distancing, a move to innocence, as if those using it are saying 'I'm not like them. I'm not the problem'. As a move to innocence, it's a deferral of one's complicity and responsibility, as if colonization is only a problem because of others not quite getting it. In moves to innocence, those performing the move presume that there is such a thing as a good settler, a good colonizer, as if decolonization can occur outside of large scale, systematic subjective *and* objective transformations. While I've used 'upsettler' myself, it's use, obviously including my own, raises concerns because I'm interested in the potential of the 'settler' term – how it can be used to open discussions around responsibility, to

[1] A mash-up term, of 'upset' and 'settler', which began as a hashtag on Twitter.

identify and signal that colonization has never ceased, to "jumpstart the decolonial engine" by identifying the enemy, as George Ciccariello-Maher (2010) writes. But, at the same time, there is a danger of it being only a performance or, as others have noted, used by white settlers to flatten differences between non-Indigenous peoples, both of which, I think, stall the decolonial engine. I also think its potential depends on the space that you use it in. For instance, I see it used in Indigenous studies classrooms or at the Indigenous Governance program's Indigenous Leadership Forum at the University of Victoria. But, for example, I don't see it used in this political theory class that I audited last fall. This I think is an example of how 'settler' declarations can be just a move to innocence, which is problematic and disappointing in a number of ways. I think it can be disruptive, I think it – and its affects and effects – can foster transformative change (obviously not on its own), but it depends on the context, the space you're in.

Rita: I wonder then if it is more effective to make these kinds of statements/declarations in a context in which Indigeneity is not considered relevant? So it maybe is less effective to declare, 'I am a settler on X Indigenous land' in places where people are already mindful and aware of whose territory they are on, and more effective when people are not even aware that the territory is Indigenous.

Jeff: And then it just becomes, almost like a re-affirmation of the original logic of colonialism – paying lip service to the Indigenous peoples of the region but subsequently reinscribing settler names and histories on the landscapes. But settler studies, from what I've read, doesn't really discuss any new ways to confront that. It doesn't problematize it at the same time as declaring it.

Rita: Right. It depends on your audience.

Jeff: If you think about it, the most effective times I've used the term settler have been in spaces where folks are most resistant to it. And then it creates these tensions, but it also creates these great conversations about what is their role and responsibilities. I think folks become complacent with the term. There are several Indigenous words for settlers that provide deeper insights into the violence and destructiveness of historic and ongoing colonization. For example, yonega is a Tsalagi (Cherokee) term for white settlers, which connotes "foam of the water; moved by wind and without its own direction; clings to everything that's solid." Wasicu is a Dakota term for settlers, which means "taker of fat." In the northwest, hwunitum is a Hul'qumi'num and SENĆOŦEN word for settler, that some have described as "the hungry people". None of the above terms are positive reflections

> of settler society and represent the lived experiences of Indigenous nations amidst settler occupation. Often hearing that the word settler is offensive to some people or polarizing, I find that using Indigenous words to describe settler relationships can help to re-center the discussion and potential actions of solidarity back into community. Just as it is a challenge for Cherokees to be welcomed into another nation's territory as strangers, there is an urgent need for settlers to change their current relationships with the local Indigenous nations on whose territory they reside. If this is not the relationship one wants to embody, whether as yonega or hwunitum or any number of Indigenous terms for settler, then the impetus is on the settler to change the nature of the relationship by taking direction from Indigenous nations themselves. The ultimate goal is to create the need for a new word or phrase to describe positive features of a settler-Indigenous relationship.
>
> *Corey:* We've had similar conversations about this Jeff. And I think there is great potential in using Indigenous terms. It literally makes that Indigenous nation known to the settler, challenging the lie of Indigenous disappearance. It also reminds me of that scene on the train in France in *Black Skin, White Masks,* where Fanon identifies the enemy and makes himself known. And although the deployment of 'settler' certainly identifies the enemy (to me that is its function), it fails to make the Indigenous nation known. So, what you're talking about Jeff, this sort of counter-performative and thereby transformative demand, is often obscured by the definitions alone, especially when they are taken out of context, as well as by settler colonial studies, through their representation of settler colonialism as transhistorical and inevitable. I think this is at least partially attributed to the overshadowing of Indigenous peoples' articulations – their own accounts of Indigenous-settler relations, their own governance, legal and diplomatic orders. This then also stresses the importance of centering Indigenous resurgence to avoid the further disavowal of colonization and colonial fatalism, as well as to inform decolonization efforts.

In the next section, we build on Jeff's conclusions to consider ways to approach settler-Indigenous relations in ways that are directed towards disrupting settler colonialism and fostering Indigenous resurgences.

Responsibility for/in settler colonialism: Indigenous resurgence and settler solidarities

Above, Jeff discussed the importance of re-centering the discussion and actions of solidarity back into communities *and* a transformation of Indigenous-settler relationships. This reflects a broader trend in Indigenous studies, particularly within the Indigenous resurgence paradigm.

Indigenous resurgence is not a new phenomenon; as Leanne Simpson writes, it is Indigenous peoples' "original instruction" (2011, p. 66). In recent years though, Indigenous resurgence emerged to signal the importance of a turn away from dominant settler institutions, values, and ethics towards Indigenous institutions, values and ethics of "interdependency, cycles of change, balance, struggle, and rootedness" (Alfred, 2009, pp. 110, 250; Coulthard, 2008, 2013; Simpson, 2011, p. 17; Corntassel, 2012, p. 91). This simultaneous 'turn away and turn to' reflects Jeff's call for a re-centering of community in both discussion and action. Yet, there is much more to Indigenous resurgence than a 'turn away' from settler society. Since Indigenous resurgence is inherently in contention with settler society, it also has explicit and implicit demands of that which is being contended with – namely, settler society and its dominant values. Theorists of Indigenous resurgence, such as Taiaiake Alfred and Leanne Simpson, among others, also express the possibility for settler society listening, learning, and acting, with respect to one's position in relation to the colonial difference, in accordance with and for what is being articulated; in short, the possibility of settlers being transformed through anti-colonial resistance (see, for instance, Alfred, 2009, p. 35; Arvin, Tuck & Morill, 2013; Coulthard, 2013; Simpson, 2008 2011). Indigenous resurgence is ultimately about reframing the conversation around decolonization in order to re-center and reinvigorate Indigenous nationhood.

Recognizing how settler colonialism works through other forms of power, Indigenous theorists have also stressed the importance of dismantling other power structures for Indigenous liberation. For instance, Alfred states that "the end goal of our Wasáse – our warrior's dance" is the "transform[ation of] the whole of society," and a "remak[ing of] the entire landscape of power," to ultimately "reflect a truly post-imperial vision" (2009, p. 27); Arvin, Tuck and Morrill (2013) note how, "Native feminist theories offer new and reclaimed ways of thinking through not only how settler colonialism has impacted Indigenous and settler communities, but also how feminist theories can imagine and realize different modes of nationalism and alliances in the future" (p. 9); Coulthard (2013) definitively states that, "for Indigenous nations to live, capitalism must die"; Simpson (2011) writes that Indigenous resurgence, "requires a disruption of the capitalist industrial complex and the colonial gender systems (and a multitude of other institutions and systems) within settler nations" (p. 87); and Smith (2005) notes how sexual, gendered, and racial power works to naturalize hierarchies that effect both Indigenous and settler peoples (though, of course, in different ways), subsequently undermining alternatives to settler colonialism.

It seems clear to us that these explicit and implicit demands expressed through Indigenous resurgence, also provide important alternative and transformative visions articulated for Indigenous peoples and/with settlers. As Smith (2005) writes, "when we do not presume that [settler colonial states] should or will always continue to exist, we create the space to reflect on what might be more just forms of governance, not only for Native peoples, but for the rest of the world" (p. 311). This is because, "Indigenous sovereignty and nationhood are predicated on interrelatedness and responsibility" rather than hypermasculine configurations of sovereignty and self based on a rejection of interdependency and projection of impermeability (p. 311). At the

same time, following Coulthard (2014), centering the colonial relation corrects an "excessively temporal framing of [primitive accumulation]" (p. 58), resists "becoming complicit in the very structures and processes of domination that [critical theory] ought to oppose" through, for instance, blanket calls to reclaim the commons (p. 61), and, echoing Smith above, prevents "overlooking what could prove to be invaluable glimpses into the ethical practices and preconditions required of a more humane and sustainable world order" (p. 61).

In our collective discussion, we consider the question of solidarity in relation to the challenges and alternatives articulated above, specifically looking at some of the temporal and spatial aspects of solidarity building and how these relationships unfold.

Discussion

Rita: We need to problematize the question of solidarity because it separates issues, as if Indigenous issues are distinctly separate from migration issues, issues around temporary foreign workers, violence against women, etc. in two ways. One, it suggests that the white settler nation doesn't need to maneuver different bodies – Indigenous bodies, white bodies, bodies of colour, male, female, trans, queer, poor, disabled, religious, secular, citizens, noncitizen workers, refugees – differently. And also, in my case, people of colour are also structurally implicated in dispossession, whether that's our choice or not. So it posits that 'your' issues of Indigenous land are not separate from 'my' issues if I care about racism, sexism, and that I must think about the ways they are related to settler colonialism.

Jeff: I guess for me 'solidarity' gets away from the direct accountability, the trust elements that are embedded in any relationship that you have. So that trust and accountability are ongoing feedback loops, if you will, that you have to constantly renegotiate or reinterpret in order to act in solidarity, or act in concert, or act in camaraderie. But I think these terms mask the messiness of that overall process.

Corey: I agree with both your critiques. Solidarity does sometimes seem to imply a distinctness that, like you state Rita, ignores relations and complicity between. And like you state Jeff, there does seem to be an underlying conceptualization of solidarity as temporal event.

Jeff: And in terms of the temporal, at what point does forgetfulness become a problem? A Tsalagi saying, "Live in a longer 'now'— learn your history and culture and understand it is what you are now," urges us to consider that notions of time are fluid and flexible. After all, the Tsalagi word for "I am forgetting" is agikewsga, which literally means I am blind or am unable to see something that happened in the past (Altman and Belt, 2012, p. 232). To live in a longer 'now', it

becomes one's responsibility to live in tohi, or a process of balance and according to the pace of the natural world (p. 227). In this sense, 'the longer now' implies not just a different time scale but also future generational responsibilities. So there is a different sense of Indigenous place-based and living histories that should be understood by folks proposing to act in solidarity. If someone is just simply saying 'I'm a Canadian, and I don't know my history', how useful is that to deepening solidarity? Maybe that forgetfulness… is also sort of convenient. You haven't done the hard work to uncover your role, or your family's role in, whether it's direct colonial actions or just settling here.

Corey: This not knowing, this forgetting of our own histories, just supports the claiming of space and place. These histories too are obviously entangled and complex. For instance, my great-great grandfather and his family were settlers in Ohio, eventually becoming a doctor and Christian missionary in the interior of China. This side of my family stayed in China – over time, transitioning from Christian missionaries to foreign capitalists – until the Second World War, when my great-grandfather was interned and my grandmother with her mother and brother came to Canada. So my own ancestral history is entangled with the global structures of settler colonialism, capitalism, christianity, white supremacy and imperialism. And how does this affect my own approaches and thoughts to solidarity? If I'm responsible to Indigenous peoples who have been and continue to be displaced and dispossessed by myself and my ancestors, and thus accountable to the structures and practices of settler colonialism and ultimately their destruction, am I not also responsible for my ancestors who served as missionaries and capitalists in China, and thus accountable to the structures and practices undergirding those acts? How does this longer, entangled, complex history contribute to solidarity practices with Indigenous peoples, *and* (in combination and/or isolation) amongst settlers ourselves?

Rita: It is a challenge to know what it means to be 'fully grounded', in a social and political sense. Growing up in the UK as a brown person in the 1970s and 1980s, during the era of overt police racism, the rise of the National Front, the anti-immigrant stance of Margaret Thatcher, I recall noting that there was a battlefield and that I was in solidarity with nonwhites. When I first arrived in Canada, the terrain shifted. I remember a series of racist incidences my family and I experienced. One of them was when my brother went to apply for a job as a bar tender and, in the window it said, 'No dogs allowed, no Indians allowed'. He was mad when he got home, we were all angry. It took us a few months to realize that the notice was about Indigenous peoples, not us as peoples from India. But the connections and differences started to form in my mind. I find it helpful when I

think of the history of colonialisms, of my family, and my role in Canada now to use 'settler colonialism' because it centres the dispossession of land as a distinguishing and ongoing colonial feature. Colonial assemblages certainly exist in India today too, such as in the road or education system but this is not government by a colonial body. The challenge is when we see colonialisms and racisms as separate, because the dispossession of Indigenous peoples lands is related to the history of British and European imperialism in India, Africa, the Caribbean, and other parts of the world, and also continuing. And these are patriarchal, heteronormative, ablest, and capitalist imperial formations that remain relevant today.

Corey: This relational, interdependent focus is also important amongst settlers ourselves – perhaps as a way to counter the flattening of differences that occurs amongst settlers, particularly in solidarity work. Settlers obviously need to be doing our own work and challenging 'our' institutions and practices that serve to protect or further colonization. But we can't do this if we flatten the differences and ignore the inequalities and power relationships that exist within settler society. Not only does such flattening prevent much needed alliances but flattening itself can actually work to protect certain elements of settler colonialism. For instance, white supremacy works to naturalize *white* settler presence. In terms of solidarity then, I find it problematic for myself, as a white, class privileged, cis-hetero, and able bodied male (as well as people like me) to demand other peoples to act in solidarity, while also not holding myself (and others like me) responsible and accountable to other forms of violence that may be a contributing factor to the further reification of structures that support settler colonialism, like the State. Now I'm not arguing for the continued eschewal of Indigenous governance and legal orders because others experience violence, but rather, that the substantive recognition of Indigenous governance and legal orders also requires a dismantling of other, related forms of domination. This latter dismantling I see as necessary but also insufficient for the dismantling of settler colonialism. These sites and spaces of domination and resistance are distinct, but also connected dialectically. This seems to be something that settlers, white settlers specifically, have yet to articulate and take up, critique and act against. And this is perhaps most evident in how settlers seem to be continuously waiting for instruction from Indigenous peoples on how to act.

Rita: I wonder if this relational approach is a more useful direction for settler colonial studies, not unlike the kind of work you do Jeff, in thinking about colonialism in a global, comparative context.

Jeff: And I think, the more you can make those links, the British occupation of Maori territory is directly related to HBC's strategy to begin treaty making here… All those things are interrelated. They are shared, and they are seen as shared strategies. The other thing I see is this impulse to delocalize it… it's always that kind of Free Tibet Syndrome… the further away acts of genocide are from your location, the more outrage expressed at these injustices. It's a way of avoiding complicity, but it's also a way of recasting the gaze. It's like, 'We're not going to look right here, because this appears to be fairly peaceful' And so it's always that sort of re-directing away from localized responsibility, and almost magnifying impacts farther away.

Rita: So what settler colonial studies *does* do, is help us relocate to locality, which is helpful. You mention the HBC. I wonder what was the relationship between the Hudson Bay Company in Canada and the East India Company or the East Africa Company? If we're thinking about settler colonialism as a structure, how is it related to other modalities of gendered and sexualized white supremacy? How are the logics of State sovereignty and authority over nonwhite bodies connected? If we're thinking about it, as non-Indigenous peoples being 'in solidarity', part of that is locating, attacking the whole structure of imperialism that is deeply gendered and homonationalist, that depends on neo-liberal projects of prioritizing able-bodied workers who can serve capitalism.

Corey: Part of this, I think, what we've been discussing here, relates to what I sometimes see as the framing of 'settler' as event, rather than structure – where we are perhaps overly focused on the question of 'who' at the expense of the 'how'. If we don't understand how settlers are produced we run the risk of representing settlers as some sort of transhistorical subject with transhistorical practices. So I'm worried that while in one moment the term 'settler' denaturalizes our – that is all non-Indigenous peoples – presence on Indigenous lands, in the next, and through this construction of the 'settler' as transhistorical, we renaturalize it. In short, we go from a disavowal of colonization, to its representation as inevitable. Here is where I think a historical materialist or genealogical approach to the production of settler subjects may be useful in showing how this production is conditioned by but also contingent on a number of factors – white supremacy, hetero-patriarchy, capitalism, colonization, the eschewal of Indigenous governance and legal orders, environmental degradation, etc. Now this is also not to say that the binary of Indigenous/Settler isn't accurate. I think its fundamental. Rather, I think it is possible and important to recognize that there have been, and are, individuals (or even collectives) that might be referred to as something other than settlers by Indigenous peoples, perhaps as cousins. Or in a similar vein, that there have been

and are practices by settlers that aren't colonial (and here is where centering Indigenous peoples' accounts of Indigenous-settler relations, as well as their own governance, legal and diplomatic orders is crucial). But I think it's just as important to recognize that these relations have and do not occur *despite* settler colonial and imperial logics, and thus outside of the binary. Rather, such relations occur in the face of it. The binary then is fundamental as the logics that uphold the binary cannot be ignored due to the existence of possiblly good relations as the logics that uphold the binary threaten those relations through the pursuit of the elimination of Indigenous peoples.

Rita: Yet, how do we act in light of these entanglements, and with, rather than overcoming differences?

Corey: Tuck and Yang (2012) had this really great article, "Decolonization is not a Metaphor." In it, they talk about the importance of an ethics of incommensurability – a recognition of how anti-racist and anti-capitalist struggles are incommensurable with decolonization. But what I've been thinking about recently is whether these struggles are *incompatible*. For example, in the Indigenous resurgence literature, there is a turn away, but it's also not an outright rejection. It also demands settlers to change. Yet recognizing that settlers are (re)produced, the change demanded is not just an individual transformation, but one connected to broader social, economic, and political justice. There are then, it seems, potential lines of affinity between decolonization and others, though incommensurable, struggles. And in order to sustain this compatibility in the face of incommensurability, relationships are essential in order to maintain accountability and to resist repeating colonial and other relations of domination, as well as, in very strategic terms, in supporting each other's resistance.

Rita: As some anti-racist and Indigenous feminists have long argued, it's not possible for people of colour to confront different racisms without thinking about sexism, capitalist exploitation, homophobia and transphobia, Indigenous struggles – they are tied to one another. There is an affinity between decolonization and other struggles. Differently positioned people of colour and Indigenous peoples are not operating with the same kinds or degrees of authority as whites or each other, but nonetheless we are not outside of these relations and forces of power.

Jeff: I like building off Tuck and Yang too. It's a way of showing the linkages across these movements, but also how they can be tighter. How can we deepen them and focus on the everyday acts of resurgence that Indigenous peoples engage in?

Rita: What you say reminds me Corey about a question you have raised in another context on temporal and spatial solidarities.

Corey: In June 2013, at Congress, you both were on a panel titled "Solidarities, Territorialities, and Embodiments." At this panel, Jeff, you seemed to be challenging Rita's notion of "temporary solidarities" by emphasizing the importance of relationship grounded in place. So I first would question how useful 'temporary solidarities' as a concept is. Second, I'm wondering about the importance of bringing the role of territorialities within these discussions of solidarity themselves. Maybe, Jeff, what you were talking about at Congress and in conversations you and I have had, is a gesturing towards what we could potentially call 'spatial solidarities' – or bringing spatiality into discussions of solidarity.

Jeff: As the late Vine Deloria, Jr. (2001) has said, "power and place produce personality." In this sense, place-based relationships are personal and anything approaching spatial solidarity would entail the regeneration of Indigenous languages, ceremonial life, living histories, and nationhood. For this reason, spatial solidarities can be a way to localize struggles for Indigenous resurgence. While the "Idle No More" movement, which began in 2012 in Canada as a response to proposed legislation by Prime Minister Stephen Harper's government that undermined Indigenous protections of land and water, tapped into an ongoing and collective Indigenous struggle for land, culture and community, the settler support for it was predominantly temporally driven and performative rather than localized and land-based. I find that the most powerful mobilization for change happens when the spatial and temporal intersect.

Rita: This centering of land strikes me as constitutive to any kind of political work with Indigenous peoples. Can you give an example Jeff?

Jeff: One example might be how settlers are welcomed onto Indigenous homelands among Native nations in Australia. Beginning in the 1980's, Tasmanian activist and lawyer, Michael Mansell, issued 'Aboriginal Passports' to an Indigenous delegation visiting Libya in 1988. More recently, Aboriginal Passports have been issued to non-Indigenous people living on Indigenous homelands. Someone visiting Indigenous homelands in Australia can apply for an Aboriginal Passport and sign a pledge stating that, "We do not support the colonial occupation of Aboriginal and Torres Strait Islander lands" (Aboriginal Passport Ceremony, 2012). This innovative strategy challenges the authority of the Australian government to regulate the travel of visitors onto Indigenous homelands and raises

awareness of contemporary struggles of Indigenous peoples in order to build solidarity for future movements.

Rita: Corey, your question is helpful, and Jeff's response also helps me think through the movement between time-situated and place-based practices of 'solidarity' and ways of thinking about these situated practices in terms of an *ethos* of 'unsettled solidarities' that moves across time and space, that is a way of being in the world, a set of ongoing relations. Where I, where we, are never outside of struggle, everyone is 'structurally implicated' in the dispossession of Indigenous lands. Everyone is differentially structurally implicated, where the ideology of presumed consent underlies settler colonialism.

Jeff: I would add that living on another Indigenous nation's territory also carries an obligation to support those defending their homelands. Cheryl Bryce from Songhees First Nation started the "Community Tool Shed" in 2009 to generate support for the restoration of Lekwungen food systems. The Community Tool Shed in Victoria, British Columbia, is where settlers and Indigenous peoples can come together to rid the land of invasive species, such as Scottish Broom, and to revitalize traditional plants such as kwetlal or camas. Cheryl's focus for this informal group is on reclaiming traditional place names, educating people about the destructiveness of invasive species, and reinstating Lekwungen food systems. The tool shed meets once per month to pull invasive species on places that have been managed by Cheryl's family for generations, such as Meegan (aka, Beacon Hill Park), and Sitchamalth (Willows Beach). To a 'resident' of Lekwungen homelands, the above-mentioned places are public lands. This demonstrates the urgency of reclaiming Indigenous place names in tandem with the restoration of Indigenous foodscapes and landscapes. The May 22, 2013 reclamation of the name PKOLS (formerly known as Mount Douglas) is one of many examples where communities can come together to demand representation on their own terms. These are everyday acts of resurgence that highlight the terrain of Indigenous struggles to restore and reconnect a place-based existence.

Corey: And both examples you highlighted Jeff do not foreclose a wide-range of participants. The PKOLS reclamation led by the W̱SÁNEĆ peoples, involved participation from Indigenous peoples across Vancouver Island and across Turtle Island, it involved the university through the Indigenous Governance program, and it involved local, non-Indigenous, activist groups, most notably Social Coast. The Community Tool Shed, a project that I've also been involved in for the past two years, does something similar. What I find really interesting in this work is that settlers and Indigenous peoples challenge our environmentally degraded and

> colonial present simultaneously. Yet, there is still attention paid to the different roles and responsibilities in this work. For instance, non-Lekwungen people in removing invasive species, and Lekwungen people in managing these lands and in harvesting plants such as camas. So unlike other stewardship groups around Victoria, those participating are not seeking to depoliticize this work, nor do they argue that this work erases their complicity or their potential complicity in colonization. In supporting Cheryl's assertion of her roles and responsibilities, they aren't seeking to restore land in order to claim it for themselves. They aren't Locke redux. And, given the nature and extent of Broom here – you find it pretty much everywhere around Southern Vancouver Island, something like 18,000 seeds are produced in a single plant, and those seeds can lie dormant for up to thirty years – pulling broom one time really does not mean much. So there is a demand for long-term work, which itself can help build accountability through such place-based relationships. And since land is the irreducible element of settler colonialism, and that environmental degradation has often proceeded through and in support of settler colonialism, it provides an example of non-Indigenous practices with the land that aren't necessarily colonial. Now I'm not saying that this is an example of decolonization or that those involved are somehow not settlers. After all, decolonization and the transformation of settlers requires subjective and objective transformations. Rather it's a practice that does not reify colonization, and thus challenges settler colonial studies construction of settler colonialism as inevitable and transhistorical.

Conclusion

Decontextualized conceptions of settler colonial studies, 'settler', and solidarity risk further eschewing Indigenous peoples and thereby reifying the stolen land each of the above is founded upon. Perhaps, most centrally, this is done through de-centering Indigenous peoples own articulations of Indigenous-settler relations, their governance, legal, and diplomatic orders, and the transformative visions entailed within Indigenous political thought. Such de-centering has the potential to present settler colonialism as complete or transhistorical, as inevitable, rather than conditioned and contingent. This failure to attend to the conditions and contingency of settler colonialism can also be traced to the marginalization of how colonization actually proceeds across time and space. That is, as entangled with other relations of domination, and not only through structures, but also practices that serve as, what Paige Raibmon (2008) refers to, "microtechniques of dispossession." Those who critique settler colonialism through transhistorical representations are then able to feel good and satisfied about their criticisms, despite their ahistoricism and decontextualization, and thus their own role in actually sustaining colonial power by failing to attend to its conditions and contingency.

We ask: what good is it to analyze settler colonialism if that analysis does not shed light on sites of contradiction and weakness, the conditions for its reproduction, or the spaces and practices of resistance to it? What is the purpose of deploying 'settler' without attention to its utility, to what it alludes to or eludes from? What good is solidarity if it cannot attend to the literal (and stolen) ground on which people stand and come together upon?

In this paper, we have argued for a contextual approach to the questions of settler colonialism, settlers, and solidarity. It is ultimately about accountability to each other, as the Tsalagi word, digadatsele'i suggests, and treating Indigenous resurgence as a process that cannot occur in isolation. This, as argued throughout this paper, demands a centering of and support for Indigenous resurgences, and a shift from a one-dimensional to a relational approach to settler colonial analyses that is connected to the issue of other Others. This also demands place-based solidarities – that is, relationships and practices – that center both Indigenous resurgences and more relational approaches to settler colonial power. After all, settler colonialism will not be undone by analysis alone, but through lived and contentious engagement with the literal and stolen ground on which people stand and come together upon.

Appendix

"Settle", according to the Oxford English Dictionary, means:

1. *"To seat, place"*
2. *"To place (material things) in order, or in a convenient or desired position; to adjust (i.e. one's clothing)"*
3. *"To place (a person) in an attitude of repose, so as to be undisturbed for a time"*
4. *"To cause to take up one's residence in a place; esp. to establish (a body of persons) as residents in a town or country; to plant (a colony)". Two derivatives from the fourth definition are "to fix or establish permanently (one's abode, residence, etc.)," and "to furnish (a place) with inhabitants or settlers"*
5. *"To fix, implant (something) in (a person's heart, mind, etc.)"*
6. *"To set firmly on a foundation; to fix (a foundation) securely"*
7. *"Of things, esp. of flying or floating objects […] to come down and remain"*
8. *"To come together from dispersion or wondering […] of a body of persons: To direct their course to a common point"*
9. *"Of things: To lodge, come to rest, in a definite place after wandering"*
10. *"Of persons: To cease from migration and adopt a fixed abode; to establish a permanent residence […] become domiciled," with its derivative as "of a people: to take up its abode in a foreign country. Also to establish a colony"*
11. *"To come or bring to rest after agitation"*
12. *"Of persons: To become composed; to compose oneself to sleep; to come to a quiet or orderly state after excitement or restless activity"*

13. *"To quiet, tranquilize, compose (a person, his mind, brain, nerves, etc.); to allay (passion)"*
14. *"To come to an end of a series of changes or fluctuations and assume a definite form or condition"*
15. *"To ensure the stability or permanence of (a condition of things, a quality, a form of power, etc.)"*
16. *"To secure or confirm (a person) in a position of authority, an office; to install permanently, establish in an office, an employment." (First used in this manner by Hall in the Chronicles of King Henry VI, 1548: "When Kynge Henry was somewhat setteled in the realme of Scotlande")*
17. *"To establish (a person) in the matrimonial state"*
18. *"To establish (a person) in the legal possession of property"*
19. *"To secure (payment, property, title) to, on, or upon (a person) by decree, ordinance, or enactment"*
20. *"To subject to permanent regulations, to set permanently in order, place on a permanent footing (institutions, government)"*
21. *"To appoint or fix definitely beforehand, to decide upon (a time, place, plan of action, price, conditions, etc.) […] to adjust (one's action) to something". Derivatives of this definition include: "to appoint or arrange (something to be done or to take place)," "to fix by mutual agreement," "to come to a decision; to decide to do something; to decide upon (a plan of action, an object of choice)," "to settle for, to decide or agree on, to content oneself with"*
22. *"To decide, come to a fixed conclusion on (a question, a matter of doubt or discussion); to bring to an end (a dispute) by agreement or intervention." Derivatives of this use include: "Law. To decide (a case) by arrangement between the contesting parties," "To put beyond dispute, establish (a principle, fact) by authority or argument," "To arrange matters in dispute, to come to terms or agreement with a person"*
23. *"To close (an account) by a money payment; to pay (an account, bill, score)"*

Decolonization is not a metaphor

Eve Tuck
State University of New York at New Paltz

K. Wayne Yang
University of California, San Diego

Abstract
Our goal in this article is to remind readers what is unsettling about decolonization. Decolonization brings about the repatriation of Indigenous land and life; it is not a metaphor for other things we want to do to improve our societies and schools. The easy adoption of decolonizing discourse by educational advocacy and scholarship, evidenced by the increasing number of calls to "decolonize our schools," or use "decolonizing methods," or, "decolonize student thinking", turns decolonization into a metaphor. As important as their goals may be, social justice, critical methodologies, or approaches that decenter settler perspectives have objectives that may be incommensurable with decolonization. Because settler colonialism is built upon an entangled triad structure of settler-native-slave, the decolonial desires of white, non-white, immigrant, postcolonial, and oppressed people, can similarly be entangled in resettlement, reoccupation, and reinhabitation that actually further settler colonialism. The metaphorization of decolonization makes possible a set of evasions, or "settler moves to innocence", that problematically attempt to reconcile settler guilt and complicity, and rescue settler futurity. In this article, we analyze multiple settler moves towards innocence in order to forward "an ethic of incommensurability" that recognizes what is distinct and what is sovereign for project(s) of decolonization in relation to human and civil rights based social justice projects. We also point to unsettling themes within transnational/Third World decolonizations, abolition, and critical space-place pedagogies, which challenge the coalescence of social justice endeavors, making room for more meaningful potential alliances.

Keywords: *decolonization, settler colonialism, settler moves to innocence, incommensurability, Indigenous land, decolonizing education*

> Decolonization, which sets out to change the order of the world, is, obviously, a program of complete disorder. But it cannot come as a result of magical practices, nor of a natural shock, nor of a friendly understanding. Decolonization, as we know, is a historical process: that is to say it cannot be understood, it cannot become intelligible nor clear to itself except in the exact measure that we can discern the movements which give it historical form and content.

Introduction

For the past several years we have been working, in our writing and teaching, to bring attention to how settler colonialism has shaped schooling and educational research in the United States and other settler colonial nation-states. These are two distinct but overlapping tasks, the first concerned with how the invisibilized dynamics of settler colonialism mark the organization, governance, curricula, and assessment of compulsory learning, the other concerned with how settler perspectives and worldviews get to count as knowledge and research and how these perspectives - repackaged as data and findings - are activated in order to rationalize and maintain unfair social structures. We are doing this work alongside many others who - somewhat relentlessly, in writings, meetings, courses, and activism - don't allow the real and symbolic violences of settler colonialism to be overlooked.

Alongside this work, we have been thinking about what decolonization means, what it wants and requires. One trend we have noticed, with growing apprehension, is the ease with which the language of decolonization has been superficially adopted into education and other social sciences, supplanting prior ways of talking about social justice, critical methodologies, or approaches which decenter settler perspectives. Decolonization, which we assert is a distinct project from other civil and human rights-based social justice projects, is far too often subsumed into the directives of these projects, with no regard for how decolonization wants something different than those forms of justice. Settler scholars swap out prior civil and human rights based terms, seemingly to signal both an awareness of the significance of Indigenous and decolonizing theorizations of schooling and educational research, and to include Indigenous peoples on the list of considerations - as an additional special (ethnic) group or class. At a conference on educational research, it is not uncommon to hear speakers refer, almost casually, to the need to "decolonize our schools," or use "decolonizing methods," or "decolonize student thinking." Yet, we have observed a startling number of these discussions make no mention of Indigenous

peoples, our/their[1] struggles for the recognition of our/their sovereignty, or the contributions of Indigenous intellectuals and activists to theories and frameworks of decolonization. Further, there is often little recognition given to the immediate context of settler colonialism on the North American lands where many of these conferences take place.

Of course, dressing up in the language of decolonization is not as offensive as "Navajo print" underwear sold at a clothing chain store (Gaynor, 2012) and other appropriations of Indigenous cultures and materials that occur so frequently. Yet, this kind of inclusion is a form of enclosure, dangerous in how it domesticates decolonization. It is also a foreclosure, limiting in how it recapitulates dominant theories of social change. On the occasion of the inaugural issue of *Decolonization: Indigeneity, Education, & Society*, we want to be sure to clarify that decolonization is not a metaphor. When metaphor invades decolonization, it kills the very possibility of decolonization; it recenters whiteness, it resettles theory, it extends innocence to the settler, it entertains a settler future. Decolonize (a verb) and decolonization (a noun) cannot easily be grafted onto pre-existing discourses/frameworks, even if they are critical, even if they are anti-racist, even if they are justice frameworks. The easy absorption, adoption, and transposing of decolonization is yet another form of settler appropriation. When we write about decolonization, we are not offering it as a metaphor; it is not an approximation of other experiences of oppression. Decolonization is not a swappable term for other things we want to do to improve our societies and schools. Decolonization doesn't have a synonym.

Our goal in this essay is to remind readers what is unsettling about decolonization - what is unsettling and what should be unsettling. Clearly, we are advocates for the analysis of settler colonialism within education and education research and we position the work of Indigenous thinkers as central in unlocking the confounding aspects of public schooling. We, at least in part, want others to join us in these efforts, so that settler colonial structuring and Indigenous critiques of that structuring are no longer rendered invisible. Yet, this joining cannot be too easy, too open, too settled. Solidarity is an uneasy, reserved, and unsettled matter that neither reconciles present grievances nor forecloses future conflict. There are parts of the decolonization project that are not easily absorbed by human rights or civil rights based approaches to educational equity. In this essay, we think about what decolonization wants.

There is a long and bumbled history of non-Indigenous peoples making moves to alleviate the impacts of colonization. The too-easy adoption of decolonizing discourse (making decolonization a metaphor) is just one part of that history and it taps into pre-existing tropes that get in the way of more meaningful potential alliances. We think of the enactment of these tropes as a series of *moves to innocence* (Malwhinney, 1998), which problematically attempt to reconcile settler guilt and complicity, and rescue settler futurity. Here, to explain why decolonization is and requires more than a metaphor, we discuss some of these moves to innocence:

---

[1] As an Indigenous scholar and a settler/trespasser/scholar writing together, we have used forward slashes to reflect our discrepant positionings in our pronouns throughout this essay.

i. Settler nativism
ii. Fantasizing adoption
iii. Colonial equivocation
iv. Conscientization
v. At risk-ing / Asterisk-ing Indigenous peoples
vi. Re-occupation and urban homesteading

Such moves ultimately represent settler fantasies of easier paths to reconciliation. Actually, we argue, attending to what is irreconcilable within settler colonial relations and what is incommensurable between decolonizing projects and other social justice projects will help to reduce the frustration of attempts at solidarity; but the attention won't get anyone off the hook from the hard, unsettling work of decolonization. Thus, we also include a discussion of interruptions that unsettle innocence and recognize incommensurability.

The set of settler colonial relations

Generally speaking, postcolonial theories and theories of coloniality attend to two forms of colonialism[2]. *External colonialism* (also called exogenous or exploitation colonization) denotes the expropriation of fragments of Indigenous worlds, animals, plants and human beings, extracting them in order to transport them to - and build the wealth, the privilege, or feed the appetites of - the colonizers, who get marked as the first world. This includes so-thought 'historic' examples such as opium, spices, tea, sugar, and tobacco, the extraction of which continues to fuel colonial efforts. This form of colonialism also includes the feeding of contemporary appetites for diamonds, fish, water, oil, humans turned workers, genetic material, cadmium and other essential minerals for high tech devices. External colonialism often requires a subset of activities properly called military colonialism - the creation of war fronts/frontiers against enemies to be conquered, and the enlistment of foreign land, resources, and people into military operations. In external colonialism, all things Native become recast as 'natural resources' - bodies and earth for war, bodies and earth for chattel.

The other form of colonialism that is attended to by postcolonial theories and theories of coloniality is *internal colonialism*, the biopolitical and geopolitical management of people, land, flora and fauna within the "domestic" borders of the imperial nation. This involves the use of

[2] Colonialism is not just a symptom of capitalism. Socialist and communist empires have also been settler empires (e.g. Chinese colonialism in Tibet). "In other words," writes Sandy Grande, "both Marxists and capitalists view land and natural resources as commodities to be exploited, in the first instance, by capitalists for personal gain, and in the second by Marxists for the good of all" (2004, p.27). Capitalism and the state are technologies of colonialism, developed over time to further colonial projects. Racism is an invention of colonialism (Silva, 2007). The current colonial era goes back to 1492, when colonial imaginary goes global.

particularized modes of control - prisons, ghettos, minoritizing, schooling, policing - to ensure the ascendancy of a nation and its white[3] elite. These modes of control, imprisonment, and involuntary transport of the human beings across borders - ghettos, their policing, their economic divestiture, and their dislocatability - are at work to authorize the metropole and conscribe her periphery. Strategies of internal colonialism, such as segregation, divestment, surveillance, and criminalization, are both structural and interpersonal.

Our intention in this descriptive exercise is not be exhaustive, or even inarguable; instead, we wish to emphasize that (a) decolonization will take a different shape in each of these contexts - though they can overlap[4] - and that (b) neither external nor internal colonialism adequately describe the form of colonialism which operates in the United States or other nation-states in which the colonizer comes to stay. *Settler colonialism* operates through internal/external colonial modes simultaneously because there is no spatial separation between metropole and colony. For example, in the United States, many Indigenous peoples have been forcibly removed from their homelands onto reservations, indentured, and abducted into state custody, signaling the form of colonization as simultaneously internal (via boarding schools and other biopolitical modes of control) and external (via uranium mining on Indigenous land in the US Southwest and oil extraction on Indigenous land in Alaska) with a frontier (the US military still nicknames all enemy territory "Indian Country"). The horizons of the settler colonial nation-state are total and require a mode of total appropriation of Indigenous life and land, rather than the selective expropriation of profit-producing fragments.

Settler colonialism is different from other forms of colonialism in that settlers come with the intention of making a new home on the land, a homemaking that insists on settler sovereignty over all things in their new domain. Thus, relying solely on postcolonial literatures or theories of coloniality that ignore settler colonialism will not help to envision the shape that decolonization must take in settler colonial contexts. Within settler colonialism, the most important concern is land/water/air/subterranean earth (land, for shorthand, in this article.) Land is what is most valuable, contested, required. This is both because the settlers make Indigenous land their new home and source of capital, and also because the disruption of Indigenous relationships to land represents a profound epistemic, ontological, cosmological violence. This violence is not temporally contained in the arrival of the settler but is reasserted each day of occupation. This is why Patrick Wolfe (1999) emphasizes that settler colonialism is a structure and not an event. In the process of settler colonialism, land is remade into property and human relationships to land are restricted to the relationship of the owner to his property. Epistemological, ontological, and cosmological relationships to land are interred, indeed made pre-modern and backward. Made savage.

---

[3] In using terms as "white" and "whiteness", we are acknowledging that whiteness extends beyond phenotype.

[4] We don't treat internal/external as a taxonomy of colonialisms. They describe two operative modes of colonialism. The modes can overlap, reinforce, and contradict one another, and do so through particular legal, social, economic and political processes that are context specific.

In order for the settlers to make a place their home, they must destroy and disappear the Indigenous peoples that live there. Indigenous peoples are those who have creation stories, not colonization stories, about how we/they came to be in a particular place - indeed how we/they came to *be a place*. Our/their relationships to land comprise our/their epistemologies, ontologies, and cosmologies. For the settlers, Indigenous peoples are in the way and, in the destruction of Indigenous peoples, Indigenous communities, and over time and through law and policy, Indigenous peoples' claims to land under settler regimes, land is recast as property and as a resource. Indigenous peoples must be erased, must be made into ghosts (Tuck and Ree, forthcoming).

At the same time, settler colonialism involves the subjugation and forced labor of chattel slaves[5], whose bodies and lives become the property, and who are kept landless. Slavery in settler colonial contexts is distinct from other forms of indenture whereby *excess labor* is extracted from persons. First, chattels are commodities of labor and therefore it is the slave's *person* that is the excess. Second, unlike workers who may aspire to own land, the slave's very presence on the land is already an excess that must be dis-located. Thus, the slave is a desirable commodity but the person underneath is imprisonable, punishable, and murderable. The violence of keeping/killing the chattel slave makes them deathlike monsters in the settler imagination; they are reconfigured/disfigured as the threat, the razor's edge of safety and terror.

The settler, if known by his actions and how he justifies them, sees himself as holding dominion over the earth and its flora and fauna, as the anthropocentric normal, and as more developed, more human, more deserving than other groups or species. The settler is making a new "home" and that home is rooted in a homesteading worldview where the wild land and wild people were made for his benefit. He can only make his identity as a settler by making the land produce, and produce excessively, because "civilization" is defined as production in excess of the "natural" world (i.e. in excess of the sustainable production already present in the Indigenous world). In order for excess production, he needs excess labor, which he cannot provide himself. The chattel slave serves as that excess labor, labor that can never be paid because payment would have to be in the form of property (land). The settler's wealth is land, or a fungible version of it, and so payment for labor is impossible.[6] The settler positions himself as both superior and normal; the settler is natural, whereas the Indigenous inhabitant and the chattel slave are unnatural, even supernatural.

Settlers are not immigrants. Immigrants are beholden to the Indigenous laws and epistemologies of the lands they migrate to. Settlers become the law, supplanting Indigenous

[5] As observed by Erica Neeganagwedgin (2012), these two groups are not always distinct. Neeganagwedgin presents a history of the enslavement of Indigenous peoples in Canada as chattel slaves. In California, Mexico, and the U.S. Southwest under the Spanish mission system, Indigenous people were removed from their land and also made into chattel slaves. Under U.S. colonization, California law stipulated that Indians could be murdered and/or indentured by any "person" (white, propertied, citizen). These laws remained in effect until 1937.

[6] See Kate McCoy (forthcoming) on settler crises in early Jamestown, Virginia to pay indentured European labor with land.

laws and epistemologies. Therefore, settler nations are not immigrant nations (See also A.J. Barker, 2009).

Not unique, the United States, as a settler colonial nation-state, also operates as an empire - utilizing external forms and internal forms of colonization simultaneous to the settler colonial project. This means, and this is perplexing to some, that dispossessed people are brought onto seized Indigenous land through other colonial projects. Other colonial projects include enslavement, as discussed, but also military recruitment, low-wage and high-wage labor recruitment (such as agricultural workers and overseas-trained engineers), and displacement/migration (such as the coerced immigration from nations torn by U.S. wars or devastated by U.S. economic policy). In this set of settler colonial relations, colonial subjects who are displaced by external colonialism, as well as racialized and minoritized by internal colonialism, still occupy and settle stolen Indigenous land. Settlers are diverse, not just of white European descent, and include people of color, even from other colonial contexts. This tightly wound set of conditions and racialized, globalized relations exponentially complicates what is meant by decolonization, and by solidarity, against settler colonial forces.

Decolonization in exploitative colonial situations could involve the seizing of imperial wealth by the postcolonial subject. In settler colonial situations, seizing imperial wealth is inextricably tied to settlement and re-invasion. Likewise, the promise of integration and civil rights is predicated on securing a share of a settler-appropriated wealth (as well as expropriated 'third-world' wealth). Decolonization in a settler context is fraught because empire, settlement, and internal colony have no spatial separation. Each of these features of settler colonialism in the US context - empire, settlement, and internal colony - make it a site of contradictory decolonial desires[7].

Decolonization as metaphor allows people to equivocate these contradictory decolonial desires because it turns decolonization into an empty signifier to be filled by any track towards liberation. In reality, the tracks walk all over land/people in settler contexts. Though the details are not fixed or agreed upon, in our view, decolonization in the settler colonial context must involve the repatriation of land simultaneous to the recognition of how land and relations to land have always already been differently understood and enacted; that is, *all* of the land, and not just symbolically. This is precisely why decolonization is necessarily unsettling, especially across lines of solidarity. "Decolonization never takes place unnoticed" (Fanon, 1963, p. 36). Settler colonialism and its decolonization implicates and unsettles everyone.

[7] Decolonization is further fraught because, although the setter-native-slave triad structures settler colonialism, this does not mean that settler, native, and slave are analogs that can be used to describe corresponding identities, structural locations, worldviews, and behaviors. Nor do they mutually constitute one another. For example, Indigenous is an identity independent of the triad, and also an ascribed structural location within the triad. Chattel slave is an ascribed structural position, but not an identity. Settler describes a set of behaviors, as well as a structural location, but is eschewed as an identity.

Playing Indian and the erasure of Indigenous peoples

Recently in a symposium on the significance of Liberal Arts education in the United States, Eve presented an argument that Liberal Arts education has historically excluded any attention to or analysis of settler colonialism. This, Eve posited, makes Liberal Arts education complicit in the project of settler colonialism and, more so, has rendered the truer project of Liberal Arts education something like trying to make the settler indigenous to the land he occupies. The attendees were titillated by this idea, nodding and murmuring in approval and it was then that Eve realized that she was trying to say something incommensurable with what they expected her to say. She was completely misunderstood. Many in the audience heard this observation: that the work of Liberal Arts education is in part to teach settlers to be indigenous, as something admirable, worthwhile, something wholesome, not as a problematic point of evidence about the reach of the settler colonial erasure.

Philip Deloria (1998) explores how and why the settler wants to be made indigenous, even if only through disguise, or other forms of *playing Indian*. Playing Indian is a powerful U.S. pastime, from the Boston Tea Party, to fraternal organizations, to new age trends, to even those aforementioned Native print underwear. Deloria maintains that, "From the colonial period to the present, the Indian has skulked in and out of the most important stories various Americans have told about themselves" (p. 5).

> The indeterminacy of American identities stems, in part, from the nation's inability to deal with Indian people. Americans wanted to feel a natural affinity with the continent, and it was Indians who could teach them such aboriginal closeness. Yet, in order to control the landscape they had to destroy the original inhabitants. (Deloria, 1998, p.5)

L. Frank Baum (author of *The Wizard of Oz*) famously asserted in 1890 that the safety of white settlers was only guaranteed by the "total annihilation of the few remaining Indians" (as quoted in Hastings, 2007). D.H. Lawrence, reading James Fenimore Cooper (discussed at length later in this article), Nathaniel Hawthorne, Hector St. John de Crevecoeur, Henry David Thoreau, Herman Melville, Walt Whitman and others for his *Studies in Classic American Literature* (1924), describes Americans' fascination with Indigeneity as one of simultaneous desire and repulsion (Deloria, 1998).

> "No place," Lawrence observed, "exerts its full influence upon a newcomer until the old inhabitant is dead or absorbed." Lawrence argued that in order to meet the "demon of the continent" head on and this finalize the "unexpressed spirit of America," white Americans needed either to destroy Indians of assimilate them into a white American world...both aimed at making Indians vanish from the landscape. (Lawrence, as quoted in Deloria, 1998, p. 4).

Everything within a settler colonial society strains to destroy or assimilate the Native in order to disappear them from the land - this is how a society can have multiple simultaneous and conflicting messages about Indigenous peoples, such as all Indians are dead, located in faraway reservations, that contemporary Indigenous people are less indigenous than prior generations, and that all Americans are a "little bit Indian." These desires to erase - to let time do its thing and wait for the older form of living to die out, or to even help speed things along (euthanize) because the death of pre-modern ways of life is thought to be inevitable - these are all desires for another kind of resolve to the colonial situation, resolved through the absolute and total destruction or assimilation of original inhabitants.

Numerous scholars have observed that Indigeneity prompts multiple forms of settler anxiety, even if only because the presence of Indigenous peoples - who make *a priori* claims to land and ways of being - is a constant reminder that the settler colonial project is incomplete (Fanon, 1963; Vine Deloria, 1988; Grande, 2004; Bruyneel, 2007). The easy adoption of decolonization as a metaphor (and nothing else) is a form of this anxiety, because it is a premature attempt at reconciliation. The absorption of decolonization by settler social justice frameworks is one way the settler, disturbed by her own settler status, tries to escape or contain the unbearable searchlight of complicity, of having harmed others just by being one's self. The desire to reconcile is just as relentless as the desire to disappear the Native; it is a desire to not have to deal with this (Indian) problem anymore.

Settler moves to innocence

We observe that another component of a desire to play Indian is a settler desire to be made innocent, to find some mercy or relief in face of the relentlessness of settler guilt and haunting (see Tuck and Ree, forthcoming, on mercy and haunting). Directly and indirectly benefitting from the erasure and assimilation of Indigenous peoples is a difficult reality for settlers to accept. The weight of this reality is uncomfortable; the misery of guilt makes one hurry toward any reprieve. In her 1998 Master's thesis, Janet Mawhinney analyzed the ways in which white people maintained and (re)produced white privilege in self-defined anti-racist settings and organizations.[8] She examined the role of storytelling and self-confession - which serves to equate stories of personal exclusion with stories of structural racism and exclusion - and what she terms 'moves to innocence,' or "strategies to remove involvement in and culpability for systems of domination" (p. 17). Mawhinney builds upon Mary Louise Fellows and Sherene Razack's (1998) conceptualization of, 'the race to innocence', "the process through which a woman comes to believe her own claim of subordination is the most urgent, and that she is unimplicated in the subordination of other women" (p. 335).

Mawhinney's thesis theorizes the self-positioning of white people as simultaneously the oppressed and never an oppressor, and as having an *absence of experience* of oppressive power

[8] Thank you to Neoma Mullens for introducing Eve to Mawhinney's concept of moves to innocence.

relations (p. 100). This simultaneous self-positioning afforded white people in various purportedly anti-racist settings to say to people of color, "I don't experience the problems you do, so I don't think about it," and "tell me what to do, you're the experts here" (p. 103). "The commonsense appeal of such statements," Malwhinney observes, enables white speakers to "utter them sanguine in [their] appearance of equanimity, is rooted in the normalization of a liberal analysis of power relations" (ibid.).

In the discussion that follows, we will do some work to identify and argue against a series of what we call 'settler moves to innocence'. Settler moves to innocence are those strategies or positionings that attempt to relieve the settler of feelings of guilt or responsibility without giving up land or power or privilege, without having to change much at all. In fact, settler scholars may gain professional kudos or a boost in their reputations for being so sensitive or self-aware. Yet settler moves to innocence are hollow, they only serve the settler. This discussion will likely cause discomfort in our settler readers, may embarrass you/us or make us/you feel implicated. Because of the racialized flights and flows of settler colonial empire described above, settlers are diverse - there are white settlers and brown settlers, and peoples in both groups make moves to innocence that attempt to deny and deflect their own complicity in settler colonialism. When it makes sense to do so, we attend to moves to innocence enacted differently by white people and by brown and Black people.

In describing settler moves to innocence, our goal is to provide a framework of excuses, distractions, and diversions from decolonization. We discuss some of the moves to innocence at greater length than others, mostly because some require less explanation and because others are more central to our initial argument for the demetaphorization of decolonization. We provide this framework so that we can be more impatient with each other, less likely to accept gestures and half-steps, and more willing to press for acts which unsettle innocence, which we discuss in the final section of this article.

Moves to innocence I: Settler nativism

In this move to innocence, settlers locate or invent a long-lost ancestor who is rumored to have had "Indian blood," and they use this claim to mark themselves as blameless in the attempted eradications of Indigenous peoples. There are numerous examples of public figures in the United States who "remember" a distant Native ancestor, including Nancy Reagan (who is said to be a descendant of Pocahontas) and, more recently, Elizabeth Warren[9] and many others, illustrating how commonplace settler nativism is. Vine Deloria Jr. discusses what he calls the Indian-grandmother complex in the following account from *Custer Died for Your Sins*:

[9] See Francie Latour's interview (June 1 2012) with Kim Tallbear for more information on the Elizabeth Warren example. In the interview, Tallbear asserts that Warren's romanticized claims and the accusations of fraud are evidence of ways in which people in the U.S. misunderstand Native American identity. Tallbear insists that to understand Native American identity, "you need to get outside of that binary, one-drop framework."

> During my three years as Executive Director of the National Congress of American Indians it was a rare day when some white [person] didn't visit my office and proudly proclaim that he or she was of Indian descent...
>
> At times I became quite defensive about being a Sioux when these white people had a pedigree that was so much more respectable than mine. But eventually I came to understand their need to identify as partially Indian and did not resent them. I would confirm their wildest stories about their Indian ancestry and would add a few tales of my own hoping that they would be able to accept themselves someday and leave us alone.
>
> Whites claiming Indian blood generally tend to reinforce mythical beliefs about Indians. All but one person I met who claimed Indian blood claimed it on their grandmother's side. I once did a projection backward and discovered that evidently most tribes were entirely female for the first three hundred years of white occupation. No one, it seemed, wanted to claim a male Indian as a forebear.
>
> It doesn't take much insight into racial attitudes to understand the real meaning of the Indian-grandmother complex that plagues certain white [people]. A male ancestor has too much of the aura of the savage warrior, the unknown primitive, the instinctive animal, to make him a respectable member of the family tree. But a young Indian princess? Ah, there was royalty for the taking. Somehow the white was linked with a noble house of gentility and culture if his grandmother was an Indian princess who ran away with an intrepid pioneer...
>
> While a real Indian grandmother is probably the nicest thing that could happen to a child, why is a remote Indian princess grandmother so necessary for many white [people]? Is it because they are afraid of being classed as foreigners? Do they need some blood tie with the frontier and its dangers in order to experience what it means to be an American? Or is it an attempt to avoid facing the guilt they bear for the treatment of the Indians? (1988, p. 2-4)

Settler nativism, or what Vine Deloria Jr. calls the Indian-grandmother complex, is a settler move to innocence because it is an attempt to deflect a settler identity, while continuing to enjoy settler privilege and occupying stolen land. Deloria observes that settler nativism is gendered and considers the reasons a storied Indian grandmother might have more appeal than an Indian grandfather. On one level, it can be expected that many settlers have an ancestor who was Indigenous and/or who was a chattel slave. This is precisely the habit of settler colonialism, which pushes humans into other human communities; strategies of rape and sexual violence, and also the ordinary attractions of human relationships, ensure that settlers have Indigenous and chattel slave ancestors.

Further, though race is a social construct, Indigenous peoples and chattel slaves, particularly slaves from the continent of Africa, were/are racialized differently in ways that support/ed the logics and aims of settler colonialism (the erasure of the Indigenous person and

the capture and containment of the slave). "Indians and Black people in the US have been racialized in opposing ways that reflect their antithetical roles in the formation of US society," Patrick Wolfe (2006) explains:

> Black people's enslavement produced an inclusive taxonomy that automatically enslaved the offspring of a slave and any other parent. In the wake of slavery, this taxonomy became fully racialized in the "one-drop rule," whereby any amount of African ancestry, no matter how remote, and regardless of phenotypical appearance, makes a person Black. (p. 387)

Kim Tallbear argues that the one-drop rule dominates understandings of race in the United States and, so, most people in the US have not been able to understand Indigenous identity (Latour, 2012). Through the one-drop rule, blackness in settler colonial contexts is *expansive*, ensuring that a slave/criminal status will be *inherited* by an expanding number of 'black' descendants. Yet, Indigenous peoples have been racialized in a profoundly different way. Native American-ness[10] is *subtractive*: Native Americans are constructed to become fewer in number and *less* Native, but never exactly white, over time. Our/their status as Indigenous peoples/first inhabitants is the basis of our/their land claims and the goal of settler colonialism is to diminish claims to land over generations (or sooner, if possible). That is, Native American is a racialization that portrays contemporary Indigenous generations to be less authentic, less Indigenous than every prior generation in order to ultimately phase out Indigenous claims to land and usher in settler claims to property. This is primarily done through blood quantum registries and policies, which were forced on Indigenous nations and communities and, in some cases, have overshadowed former ways of determining tribal membership.

Wolfe (2006) explains:

> For Indians, in stark contrast, non-Indian ancestry compromised their indigeneity, producing "half-breeds," a regime that persists in the form of blood quantum regulations. As opposed to enslaved people, whose reproduction augmented their owners' wealth, Indigenous people obstructed settlers' access to land, so their increase was counterproductive. In this way, the restrictive racial classification of Indians straightforwardly furthered the logic of elimination. (p. 387)

The racializations of Indigenous people and Black people in the US settler colonial nation-state are geared to ensure the ascendancy of white settlers as the true and rightful owners and occupiers of the land.

> In the national mythologies of such societies, it is believed that white people came first and that it is they who principally developed the land; Aboriginal peoples are presumed to be mostly dead or assimilated. European settlers thus *become* the

[10] Native American, then, can be a signifier for how Indigenous peoples (over 500 federally recognized tribes and nations in the U.S. alone) are racialized into one vanishing race in the U.S. settler-colonial context.

> original inhabitants and the group most entitled to the fruits of citizenship." (Razack, 2002, p. 1-2; emphasis original.)

In the racialization of whiteness, blood quantum rules are reversed so that white people can stay white, yet claim descendance from an Indian grandmother. In 1924, the Virginia legislature passed the Racial Integrity Act, which enforced the one-drop rule *except* for white people who claimed a distant Indian grandmother - the result of strong lobbying from the aristocratic "First Families of Virginia" who all claim to have descended from Pocahontas (including Nancy Reagan, born in 1921). Known as the Pocahontas Exception, this loophole allowed thousands of white people to claim Indian ancestry, while actual Indigenous people were reclassified as "colored" and disappeared off the public record[11].

Settler nativism, through the claiming of a long-lost ancestor, invests in these specific racializations of Indigenous people and Black people, and disbelieves the sovereign authority of Indigenous nations to determine tribal membership. Dakota scholar Kim Tallbear (in an interview on the recent Elizabeth Warren example), provides an account that echoes and updates Deloria's account. Speaking to the many versions of settler nativism she has encountered, in which people say,

> "My great-great grandmother was an Indian princess." [or] "I'm descended from Pocohantas." What Elizabeth Warren said about the high cheekbones, I've had so many people from across the political spectrum say things that strange or stranger. And my point is, maybe you do have some remote ancestor. So what? You don't just get to decide you're Cherokee if the community does not recognize you as such (as quoted in Latour, 2012).

Ancestry is different from tribal membership; Indigenous identity and tribal membership are questions that Indigenous communities alone have the right to struggle over and define, not DNA tests, heritage websites, and certainly not the settler state. Settler nativism is about imagining an Indian past and a settler future; in contrast, tribal sovereignty has provided for an Indigenous present and various Indigenous intellectuals theorize decolonization as Native futures without a settler state.

Moves to innocence II: Settler adoption fantasies

Describing acts of passing, Sara Ahmed (2000) asserts the importance of being able to replace "the stranger", or take the place of the other, in the consolidation and (re)affirmation of white identity. To "become without becoming," is to reproduce "the other as 'not-I' *within* rather than *beyond* the structure of the 'I'" (p. 132). Sherene Razack, reading Ahmed, tells us that

[11] The 1940 Census only recorded 198 Indians in the State of Virginia. 6 out of 8 tribes in Virginia are currently unable to obtain federal recognition because of the racial erasure under the Racial Integrity Act (Fiske, 2004).

appropriating the other's pain occurs when, "we think we are recognizing not only the other's pain but his or her difference. Difference becomes the conduit of identification in much the same way as pain does" (Razack, 2007, p. 379). Discussing the film *Dances with Wolves* (a cinematic fiction of a Union soldier in the post-bellum Civil War era who befriends and protects the Lakota Sioux, who are represented as a noble, dying race), Ahmed critically engages the narrative, in which a white man (played by Kevin Costner) comes to respect the Sioux,

> to the point of being able to dance their dances...the white man in this example is able to 'to become without becoming' (Ahmed, 2000, p. 32)...He alone is transformed through his encounter with the Sioux, while they remain the mechanism for his transformation. He becomes the authentic knower while they remain what is to be known and consumed, and spit out again, as good Indians who confirm the white man's position as hero of the story...the Sioux remain objects, while Kevin Costner is able to go anywhere and be anything. (Ahmed's analysis, as discussed by Razack, 2007, p. 379).

For the purposes of this article, we locate the desire to *become without becoming [Indian]* within settler adoption fantasies. These fantasies can mean the adoption of Indigenous practices and knowledge, but more, refer to those narratives in the settler colonial imagination in which the Native (understanding that he is becoming extinct) hands over his land, his claim to the land, his very Indian-ness to the settler for safe-keeping. This is a fantasy that is invested in a settler futurity and dependent on the foreclosure of an Indigenous futurity.

Settler adoption fantasies are longstanding narratives in the United States, fueled by rare instances of ceremonial "adoptions", from John Smith's adoption in 1607 by Powhatan (Pocahontas' father), to Lewis Henry Morgan's adoption in 1847 by Seneca member Jimmy Johnson, to the recent adoption of actor Johnny Depp by the family of LaDonna Harris, a Comanche woman and social activist. As sovereign nations, tribes make decisions about who is considered a member, so our interest is not in whether adoptions are appropriate or legitimate. Rather, because the prevalence of the adoption narrative in American literature, film, television, holidays and history books far exceeds the actual occurrences of adoptions, we are interested in how this narrative spins a fantasy that an individual settler can become innocent, indeed heroic and indigenized, against a backdrop of national guilt. The adoption fantasy is the mythical trump card desired by critical settlers who feel remorse about settler colonialism, one that absolves them from the inheritance of settler crimes and that bequeaths a new inheritance of Native-ness *and claims to land* (which is a reaffirmation of what the settler project has been all along).

To more fully explain, we turn to perhaps the most influential version of the adoption narrative, penned by James Fenimore Cooper in 1823-1841. James Fenimore, son of "that genius in land speculation William Cooper" (Butterfield, 1954, p. 374), grew up in Six Nations territory that his father had grabbed and named after himself as Cooperstown, New York. In these Iroquois lakes, forests, and hills, James Fenimore, and later his daughter, Susan, imagined for themselves frontier romances full of tragic Indians, inventive and compassionate settlers, and virginal white/Indian women in virgin wilderness. Cooper's five-book series, collectively called

the *Leatherstocking Tales*, are foundational in the emergence of American literature. Melville called Cooper "our national author" and it was no exaggeration. His were the most widely read novels of the time and, in the age of the printing press, this meant they were the most circulated books in a U.S. print-based popular culture. Mass print established national language and identity, an "imagined community" (Anderson, 1991) from which emerges 'America' as a nation as opposed to just an assortment of former colonies. The *Tales* are credited with the constructions of the vanishing Indian, the resourceful Frontiersman, and the degenerate Negro: the pivotal triad of archetypes that forms the basis for an American national literature.

The Last of Mohicans is undoubtedly the most famous among the *Tales* and has been remade[12] into three separate television series in 1957, 1971, and 2004; an opera in 1977; a BBC radio adaptation in 1995; a 2007 Marvel comic book series; a stage drama in performance since 2010; and eleven separate films spanning 1912 to 1992. In a sense, *Last of the Mohicans* is a national narrative that has never stopped being remade[13].

Across all five books, Cooper's epic hero is Natty Bumppo, a white man 'gone native', at home in nature, praised for his wisdom and ways that are both Indian and white. In *Last of the Mohicans,* this hero becomes the adopted son of Chingachgook, fictional chief of the fictional tribe "Mohicans", who renames Natty, Nathaniel Hawkeye - thus legitimating and completing his Indigeneity. At the same time, Chingachgook conveniently fades into extinction. In a critical symbolic gesture, Chingachgook hands over his son Uncas - the last of the Mohicans - to the adopted, Indigenized white man, Hawkeye. When Uncas dies, the ramification is obvious: Hawkeye becomes without becoming the last of the Mohicans. *You are now one of us, you are now Native.* "The pale-faces are masters of the earth, and the time of the red-men has not yet come again" (Cooper 2000, p.407).

Cooper's books fantasize the founding and expansion of the U.S. settler nation by fictionalizing the period of 1740-1804, distilled into the single narrative of one man. The arc of his life stands in for the narrative of national development: the heroic settler Natty Bumppo transitions from British trapper to 'native' American, to prairie pioneer in the new Western frontier. Interestingly, the books themselves were written in reverse chronological order, starting with the pioneer, going backwards in time. Through such historical hypnosis, settler literature fabricates past lives, all the way back to an Indian past. 'I am American' becomes 'I was frontiersman, was British, was Indian'.

In this fantasy, Hawkeye is both adopter and adoptee. The act of adopting indigenous ways makes him 'deserving' to be adopted by the Indigenous. Settler fantasies of adoption alleviate the anxiety of settler un-belonging. He adopts the love of land and therefore thinks he belongs to the land. He is a first environmentalist and sentimentalist, nostalgic for vanishing

[12] Tellingly, these remakes were produced in Canada, Britain, Germany and the United States.

[13] To include all the 'remakes' of the story in its different forms (e.g. the post 9/11 historical fiction G*angs of New York*, the 2009 film *Avatar*, or the 2011 film *The Descendants* - also discussed in this article), would require an exhaustive and exhausting account well beyond the scope of this article.

Native ways. In today's jargon, he could be thought of as an eco-activist, naturalist, and Indian sympathizer. At the same time, his cultural hybridity is what makes him more 'fit' to survive - the ultimate social Darwinism - better than both British and Indian; he is the mythical American. Hawkeye, hybrid white and Indian, becomes the reluctant but nonetheless rightful inheritor of the land and warden of its vanishing people.

Similarly, the settler intellectual who hybridizes decolonial thought with Western critical traditions (metaphorizing decolonization), emerges superior to both Native intellectuals and continental theorists simultaneously. With his critical hawk-eye, he again sees the critique better than anyone and sees the world from a loftier station[14]. It is a fiction, just as Cooper's Hawkeye, just as the adoption, just as the belonging.

In addition to fabricating historical memory, the *Tales* serve to generate historical amnesia. The books were published between 1823-1841, at the height of the Jacksonian period with the Indian Removal Act of 1830 and subsequent Trail of Tears 1831-1837. During this time, 46,000 Native Americans were removed from their homelands, opening 25 million acres of land for re-settlement. The *Tales* are not only silent on Indian Removal but narrate the Indian as vanishing in an earlier time frame, and thus Indigenous people are already dead prior to removal.

Performing sympathy is critical to Cooper's project of settler innocence. It is no accident that he is often read as a sympathizer to the Indians (despite the fact that he didn't know any) in contrast to Jackson's policies of removal and genocide. Cooper is cast as the 'innocent' father of U.S. ideology, in contrast to the 'bad white men' of history.

Performing suffering is also critical to Cooper's project of settler innocence. Hawkeye takes on the (imagined) demeanor of the vanishing Native - brooding, vengeful, protecting a dying way of life, and unsuccessful in finding a mate and producing offspring. Thus sympathy and suffering are the tokens used to absorb the Native Other's difference, coded as pain, the 'not-I' into the 'I'.

The settler's personal suffering feeds his fantasy of mutuality. The 2011 film, *The Descendants,* is a modern remake of the adoption fantasy (blended with a healthy dose of settler nativism). George Clooney's character, "King" is a haole hypo-descendant of the last surviving princess of Hawai'i and reluctant inheritor of a massive expanse of land, the last wilderness on the Island of Kauai. In contrast to his obnoxious settler cousins, he earns his privilege as an overworked lawyer rather than relying on his unearned inheritance. Furthermore, Clooney's character suffers - he is a dysfunctional father, heading a dysfunctional family, watching his wife wither away in a coma, learning that she cheated on him - and so he is somehow Hawaiian at heart. Because pain is the token for oppression, claims to pain then equate to claims of being an innocent non-oppressor. By the film's end, King goes against the wishes of his profiteering settler cousins and chooses to "keep" the land, reluctantly accepting that his is the steward of the land, a responsibility bequeathed upon him as an accident of birth. This is the denouement of

[14] His lament is that no one else can see what he sees, just as Hawkeye laments his failed attempts to rescue white people from bad Indians, and good Indians from ignorant white people. He is the escapee from Plato's Cave. The rest of us are stuck in the dark.

reconciliation between the settler-I and the interiorized native-not-I within the settler. Sympathy and suffering are profoundly satisfying for settler cinema: *The Descendants* was nominated for 5 Academy Awards and won for Best Adapted Screenplay in 2012.

The beauty of this settler fantasy is that it adopts decolonization and aborts it in one gesture. Hawkeye adopts Uncas, who then conveniently dies. King adopts Hawai'i and negates the necessity for *ea*, Kanaka Maoli sovereignty. Decolonization is stillborn - rendered irrelevant because decolonization is already completed by the indigenized consciousness of the settler. Now 'we' are all Indian, all Hawaiian, and decolonization is no longer an issue. 'Our' only recourse is to move forward, however regretfully, with 'our' settler future.

In the unwritten decolonial version of Cooper's story, Hawkeye would lose his land back to the Mohawk - the real people upon whose land Cooperstown was built and whose rivers, lakes, and forests Cooper mined for his frontier romances. Hawkeye would shoot his last arrow, or his last long-rifle shot, return his eagle feather, and would be renamed Natty Bumppo, settler on Native land. The story would end with the moment of this recognition. Unresolved are the questions: Would a conversation follow after that between Native and the last settler? Would the settler leave or just vanish? Would he ask to stay, and if he did, who would say yes? These are questions that will be addressed at decolonization, and not a priori in order to appease anxieties for a settler future.

Moves to innocence III: Colonial equivocation

A more nuanced move to innocence is the homogenizing of various experiences of oppression as colonization. Calling different groups 'colonized' without describing their relationship to settler colonialism is an equivocation, "the fallacy of using a word in different senses at different stages of the reasoning" (Etymonline, 2001). In particular, describing all struggles against imperialism as 'decolonizing' creates a convenient ambiguity between decolonization and social justice work, especially among people of color, queer people, and other groups minoritized by the settler nation-state. 'We are all colonized,' may be a true statement but is deceptively embracive and vague, its inference: 'None of us are settlers.' Equivocation, or calling everything by the same name, is a move towards innocence that is especially vogue in coalition politics among people of color.

People of color who enter/are brought into the settler colonial nation-state also enter the triad of relations between settler-native-slave. We are referring here to the colonial pathways that are usually described as 'immigration' and how the refugee/immigrant/migrant is invited to be a settler in some scenarios, given the appropriate investments in whiteness, or is made an illegal, criminal presence in other scenarios. Ghetto colonialism, prisons, and under resourced compulsory schooling are specializations of settler colonialism in North America; they are

produced by the collapsing of internal, external, and settler colonialisms, into new blended categories[15].

This triad of settler-native-slave and its selective collapsibility seems to be unique to settler colonial nations. For example, all Aleut people on the Aleutian Islands were collected and placed in internment camps for four years after the bombing of Dutch Harbor; the stated rationale was the protection of the people but another likely reason was that the U.S. Government feared the Aleuts would become allies with the Japanese and/or be difficult to differentiate from potential Japanese spies. White people who lived on the Aleutian Islands at that same time were not interned. Internment in abandoned warehouses and canneries in Southeast Alaska was the cause of significant numbers of death of children and elders, physical injury, and illness among Aleut people. Aleut internment during WWII is largely ignored as part of U.S. history. The shuffling of Indigenous people between Native, enslavable Other, and Orientalized Other[16] shows how settler colonialism constructs and collapses its triad of categories.

This colonizing trick explains why certain minorities can at times become model and quasi-assimilable (as exemplified by Asian settler colonialism, civil rights, model minority discourse, and the use of 'hispanic' as an ethnic category to mean both white and non-white) yet, in times of crisis, revert to the status of foreign contagions (as exemplified by Japanese Internment, Islamophobia, Chinese Exclusion, Red Scare, anti-Irish nativism, WWII anti-semitism, and anti-Mexican-immigration). This is why 'labor' or 'workers' as an agential political class fails to activate the decolonizing project. "[S]hifting lines of the international division of labor" (Spivak, 1985, p. 84) bisect the very category of labor into caste-like bodies built for work on one hand and rewardable citizen-workers on the other. Some labor becomes settler, while excess labor becomes enslavable, criminal, murderable.

The impossibility of fully becoming a white settler - in this case, white referring to an exceptionalized position with assumed rights to invulnerability and legal supremacy - as articulated by minority literature preoccupied with "glass ceilings" and "forever foreign" status and "myth of the model minority", offers a strong critique of the myth of the democratic nation-state. However, its logical endpoint, the attainment of equal legal and cultural entitlements, is actually an investment in settler colonialism. Indeed, even the ability to be a minority citizen in the settler nation means an option to become a brown settler. For many people of color, becoming a subordinate settler is an option even when becoming white is not.

"Following stolen resources" is a phrase that Wayne has encountered, used to describe Filipino overseas labor (over 10% of the population of the Philippines is working abroad) and other migrations from colony to metropole. This phrase is an important anti-colonial framing of a

[15] E.g. Detention centers contain the foreign, non-citizen subject who is paradoxically outside of the nation yet at the mercy of imperial sovereignty within the metropole.

[16] We are using Orientalized Other in sense of the enemy other, following Edward Said's (1978) analysis of Orientalism.

colonial situation. However an anti-colonial critique is not the same as a decolonizing framework; anti-colonial critique often celebrates empowered postcolonial subjects who seize denied privileges from the metropole. This anti-to-post-colonial project doesn't strive to undo colonialism but rather to remake it and subvert it. Seeking stolen resources is entangled with settler colonialism because those resources were nature/Native first, then enlisted into the service of settlement and thus almost impossible to reclaim without re-occupying Native land. Furthermore, the postcolonial pursuit of resources is fundamentally an anthropocentric model, as land, water, air, animals, and plants are never able to become postcolonial; they remain objects to be exploited by the empowered postcolonial subject.

Equivocation is the vague equating of colonialisms that erases the sweeping scope of land as the basis of wealth, power, law in settler nation-states. Vocalizing a 'muliticultural' approach to oppressions, or remaining silent on settler colonialism while talking about colonialisms, or tacking on a gesture towards Indigenous people without addressing Indigenous sovereignty or rights, or forwarding a thesis on decolonization without regard to unsettling/deoccupying land, are equivocations. That is, they ambiguously avoid engaging with settler colonialism; they are ambivalent about minority / people of color / colonized Others *as settlers*; they are cryptic about Indigenous land rights in spaces inhabited by people of color.

Moves to innocence IV: Free your mind and the rest will follow

Fanon told us in 1963 that decolonizing the mind is the first step, not the only step toward overthrowing colonial regimes. Yet we wonder whether another settler move to innocence is to focus on decolonizing the mind, or the cultivation of critical consciousness, as if it were the sole activity of decolonization; to allow *conscientization* to stand in for the more uncomfortable task of relinquishing stolen land. We agree that curricula, literature, and pedagogy can be crafted to aid people in learning to see settler colonialism, to articulate critiques of settler epistemology, and set aside settler histories and values in search of ethics that reject domination and exploitation; this is not unimportant work. However, the front-loading of critical consciousness building can waylay decolonization, even though the experience of teaching and learning to be critical of settler colonialism can be so powerful it can feel like it is indeed making change. Until stolen land is relinquished, critical consciousness does not translate into action that disrupts settler colonialism. So, we respectfully disagree with George Clinton and Funkadelic (1970) and En Vogue (1992) when they assert that if you "free your mind, the rest (your ass) will follow."

Paulo Freire, eminent education philosopher, popular educator, and liberation theologian, wrote his celebrated book, *Pedagogy of the Oppressed*, in no small part as a response to Fanon's *Wretched of the Earth.* Its influence upon critical pedagogy and on the practices of educators committed to social justice cannot be overstated. Therefore, it is important to point out significant differences between Freire and Fanon, especially with regard to de/colonization. Freire situates the work of liberation in the minds of the oppressed, an abstract category of dehumanized worker vis-a-vis a similarly abstract category of oppressor. This is a sharp right

turn away from Fanon's work, which always positioned the work of liberation in the particularities of colonization, in the specific structural and interpersonal categories of Native and settler. Under Freire's paradigm, it is unclear who the oppressed are, even more ambiguous who the oppressors are, and it is inferred throughout that an innocent third category of enlightened human exists: "those who suffer with [the oppressed] and fight at their side" (Freire, 2000, p. 42). These words, taken from the opening dedication of *Pedagogy of the Oppressed*, invoke the same settler fantasy of mutuality based on sympathy and suffering.

Fanon positions decolonization as chaotic, an unclean break from a colonial condition that is already over determined by the violence of the colonizer and unresolved in its possible futures. By contrast, Freire positions liberation as redemption, a freeing of both oppressor and oppressed through their humanity. Humans become 'subjects' who then proceed to work on the 'objects' of the world (animals, earth, water), and indeed read the word (critical consciousness) in order to write the world (exploit nature). For Freire, there are no Natives, no Settlers, and indeed no history, and the future is simply a rupture from the timeless present. Settler colonialism is absent from his discussion, implying either that it is an unimportant analytic or that it is an already completed project of the past (a past oppression perhaps). Freire's theories of liberation resoundingly echo the allegory of Plato's Cave, a continental philosophy of mental emancipation, whereby the thinking man individualistically emerges from the dark cave of ignorance into the light of critical consciousness.

By contrast, black feminist thought roots freedom in the darkness of the cave, in that well of feeling and wisdom from which all knowledge is recreated.

> These places of possibility within ourselves are dark because they are ancient and hidden; they have survived and grown strong through darkness. Within these deep places, each one of us holds an incredible reserve of creativity and power, of unexamined and unrecorded emotion and feeling. The woman's place of power within each of us is neither white nor surface; it is dark, it is ancient, and it is deep. (Lorde, 1984, pp. 36-37)

Audre Lorde's words provide a sharp contrast to Plato's sight-centric image of liberation: "The white fathers told us, I think therefore I am; and the black mothers in each of us - the poet - whispers in our dreams, I feel therefore I can be free" (p. 38). For Lorde, writing is not action upon the world. Rather, poetry is giving a name to the nameless, "first made into language, then into idea, then into more tangible action" (p. 37). Importantly, freedom is a possibility that is not just mentally generated; it is particular and felt.

Freire's philosophies have encouraged educators to use "colonization" as a metaphor for oppression. In such a paradigm, "internal colonization" reduces to "mental colonization", logically leading to the solution of decolonizing one's mind and the rest will follow. Such philosophy conveniently sidesteps the most unsettling of questions:

> The essential thing is to see clearly, to think clearly - that is, dangerously and to answer clearly the innocent first question: what, fundamentally, is colonization? (Cesaire, 2000, p. 32)

Because colonialism is comprised of global and historical relations, Cesaire's question must be considered globally and historically. However, it cannot be reduced to a global answer, nor a historical answer. To do so is to use colonization metaphorically. "What is colonization?" must be answered specifically, with attention to the colonial apparatus that is assembled to order the relationships between particular peoples, lands, the 'natural world', and 'civilization'. Colonialism is marked by its specializations. In North America and other settings, settler sovereignty imposes sexuality, legality, raciality, language, religion and property in specific ways. Decolonization likewise must be thought through in these particularities.

> To agree on what [decolonization] is not: neither evangelization, nor a philanthropic enterprise, nor a desire to push back the frontiers of ignorance, disease, and tyranny... (Cesaire, 2000, p. 32)

We deliberately extend Cesaire's words above to assert what decolonization is not. It is not converting Indigenous politics to a Western doctrine of liberation; it is not a philanthropic process of 'helping' the at-risk and alleviating suffering; it is not a generic term for struggle against oppressive conditions and outcomes. The broad umbrella of social justice may have room underneath for all of these efforts. By contrast, decolonization specifically requires the repatriation of Indigenous land and life. Decolonization is not a metonym for social justice.

We don't intend to discourage those who have dedicated careers and lives to teaching themselves and others to be critically conscious of racism, sexism, homophobia, classism, xenophobia, and settler colonialism. We are asking them/you to consider how the pursuit of critical consciousness, the pursuit of social justice through a critical enlightenment, can also be settler moves to innocence - diversions, distractions, which relieve the settler of feelings of guilt or responsibility, and conceal the need to give up land or power or privilege.

Anna Jacobs' 2009 Master's thesis explores the possibilities for what she calls *white harm reduction* models. Harm reduction models attempt to reduce the harm or risk of specific practices. Jacobs identifies white supremacy as a public health issue that is at the root of most other public health issues. The goal of white harm reduction models, Jacobs says, is to reduce the harm that white supremacy has had on white people, and the deep harm it has caused non-white people over generations. Learning from Jacobs' analysis, we understand the curricular-pedagogical project of critical consciousness as *settler harm reduction,* crucial in the resuscitation of practices and intellectual life outside of settler ontologies. (Settler) harm reduction is intended only as a stopgap. As the environmental crisis escalates and peoples around the globe are exposed to greater concentrations of violence and poverty, the need for settler harm reduction is acute, profoundly so. At the same time we remember that, by definition, settler harm

reduction, like conscientization, is not the same as decolonization and does not inherently offer any pathways that lead to decolonization.

Moves to innocence V: A(s)t(e)risk peoples

This settler move to innocence is concerned with the ways in which Indigenous peoples are counted, codified, represented, and included/disincluded by educational researchers and other social science researchers. Indigenous peoples are rendered visible in mainstream educational research in two main ways: as "at risk" peoples and as asterisk peoples. This comprises a settler move to innocence because it erases and then conceals the erasure of Indigenous peoples within the settler colonial nation-state and moves Indigenous nations as "populations" to the margins of public discourse.

As "at risk" peoples, Indigenous students and families are described as on the verge of extinction, culturally and economically bereft, engaged or soon-to-be engaged in self-destructive behaviors which can interrupt their school careers and seamless absorption into the economy. Even though it is widely known and verified that Native youth gain access to personal and academic success when they also have access to/instruction in their home languages, most Native American and Alaskan Native youth are taught in English-only schools by temporary teachers who know little about their students' communities (Lomawaima and McCarty, 2006; Lee, 2011). Even though Indigenous knowledge systems predate, expand, update, and complicate the curricula found in most public schools, schools attended by poor Indigenous students are among those most regimented in attempts to comply with federal mandates. Though these mandates intrude on the sovereignty of Indigenous peoples, the "services" promised at the inception of these mandates do little to make the schools attended by Indigenous youth better at providing them a compelling, relevant, inspiring and meaningful education.

At the same time, Indigenous communities become the asterisk peoples, meaning they are represented by an asterisk in large and crucial data sets, many of which are conducted to inform public policy that impact our/their lives (Villegas, 2012). Education and health statistics are unavailable from Indigenous communities for a variety of reasons and, when they are made available, the size of the *n*, or the sample size, can appear to be negligible when compared to the sample size of other/race-based categories. Though Indigenous scholars such as Malia Villegas recognize that Indigenous peoples are distinct from each other but also from other racialized groups surveyed in these studies, they argue that difficulty of collecting basic education and health information about this small and heterogeneous category must be overcome in order to counter the disappearance of Indigenous particularities in public policy.

In U.S. educational research in particular, Indigenous peoples are included only as asterisks, as footnotes into dominant paradigms of educational inequality in the U.S. This can be observed in the progressive literature on school discipline, on 'underrepresented minorities' in higher education, and in the literature of reparation, i.e., redressing 'past' wrongs against non-white Others. Under such paradigms, which do important work on alleviating the symptoms of

colonialism (poverty, dispossession, criminality, premature death, cultural genocide), Indigeneity is simply an "and" or an illustration of oppression. 'Urban education', for example, is a code word for the schooling of black, brown, and ghettoized youth who form the numerical majority in divested public schools. Urban American Indians and Native Alaskans become an asterisk group, invisibilized, even though about two-thirds of Indigenous peoples in the U.S. live in urban areas, according to the 2010 census. Yet, urban Indians receive fewer federal funds for education, health, and employment than their counterparts on reservations (Berry, 2012). Similarly, Native Pasifika people become an asterisk in the Asian Pacific Islander category and their politics/epistemologies/experiences are often subsumed under a pan-ethnic Asian-American master narrative. From a settler viewpoint that concerns itself with numerical inequality, e.g. the achievement gap, underrepresentation, and the 99%'s short share of the wealth of the metropole, the asterisk is an outlier, an outnumber. It is a token gesture, an inclusion and an enclosure of Native people into the politics of equity. These acts of inclusion assimilate Indigenous sovereignty, ways of knowing, and ways of being by remaking a collective-comprised tribal identity into an individualized ethnic identity.

From a decolonizing perspective, the asterisk is a body count that does not account for Indigenous politics, educational concerns, and epistemologies. Urban land (indeed all land) is Native land. The vast majority of Native youth in North America live in urban settings. Any decolonizing urban education endeavor must address the foundations of urban land pedagogy and Indigenous politics *vis-a-vis* the settler colonial state.

Moves to innocence VI: Re-occupation and urban homesteading

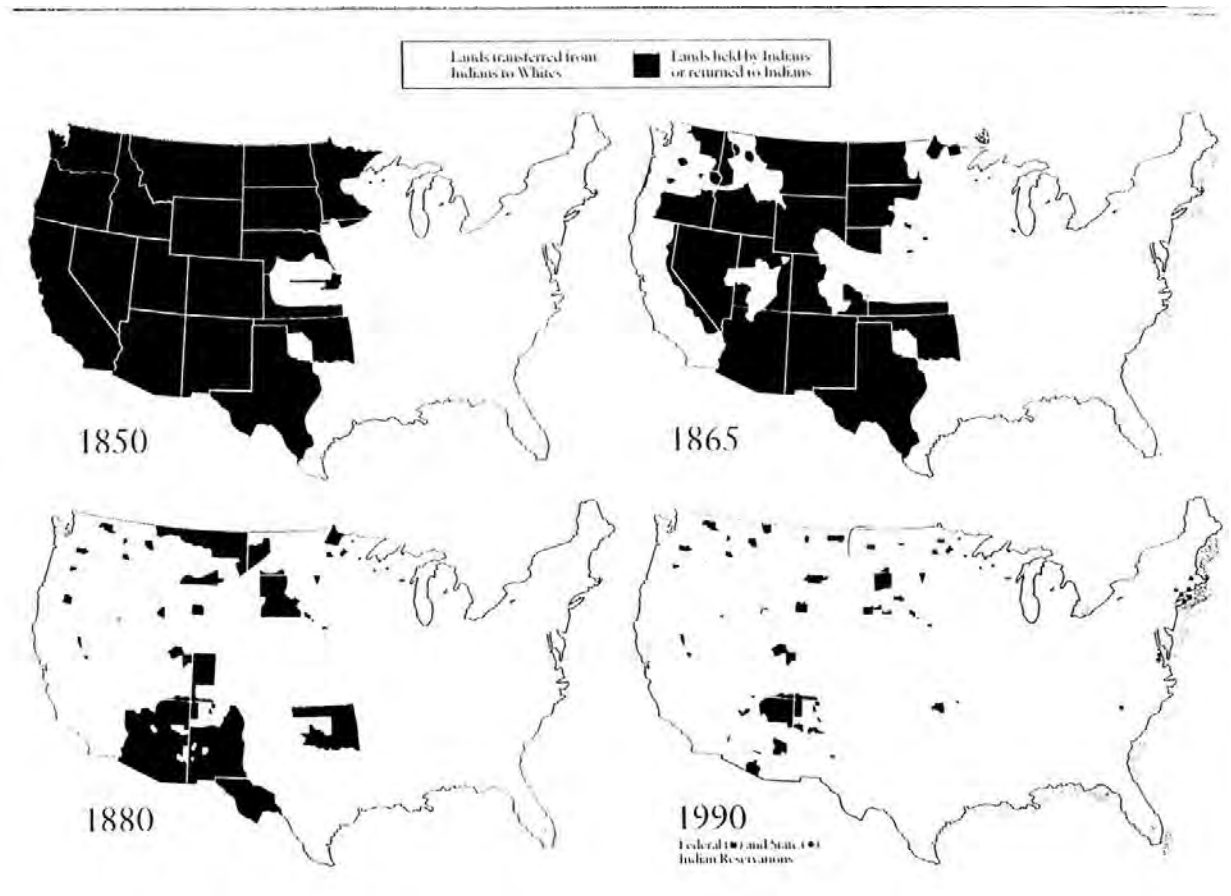
The Occupy movement for many economically marginalized people has been a welcome expression of resistance to the massive disparities in the distribution of wealth; for many Indigenous people, Occupy is another settler re-occupation on stolen land. The rhetoric of the movement relies upon problematic assumptions about social justice and is a prime example of the incommensurability between "re/occupy" and "decolonize" as political agendas. The pursuit of worker rights (and rights to work) and minoritized people's rights in a settler colonial context can appear to be anti-capitalist, but this pursuit is nonetheless largely pro-colonial. That is, the ideal of "redistribution of wealth" camouflages how much of that wealth is *land*, Native land. In Occupy, the "99%" is invoked as a deserving supermajority, in contrast to the unearned wealth of the "1%". It renders Indigenous peoples (a 0.9% 'super-minority') completely invisible and absorbed, just an asterisk group to be subsumed into the legion of occupiers.

Figure 1.1. If U.S. land were divided like U.S. wealth

For example, "If U.S. land were divided like U.S. wealth" (figure 1.1) is a popular graphic that was electronically circulated on the Internet in late 2011 in connection with the Occupy movement. The image reveals inherent assumptions about land, including: land is property; land is/belongs to the United States; land should be distributed democratically. The beliefs that land can be owned by people, and that occupation is a right, reflect a profoundly settling, anthropocentric, colonial view of the world.

In figure 1.1, the irony of mapping of wealth onto land seems to escape most of those who re-posted the images on their social networking sites and blogs: Land is already wealth; it is already divided; and its distribution is the greatest indicator of racial inequality[17]. Indeed the current wealth crisis facing the 99% spiraled with the crash in home/land ownership. Land (not money) is actually the basis for U.S. wealth. If we took away land, there would be little wealth left to redistribute.

[17] Wealth, most significantly in the form of home ownership, supercedes income as an indicator of disparities between racial groups. See discussions on the wealth gap, home ownership, and racial inequality by Thomas Shapiro (2004), in *The Hidden Cost of Being African American: How Wealth Perpetuates Inequality.*



NATIVE LAND: 100%. RESERVATION LAND: 2.3%.

Figure 1.2. If Native land were [is] divided like Native land

Settler colonization can be visually understood as the unbroken pace of invasion, and settler occupation, into Native lands: the white space in figure 1.2. Decolonization, as a process, would repatriate land to Indigenous peoples, reversing the timeline of these images.

As detailed by public intellectuals/bloggers such as *Tequila Sovereign* (Lenape scholar Joanne Barker), some Occupy sites, including Boston, Denver, Austin, and Albuquerque tried to engage in discussions about the problematic and colonial overtones of occupation (Barker, October 9, 2011). Barker blogs about a firsthand experience in bringing a proposal for a *Memorandum of Solidarity with Indigenous Peoples,*[18] to the General Assembly in Occupy Oakland. The memorandum, signed by Corrina Gould, (Chochenyo Ohlone - the first peoples of Oakland/Ohlone), Barker, and numerous other Indigenous and non-Indigenous activist-scholars, called for the acknowledgement of Oakland as already occupied and on stolen land; of the ongoing defiance by Indigenous peoples in the U.S. and around the globe against imperialism,

[18] The memorandum can be found at http://www.indybay.org/newsitems/2011/10/29/18695950.php, last retrieved June 1, 2012.

colonialism, and oppression; the need for genuine and respectful involvement of Indigenous peoples in the Occupy Oakland movement; and the aspiration to "Decolonize Oakland," rather than re-occupy it. From Barker's account of the responses from settler individuals to the memorandum,

> Ultimately, what they [settler participants in Occupy Oakland] were asking is whether or not we were asking them, as non-indigenous people, the impossible? Would their solidarity with us require them to give up their lands, their resources, their ways of life, so that we – who numbered so few, after all – could have more? Could have it all? (Barker, October 30, 2011)

These responses, resistances by settler participants to the aspiration of decolonization in Occupy Oakland, illustrate the reluctance of some settlers to engage the prospect of decolonization beyond the metaphorical or figurative level. Further, they reveal the limitations to "solidarity," without the willingness to acknowledge stolen land and how stolen land benefits settlers. "Genuine solidarity with indigenous peoples," Barker continues, "assumes a basic understanding of how histories of colonization and imperialism have produced and *still produce* the legal and economic possibility for Oakland" (ibid., emphasis original).

For social justice movements, like Occupy, to truly aspire to decolonization non-metaphorically, they would impoverish, not enrich, the 99%+ settler population of United States. Decolonization eliminates settler property rights and settler sovereignty. It requires the abolition of land as property and upholds the sovereignty of Native land and people.

There are important parallels between Occupy/Decolonize and the French/Haitian Revolutions of 1789-1799 and 1791-1804, respectively. Haiti has the dubious distinction of being "the poorest country in the Western hemisphere" (Central Intelligence Agency, 2012); yet, it was the richest of France's colonies until the Haitian Revolution, the only slave revolution to ever found a state. This paradox can be explained by what/who counts as whose property. Under French colonialism, Haiti was a worth a fortune in enslaved human beings. From the French slave owners' perspectives, Haitian independence abolished not slavery, but their property and a source of common-wealth. Unfortunately, history provides us with the exact figures on what their property was worth; in 1825, "France recognized Haitian independence by a treaty requiring Haiti to pay an indemnity of 150 million francs payable in 5 years to compensate absentee slaveowners for their losses" (Schuller, 2007, p.149). The magnitude[19] of these

[19] 150 million Francs was the equivalent of France's annual budget (and Haiti's population was less than 1% of France's), 10 times all annual Haitian exports in 1825, equivalent to $21 billion in 2010 U.S. Dollars. By contrast France sold the Louisiana Purchase to the United States in 1803 for a net sum of 42 million Francs. The indemnity demand, delivered by 12 warships armed with 500 canons, "heralded a strategy of plunder" (Schuller, 2007, p.166), as a new technology in colonial reconquest.

reparations not *for* slavery, but *to* former slave owners, plunged Haiti into eternal debt[20]. Occupy draws almost directly from the values of the French Revolution: the Commons, the General Assembly, the natural right to property, and the resistance to the decolonization of Indigenous life/land. In 1789, the French *Communes* (Commons) declared themselves a National Assembly directly "of the People" (the 99%) against the representative assembly of "the Estates" (the 1%) set up by the ruling elite, and adopted the celebrated *Declaration of the Rights of the Man and the Citizen.* Not unlike the heated discussions at the December 4, 2011 General Assembly of Occupy Oakland that ultimately rejected the proposal to change the name to "Decolonize Oakland", the 1789 National Assembly debated at great length over the language of emancipation in the *Declaration*. Ultimately, the *Declaration* abolished slavery but not property, and effectively stipulated that property trumped emancipation. While rhetorically declaring men as forever free and equal (and thus unenslavable), it assured the (revolutionary) colonial proprietors in the assembly that their chattel would be untouched, stating unequivocally: "The right to property being inviolable and sacred, no one ought to be deprived of it..." (Blackburn, 2006, p. 650).

Table 1.
Outnumbers. Incommensurable.

French Revolution	99% French, 1% Slaves[21]
Haitian Revolution	90% Slaves, 10% Whites & Free Blacks

Decolonizing the Americas means all land is repatriated and all settlers become landless. It is incommensurable with the redistribution of Native land/life as common-wealth.

Table 2.
Outnumbers. Incommensurable.

Occupy	99% Occupiers, 1% Owners
Decolonize	0.9% Indigenous[22], 99.1% Settlers[23]

[20] Haiti has literally been in debt from the moment it was recognized as a country. Haiti paid off its indemnity to France in 1937, but only through new indemnity with the United States. Ironically, in contemporary times, the Paris Club has power over Haiti's debt, and thus maintains Haiti's poverty.

[21] At 28 million people, France was the 3rd most populous country in the world in 1789, after China and India. Haiti's slave population in 1791 was approximately 452,000 - a fluctuating number as the slave mortality rate exceeded the birth rate, requiring a constant supply of newly enslaved Africans; and approximately 200,000 slaves died in the revolution. 1% refers to this number of enslaved people in Haiti relative to the French population, and does not include those enslaved in France or its other colonies.

[22] According to the 2010 U.S. census, Native Americans comprise 0.9% of U.S. inhabitants.

Our critique of Occupation is not just a critique of rhetoric. The call to "occupy everything" has legitimized a set of practices with problematic relationships to land and to Indigenous sovereignty. Urban homesteading, for example, is the practice of re-settling urban land in the fashion of self-styled pioneers in a mythical frontier. Not surprisingly, urban homesteading can also become a form of playing Indian, invoking Indigeneity as 'tradition' and claiming Indian-like spirituality while evading Indigenous sovereignty and the modern presence of actual urban Native peoples. More significant examples are Occupiers' claims to land and their imposition of Western forms of governance within their tent cities/colonies. Claiming land for the Commons and asserting consensus as the rule of the Commons, erases existing, prior, and future Native land rights, decolonial leadership, and forms of self-government.

Occupation is a move towards innocence that hides behind the numerical superiority of the settler nation, the elision of democracy with justice, and the logic that what became property under the 1% rightfully belongs to the other 99%.

In contrast to the settler labor of occupying the commons, homesteading, and possession, some scholars have begun to consider the labor of de-occupation in the undercommons, permanent fugitivity, and dispossession as possibilities for a radical black praxis. Such "a labor that is dedicated to the reproduction of social dispossession as having an ethical dimension" (Moten & Harney, 2004, p.110), includes both the refusal of acquiring property and of being property

Incommensurability is unsettling

Having elaborated on settler moves to innocence, we give a synopsis of the imbrication of settler colonialism with transnationalist, abolitionist, and critical pedagogy movements - efforts that are often thought of as exempt from Indigenous decolonizing analyses - as a synthesis of how decolonization as material, not metaphor, unsettles the innocence of these movements. These are interruptions which destabilize, un-balance, and repatriate the very terms and assumptions of some of the most radical efforts to reimagine human power relations. We argue that the opportunities for solidarity lie in what is incommensurable rather than what is common across these efforts.

We offer these perspectives on unsettling innocence because they are examples of what we might call an ethic of incommensurability, which recognizes what is distinct, what is sovereign for project(s) of decolonization in relation to human and civil rights based social justice projects. There are portions of these projects that simply cannot speak to one another, cannot be aligned or allied. We make these notations to highlight opportunities for what can only ever be strategic and contingent collaborations, and to indicate the reasons that lasting solidarities may be elusive, even undesirable. Below we point to unsettling themes that challenge the coalescence of social justice endeavors broadly assembled into three areas:

[23] Wayne would like to give special thanks to Jodi Byrd for pointing out this numerical irony.

Transnational or Third World decolonizations, Abolition, and Critical Space-Place Pedagogies. For each of these areas, we offer entry points into the literature - beginning a sort of bibliography of incommensurability.

Third world decolonizations

The anti-colonial turn towards the transnational can sometimes involve ignoring the settler colonial context where one resides and how that inhabitation is implicated in settler colonialism, in order to establish "global" solidarities that presumably suffer fewer complicities and complications. This deliberate not-seeing is morally convenient but avoids an important feature of the aforementioned selective collapsibility of settler colonial-nations states. Expressions such as "the Global South within the Global North" and "the Third World in the First World" neglect the Four Directions via a Flat Earth perspective and ambiguate First Nations with Third World migrants. For people writing on Third World decolonizations, but who do so upon Native land, we invite you to consider the permanent settler war as the theater for all imperial wars:

- the Orientalism of Indigenous Americans (Berger, 2004; Marez, 2007)
- discovery, invasion, occupation, and Commons as the claims of settler sovereignty (Ford, 2010)
- heteropatriarchy as the imposition of settler sexuality (Morgensen, 2011)
- citizenship as coercive and forced assimilation into the white settler normative (Bruyneel, 2004; Somerville, 2010)
- religion as covenant for settler nation-state (A.J. Barker, 2009; Maldonado-Torres, 2008)
- the frontier as the first and always the site of invasion and war (Byrd, 2011),
- U.S. imperialism as the expansion of settler colonialism (*ibid*)
- Asian settler colonialism (Fujikane, 2012; Fujikane, & Okamura, 2008, Saranillio, 2010a, 2010b)
- the frontier as the language of 'progress' and discovery (Maldonado-Torres, 2008)
- rape as settler colonial structure (Deer, 2009; 2010)
- the discourse of terrorism as the terror of Native retribution (Tuck & Ree, forthcoming)
- Native Feminisms as incommensurable with other feminisms (Arvin, Tuck, Morrill, forthcoming; Goeman & Denetdale, 2009).

Abolition

The abolition of slavery often presumes the expansion of settlers who own Native land and life via inclusion of emancipated slaves and prisoners into the settler nation-state. As we have noted, it is no accident that the U.S. government promised 40 acres of Indian land as reparations for plantation slavery. Likewise, indentured European laborers were often awarded tracts of 'unsettled' Indigenous land as payment at the end of their service (McCoy, forthcoming).

Communal ownership of land has figured centrally in various movements for autonomous, self-determined communities. "The land belongs to those who work it," disturbingly parrots Lockean justifications for seizing Native land as property, 'earned' through one's labor in clearing and cultivating 'virgin' land. For writers on the prison industrial complex, il/legality, and other forms of slavery, we urge you to consider how enslavement is a twofold procedure: removal from land and the creation of property (land and bodies). Thus, abolition is likewise twofold, requiring the repatriation of land and the abolition of property (land and bodies). Abolition means self-possession but not object-possession, repatriation but not reparation:

- "The animals of the world exist for their own reasons. They were not made for humans any more than black people were made for white, or women created for men" (Alice Walker, describing the work of Marjorie Spiegel, in the in the preface to Spigel's 1988 book, *The Dreaded Comparison*).
- Enslavement/removal of Native Americans (Gallay, 2009)
- Slaves who become slave-owners, savagery as enslavability, chattel slavery as a sign of civilization (Gallay, 2009)
- Black fugitivity, undercommons, and radical dispossession (Moten, 2008; Moten & Harney, 2004; Moten & Harney, 2010)
- Incarceration as a settler colonialism strategy of land dispossession (Ross, 1998; Watson, 2007)
- Native land and Native people as co-constituitive (Meyer, 2008; Kawagley, 2010)

Critical pedagogies

The many critical pedagogies that engage emancipatory education, place based education, environmental education, critical multiculturalism, and urban education often position land as public Commons or seek commonalities between struggles. Although we believe that "we must be fluent" in each other's stories and struggles (paraphrasing Alexander, 2002, p.91), we detect precisely this lack of fluency in land and Indigenous sovereignty. Yupiaq scholar, Oscar Kawagley's assertion, "We know that Mother Nature has a culture, and it is a Native culture" (2010, p. xiii), directs us to think through land as "more than a site *upon* which humans make history or as a location that accumulates history" (Goeman, 2008, p.24). The forthcoming special issue in *Environmental Education Research*, "Land Education: Indigenous, postcolonial, and decolonizing perspectives on place and environmental education research" might be a good starting point to consider the incommensurability of place-based, environmentalist, urban pedagogies with land education.

- The urban as Indigenous (Bang, 2009; Belin, 1999; Friedel, 2011; Goeman, 2008; Intertribal Friendship House & Lobo, 2002)
- Indigenous storied land as disrupting settler maps (Goeman, 2008)

- Novels, poetry, and essays by Greg Sarris, Craig Womack, Joy Harjo, Gerald Vizenor
- To Remain an Indian (Lomawaima & McCarty, 2006)
- Shadow Curriculum (Richardson, 2011)
- Red Pedagogy (Grande, 2004)
- Land Education (McCoy, Tuck, McKenzie, forthcoming)

More on incommensurability

Incommensurability is an acknowledgement that decolonization will require a change in the order of the world (Fanon, 1963). This is not to say that Indigenous peoples or Black and brown peoples take positions of dominance over white settlers; the goal is not for everyone to merely swap spots on the settler-colonial triad, to take another turn on the merry-go-round. The goal is to break the relentless structuring of the triad - a break and not a compromise (Memmi, 1991).

Breaking the settler colonial triad, in direct terms, means repatriating land to sovereign Native tribes and nations, abolition of slavery in its contemporary forms, and the dismantling of the imperial metropole. Decolonization "here" is intimately connected to anti-imperialism elsewhere. However, decolonial struggles here/there are not parallel, not shared equally, nor do they bring neat closure to the concerns of all involved - particularly not for settlers. Decolonization is not equivocal to other anti-colonial struggles. It is incommensurable.

There is so much that is incommensurable, so many overlaps that can't be figured, that cannot be resolved. Settler colonialism fuels imperialism all around the globe. Oil is the motor and motive for war and so was salt, so will be water. Settler sovereignty over these very pieces of earth, air, and water is what makes possible these imperialisms. The same yellow pollen in the water of the Laguna Pueblo reservation in New Mexico, Leslie Marmon Silko reminds us, is the same uranium that annihilated over 200,000 strangers in 2 flashes. The same yellow pollen that poisons the land from where it came. Used in the same war that took a generation of young Pueblo men. Through the voice of her character Betonie, Silko writes, "Thirty thousand years ago they were not strangers. You saw what the evil had done; you saw the witchery ranging as wide as the world" (Silko, 1982, p. 174). In Tucson, Arizona, where Silko lives, her books are now banned in schools. Only curricular materials affirming the settler innocence, ingenuity, and right to America may be taught.

In "No", her response to the 2003 United States invasion of Iraq, Mvskoke/Creek poet Joy Harjo (2004) writes, "Yes, that was me you saw shaking with bravery, with a government issued rifle on my back. I'm sorry I could not greet you, as you deserved, my relative." Don't Native Americans participate in greater rates in the military? asks the young-ish man from Viet Nam.

"Indian Country" was/is the term used in Viet Nam, Afghanistan, Iraq by the U.S. military for 'enemy territory'. The first Black American President said without blinking, "There was a point before folks had left, before we had gotten everybody back on the helicopter and were flying back to base, where they said Geronimo has been killed, and Geronimo was the code

name for bin Laden." Elmer Pratt, Black Panther leader, falsely imprisoned for 27 years, was a Vietnam Veteran, was nicknamed 'Geronimo'. Geronimo is settler nickname for the Bedonkohe Apache warrior who fought Mexican and then U.S. expansion into Apache tribal lands. The Colt .45 was perfected to kill Indigenous people during the 'liberation' of what became the Philippines, but it was first invented for the 'Indian Wars' in North America alongside The Hotchkiss Canon- a gattling gun that shot canonballs. The technologies of the permanent settler war are reserviced for foreign wars, including boarding schools, colonial schools, urban schools run by military personnel.

It is properly called Indian Country.

NEW YORK, SATURDAY, APRIL 8, 1882.

The Hotchkiss Revolving Cannon

which the cut represents, mounted on the field carriage, has been adopted by the United States for both Field and Naval purposes, and by nearly all the Governments of Europe.

They are made of 37mm., 47mm., and 58mm. calibre, and fire common and steel shell.

The 37mm. and 47mm. fire 60 to 80 shell per minute, giving 1,500 to 2,000 fragments. In service, with deliberate aim at moving objects, from 15 to 20, giving 1,200 dangerous fragments per minute.

The Naval gun is mounted on the non-recoil principle, and being almost free from the shoulder, with the aim of a musket, attains a greater accuracy at sea than any other cannon.

The range of the 37mm. gun is 3,000 yards, of the 47mm., 6,500 yards.

The steel shell from the smaller gun penetrates all torpedo boats up to 2,000 yards, and at acute angles up to 2,000 yards, and the 47mm. perforates all the unarmored ships now in service.

For Field service the accuracy of fire and regularity of range are unsurpassed.

(See Official Reports of Chief of Ordnance, U. S. A.)

Figure 1.3. Hotchkiss Revolving Cannon

Ideologies of US settler colonialism directly informed Australian settler colonialism. South African apartheid townships, the kill-zones in what became the Philippine colony, then nation-state, the checkerboarding of Palestinian land with checkpoints, were modeled after U.S. seizures of land and containments of Indian bodies to reservations. The racial science developed in the U.S. (a settler colonial racial science) informed Hitler's designs on racial purity ("This book is my bible" he said of Madison Grant's The Passing of the Great Race). The admiration is sometimes mutual, the doctors and administrators of forced sterilizations of black, Native, disabled, poor, and mostly female people - The Sterilization Act accompanied the Racial Integrity Act and the Pocohontas Exception - praised the Nazi eugenics program. Forced sterilizations became illegal in California in 1964. The management technologies of North American settler colonialism have provided the tools for internal colonialisms elsewhere.

So to with philosophies of state and corporate land-grabbing[24]*. The prominence of "flat world" perspectives asserts that technology has afforded a diminished significance of place and borders. The claim is that U.S. borders have become more flexible, yet simultaneously, the physical border has become more absolute and enforced. The border is no longer just a line suturing two nation-states; the U.S. now polices its borders interior to its territory and exercises*

[24] See also Arundhati Roy (2012) in Capitalism: A Ghost Story

sovereignty throughout the globe. Just as sovereignty has expanded, so has settler colonialism in partial forms.

New Orleans' lower ninth ward lies at the confluence of river channels and gulf waters, and at the intersection of land grabbing and human bondage. The collapsing of levies heralded the selective collapsibility of native-slave, again, for the purpose of reinvasion, resettlement, reinhabitation. The naturalized disaster of Hurricane Katrina's floodwaters laid the perfect cover for land speculation and the ablution of excess people. What can't be absorbed, can't be folded in (because the settlers won't give up THEIR land to advance abolition), translates into bodies stacked on top of one another in public housing and prisons, in cells, kept from the labor market, making labor for others (guards and other corrections personnel) making money for states -human homesteading. It necessitates the manufacturing of crime at rates higher than anywhere in the world. 1 in 6 people in the state of Louisiana are incarcerated, the highest number of caged people per capita, making it the prison capital of United States, and therefore the prison capital of the world.

Table 3
Prison capital of the world[25].

	Prisoners per 100,000 residents
Louisiana	1,619
United States	730
Russia	450
Iran	333
China	122
Afghanistan	62

The Yazoo and Mississippi Rivers' delta flood plain was once land so fertile that it could be squeezed for excess production of cotton, giving rise to exceptionally large-scale plantation slavery. Plantation owners lived in houses like pyramids and chattel slavery took an extreme form here, even for the South, beginning with enslaved Chitimachas, Choctaw, Natchez, Chaoüachas, Natchez, Westo, Yamasee, Euchee, Yazoo and Tawasa peoples, then later replaced by enslaved West Africans. Literally, worked to death. This "most Southern on earth"(Cobb, 1992) was a place of ultimate terror for Black people even under slavery (the worst place to be sold off too, the place of no return, the place of premature death). Black and Native people alike were induced to raid and enslave Native tribes, as a bargain for their own freedom or to defer their own enslavibility by the British, French, and then American settlers. Abolition has its incommensurabilities.

The Delta is now more segregated than it was during Jim Crow in 1950 (Aiken, 1990). The rising number of impoverished, all black townships is the result of mechanization of

[25] Source: Chang (2012).

agriculture and a fundamental settler covenant that keeps black people landless. When black labor is unlabored, the Black person underneath is the excess.

Angola Farm is perhaps the more notorious of the two State Penitentiaries along the Mississippi River. Three hundred miles upriver in the upper Delta region is Parchment Farm. Both State Penitentiaries (Mississippi and Louisana, respectively), both former slave plantations, both turned convict-leasing farms almost immediately after the Civil War by genius land speculators-cum-prison wardens. After the Union victory in the Civil War 'abolished' slavery, former Confederate Major, Samuel Lawrence James, obtained the lease to the Louisiana State Penn in 1869, and then bought Angola Farm in 1880 as land to put his chattel to work.

Figure 1.4. "The Cage: where convicts are herded like beasts of the jungle. The pan under it is the toilet receptacle. The stench from it hangs like a pall over the whole area" John Spivak, Georgia N_____, 1932.

Cages on wheels. To mobilize labor on land by landless people whose crime was mobility on land they did not own. The largest human trafficker in the world is the carceral state within

the United States, not some secret Thai triad or Russian mafia or Chinese smuggler. The U.S. carceral state is properly called neo-slavery, precisely because it is legal. It is not simply a product of exceptional racism in the U.S.; its racism is a direct function of the settler colonial mandate of land and people as property.

Black Codes made vagrancy - i.e. landlessness - illegal in the Antebellum South, making the self-possessed yet dispossessed Black body a crime (similar logic allowed for the seizure, imprisonment and indenture of any Indian by any person in California until 1937, based on the ideology that Indians are simultaneously landless and land-like). Dennis Childs writes "the slave ship and the plantation" and not Bentham's panopticon as presented by Foucault, "operated as spatial, racial, and economic templates for subsequent models of coerced labor and human warehousing - as America's original prison industrial complex" (2009, p.288). Geopolitics and biopolitics are completely knotted together in a settler colonial context.

Despite the rise of publicly traded prisons, Farms are not fundamentally capitalist ventures; at their core, they are colonial contract institutions much like Spanish Missions, Indian Boarding Schools, and ghetto school systems[26]*. The labor to cage black bodies is paid for by the state and then land is granted, worked by convict labor, to generate additional profits for the prison proprietors. However, it is the management of excess presence on the land, not the forced labor, that is the main object of slavery under settler colonialism.*

Today, 85% of people incarcerated at Angola, die there.

Conclusion

An ethic of incommensurability, which guides moves that unsettle innocence, stands in contrast to aims of reconciliation, which motivate settler moves to innocence. Reconciliation is about rescuing settler normalcy, about rescuing a settler future. Reconciliation is concerned with questions of *what will decolonization look like? What will happen after abolition? What will be the consequences of decolonization for the settler?* Incommensurability acknowledges that these questions need not, and perhaps cannot, be answered in order for decolonization to exist as a framework.

We want to say, first, that decolonization is not obliged to answer those questions - decolonization is not accountable to settlers, or settler futurity. Decolonization is accountable to Indigenous sovereignty and futurity. Still, we acknowledge the questions of those wary participants in Occupy Oakland and other settlers who want to know what decolonization will require of them. The answers are not fully in view and can't be as long as decolonization remains punctuated by metaphor. The answers will not emerge from friendly understanding, and indeed require a dangerous understanding of uncommonality that un-coalesces coalition politics - moves that may feel very unfriendly. But we will find out the answers as we get there, "in the

[26] As we write today, Louisiana has moved to privatize all of its public schools http://www.huffingtonpost.com/2012/06/01/louisiana-makes-bold-bid-_n_1563900.html

exact measure that we can discern the movements which give [decolonization] historical form and content" (Fanon, 1963, p. 36).

To fully enact an ethic of incommensurability means relinquishing settler futurity, abandoning the hope that settlers may one day be commensurable to Native peoples. It means removing the asterisks, periods, commas, apostrophes, the whereas's, buts, and conditional clauses that punctuate decolonization and underwrite settler innocence. The Native futures, the lives to be lived once the settler nation is gone - these are the unwritten possibilities made possible by an ethic of incommensurability.

> *when you take away the punctuation*
> he says of
> lines lifted from the documents about
> military-occupied land
> its acreage and location
> *you take away its finality*
> *opening the possibility of other futures*
>
> -Craig Santos Perez, Chamoru scholar and poet
> (as quoted by Voeltz, 2012)

Decolonization offers a different perspective to human and civil rights based approaches to justice, an unsettling one, rather than a complementary one. Decolonization is not an "and". It is an elsewhere.

Settler colonialism and the elimination of the native

PATRICK WOLFE

The question of genocide is never far from discussions of settler colonialism. Land is life—or, at least, land is necessary for life. Thus contests for land can be—indeed, often are—contests for life. Yet this is not to say that settler colonialism is simply a form of genocide. In some settler-colonial sites (one thinks, for instance, of Fiji), native society was able to accommodate—though hardly unscathed—the invaders and the transformative socioeconomic system that they introduced. Even in sites of wholesale expropriation such as Australia or North America, settler colonialism's genocidal outcomes have not manifested evenly across time or space. Native Title in Australia or Indian sovereignty in the US may have deleterious features, but these are hardly equivalent to the impact of frontier homicide. Moreover, there can be genocide in the absence of settler colonialism. The best known of all genocides was internal to Europe, while genocides that have been perpetrated in, for example, Armenia, Cambodia, Rwanda or (one fears) Darfur do not seem to be assignable to settler colonialism. In this article, I shall begin to explore, in comparative fashion, the relationship between genocide and the settler-colonial tendency that I term the logic of elimination.[1] I contend that, though the two have converged—which is to say, the settler-colonial logic of elimination has manifested as genocidal—they should be distinguished. Settler colonialism is inherently eliminatory but not invariably genocidal.

As practised by Europeans, both genocide and settler colonialism have typically employed the organizing grammar of race. European xenophobic traditions such as anti-Semitism, Islamophobia, or Negrophobia are considerably older than race, which, as many have shown, became discursively consolidated fairly late in the eighteenth century.[2] But the mere fact that race is a social construct does not of itself tell us very much. As I have argued, different racial regimes encode and reproduce the unequal relationships into which Europeans coerced the populations concerned. For instance, Indians and Black people in the US have been racialized in opposing ways that reflect their antithetical roles in the formation of US society. Black people's enslavement produced an inclusive taxonomy that automatically enslaved the offspring of a slave and any other parent. In the wake of slavery, this taxonomy became fully racialized in the "one-drop rule,"

ISSN 1462-3528 print; ISSN 1469-9494 online/06/040387-23
DOI: 10.1080/14623520601056240

whereby any amount of African ancestry, no matter how remote, and regardless of phenotypical appearance, makes a person Black. For Indians, in stark contrast, non-Indian ancestry compromised their indigeneity, producing "half-breeds," a regime that persists in the form of blood quantum regulations. As opposed to enslaved people, whose reproduction augmented their owners' wealth, Indigenous people obstructed settlers' access to land, so their increase was counterproductive. In this way, the restrictive racial classification of Indians straightforwardly furthered the logic of elimination. Thus we cannot simply say that settler colonialism or genocide have been targeted at particular races, since a race cannot be taken as given. It is made in the targeting.[3] Black people were racialized as slaves; slavery constituted their blackness. Correspondingly, Indigenous North Americans were not killed, driven away, romanticized, assimilated, fenced in, bred White, and otherwise eliminated as the original owners of the land but *as Indians*. Roger Smith has missed this point in seeking to distinguish between victims murdered for where they are and victims murdered for who they are.[4] So far as Indigenous people are concerned, where they are *is* who they are, and not only by their own reckoning. As Deborah Bird Rose has pointed out, to get in the way of settler colonization, all the native has to do is stay at home.[5] Whatever settlers may say—and they generally have a lot to say—the primary motive for elimination is not race (or religion, ethnicity, grade of civilization, etc.) but access to territory. Territoriality is settler colonialism's specific, irreducible element.

The logic of elimination not only refers to the summary liquidation of Indigenous people, though it includes that. In common with genocide as Raphaël Lemkin characterized it,[6] settler colonialism has both negative and positive dimensions. Negatively, it strives for the dissolution of native societies. Positively, it erects a new colonial society on the expropriated land base—as I put it, settler colonizers come to stay: invasion is a structure not an event.[7] In its positive aspect, elimination is an organizing principal of settler-colonial society rather than a one-off (and superseded) occurrence. The positive outcomes of the logic of elimination can include officially encouraged miscegenation, the breaking-down of native title into alienable individual freeholds, native citizenship, child abduction, religious conversion, resocialization in total institutions such as missions or boarding schools, and a whole range of cognate biocultural assimilations. All these strategies, including frontier homicide, are characteristic of settler colonialism. Some of them are more controversial in genocide studies than others.

Settler colonialism destroys to replace. As Theodor Herzl, founding father of Zionism, observed in his allegorical manifesto/novel, "If I wish to substitute a new building for an old one, I must demolish before I construct."[8] In a kind of realization that took place half a century later, one-time deputy-mayor of West Jerusalem Meron Benvenisti recalled, "As a member of a pioneering youth movement, I myself 'made the desert bloom' by uprooting the ancient olive trees of al-Bassa to clear the ground for a banana grove, as required by the 'planned farming' principles of my kibbutz, Rosh Haniqra."[9] Renaming is central to the cadastral effacement/replacement of the Palestinian Arab presence that Benvenisti poignantly recounts.[10] Comparably, though with reference to Australia,

Tony Birch has charted the contradictory process whereby White residents sought to frustrate the (re-) renaming of Gariwerd back from the derivative "Grampians" that these hills had become in the wake of their original owners' forcible dispossession in the nineteenth century.[11] Ideologically, however, there is a major difference between the Australian and Israeli cases. The prospect of Israeli authorities changing the Hebrew place-names whose invention Benvenisti has described back to their Arabic counterparts is almost unimaginable. In Australia, by contrast (as in many other settler societies), the erasure of indigeneity conflicts with the assertion of settler nationalism. On the one hand, settler society required the practical elimination of the natives in order to establish itself on their territory. On the symbolic level, however, settler society subsequently sought to recuperate indigeneity in order to express its difference—and, accordingly, its independence—from the mother country. Hence it is not surprising that a progressive Australian state government should wish to attach an indigenous aura to a geographical feature that bore the second-hand name of a British mountain range. Australian public buildings and official symbolism, along with the national airlines, film industry, sports teams and the like, are distinguished by the ostentatious borrowing of Aboriginal motifs. For nationalist purposes, it is hard to see an alternative to this contradictory reappropriation of a foundationally disavowed Aboriginality. The ideological justification for the dispossession of Aborigines was that "we" could use the land better than they could, not that we had been on the land primordially and were merely returning home. One cannot imagine the Al-Quds/Jerusalem suburb of Kfar Sha'ul being renamed Deir Yasin. Despite this major ideological difference, however, Zionism still betrays a need to distance itself from its European origins that recalls the settler anxieties that characterize Australian national discourse. Yiddish, for instance, was decisively rejected in favour of Hebrew—a Hebrew inflected, what is more, with the accents of the otherwise derided Yemeni *mizrachim*. Analogously, as Mark LeVine has noted, though the Zionist modernization of the Arab city of Jaffa was intended to have a certain site specificity, "in fact Jaffa has had to be emptied of its Arab past and Arab inhabitants in order for architects to be able to reenvision the region as a 'typical Middle Eastern city'."[12]

In its positive aspect, therefore, settler colonialism does not simply replace native society *tout court*. Rather, the process of replacement maintains the refractory imprint of the native counter-claim. This phenomenon is not confined to the realm of symbolism. In the Zionist case, for instance, as Gershon Shafir has cogently shown, the core doctrine of the conquest of labour, which produced the *kibbutzim* and Histadrut, central institutions of the Israeli state, emerged out of the local confrontation with Arab Palestinians in a form fundamentally different from the pristine doctrine of productivization that had originally been coined in Europe. The concept of productivization was developed in response to the self-loathing that discriminatory exclusions from productive industry encouraged in Eastern European Jewry (in this sense, as Shafir acutely observes, Zionism mirrored the persecutors' anti-Semitism[13]). In its European enunciation, productivization was not designed to disempower anyone else. It was rather designed, autarkically as it were, to inculcate productive self-sufficiency in a Jewish

population that had been relegated to urban (principally financial) occupations that were stigmatized as parasitic by the surrounding gentile population—a prejudice that those who sought to build the "new Jew" endorsed insofar as they resisted its internalization. On its importation into Palestine, however, the doctrine evolved into a tool of ethnic conflict, as Jewish industries were actively discouraged from employing non-Jewish labour, even though Arabs worked for lower wages and, in many cases, more efficiently:

> "Hebrew labor," or "conquest of labor" . . . was born of Palestinian circumstances, and advocated a struggle against Palestinian Arab workers. This fundamental difference demonstrates the confusion created by referring "Hebrew labor" back to the productivization movement and anachronistically describing it as evolving in a direct line from Eastern European origins.[14]

As it developed on the colonial ground, the conquest of labour subordinated economic efficiency to the demands of building a self-sufficient proto-national Yishuv (Jewish community in Palestine) at the expense of the surrounding Arab population. This situated struggle produced the new Jew as subject of the labour that it conquered. In the words of Zionist architect Julius Posner, reprising a folk song, "We have come to the homeland to build and be rebuilt in it . . . the creation of the new Jew . . . [is also] the creator of that Jew."[15] As such, the conquest of labour was central both to the institutional imagining of a *goyim-rein* (gentile-free) zone and to the continued stigmatization of Jews who remained unredeemed in the *galut* (diaspora). The positive force that animated the Jewish nation and its individual new-Jewish subjects issued from the negative process of excluding Palestine's Indigenous owners.

In short, elimination refers to more than the summary liquidation of Indigenous people, though it includes that. In its positive aspect, the logic of elimination marks a return whereby the native repressed continues to structure settler-colonial society. It is both as complex social formation and as continuity through time that I term settler colonization a structure rather than an event, and it is on this basis that I shall consider its relationship to genocide.

***

To start at the top, with the European sovereigns who laid claim to the territories of non-Christian (or, in later secularized versions, uncivilized) inhabitants of the rest of the world: justifications for this claim were derived from a disputatious arena of scholarly controversy that had been prompted by European conquests in the Americas and is misleadingly referred to, in the singular, as the doctrine of discovery.[16] Though a thoroughgoing diminution of native entitlement was axiomatic to discovery, the discourse was primarily addressed to relations between European sovereigns rather than to relations between Europeans and natives.[17] Competing theoretical formulas were designed to restrain the endless rounds of war-making over claims to colonial territory that European sovereigns were prone to indulge in. The rights accorded to natives tended to reflect the balance between European powers in any given theatre of colonial settlement. In Australia, for instance, where British

dominion was effectively unchallenged by other European powers, Aborigines were accorded no rights to their territory, informal variants on the theme of *terra nullius* being taken for granted in settler culture. In North America, by contrast, treaties between Indian and European nations were premised on a sovereignty that reflected Indians' capacity to permute local alliance networks from among the rival Spanish, British, French, Dutch, Swedish and Russian presences.[18] Even where native sovereignty was recognized, however, ultimate dominion over the territory in question was held to inhere in the European sovereign in whose name it had been "discovered." Through all the diversity among the theorists of discovery, a constant theme is the clear distinction between dominion, which inhered in European sovereigns alone, and natives' right of occupancy, also expressed in terms of possession or usufruct, which entitled natives to pragmatic use (understood as hunting and gathering rather than agriculture)[19] of a territory that Europeans had discovered. The distinction between dominion and occupancy illuminates the settler-colonial project's reliance on the elimination of native societies.

Through being the first European to visit and properly claim a given territory, a discoverer acquired the right, on behalf of his sovereign and *vis-à-vis* other Europeans who came after him, to buy land from the natives. This right, known as preemption, gave the discovering power (or, in the US case, its successors) a monopoly over land transactions with the natives, who were prevented from disposing of their land to any other European power. On the face of it, this would seem to pose little threat to people who did not wish to dispose of their land to anyone. Indeed, this semblance of native voluntarism has provided scope for some limited judicial magnanimity in regard to Indian sovereignty.[20] In practice, however, the corollary did not apply. Preemption sanctioned European priority but not Indigenous freedom of choice. As Harvey Rosenthal observed of the concept's extension into the US constitutional environment, "The American right to buy always superseded the Indian right not to sell."[21] The mechanisms of this priority are crucial. Why should ostensibly sovereign nations, residing in territory solemnly guaranteed to them by treaties, decide that they are willing, after all, to surrender their ancestral homelands? More often than not (and nearly always up to the wars with the Plains Indians, which did not take place until after the civil war), the agency which reduced Indian peoples to this abjection was not some state instrumentality but irregular, greed-crazed invaders who had no intention of allowing the formalities of federal law to impede their access to the riches available in, under, and on Indian soil.[22] If the government notionally held itself aloof from such disreputable proceedings, however, it was never far away. Consider, for instance, the complicity between bayonet-wielding troops and the "lawless rabble" in this account of events immediately preceding the eastern Cherokee's catastrophic "Trail of Tears," one of many comparable 1830s removals whereby Indians from the South East were displaced west of the Mississippi to make way for the development of the slave-plantation economy in the Deep South:

> Families at dinner were startled by the sudden gleam of bayonets in the doorway and rose up to be driven with blows and oaths along the weary miles of trail that led to the stockade

> [where they were held prior to the removal itself.] Men were seized in their fields or going along the road, women were taken from their wheels and children from their play. In many cases, on turning for one last look as they crossed the ridge, they saw their homes in flames, fired by the lawless rabble that followed on the heels of the soldiers to loot and pillage. So keen were these outlaws on the scent that in some instances they were driving off the cattle and other stock of the Indians almost before the soldiers had fairly started their owners in the other direction. Systematic hunts were made by the same men for Indian graves, to rob them of the silver pendants and other valuables deposited with the dead. A Georgia volunteer, afterward a colonel in the Confederate service, said: "I fought through the civil war and have seen men shot to pieces and slaughtered by thousands, but the Cherokee removal was the cruelest work I ever knew."[23]

On the basis of this passage alone, the structural complexity of settler colonialism could sustain libraries of elaboration. A global dimension to the frenzy for native land is reflected in the fact that, as economic immigrants, the rabble were generally drawn from the ranks of Europe's landless. The cattle and other stock were not only being driven off Cherokee land; they were being driven into private ownership. Once evacuated, the Red man's land would be mixed with Black labour to produce cotton, the white gold of the Deep South. To this end, the international slave trade and the highest echelons of the formal state apparatus converged across three continents with the disorderly pillaging of a nomadic horde who may or may not have been "lawless" but who were categorically White. Moreover, in their indiscriminate lust for any value that could be extracted from the Cherokee's homeland, these racialized grave-robbers are unlikely to have stopped at the pendants. The burgeoning science of craniology, which provided a distinctively post-eighteenth-century validation for their claim to a racial superiority that entitled them to other people's lands, made Cherokee skulls too marketable a commodity to be overlooked.[24] In its endless multidimensionality, there was nothing singular about this one sorry removal, which all of modernity attended.

Rather than something separate from or running counter to the colonial state, the murderous activities of the frontier rabble constitute its principal means of expansion. These have occurred "behind the screen of the frontier, in the wake of which, once the dust has settled, the irregular acts that took place have been regularized and the boundaries of White settlement extended. Characteristically, officials express regret at the lawlessness of this process while resigning themselves to its inevitability."[25] In this light, we are in a position to understand the pragmatics of the doctrine of discovery more clearly. Understood as an assertion of Indigenous entitlement, the distinction between dominion and occupancy dissolves into incoherence. Understood processually, however, as a stage in the formation of the settler-colonial state (specifically, the stage linking the theory and the realization of territorial acquisition), the distinction is only too consistent. As observed, preemption provided that natives could transfer their right of occupancy to the discovering sovereign and to no one else. They could not transfer dominion because it was not theirs to transfer; that inhered in the European sovereign and had done so from the moment of discovery. Dominion without conquest constitutes the theoretical (or "inchoate") stage of territorial sovereignty.[26] In US

Chief Justice John Marshall's words, it remained to be "consummated by possession."[27] This delicately phrased "consummation" is precisely what the rabble were achieving at Cherokee New Echota in 1838. In other words, the right of occupancy was not an assertion of native rights. Rather, it was a pragmatic acknowledgment of the lethal interlude that would intervene between the conceit of discovery, when navigators proclaimed European dominion over whole continents to trees or deserted beaches, and the practical realization of that conceit in the final securing of European settlement, formally consummated in the extinguishment of native title. Thus it is not surprising that Native Title had hardly been asserted in Australian law than Mr Justice Olney was echoing Marshall's formula, Olney's twenty-first-century version of consummation being the "tide of history" that provided the pretext for his notorious judgment in the *Yorta Yorta* case.[28] As observed, the logic of elimination continues into the present.

The tide of history canonizes the fait accompli, harnessing the diplomatic niceties of the law of nations to the maverick rapine of the squatters' posse within a cohesive project that implicates individual and nation-state, official and unofficial alike. Over the Green Line today, *Ammana*, the settler advance-guard of the fundamentalist *Gush Emunim* movement, hastens apace with the construction of its facts on the ground. In this regard, the settlers are maintaining a tried and tested Zionist strategy—Israel's 1949 campaign to seize the Negev before the impending armistice was codenamed *Uvda*, Hebrew for "fact."[29] As Bernard Avishai lamented of the country he had volunteered to defend, "settlements were made in the territories beyond the Green Line so effortlessly after 1967 because the Zionist institutions that built them and the laws that drove them ... had all been going full throttle within the Green Line before 1967. To focus merely on West Bank settlers was always to beg the question."[30] In sum, then, settler colonialism is an inclusive, land-centred project that coordinates a comprehensive range of agencies, from the metropolitan centre to the frontier encampment, with a view to eliminating Indigenous societies. Its operations are not dependent on the presence or absence of formal state institutions or functionaries. Accordingly—to begin to move toward the issue of genocide—the occasions on or the extent to which settler colonialism conduces to genocide are not a matter of the presence or absence of the formal apparatus of the state.

***

While it is clearly the case, as Isabel Hull argues, that the pace, scale and intensity of certain forms of modern genocide require the centralized technological, logistical and administrative capacities of the modern state,[31] this does not mean that settler-colonial discourse should be regarded as pre- (or less than) modern. Rather, as a range of thinkers—including, in this connection, W. E. B. Dubois, Hannah Arendt and Aimé Césaire—have argued, some of the core features of modernity were pioneered in the colonies.[32] It is a commonplace that the Holocaust gathered together the instrumental, technological and bureaucratic constituents of Western modernity. Accordingly, despite the historiographical energy

that has already been devoted to the Holocaust, the genealogical field available to its historian remains apparently inexhaustible. Thus we have recently been informed that its historical ingredients included the guillotine and, for the industry-scale processing of human bodies, the techniques of Chicago cattle-yards.[33] Yet the image of the dispassionate genocidal technocrat that the Holocaust spawned is by no means the whole story. Rather, as Dieter Pohl, Jürgen Zimmerer and others have pointed out, a substantial number of the Nazis' victims, including Jewish and Gypsy (Sinti and Rom) ones, were not murdered in camps but in deranged shooting sprees that were more reminiscent of sixteenth-century Spanish behaviour in the Americas than of Fordism, while millions of Slav civilians and Soviet soldiers were simply starved to death in circumstances that could well have struck a chord with late-eighteenth-century Bengalis or mid-nineteenth-century Irish people.[34] This is not to suggest a partition of the Holocaust into, say, modern and atavistic elements. It is to stress the modernity of colonialism.

Settler colonialism was foundational to modernity. Frontier individuals' endless appeals for state protection not only presupposed a commonality between the private and official realms. In most cases (Queensland was a partial exception), it also presupposed a global chain of command linking remote colonial frontiers to the metropolis.[35] Behind it all lay the driving engine of international market forces, which linked Australian wool to Yorkshire mills and, complementarily, to cotton produced under different colonial conditions in India, Egypt, and the slave states of the Deep South. As Cole Harris observed in relation to the dispossession of Indians in British Columbia, "Combine capital's interest in uncluttered access to land and settlers' interest in land as livelihood, and the principal momentum of settler colonialism comes into focus."[36] The Industrial Revolution, misleadingly figuring in popular consciousness as an autochthonous metropolitan phenomenon, required colonial land and labour to produce its raw materials just as centrally as it required metropolitan factories and an industrial proletariat to process them, whereupon the colonies were again required as a market. The expropriated Aboriginal, enslaved African American, or indentured Asian is as thoroughly modern as the factory worker, bureaucrat, or *flâneur* of the metropolitan centre. The fact that the slave may be in chains does not make him or her medieval. By the same token, the fact that the genocidal Hutus of Rwanda often employed agricultural implements to murder their Tutsi neighbours en masse does not license the racist assumption that, because neither Europeans nor the latest technology were involved, this was a primordial (read "savage") bloodletting. Rwanda and Burundi are colonial creations—not only so far as the obvious factor of their geographical borders is concerned, but, more intimately, in the very racial boundaries that marked and reproduced the Hutu/Tutsi division. As Robert Melson has observed in his sharp secondary synopsis of it, "The Rwandan genocide was the product of a postcolonial state, a racialist ideology, a revolution claiming democratic legitimation, and war—all manifestations of the modern world."[37] The mutual Hutu/Tutsi racialization on which this "post"-colonial ideology was based was itself an artifice of colonialism. In classic

Foucauldian style, the German and, above all, Belgian overlords who succeeded each other in modern Rwanda had imposed a racial grid on the complex native social order, co-opting the pastoral Tutsi aristocracy as a comprador elite who facilitated their exploitation of the agriculturalist Hutu and lower-order Tutsis. This racial difference was elaborated "by Belgian administrators and anthropologists who argued—in what came to be known as the 'Hamitic Hypothesis'—that the Tutsi were conquerors who had originated in Ethiopia (closer to Europe!) and that the Hutu were a conquered inferior tribe of local provenance."[38] Shades of the Franks and the Gauls. In their inculcation with racial discourse, Rwandans were integrally modern. Even the notorious hoes with which some Hutus murdered their Tutsi compatriots symbolized the agriculture that not only encapsulated their difference from their victims. As such, these hoes were also the instruments of the Hutus' involvement in the global market.

***

Of itself, however, modernity cannot explain the insatiable dynamic whereby settler colonialism always needs more land. The answer that springs most readily to mind is agriculture, though it is not necessarily the only one. The whole range of primary sectors can motivate the project. In addition to agriculture, therefore, we should think in terms of forestry, fishing, pastoralism and mining (the last straw for the Cherokee was the discovery of gold on their land). With the exception of agriculture, however (and, for some peoples, pastoralism), none of these is sufficient in itself. You cannot eat lumber or gold; fishing for the world market requires canneries. Moreover, sooner or later, miners move on, while forests and fish become exhausted or need to be farmed. Agriculture not only supports the other sectors. It is inherently sedentary and, therefore, permanent. In contrast to extractive industries, which rely on what just happens to be there, agriculture is a rational means/end calculus that is geared to vouchsafing its own reproduction, generating capital that projects into a future where it repeats itself (hence the farmer's dread of being reduced to eating seed stock). Moreover, as John Locke never tired of pointing out, agriculture supports a larger population than non-sedentary modes of production.[39] In settler-colonial terms, this enables a population to be expanded by continuing immigration at the expense of native lands and livelihoods. The inequities, contradictions and pogroms of metropolitan society ensure a recurrent supply of fresh immigrants—especially, as noted, from among the landless. In this way, individual motivations dovetail with the global market's imperative for expansion. Through its ceaseless expansion, agriculture (including, for this purpose, commercial pastoralism) progressively eats into Indigenous territory, a primitive accumulation that turns native flora and fauna into a dwindling resource and curtails the reproduction of Indigenous modes of production. In the event, Indigenous people are either rendered dependent on the introduced economy or reduced to the stock-raids that provide the classic pretext for colonial death-squads.

None of this means that Indigenous people are by definition non-agricultural. Whether or not they actually do practise agriculture, however (as in the case of

the Indians who taught Whites to grow corn and tobacco), natives are typically represented as unsettled, nomadic, rootless, etc., in settler-colonial discourse. In addition to its objective economic centrality to the project, agriculture, with its life-sustaining connectedness to land, is a potent symbol of settler-colonial identity. Accordingly, settler-colonial discourse is resolutely impervious to glaring inconsistencies such as sedentary natives or the fact that the settlers themselves have come from somewhere else. Thus it is significant that the feminized, finance-oriented (or, for that matter, wandering) Jew of European anti-Semitism should assert an aggressively masculine agricultural self-identification in Palestine.[40] The new Jew's formative Other was the nomadic Bedouin rather than the *fellaheen* farmer. The reproach of nomadism renders the native removable. Moreover, if the natives are not already nomadic, then the reproach can be turned into a self-fulfilling prophecy through the burning of corn or the uprooting of fruit trees.

But if the natives are already agriculturalists, then why not simply incorporate their productivity into the colonial economy? At this point, we begin to get closer to the question of just who it is (or, more to the point, who they are) that settler colonialism strives to eliminate—and, accordingly, closer to an understanding of the relationship between settler colonialism and genocide. To stay with the Cherokee removal: when it came to it, the factor that most antagonized the Georgia state government (with the at-least-tacit support of Andrew Jackson's federal administration) was not actually the recalcitrant savagery of which Indians were routinely accused, but the Cherokee's unmistakable aptitude for civilization. Indeed, they and their Creek, Choctaw, Chickasaw and Seminole neighbours, who were also targeted for removal, figured revealingly as the "Five Civilized Tribes" in Euroamerican parlance. In the Cherokee's case, two dimensions of their civility were particularly salient. They had become successful agriculturalists on the White model, with a number of them owning substantial holdings of Black slaves, and they had introduced a written national constitution that bore more than a passing resemblance to the US one.[41] Why should genteel Georgians wish to rid themselves of such cultivated neighbours? The reason why the Cherokee's constitution and their agricultural prowess stood out as such singular provocations to the officials and legislators of the state of Georgia—and this is attested over and over again in their public statements and correspondence—is that the Cherokee's farms, plantations, slaves and written constitution all signified *permanence*.[42] The first thing the rabble did, let us remember, was burn their houses.

Brutal and murderous though the removals of the Five Civilized Tribes generally were, they did not affect each member equally. This was not simply a matter of wealth or status. Principal Cherokee chief John Ross, for example, lost not only his plantation after setting off on the Trail of Tears. On that trail, one deathly cold Little Rock, Arkansas day in February 1839, he also lost his wife, Qatie, who died after giving her blanket to a freezing child.[43] Ross's fortunes differed sharply from those of the principal Choctaw chief Greenwood LeFlore, who, unlike Ross, signed a removal treaty on behalf of his people, only to stay behind himself, accept US citizenship, and go on to a distinguished career in Mississippi politics.[44]

But it was not just his chiefly rank that enabled LeFlore to stay behind. Indeed, he was by no means the only one to do so. As Ronald Satz has commented, Andrew Jackson was taken by surprise when "thousands of Choctaws decided to take advantage of the allotment provisions [in the treaty LeFlore had signed] and become homesteaders and American citizens in Mississippi."[45] In addition to being principal chiefs, Ross and LeFlore both had White fathers and light skin. Both were wealthy, educated and well connected in Euroamerican society. Many of the thousands of compatriots who stayed behind with LeFlore lacked any of these qualifications. There was nothing special about the Choctaw to make them particularly congenial to White society—most of them got removed like Ross and the Cherokee. The reason that the remaining Choctaw were acceptable had nothing to do with their being Choctaw. On the contrary, it had to do with their *not* (or, at least, no longer) being Choctaw. They had become "homesteaders and American citizens." In a word, they had become individuals.

What distinguished Ross and the removing Choctaw from those who stayed behind was collectivity.[46] Tribal land was tribally owned—tribes and private property did not mix. Indians were the original communist menace. As homesteaders, by contrast, the Choctaw who stayed became individual proprietors, each to his own, of separately allotted fragments of what had previously been the tribal estate, theirs to sell to White people if they chose to. Without the tribe, though, for all practical purposes they were no longer Indians (this is the citizenship part). Here, in essence, is assimilation's Faustian bargain—have our settler world, but lose your Indigenous soul. Beyond any doubt, this is a kind of death. Assimilationists recognized this very clearly. On the face of it, one might not expect there to be much in common between Captain Richard Pratt, founder of the Carlisle boarding school for Indian youth and leading light of the philanthropic "Friends of the Indian" group, and General Phil Sheridan, scourge of the Plains and author of the deathless maxim, "The only good Indian is a dead Indian." Given the training in individualism that Pratt provided at his school, however, the tribe could disappear while its members stayed behind, a metaphysical variant on the Choctaw scenario. This would offer a solution to reformers' disquiet over the national discredit attaching to the Vanishing Indian. In a paper for the 1892 Charities and Correction Conference held in Denver, Pratt explicitly endorsed Sheridan's maxim, "but only in this: that all the Indian there is in the race should be dead. Kill the Indian in him and save the man."[47]

***

But just what kind of death is it that is involved in assimilation? The term "homicide," for instance, combines the senses of killing and of humanity. So far as I know, when it comes to killing a human individual, there is no alternative to terminating their somatic career. Yet, when Orestes was arraigned before the Furies for the murder of his mother Clytemnestra, whom he had killed to avenge her murder of his father Agamemnon, he was acquitted on the ground that, in a

patrilineal society, he belonged to his father rather than to his mother, so the charge of matricide could not stand. Now, without taking this legend too seriously, it nonetheless illustrates (as legends are presumably meant to) an important point. Orestes' beating the charge did not mean that he had not actually killed Clytemnestra. It meant that he had been brought before the wrong court (the Furies dealt with intra-family matters that could not be resolved by the mechanism of feud). Thus Orestes may not have been guilty of matricide, but that did not mean he was innocent. It meant that he might be guilty of some other form of illegal killing—one that could be dealt with by the blood-feud or other appropriate sanction (where his plea of obligatory revenge may or may not have succeeded). As in those languages where a verb is inflected by its object, the nature of a justiciable killing depends on its victim. There are seemingly absolute differences between, say, suicide, insecticide, and infanticide. The etymology of "genocide" combines the senses of killing and of grouphood. "Group" is more than a purely numerical designation. *Genos* refers to a denominate group with a membership that persists through time (Raphaël Lemkin translated it as "tribe"). It is not simply a random collectivity (such as, say, the passengers on a bus). Accordingly, with respect to Robert Gellately and Ben Kiernan (concerning both the subtitle of their excellent collection and their reference, in this context, to 9/11), the strike on the World Trade Center is an example of mass murder but not, in my view, of genocide. Certainly, the bulk of the victims were US citizens. On the scale of the whole, however, not only was it an infinitesimal part of the group "Americans" (which, strictly, is not a consideration), but it was a one-off event.[48] This does not mean that the perpetrators of 9/11 are not guilty. It means that a genocide tribunal is the wrong court to bring them before. Mass murders are not the same thing as genocide, though the one action can be both. Thus genocide has been achieved by means of summary mass murder (to cite examples already used) in the frontier massacring of Indigenous peoples, in the Holocaust, and in Rwanda. But there can be summary mass murder without genocide, as in the case of 9/11, and there can be genocide without summary mass murder, as in the case of the continuing post-frontier destruction, in whole and in part, of Indigenous *genoi*. Lemkin knew what he was doing when he used the word "tribe."[49] Richard Pratt and Phillip Sheridan were both practitioners of genocide. The question of degree is not the definitional issue.

Vital though it is, definitional discussion can seem insensitively abstract. In the preceding paragraph, part of what I have had in mind has, obviously, been the term (which Lemkin favoured) "cultural genocide." My reason for not favouring the term is that it confuses definition with degree. Moreover, though this objection holds in its own right (or so I think), the practical hazards that can ensue once an abstract concept like "cultural genocide" falls into the wrong hands are legion. In particular, in an elementary category error, "either/or" can be substituted for "both/and," from which genocide emerges as either biological (read "the real thing") or cultural—and thus, it follows, not real. In practice, it should go without saying that the imposition on a people of the procedures and techniques that are generally glossed as "cultural genocide" is certainly going to have a direct

impact on that people's capacity to stay alive (even apart from their qualitative immiseration while they do so). At the height of the Dawes-era assimilation programme, for instance, in the decade after Richard Pratt penned his Denver paper, Indian numbers hit the lowest level they would ever register.[50] Even in contemporary, post-Native Title Australia, Aboriginal life expectancy clings to a level some 25% below that enjoyed by mainstream society, with infant mortality rates that are even worse.[51] What species of sophistry does it take to separate a quarter "part" of the life of a group from the history of their elimination?

Clearly, we are not talking about an isolated event here. Thus we can shift from settler colonialism's structural complexity to its positivity as a structuring principle of settler-colonial society across time.

***

The Cherokee Trail of Tears, which took place over the winter of 1838–1839, presupposed the Louisiana Purchase of 1803, when Thomas Jefferson had bought approximately one-third of the present-day continental United States at a knock-down price from Napoleon.[52] The greatest real estate deal in history provided the territory west of the Mississippi that successive US governments would exchange for the homelands of the eastern tribes whom they were bent on removing. For various reasons, these removals, which turned eastern tribes into proxy invaders of Indian territory across the Mississippi, were a crude and unsatisfactory form of elimination. In particular, they were temporary, it being only a matter of time before the frontier rabble caught up with them.[53] When that happened, as Annie Abel resignedly observed in concluding her classic account of the removals, "Titles given in the West proved less substantial than those in the East, for they had no foundation in antiquity."[54] Repeat removals, excisions from reservations, grants of the same land to different tribes, all conducted against a background of endless pressure for new or revised treaties, were the symptoms of removal's temporariness, which kept time with the westward march of the nation. In the end, though, the western frontier met the one moving back in from the Pacific, and there was simply no space left for removal. The frontier had become coterminal with reservation boundaries. At this point, when the crude technique of removal declined in favour of a range of strategies for assimilating Indian people now that they had been contained within Euroamerican society, we can more clearly see the logic of elimination's positivity as a continuing feature of Euroamerican settler society.

With the demise of the frontier, elimination turned inwards, seeking to penetrate through the tribal surface to the individual Indian below, who was to be co-opted out of the tribe, which would be depleted accordingly, and into White society. The Greenwood LeFlore situation was to be generalized to all Indians. The first major expression of this shift was the discontinuation of treaty-making, which came about in 1871.[55] Over the following three decades, an avalanche of assimilationist legislation, accompanied by draconian Supreme Court judgments which notionally dismantled tribal sovereignty and provided

for the abrogation of existing treaties,[56] relentlessly sought the breakdown of the tribe and the absorption into White society of individual Indians and their tribal land, only separately. John Wunder has termed this policy framework "the New Colonialism," a discursive formation based on reservations and boarding schools that "attacked every aspect of Native American life—religion, speech, political freedoms, economic liberty, and cultural diversity."[57] The centrepiece of this campaign was the allotment programme, first generalized as Indian policy in the Dawes Severalty Act of 1887 and subsequently intensified and extended, whereby tribal land was to be broken down into individual allotments whose proprietors could eventually sell them to White people.[58] Ostensibly, this programme provided for a cultural transformation whereby the magic of private property ownership would propel Indians from the collective inertia of tribal membership into the progressive individualism of the American dream. In practice, not only did Indian numbers rapidly hit the lowest level they would ever record, but this cultural procedure turned out to yield a faster method of land transference than the US Cavalry had previously provided. In the half-century from 1881, the total acreage held by Indians in the United States fell by two thirds, from just over 155 million acres to just over 52 million.[59] Needless to say, the coincidence between the demographic statistics and the land-ownership ones was no coincidence. Throughout this process, reformers' justifications for it (saving the Indian from the tribe, giving him the same opportunities as the White man, etc.) repeatedly included the express intention to destroy the tribe in whole.[60] With their land base thus attenuated, US citizenship was extended to all Indians in 1924. In 1934, under the New Deal *Indian Reform Act*, allotment was abandoned in favour of a policy of admitting the tribe itself into the US polity, only on condition that its constitution be rewritten into structural harmony with its US civic environment. A distinctive feature of the model constitutions that the Secretary of the Interior approved for tribes that registered under the 1934 Act was blood quantum requirements, originally introduced by Dawes Act commissioners to determine which tribal members would be eligible for what kind of allotments.[61] Under the blood quantum regime, one's Indianness progressively declines in accordance with a "biological" calculus that is a construct of Euroamerican culture.[62] Juaneño/Jaqi scholar Annette Jaimes has termed this procedure "statistical extermination."[63] In sum, the containment of Indian groups within Euroamerican society that culminated in the end of the frontier produced a range of ongoing complementary strategies whose common intention was the destruction of heterodox forms of Indian grouphood. In the post-World War II climate of civil rights, these strategies were reinforced by the policies of termination and relocation, held out as liberating individual Indians from the thralldom of the tribe, whose compound effects rivalled the disasters of allotment.[64] A major difference between this and the generality of non-colonial genocides is its sustained duration.

For comparative purposes, it is significant that the full radicalization of assimilation policies in both the US and Australia coincided with the closure of the frontier, which forestalled spatial stop-gaps such as removal. In infra-continental

societies like those of mainland Europe, the frontier designates a national boundary as opposed to a mobile index of expansion. Israel's borders partake of both qualities. Despite Zionism's chronic addiction to territorial expansion, Israel's borders do not preclude the option of removal (in this connection, it is hardly surprising that a nation that has driven so many of its original inhabitants into the sand should express an abiding fear of itself being driven into the sea). As the logic of elimination has taken on a variety of forms in other settler-colonial situations, so, in Israel, the continuing tendency to Palestinian expulsion has not been limited to the unelaborated exercise of force. As Baruch Kimmerling and Joel Migdal have observed, for instance, Israeli officials have only permitted family unions "in one direction—out of Israel."[65] The Law of Return commits the Jewish state to numerically unlimited but ethnically exclusive immigration, a factor that, formalities of citizenship notwithstanding, militates against the assimilation of gentile natives. Thus assimilation should not be seen as an invariable concomitant of settler colonialism. Rather, assimilation is one of a range of strategies of elimination that become favoured in particular historical circumstances. Moreover, assimilation itself can take on a variety of forms. In the Australian context, for instance, various scholars have recognized that "the genetic and cultural codes recapitulated each other."[66] Though "softer" than the recourse to simple violence, however, these strategies are not necessarily less eliminatory. To take an example from genocide's definitional core, Article II (d) of the UN Convention on Genocide, which seems to have been relatively overlooked in Australian discussions, includes among the acts that constitute genocide (assuming they are committed with intent to destroy a target group in whole or in part) the imposition of "measures intended to prevent births within the group." Given that the Australian practice of abducting Aboriginal children, assuming its "success," would bring about a situation in which second-generation offspring were born into a group that was different from the one from which the child/parent had originally been abducted, there is abundant evidence of genocide being practised in post-war Australia on the basis of Article II (d) alone. It is impossible to draw simple either/or lines between culture and biology in cases such as these. Though a child was physically abducted, the eventual outcome is as much a matter of a social classification as it is of a body count. Nonetheless, the intentional contribution to the demographic destruction of the "relinquishing" group is unequivocal.

***

Why, then, logic of elimination rather than genocide? As stated at the outset, settler colonialism is a specific social formation and it is desirable to retain that specificity. So far as I can tell, an understanding of settler colonialism would not be particularly helpful for understanding the mass killings of, say, witches in medieval Europe, Tutsis in Rwanda, enemies of the people in Cambodia, or Jews in the Nazi fatherland (the *Lebensraum* is, of course, another matter). By the same token, with the possible exception of the witches (whose murders

appear to have been built into a great social transition), these mass killings would seem to have little to tell us about the long-run structural consistency of settler colonizers' attempts to eliminate native societies. In contrast to the Holocaust, which was endemic to Nazism rather than to Germany (which was by no means the only—or even, historically, the most—anti-Semitic society in Europe), settler colonialism is relatively impervious to regime change. The genocide of American Indians or of Aboriginal people in Australia has not been subject to election results. So why not a special kind of genocide?—Raymond Evans' and Bill Thorpe's etymologically deft "indigenocide," for instance,[67] or one of the hyphenated genocides ("cultural genocide," "ethnocide," "politicide," etc.)[68] that have variously been proposed? The apparently insurmountable problem with the qualified genocides is that, in their very defensiveness, they threaten to undo themselves. They are never quite the real thing, just as patronizingly hyphenated ethnics are not fully Australian or fully American. Apart from this categorical problem, there is a historical basis to the relative diminution of the qualified genocides. This basis is, of course, the Holocaust, the non-paradigmatic paradigm that, being the indispensable example, can never merely exemplify. Keeping one eye on the Holocaust, which is always the unqualified referent of the qualified genocides, can only disadvantage Indigenous people because it discursively reinforces the figure of lack at the heart of the non-Western. Moreover, whereas the Holocaust exonerates anti-Semitic Western nations who were on the side opposing the Nazis, those same nations have nothing to gain from their liability for colonial genocides. On historical as well as categorical grounds, therefore, the hyphenated genocides devalue Indigenous attrition. No such problem bedevils analysis of the logic of elimination, which, in its specificity to settler colonialism, is premised on the securing—the obtaining and the maintaining—of territory.[69] This logic certainly requires the elimination of the owners of that territory, but not in any particular way. To this extent, it is a larger category than genocide. For instance, the style of romantic stereotyping that I have termed "repressive authenticity," which is a feature of settler-colonial discourse in many countries, is not genocidal in itself, though it eliminates large numbers of empirical natives from official reckonings and, as such, is often concomitant with genocidal practice.[70] Indeed, depending on the historical conjuncture, assimilation can be a more effective mode of elimination than conventional forms of killing, since it does not involve such a disruptive affront to the rule of law that is ideologically central to the cohesion of settler society. When invasion is recognized as a structure rather than an event, its history does not stop—or, more to the point, become relatively trivial—when it moves on from the era of frontier homicide. Rather, narrating that history involves charting the continuities, discontinuities, adjustments, and departures whereby a logic that initially informed frontier killing transmutes into different modalities, discourses and institutional formations as it undergirds the historical development and complexification of settler society. This is not a hierarchical procedure.

How, then, when elimination manifests as genocide, are we to retain the specificity of settler colonialism without downplaying its impact by resorting to

a qualified genocide? I suggest that the term "structural genocide" avoids the questions of degree—and, therefore, of hierarchy among victims—that are entailed in qualified genocides, while retaining settler colonialism's structural induration (it also lets in the witches—whose destruction, as Charles Zika has shown, was closely linked to the coeval transatlantic destruction of Native Americans[71]). Given a historical perspective on structural genocide, we can recognize its being in abeyance (as, mercifully, it seems to be in contemporary Australia) rather than being a thing of the past—which is to say, we should guard against the recurrence of what Dirk Moses terms "genocidal moments" (social workers continue to take Aboriginal children in disproportionate numbers, for example.[72]) Focusing on structural genocide also enables us to appreciate some of the concrete empirical relationships between spatial removal, mass killings and biocultural assimilation. For instance, where there is no space left for removal (as occurred on the closure of the frontier in the US and Australia, or on the Soviet victory on Nazi Germany's eastern front), mass killings or assimilation become the only eliminatory options available. Under these circumstances, the resort to mass killings can reflect the proclaimed inassimilability of the victim group, as in the case of Jews in relation to the "Aryan" blood stock.[73] Correspondingly, assimilation programmes can reflect the ideological requirements of settler-colonial societies, which characteristically cite native advancement to establish their egalitarian credentials to potentially fractious groups of immigrants.[74]

***

How, then, might any of this help to predict and prevent genocide?

In the first place, it shows us that settler colonialism is an indicator. Unpalatable though it is (to speak as a member of a settler society), this conclusion has a positive aspect, which is a corollary to settler colonialism's temporal dimension. Since settler colonialism persists over extended periods of time, structural genocide should be easier to interrupt than short-term genocides. For instance, it seems reasonable to credit the belated UN/Australian intervention in East Timor with warding off the likelihood of a continued or renewed genocidal programme. *Realpolitik* is a factor, however. Thus the Timorese miracle would not seem to hold out a great deal of hope for, say, Tibet.

Since settler colonialism is an indicator, it follows that we should monitor situations in which settler colonialism intensifies or in which societies that are not yet, or not fully, settler-colonial take on more of its characteristics. Israel's progressive dispensing with its reliance on Palestinian labour would seem to present an ominous case in point.[75] Colin Tatz has argued, conclusively in my view, that, while Turkish behaviour in Armenia, Nazi behaviour in Europe, and Australian behaviour towards Aborigines (among other examples) constitute genocide, the apartheid regime in South Africa does not. His basic reason is that African labour was indispensable to apartheid South Africa, so it would have been

counterproductive to destroy it. The same can be said of African American slavery. In both cases, the genocide tribunal is the wrong court.

The US parallel is significant because, unlike the South African case, the formal apparatus of oppression (slavery) was overcome but Whites remained in power.[76] On emancipation, Blacks became surplus to some requirements and, to that extent, more like Indians. Thus it is highly significant that the barbarities of lynching and the Jim Crow reign of terror should be a post-emancipation phenomenon.[77] As valuable commodities, slaves had only been destroyed *in extremis*. Even after slavery, Black people continued to have value as a source of super-cheap labour (providing an incitement to poor Whites), so their dispensability was tempered.[78] Today in the US, the blatant racial zoning of large cities and the penal system suggests that, once colonized people outlive their utility, settler societies can fall back on the repertoire of strategies (in this case, spatial sequestration) whereby they have also dealt with the native surplus. There could hardly be a more concrete expression of spatial sequestration than the West Bank barrier. There again, apartheid also relied on sequestration. Perhaps Colin Tatz, who insists that Israel is not genocidal,[79] finds it politic to allow an association between the Zionist and apartheid regimes as the price of preempting the charge of genocide. It is hard to imagine that a scholar of his perspicacity can have failed to recognize the Palestinian resonances of his statement, made in relation to Biko youth, that: "They threw rocks and died for their efforts."[80] Nonetheless, as Palestinians become more and more dispensable, Gaza and the West Bank become less and less like Bantustans and more and more like reservations (or, for that matter, like the Warsaw Ghetto). Porous borders do not offer a way out.

3 Robert Manne has missed this point. Responding to a question posed in 1937 by Western Australian Aboriginal affairs functionary A. O. Neville ("Are we going to have a population of 1,000,000 blacks in the [Australian] Commonwealth, or are we going to merge them into our white community and eventually forget that there ever were any aborigines in Australia?"), Manne suggests that, in order to "grasp the genocidal implications" of the question, "we need only replace the words 'blacks' and 'Aborigine' [*sic*] with the word 'Jew'" and locate the posing of the question in Berlin rather than Canberra. Manne, "Aboriginal child removal and the question of genocide," in A. Dirk Moses, ed., *Genocide and Settler Society* (Berghahn, New York, 2005), pp 219–220. Apart from its contrivance, this analogy fails because the Nazi racialization of Jews did not conduce to their assimilation. Rather, the reverse was the case. As Robert Gellately has observed, "Although we can point to some similarities in Nazi plans and actions for Jews and Slavs, there was, and remains one crucial difference: in principle Jews could never be saved, never convert, nor be assimilated." Gellately, "The Third Reich, the Holocaust, and visions of serial genocide," in Gellately and Kiernan, eds, *The Specter of Genocide: mass murder in historical perspective* (Cambridge: Cambridge U.P. 2003), pp 241–263, at p 262.

15 Quoted in LeVine, *Overthrowing Geography*, p 167.
16 For varying analyses and discussions of the principal formulations of the doctrine of discovery, see e.g. Anthony Anghie, "Francisco de Vitoria and the colonial origins of international law," in Eve Darian-Smith and Peter Fitzpatrick, eds, *Laws of the Postcolonial* (Ann Arbor, MI: Michigan U.P. 1999), pp 89–107; Andrew Fitzmaurice, *Humanism and America: An Intellectual History of English Colonisation*, *1500–1625* (Cambridge: Cambridge U.P. 2003); David Kennedy, "Primitive legal scholarship," *Harvard International Law Journal*, Vol 27, 1986, pp 1–98; Mark F. Lindley, *The Acquisition and Government of Backward Territory in International Law* (London: Longmans, Green. 1926); Robert A. Williams, Jr., *The American Indian in Western Legal Thought: The Discourses of Conquest* (Oxford: Oxford U.P. 1990), esp. pp 233–286.
17 This observation unites almost all commentators, whatever their political inclination. Cf. e.g. Anthony Anghie, "Finding the peripheries: sovereignty and colonialism in nineteenth-century international law," *Harvard International Law Journal*, Vol 40, 1999, pp 1–80, at p 69; L. C. Green, "Claims to territory in colonial America," in L. C. Green and Olive P. Dickason, *The Law of Nations and the New World* (Alberta: Alberta U.P. 1989), p 125.
18 See e.g. Wilcomb E. Washburn, ed., *History of Indian–White Relations* (Washington, DC: Smithsonian Institution 1988), William C. Sturtevant, ed., *Handbook of North American Indians*, Vol 4 (Washington D.C., Smithsonian Institution, 1978), pp 5–39.
19 As Mr Justice Johnson put it in his concurrence with Chief Justice Marshall's judgment in *Cherokee v. Georgia*, "The hunter state bore within itself the promise of vacating the territory, because when game ceased, the hunter would go elsewhere to seek it. But a more fixed state of society would amount to a permanent destruction of the hope, and, of consequence, of the beneficial character of the pre-emptive right." *Cherokee v. Georgia*, 30 *US* (5 Peters) 1, 1831, p 23.
20 The judgments most often cited in this connection are *Worcester v. Georgia*, 31 *US* (6 Peters) 515, 1832, *Crow Dog*, 109 *US* 556, 1883, and *Williams v. Lee*, 358 *US* 217, 1959. I am currently preparing a critique of the limitations of these judgments, and of the limitations of US-style Indian sovereignty as a whole, in an article provisionally entitled "Against the intentional fallacy: marking the gap between rhetoric and outcome in US Indian law and policy."
21 Harvey D. Rosenthal, "Indian claims and the American conscience: a brief history of the Indian Claims Commission," in Imre Sutton, ed., *Irredeemable America: The Indians' Estate and Land Claims* (Albuquerque: New Mexico U.P. 1985), pp 35–70, at p 36.
22 The classic accounts from a well-established literature include: Annie H. Abel, "The history of events resulting in Indian consolidation west of the Mississippi River," in *American Historical Association Annual Report for 1906*, 2 vols (Washington, DC: American Historical Association 1906), Vol 2, pp 233–450; Angie Debo, *A History of the Indians of the United States* (Norman, OK: Pimlico 1970); Grant Foreman, *Indian Removal* (Norman, OK: Oklahoma U.P. 1932).

23 James M. Mooney, *Historical Sketch of the Cherokee* (Chicago: Aldine Transaction 1975 [1900]), p 124.
24 The most lively source on the ghoulish enterprise of craniology/craniometry remains Stephen J. Gould, *The Mismeasure of Man* (Harmondsworth: Norton 1981). For a superbly written account with an Australian focus, see Helen MacDonald, *Human Remains: Episodes in Human Dissection* (Melbourne: Melbourne U.P. 2005).
25 Wolfe, "Limits of native title," p 144.
26 Williams, *American Indian in Western Legal Thought*, p 269.

31 Isabel V. Hull, "Military culture and the production of 'Final Solutions' in the colonies: the example of Wilhelminian Germany," in Gellately and Kiernan, *The Specter of Genocide*, pp 141–162.
32 In 1902, the renowned English liberal J. A. Hobson was expressing the fear "that the arts and crafts of tyranny, acquired and exercised in our unfree Empire, should be turned against our liberties at home." Hobson, *Imperialism. A Study* (London: Allen & Unwin 1902), p 160.
33 Enzo Traverso, *The Origins of Nazi Violence*, Janet Lloyd, trans. (New York: New Press 2003); Charles Patterson, *Eternal Treblinka: Our Treatment of Animals and the Holocaust* (New York: Lantern Books 2002).
34 "The [Central Government region Jewish] ghetto clearings amounted to wild, day-long shooting sprees in particular sections of cities, at the end of which bodies were lying in the main streets leading to train stations." Pohl, "The murder of Jews in the general government," in Ulrich Herbert, ed., *National Socialist Extermination Policies: Contemporary German Perspectives and Controversies* (New York: Berghahn Books 2000), pp 83–103, at p 99. See also Jürgen Zimmerer, "Colonialism and the Holocaust: towards an archaeology of genocide," Andrew H. Beattie, trans., in Moses, *Genocide and Settler Society*, pp 48–76. On colonial starvations and the "New Imperialism," see Mike Davis, *Late Victorian Holocausts: El Niño Famines and the Making of the Third World* (London: Verso 2001).
35 Israel is also, of course, a partial exception here, though not so substantial an exception as is asserted by those who claim that Israel cannot be a colonial formation because it lacks a single commissioning metropolis. From the outset, the Yishuv co-opted Ottoman, British and US imperialism to its own advantage, a reciprocated opportunism involving what Maxime Rodinson neatly glossed as "the collective mother country." Rodinson, *Israel. A Settler-Colonial State?* David Thorstad, trans. (New York: Monad 1973), p 76.
36 Cole Harris, "How did colonialism dispossess? Comments from an edge of empire," *Annals of the Association of American Geographers*, Vol 94, 2004, p 179.
37 Robert Melson, "Modern genocide in Rwanda: ideology, revolution, war, and mass murder in an African state," in Gellately and Kiernan, *The Specter of Genocide*, pp 325–338, at p 326.
38 Melson, "Modern genocide in Rwanda," pp 327–328.
39 "For the provisions serving to the support of humane life, produced by one acre of inclosed and cultivated land, are (to speak much within compasse) ten times more, than those, which are yeilded [*sic*] by an acre of Land, of an equal richnesse, lyeing wast in common." John Locke, *Two Treatises of Government* (Cambridge: Cambridge U.P. 1963 [1698]), p 312.
40 The new Jew is an enduring Zionist theme. In introducing his terrorist memoir, future Israeli prime minister Menachim Begin announced that, in addition to his Jewish readers, he had also written the book for gentiles: "lest they be unwilling to realise, or all too ready to overlook, the fact that out of blood and fire and tears and ashes a new specimen of human being was born, a specimen completely unknown to the world for over eighteen hundred years, 'the FIGHTING JEW'." Begin, *The Revolt*, Samuel Katz, trans. (London: W.H. Allen 1979), p xxv, capitals in original. For a more recent diasporan example, see, for instance, the Adi Nes photograph used as publicity for the Jewish Museum of New York's 1998–1999 "After Rabin: new art from Israel" show, at www.thejewishmuseum.org/site/pages/content/exhibitions/special/rabin/rabin_zoom/rabinL1.html
41 "[John] Ross—the successful self-made Cherokee entrepreneur—was really what white Georgians feared. Their biggest obstacle to acquiring the Cherokee lands was the cultivator's plow and overseer's whip—not

the war club, bow, and scalping knife." Sean M. O'Brien, *In Bitterness and in Tears: Andrew Jackson's Destruction of the Creeks and Seminoles* (Westport, CT: Praeger 2003), p 229. For the Constitution of the Cherokee Nation, see the *Cherokee Phoenix*, February 28, 1828.

42 The capacity to achieve permanence was typically put down to European ancestry, as in Andrew Jackson's exasperated disparagement of the "designing half-breeds and renegade white men" who had encouraged Chickasaw reluctance to cede land. Theda Perdue, *"Mixed Blood" Indians: Racial Construction in the Early South* (Athens, GA: Georgia U.P. 2003), pp 70, 95–96.

43 Foreman, *Indian Removal*, p 310.

44 Perdue, *"Mixed Blood" Indians*, p 68.

45 Ronald N. Satz, *American Indian Policy in the Jacksonian Era* (Lincoln, NE: Nebraska U.P. 1975), p 83.

46 European anti-Semitism could produce similar results: "What centuries of deprivation and persecution had failed to do, the dazzling light of [Jewish] emancipation [in France] achieved. Yet the choice was limited. The words of Clermont-Tonnère, a liberal deputy in the French national assembly: '*Aux Juifs comme nation nous ne donnons rien; aux Juifs comme individuels nous donnons tout'* [to Jews as national collectivity we give nothing; to Jews as individuals we give everything] . . . reveal how restricted was the application of liberty." Isaiah Friedman, *The Question of Palestine, 1914–1918: British–Jewish–Arab Relations* (London: Routledge & Kegan Paul 1973), p 26.

47 From Richard H. Pratt, "The advantages of mingling Indians with whites" (1892), selection in Francis P. Prucha, ed., *Americanizing the American Indians: Writings by the "Friends of the Indian," 1880–1900* (Cambridge, MA: Harvard U.P. 1973), pp 260–271, at p 261. Ward Churchill's *Kill the Indian, Save the Man: The Genocidal Impact of American Indian Residential Schools* (San Francisco: City Lights 2004) illuminates the genocidal consequences of Friends of the Indian-style total institutions with dreadful and systematic clarity.

48 So far, at least. If Al-Qaeda were to repeat the procedure a sufficient number of times, then 9/11 could emerge as the onset of a genocide. Definitionally, in other words, as in the case of other patterned or cumulative phenomena, genocide can obtain retrospectively.

49 He had alternatives. Liddell and Scott give "race, stock, family" as primary meanings of *genos*, with secondary meanings including offspring, nation, caste, breed, gender(!) and "class, sort, kind." "Tribe" is listed as a subdivision of *ethnos* ("a number of people living together, a company, body of men . . . a race, family, tribe"). Henry G. Liddell and Robert Scott, *Greek–English Lexicon* (Oxford: Clarendon 1869), pp 314, 426. Cf. Lemkin, *Axis Rule in Occupied Europe*, p 79.

50 Russell Thornton, *American Indian Holocaust and Survival: A Population History Since 1492* (Norman, OK: Oklahoma U.P 1987), p 133.

51 "In 1998–2000, life expectancy for Aboriginal and Torres Strait Islander peoples was shorter by 21 years for males and 20 years for females, compared with the total population . . . In 1998–2000, the death rate for Indigenous infants was around four times the rate in the total population." Australian Bureau of Statistics, *Australian Social Trends: Health—Mortality and Morbidity: Mortality of Aboriginal and Torres Strait Islander Peoples* (Canberra: Australian Bureau of Statistics, 2002), p 1. See also: House of Representatives Standing Committee on Family and Community Affairs, *Health is Life: Report on the Inquiry into Indigenous Health* (Canberra: House of Representatives, 2000); Neil Thomson, "Trends in Aboriginal infant mortality," in Alan Gray, ed., *A Matter of Life and Death: Contemporary Aboriginal Infant Mortality* (Canberra: Aboriginal Studies Press 1990), pp 1–8.

52 What Jefferson bought was French dominion. The rawly unsettled nature of the Purchase territory (at least, outside New Orleans and its environs and outpost settlements such as Detroit and St Louis) was illustrated by the rapid commissioning of Lewis and Clark's 1803 expedition to chart it.

53 This was the reality behind the mushrooming frontier demographies. "In the decade before 1820, the population of the new state of Alabama increased by a startling 1,000 per cent." O'Brien, *In Bitterness and in Tears*, p 221. For an illuminating catalogue of Creek responses to this invasion, see Richard S. Lackey, comp., *Frontier Claims in the Lower South. Records of Claims Filed by Citizens of the Alabama and Tombigbee River Settlements in the Mississippi Territory for Depradations by the Creek Indians During the War of 1812* (New Orleans: Polyanthos 1977).

54 Abel, "Indian consolidation west of the Mississippi River," p 412.

55 "No Indian nation or tribe within the territory of the United States shall be acknowledged or recognized as an independent nation, tribe, or power with whom the United States may contract by treaty." 16 *Stat*., 566 (Act of March 3, 1871), c 120, s 1. For discussion, see Vine Deloria, Jr. and David E. Wilkins, *Tribes, Treaties, & Constitutional Tribulations* (Austin, TX: Texas U.P. 1999), pp 60–61; Francis P. Prucha, *The Great Father: The United States Government and the American Indians* (abridged ed., Lincoln, NE: Nebraska U.P. 1986), p 165.

56 In particular, *US v. Kagama*, 118 *US* 1886, p 375; *Lone Wolf v. Hitchcock*, 187 *US* 1903, p 553.

57 John R. Wunder, *"Retained by the People": A History of American Indians and the Bill of Rights* (New York: Oxford U.P. 1994), pp 17, 39.
58 The best source on this campaign remains the authoritative report that found its way into the House hearings preceding the *Indian Reorganization Act* of 1934: D. S. Otis, *The Dawes Act and the Allotment of Indian Lands*, Francis P. Prucha, ed. (Norman, OK: Oklahoma U.P. 1973 [1934]).
59 *Statistical Abstract of the United States* (Washington, DC: US Bureau of the Census, Department of Commerce, 1955), p 180.
60 See e.g. Frederick E. Hoxie, *A Final Promise. The Campaign to Assimilate the Indians, 1880–1920* (Cambridge: Nebraska U.P. 1989); Prucha, *Americanizing the American Indians*, passim.
61 Thomas J. Morgan, "What is an Indian?," in *Sixty-Fifth Annual Report of the Commissioner for Indian Affairs* (Washington, DC: Government Printing Office 1892), pp 31–37.
62 "Thus the key factor in colonial and 'post'-colonial race relations is not, as some have argued, simple demographic numbers, since populations have to be differentiated before they can be counted. Difference, it cannot be stressed enough, is not simply given. It is the outcome of differentiation, which is an intensely conflictual process." Patrick Wolfe, "Land, labor, and difference: elementary structures of race," *American Historical Review*, Vol 106, 2001, pp 865–905, at p 894.
63 M. Annette Jaimes, "Federal Indian identification policy: a usurpation of Indigenous sovereignty in North America," in her, ed., *The State of Native America: Genocide, Colonization, and Resistance* (Boston: South End Press 1992), pp 123–138, at p 137. Patricia Limerick is almost as succinct: "Set the blood quantum at one quarter, hold to it as a rigid definition of Indians, let intermarriage proceed as it has for centuries, and eventually Indians will be defined out of existence. When that happens, the federal government will finally be freed from its persistent 'Indian problem'." Limerick, *The Legacy of Conquest: The Unbroken Past of the American West* (New York: Norton 1987), p 338.
64 Donald L. Fixico, *Termination and Relocation. Federal Indian Policy, 1945–1960* (Albuquerque: New Mexico U.P. 1986); Charles F. Wilkinson and Eric R. Biggs, "The evolution of the termination policy," *American Indian Law Review*, Vol 5, 1977, pp 139–184.
65 Baruch Kimmerling and Joel S. Migdal, *The Palestinian People. A History* (rev. ed., Cambridge, MA: Harvard U.P. 2003), p 172.
66 Wolfe, "Nation and miscegeNation," p 111; *Settler Colonialism and the Transformation of Anthropology*, p 180. Scholars who have made this point after me are too numerous to mention. Among those who made it before I did, see e.g. Jeremy Beckett, "The past in the present, the present in the past: constructing a national Aboriginality," in his, ed., *Past and Present: The Construction of Aboriginality* (Canberra: Aboriginal Studies Press 1988), pp 191–217; Gillian Cowlishaw, "Colour, culture and the Aboriginalists," *Man*, Vol 22, 1988, pp 221–237; Andrew Lattas, "Aborigines and contemporary Australian nationalism: primordiality and the cultural politics of otherness," in Julie Marcus, ed., *Writing Australian Culture* (*Social Analysis* special issue no. 27, pp 50–69.
67 Evans and Thorpe, "The massacre of Aboriginal history," *Overland*, Vol 163, 2001, pp 21–39, at p 36.
68 For examples (some of which are actually hyphenated), see Katherine Bischoping and Natalie Fingerhut, "Border lines: Indigenous peoples in genocide studies," *Canadian Review of Social Anthropology*, Vol 33, 1996, pp 481–505, at pp 484–485; Robert K. Hitchcock and Tara M. Twedt, "Physical and cultural genocide of various Indigenous peoples," in Samuel Totten, William S. Parsons and Israel W. Charny, eds, *Genocide in the Twentieth Century* (New York: Garland Press 1995), pp 483–514, at pp 498–501. For "politicide" ("a process that covers a wide range of social, political, and military activities whose goal is to destroy the political and national viability of a whole community of people"), see Baruch Kimmerling, *Politicide. Ariel Sharon's War Against the Palestinians* (rev. ed., London: Verso 2006).
69 Ever alert to the damaging implications in this connection of Israel's invasion of Palestinian territory, Colin Tatz belittles the significance of "a contest for land and what the land held" as merely "explain[ing] away" colonial ethnocide. Tatz, *With Intent to Destroy: Reflecting on Genocide* (London: Verso 2003), p 180. Lower down the page, however, he observes that "We need to remember that Aboriginal Australians were deemed expendable not just because they were considered 'vermin', or because they sometimes speared cattle or settlers, but because they failed the Lockean test of being a people capable of a polity and a civility, to wit, they couldn't or wouldn't exploit the land they held, at least not in the European sense."
70 Wolfe, "Nation and miscegeNation," pp 110–118; *Settler Colonialism and the Transformation of Anthropology*, pp 168–190. For US examples, see e.g. Robert F. Berkhofer, Jr., *The White Man's Indian. Images of the American Indian from Columbus to the Present* (New York: Vintage Books 1979); Hugh Honour, *The New Golden Land: European Images of America from the Discoveries to the Present Time* (New York: Pantheon 1975). For responses to the phenomenon, see e.g. Fergus M. Bordewich, *Killing the White Man's Indian. Reinventing Native Americans at the End of the Twentieth Century* (New York: Anchor Books 1996); Ward Churchill, *Indians Are Us? Culture and Genocide in Native North America* (Monroe, ME: Common Courage Press 1994).

71 Zika, "Fashioning new worlds from old fathers: reflections on Saturn, Amerindians and witches in a sixteenth-century print," in Donna Merwick, ed., *Dangerous Liaisons: Essays in Honour of Greg Dening* (Melbourne: History Department, University of Melbourne 1994), pp 249–281; Zika, "Cannibalism and witchcraft in early-modern Europe: reading the visual images," *History Workshop Journal*, Vol 44, 1997, pp 77–105.

72 "At June 2002, 22% (4,200) of children in out-of-home care were Aboriginal or Torres Straight [*sic*] Islander children. This represented a much higher rate of children in out-of-home care among Indigenous children than non-Indigenous children (20.1 per 1,000 compared with 3.2 per 1,000)." "Children in out-of-home care," in Australian Bureau of Statistics, *Australia Now* (Canberra: Australian Bureau of Statistics, 2004), s. 2, "Australian social trends, 2003: family and community-services: child protection." An indication of the progress that Indigenous people in Australia have achieved since the darkest days of the assimilation policy is contained in the sentence that follows this excerpt: "In all jurisdictions, the Aboriginal Child Placement Principle outlines a preference for Indigenous children to be placed with other Aboriginal or Torres Straight [*sic*] Islander peoples, preferably within the child's extended family or community."

73 Given the matrilineal transmission of—and relative difficulty of conversion to—Judaism, this factor indicates vigilance in relation to Palestine.

74 "Assimilated natives would be proof positive that America was an open society, where obedience and accommodation to the wishes of the majority would be rewarded with social equality." Hoxie, *Final Promise*, p 34. See also George P. Castile, "Indian sign: hegemony and symbolism in federal Indian policy," in his and Robert L. Bee, eds, *State and Reservation. New Perspectives on Federal Indian Policy* (Tucson, AZ: Arizona U.P. 1992), pp 165–186, at pp 176–183.

75 A drive to replace Palestinian labour with cheap immigrant labour was begun in the early 1990s in response to the first *Intifada*. Though this policy was officially abandoned as it generated its own problems, around 8% of Israel's population continues to be made up of illegal immigrants (who are, by definition, non-Jewish). See Shmuel Amir, "Overseas foreign workers in Israel: policy aims and labor market outcomes," *International Migration Review*, Vol 36, 2002, pp 41–58; Eric Beachemin, "Illegal in Israel," Radio Netherlands broadcast, September 15, 2004, at http://www2.rnw.nl/rnw/en/features/humanrights/tornlives/ilegalinisrael?view = Standard; Leila Farsakh, "An occupation that creates children willing to die. Israel: an apartheid state?," *Monde Diplomatique*, English language edition, November 4, 2003, at http://mondediplo.com/2003/11/04apartheid

76 Though formal legislative power was, for a time, exercised by Blacks in Black-majority Southern states during Reconstruction. See Thomas C. Holt, *Black Over White: Negro Political Leadership in South Carolina during Reconstruction* (Urbana, IL: Illinois U.P. 1977).

77 W. Fitzhugh Brundage, *Lynching in the New South: Georgia and Virginia, 1880–1930* (Urbana, IL: Illinois U.P. 1993); Leon F. Litwack, *Trouble in Mind: Black Southerners in the Age of Jim Crow* (New York: Knopf 1998); Joel Williamson, *The Crucible of Race: Black–White Relations in the American South Since Emancipation* (Oxford: Oxford U.P. 1984), pp 180–223.

78 "Slave labor could be analyzed in economic, social, and political terms [in traditional histories,] but free labor was often defined as simply the ending of coercion, not as a structure of labor control that needed to be analyzed in its own way." Thomas C. Holt, Rebecca J. Scott and Frederick Cooper, *Beyond Slavery: Explorations of Race, Labor, and Citizenship in Postemancipation Societies* (Chapel Hill, NC: North Carolina U.P. 2000), pp 2–3.

79 Though he is too scrupulous a scholar not to acknowledge that "Israeli actions may become near-genocidal." Tatz, *With Intent to Destroy*, p 181.

80 "[C]apital punishment now being an unquestioned, routine penalty for chucking stones at Israelis." Robert Fisk, *The Great War for Civilisation: The Conquest of the Middle East* (London: Fourth Estate 2005), p 546. Quote in text from Tatz, *With Intent to Destroy*, p 117. I have chosen not to patronize Professor Tatz by quoting approvingly from his otherwise very useful book, from which I have learned a lot, on account of our fundamental divergence over the issue of contemporary Zionism, which I wholeheartedly oppose, and, in particular, of my disdain for his attempts to confuse contemporary anti-Zionism with anti-Semitism (e.g. pp 19, 27, 127). Apart from anything else, these attempts do grave injustice to the real victims of anti-Semitism.

INTRODUCTION

◆ ◆ ◆

The Indigenous Body in Pain

"All of us, readers and writers, are bereft when criticism remains too polite or too fearful to notice a disrupting darkness before its eyes." So concludes *Playing in the Dark,* Toni Morrison's forceful exposition of American literature's deep "association with race." Published in 1992, the year of the Columbian quincentenary, Morrison's collection locates African Americans at the center of American cultural development, fusing "black" and "white" into a seemingly inescapable imaginary bond. As she and so many others have come to acknowledge, definitions of America are embedded in racial constructions: "the American self knows itself as not enslaved, but free; not repulsive, but desirable; not helpless, but licensed and powerful; not history-less, but historical; not damned, but innocent; not a blind accident of evolution, but a progressive fulfillment of destiny."[1]

This book attempts to add to these equations. The narrative of American history, it argues, has failed to gauge the violence that remade much of the continent before U.S. expansion. Nor have American historians fully assessed the violent effects of such expansion on the many Indian peoples caught within these continental changes. Following Morrison's critique, this work suggests that American history is considered a place of comfort, not one of pain; a realm of achievement rather than one of indigenous trauma.

Compared with Europe, Africa, the Middle East, and Asia, North America, in particular the region that would become the United States, has a short and linear history. Beginning in the early seventeenth cen-

tury, scattered groups of Anglo settlers discarded the constraints of Europe for the promises of a new land. Along the Atlantic, these economic and religious outposts grew and eventually united against England. A new polity and nation were formed, and a revolutionary experiment in politics and culture began, an experiment that not only continues to the present but also has spread through much of the world.

These are among the founding truths of American history, as are the United States' subsequent development and expansion as a superpower. Such truths are important. They underscore the achievements of a fledgling nation, and most indexes of American history support and reinforce this narrative. Cities sprouted where forests once stood, immigrants amassed great wealth, and industry grew and grew and grew. By the early twentieth century, such truths had become so accepted that many simply regarded American history as a process of nature: a promised "virgin land" uninhabited before European contact had supinely awaited its natural awakening, the fulfillment of its "destiny." On a narrative and discursive level, America represented the promise of prosperity, and the toil and suffering involved in achieving it simply confirmed the overarching potential and goodness of the nation. *Give us your tired, your poor, and your huddled masses yearning to be free,* and we shall turn them into prosperous citizens and adorn them with the vestments of the rights of man.[2]

Narratives about the past are in constant flux, and it is now commonplace to reject such portrayals as prejudiced and incomplete. Women, workers, racial and ethnic minorities do not fit easily into such contained mythologies. The primary function of myth, as Roland Barthes has argued, is to turn history into nature, and the past two generations of scholars have attempted to reconcile discordant views of our nation's past, to reconcile the mythic promise of America with its past and contemporary inequities, opening new fields of inquiry and reinterpreting canonical subjects. A deluge of scholarship on nearly all aspects of American life and culture now fills university press catalogs and the convention halls of our nation's academic gatherings.[3]

Yet a glaring absence remains at the heart of the field. Still missing from most narratives of American history are clear and informed anal-

yses of our nation's indigenous peoples. Although "Indians" are emblematic of America and continue to excite the imaginations of the young both here and abroad, Indian history is no mere curiosity or sideshow in the drama of the American past. The two remain interwoven. North America was already inhabited when Europeans arrived, and from their first days on this continent, Europeans relied on Native peoples for guidance, hospitality, and survival. American historians since the days of the Puritans have tried to rationalize Europeans' takings of Indian lands and lives, and all Indian peoples have endured the many traumas of contact and colonization. Native and European peoples have interacted, intermingled, and coexisted since the first moments of encounter. They have also come into bitter and deadly conflict. Reconciling the dispossession of millions with the making of America remains a sobering challenge, an endeavor that requires reevaluation of many enduring historical assumptions. A generation of scholars has already begun this large task, and this book aims to contribute to it.[4]

Historicizing Colonialism

Despite an outpouring of work over the past decades, those investigating American Indian history and U.S. history more generally have failed to reckon with the violence upon which the continent was built. Most scholarship has focused on colonial and early American history or, west of the Mississippi, on the decades of exploration and expansion in the nineteenth century. The Indians of the American Great Basin—the vast interior portions of the American West between the Sierra and Rocky Mountains—still figure little or not at all in the nation's vision of its past. The many Ute, Paiute, and Shoshone groups who have inhabited this region since time immemorial generally appear as distant shadows in historical texts, faint nameless traces of America's primordial past. Whether as hostile combatants against American migrants or as peaceful desert dwellers, Great Basin Indians are rarely seen as agents in histories of the region. They appear passive objects as history essentially rolls over them, forcing them into minor roles in a larger pageant, understudies in the very dramas remaking their homelands. From the first moments of conquest to the present

day, the experiences of these Indian peoples remain overlooked and bypassed on the thoroughfare of historical inquiry. These Indians, like so many others, remain nonparticipants in the epic of America.[5]

Such historical oversight is surpassed only by anthropology's treatment of these Native peoples. For nearly a century, many of those who have studied Great Basin Indians have consigned them to the distant netherworlds of "prehistory," to the very margins of "civilization." Because of their sparse technologies and migratory economies, anthropologists, including the influential ethnographer Julian Steward, have represented Great Basin Indians as the quintessential "peoples without history," the most "primitive" peoples in the world. Steward pioneered the field of Great Basin as well as American anthropology, using his research among the Nevada Shoshone to construct elaborate models of human organization in which Great Basin Indians supposedly remained the least "developed" cultures in the world. They represented antitheses of modernity and lived "simple" unchanging lives as endless desert wanderers, the first and definitive "hunters and gatherers." An entire language of cultural development arose from Steward's study of these Indian peoples, who became the sediment upon which others attempted to understand "Man's Rise to Civilization."[6]

Such environmentally determined cultural hierarchies have now become discredited, replaced by more relativistic and discursive notions of culture. In the Great Basin, however, as in many other parts of the Americas, the intellectual residue of primitivism remains. The region's indigenous peoples remain fixed within static definitions of culture, imprisoned in notions of essentialism. As a result of the pernicious, self-perpetuating logic of timelessness on the one hand, and of primitivism on the other, these groups remain outside of history, and any changes or adaptations they have made become only further evidence of their demise. When Native peoples adapt to foreign economies or utilize outside technologies, they are assumed to abandon their previous—that is, inferior—ways while in the process losing parts of themselves; they lose the very things that according to others define them. Once adaptation becomes synonymous with assimilation, change over time—the commonplace definition of history—becomes a death knell. The more things change, the greater the loss.[7]

This study takes direct aim at the intertwined ahistoricism and essentialism that pervade understandings of the Intermountain West. It

offers an alternative to this overlooked and overdetermined past. Far from being marginal actors in American history, Great Basin Indians in fact remain central to the development and course of western history. Furthermore, beneath the discourse of primitivism lie painful and traumatic pasts that defy summary analysis. From the spread of epidemic diseases, to the introduction of new economies, to the loss of lands, lives, and resources, these indigenous peoples, like so many others, have experienced epic ordeals. Moreover, they have done so largely outside the view of America's settler and immigrant populations. From their earliest recorded interactions with Europeans in the 1600s to their nineteenth-century struggles within an expansionist state, Great Basin Indians have witnessed the rise of new worlds and the collapse of old ones. Such challenges and changes remain fundamental to understandings of the region's past and are linked to larger imperial and national currents.[8]

These are not, however, simply *peoples with history* whose experiences can be molded or incorporated into common narratives of American history. As the pioneering Indian studies scholar Vine Deloria Jr. noted almost forty years ago, it does little good to add Indians into a flawed mosaic of American history without first reworking the temporal and spatial boundaries of the field. This book extends Deloria's critique and suggests that the experiences of Great Basin Indians force reconsideration of large portions of North American history, histories that after excavation offer far from celebratory portraits of America. Harrowing, violent histories of Native peoples caught in the maelstrom of colonialism define this and other regions and remain necessary foundations upon which other narratives must contend. Such painful histories also have contemporary legacies that continue to influence these communities and their descendants.[9]

Violence as both a subject and a method is at the heart of this book. That Native peoples endured violent attacks or responded to such attacks with force is not news. Indeed, the history of Indian-white relations, particularly throughout the eighteenth and nineteenth centuries, reads like a series of constant wars. The following pages examine the nature of such chronic conflict—the seemingly endless raids, battles, massacres, and numbers lost on all sides. Ultimately, however, violence becomes more than an intriguing or distressing historical subject. It becomes an interpretive concept as well as a method for

understanding these understudied worlds. By charting the region's changing relations of violence, this work seeks to open up historical landscapes already altered by European contact, as violence provides the clearest and at times only windows into them. Violence provides the threads that weave Great Basin Indian history together and organizes the discussion in the following four ways.[10]

First, the earliest moments of postcontact Great Basin history become accessible only through analyses of the shifting relations of violence that remade the Intermountain West during the Spanish colonial era. As the first colonial power in North America, Spain initiated imperial intrusions that disrupted the everyday lives of Indian peoples throughout the continent. The demographic, economic, and environmental changes unleashed throughout northern New Spain have received much analysis, but few have considered the central role and effects of violence in these transformations. While many recognize the effects of Spanish horses, trade networks, and diplomacy, few link these changes to broader patterns of everyday life in the Spanish borderlands. Focusing on the easternmost Great Basin groups, principally on bands of Ute Indians in northern New Mexico and in Colorado, Chapters 1 through 4 examine worlds revolutionized by the irruption of new forms of colonial violence. From the earliest explorations and settlements in colonial New Mexico to the varying frontier successes of Spanish and later Mexican regimes, Ute bands adopted changing strategies of survival in response to colonial disturbance and remained critical to the region's balance of power. In response to the waves of violence engulfing their homelands, Utes became feared combatants, courted allies, and eventually gracious hosts whose changing economic and political decisions contributed to the composition of the Spanish borderlands.[11]

Ute adaptation in the face of imperial expansion is, however, neither celebrated nor glorified. Utes responded in kind to the shifting relations of violence sweeping throughout their homelands, redirecting colonial violence against their neighbors, Spanish and Indian alike. Carrying violence to more distant peoples in New Mexico's expanding hinterlands, Utes attempted to monopolize the trade routes in and out of the colony while besieging neighboring groups, particularly those without horses. As their power north of Santa Fe increasingly weighed upon the minds of colonial rulers, Utes forged genera-

tions of ties to New Mexico that wedded these societies together in new and surprising ways. However, Spanish-Ute accommodation carried high and deadly costs for Ute neighbors, particularly nonequestrian Paiute and Shoshone groups in the southern Great Basin, whose communities were raided for slaves by Utes, New Mexicans, and later Americans. Like their neighboring Indian and Spanish rivals, Utes remade themselves in response to the region's cycles of violence and did so at the expense of others, as violence and Indian slavery became woven into the fabric of everyday life throughout the early West. While sparsely documented, evidence of Great Basin Indian captivity and Ute slave trafficking underscores the transformative and violent nature of Great Basin Indian history. In short, before their sustained appearance in written records, Great Basin Indians endured the disruptive hold of colonialism's expansive reach, brought to them first by other Indian people.[12]

Violence organizes this study in a second and related way. The shifting relations of violence that remade Native worlds throughout the early West did so largely outside of colonial settlements and the purview of authorities. Often only faint traces remain of the waves of violence that swept out of New Mexico and transformed Native peoples from the Sierras to the Mississippi. Accessing the effects of such waves of violence is a fragile endeavor, the results of which must be viewed with skepticism. As in other contact zones and imperial hinterlands, Utes and other Great Basin Indians inhabited "new worlds for all," the genesis of which remains lost to historical inquiry. The history of these groups becomes, then, a history without clear or fixed origins. The earliest documentary histories of Great Basin Indians remain unfixed and untied to specific moments or locales. They remain histories in motion, accelerated by the revolutionary and violent impacts of European contact and colonialism. As Utes ferried Great Basin Indian captives into New Mexico, for example, colonial officials knew little of the natal origins of these slaves, often classifying them as "Yutas" on the basis of shared linguistic ties. These renamed Great Basin captives—overwhelmingly young women and children—provide the earliest sustained references to nonequestrian Great Basin peoples while also revealing the violence intrinsic to the region's history.[13]

Such attention to violence and motion, however, by no means discredits Ute and other tribal traditions that for strategic reasons empha-

size the permanent and immemorial existence of each nation in their respective homelands. Forged against narratives of erasure, such histories have often countered policies aimed at denying Indians access to lands and resources. Emphasis on these Native groups' changing relations of violence is intended here to recast the received categories of analysis that have so readily frozen these Native people. As the following pages suggest, understandings of Indian history, culture, and identity remain historically determined, located not in essential cultural traits but in the violent postcontact time and space of American history. No timeless ethnographic categories or political definitions characterize these Native peoples. Indeed, in this region, precise band names, territorial locales, and stable political designations are often unreliable, particularly given the violent shock waves that engulfed these Indian homelands before their sustained documentation. Hybridity, adaptation, and exchange more clearly characterize these histories than do fixed ethnographic categories, let alone the convenient dichotomies so common to narratives of American Indians. Colonial violence, in sum, characterizes these Native worlds as the violence that saturated communities on the margins of empire has also destabilized the categories of analysis used to describe them.[14]

While violence emerges as the overarching theme of this book, pain remains its implied object, particularly as experienced by Indian peoples. Elusive yet omnipresent, pain remains an uncommon subject in historical inquiry, partly because of language's inability to capture the experiential nature of another's pain. As Elaine Scarry has argued, bodily pain not only resists representation but also destabilizes it, casting this most elemental human experience into the realms of medical and biological sciences.[15]

While Scarry's work focuses primarily on the psychology of pain, several historians have utilized her findings in assessing, in Barbara Young Welke's words, "the irony that the tools of civilization were themselves the instruments of acute suffering." Colonialism's effects upon such indigenous "bodies in pain" necessitate deeper documentary and interpretive attention. Underrecognized corollaries to Europe's expansion into the Americas, violence and pain remain essential, if destabilizing, prerequisites in the study of American history.[16]

Third, violence weds the history of these Native groups to larger imperial histories. Despite accounts to contrary, Europe's colonization of

North American Indian lands defines much of American history. In fact, pioneering American historian Frederick Jackson Turner was partially correct when he declared the process of American expansion as the foundational experience of American history. Although Turner's insistence on the self-democratizing attributes of "frontier" settlement has been recast, few have claimed the effects of such expansion on Indian peoples as equally foundational to, if not representative of, the American experience. This book attempts such suggestion. The violent transformation of Indian lands and lives characterizes European and American expansion. Neither natural nor inevitable, the violent deformations of Native communities locate these indigenous pasts within the broader field of European global colonialism. Historicizing the violent effects of colonialism and suggesting how enduring such effects have become remain objectives in the chapters to come.[17]

Finally, violence and the history of Native influences on imperial and national borderlands require alternative paradigms for understanding the nineteenth-century processes of American expansion. As Chapters 5 through 7 reveal, the United States expanded into worlds already affected by generations of European disruptions and remade these worlds through its own agents of empire. From the use of the U.S. Army to combat and confine Indian peoples, to the state-sanctioned theft of Indian lands and resources, violence both predated and became intrinsic to American expansion. Violence enabled the rapid accumulation of new resources, territories, and subject peoples. It legitimated the power of migrants, structured new social and racial orders, and provided the preconditions for political formation. From the initial moments of American exploration and conquest, through statehood, and into the stages of territorial formation, violence organized the region's nascent economies, settlements, and polities. Violence and American nationhood, in short, progressed hand in hand.[18]

American political formation in the Great Basin occurred through violence in the homelands of Native peoples, many of whom had forged generations of relations with colonial societies. In the 1800s such shared or mutually constructed worlds were overturned. Following a rapid succession of events, newcomers swarmed throughout the region, seizing the most fertile lands and resources for their own. Fur trappers, traders, and explorers either wrought the initial traumas or

laid the basis for subsequent ones. In the Great Basin, trappers vied with one another in scorched-earth trapping practices, emptying fragile watersheds of small game, while traders ferried resources into and out of the region, enmeshing Native communities in webs of economic dependency. Explorers and cartographers like Lewis and Clark initiated less immediate forms of violence, performing the geographical measurements required for subsequent disruptions. Armies, settlers, migrants, and their herds soon followed, forever altering the region's ecology and societies. In the span of one generation, from the Rocky Mountains to the Sierras immigrants became settlers, settlements became towns, and Indians became outsiders. Surveying the pre-reservation history of Colorado's and Utah's Native populations, the second half of this book highlights the divergent paths of diplomacy, warfare, and survival initiated by equestrian Utes and Shoshones in response to the pandemic relations of violence engulfing their communities.

Great Basin Indian Struggles for Survival

Amidst such demographic and environmental turmoil, Great Basin Indians struggled to survive. Colorado Utes navigated political channels to protect territories within their familiar yet changing world, while Utah's Utes and Shoshones escalated their use of violence in response to settler and emigrant disruptions. Others became overwhelmed by the onslaught, as many Indian families migrated out of the region to neighboring areas where the federal government had created federally protected Indian lands called reservations. Such enclaves, or "laboratories" as later government officials viewed them, became intertribal refugee centers where previously unrelated peoples joined together in diaspora. Despite the U.S. Senate's ratification of treaties mandating the creation of reservations throughout the region, many Great Basin groups, particularly nonequestrians, received few federal protections and faced the ordeal of conquest on their own.[19]

In Nevada, eastern California, and central Utah, survival often necessitated integration into the region's evolving settler economies. Facing enduring economic and environmental crises, many Indian families attached themselves to white farms, mining communities, or ranches where Indian men and women worked in the most degraded

sectors. Great Basin Indian impoverishment—a common trope in American literary and travel narratives—became the clearest expression of such disruption, as everywhere Indian peoples appeared to be on the verge of extinction, impoverished beyond the hope of survival. Mark Twain's infamous comments about the Goshute Shoshone of eastern Nevada encapsulate such perceptions: "It was along in this wild country . . . that we came across the wretchedest type of mankind . . . the Goshoot Indians. From what we could see and all we could learn, they are very considerably inferior to even the despised Digger Indians of California, inferior to all races of savages on our continent . . . Our Goshoots are manifestly descended from the self-same gorilla, or kangaroo or Norway rat, whichever animal-Adam the Darwinians trace them to." What America's most celebrated nineteenth-century writer failed to "learn" was that Indian poverty—masqueraded as "wretchedness" and "inferiority"—remained intimately linked to American colonization; these Native peoples were not relics of an ancient past but products of the most rapid territorial expansion in world history. Racial and cultural difference, however, more easily explained Indian misery.[20]

In the face of such impoverishment, Great Basin Indians fought to retain control over their communities and access to their homelands. Comparing the unique, though parallel, economic adaptations initiated by equestrian Utes and Shoshones, Chapters 6 and 7 link the region's colonial period to the violent aftermath of American expansion. Surveying pre-reservation efforts of Native communities to maintain control over their subsistence lands while also highlighting their growing tensions around settler communities, it ends where many narratives of Indian history end, in bloodshed, with an examination of the January 1863 Bear River Massacre, when 500 Northern Shoshones fought for survival against Civil War volunteers, more than half dying in the morning snow.

The Epilogue meditates on the region's divergent historical narratives. Contrasting Julian Steward's seminal ethnographies with Western Shoshone family histories, it highlights the power of narrative both to define a people's essence and to instill a deep sense of cultural pride. Steward, as powerfully as any American anthropologist, classified his subjects into reified cultural hierarchies and failed to see how the very people he interviewed and traveled among had responded to the challenges of conquest. More concerned with his evolutionary

typologies than with the everyday struggles of his informants, Steward went so far as to petition against Western Shoshone attempts to gain federal recognition and reservation lands under the auspices of the Indian Reorganization Act of 1934. He believed that the "traditional" political institutions of the Shoshone were so undeveloped that they could not manage as a "tribe"; their attempts to reinvent themselves politically were antithetical to, and thus threatened, their culture.

[To view this image, refer to the print version of this title.]

Shoshone Beggars at the Railway Station, Carlin, Nevada. Lithograph in *Frank Leslie's Illustrated Newspaper* (New York), November 8, 1873. Images of Western and Goshute Shoshone impoverishment captured the attention of Indian agents, journalists, and travel writers throughout the 1800s, most famously by Mark Twain.

Steward and other American intellectuals, the Epilogue suggests, have perpetuated one of the most lasting legacies of conquest: they have erased violence and colonialism from discussions of the region's past, performing acts of representational violence whose power continues to misinform assessments of these Native people.[21]

Western Shoshone and other Great Basin groups have resisted such intellectual and political racism in many ways. Denied the guarantees of nineteenth-century treaties, particularly the 1863 Treaty of Ruby Valley, the Western Shoshone, for example, spent the entire twentieth century fighting for implementation of the treaty's articles, particularly its provisions for the establishment of Indian reservations in Nevada. Despite Steward's protests, Shoshone groups used the mechanisms of the Indian Reorganization Act to receive some new lands and federal recognition. After World War II, they navigated the equally complicated legal channels established by the Indian Claims Commission to file for their outstanding land claims, and throughout the 1970s, 1980s, and 1990s Shoshone groups fought for the return of Indian homelands. Unlike any other state in the union, over 90 percent of Nevada is "owned" by the federal government, which manages tens of millions of acres through Department of Defense and Bureau of Land Management offices, using the region for everything from nuclear testing to wildlife preserves. The origins of these (sometimes contradictory) policies date to 1863 and to the unconstitutional failure of the federal government to receive title from Shoshone groups. As the final chapter and the Epilogue detail, Shoshone political struggles mirror the social and economic ordeals of other Great Basin groups, in which the threat and legacy of violence also remain ever present.[22]

The Epilogue ends with two nonreservation Shoshone family histories, including my own. The young Shoshone woman in the photo, Mamie Andrews, was my great-grandmother, born in the 1890s in central Nevada during the second generation after American conquest. While Nevada acquired statehood relatively early in the West, institutionalizing the mechanisms of statehood took decades. Many Native peoples continued to live "outside the state," speaking their own language, living to themselves, and traveling, as they always had, seasonally for food, work, worship, and recreation. Their migratory and cultural practices contravened government policies aimed at confining

and classifying Native peoples and prompted increased surveillance through institutions of state control, particularly the Bureau of Indian Affairs.

Born on a white ranch in Smoky Valley, Nevada, Mamie from her earliest days learned from her mother and aunts to cook and clean for white families, later becoming a domestic servant herself. Like the other Indian families who lived on ranches and in nearby mining towns, she grew up in intimate familiarity with whites, played with white and Indian children, and remained part of a community of ranchers and their Indian laborers. Never knowing her father, many

[To view this image, refer to the print version of this title.]

Mamie Andrews, about 1919. Eva Charley Family Collection. Photographed in a Nevada studio shortly before her confinement in the Nevada State Mental Hospital, Mamie Andrews left behind four Shoshone children in Smoky Valley, including Eva Charley, the author's grandmother.

believed her to be the result of the often nonconsensual sexual relations between Indian women and white men, which became commonplace in mining and ranching communities, where unequal gender ratios and racial hierarchies converged. Like most Indian laborers, Mamie received an English name. She married a handsome Indian man, Sam Johnson, and had one child with him, Eva, before leaving him for his half-brother, Bob Snooks, and having three more children.

Working hard with four children, Mamie and Bob became increasingly combative, especially during times when Bob drank with his friends and cousins after long days harvesting hay or mending endless cattle lines. Bob's excessive drinking and the aggressive behavior that followed from it paralleled that of other Indian men, whose poverty seemed only more glaring in contrast with the material possessions of whites and the countless images of fancy goods advertised in stores and newspapers. White insults, jokes, and generally disdainful manners fueled the need for escape. Whites owned just about everything, and the creation of liminal spaces outside of white control became as seemingly natural as Indian subjection. Indians traveled to regional Native festivals, called "fandangos," worked in seasonal labor groups, and migrated throughout the region.

After his return from one summer's fandango, Bob's attacks on Mamie became more severe, requiring her to seek assistance from local Indian healers as well as white doctors. Everyone in the community recalls that her second husband's abuse rendered Mamie unstable. Her crying and outbursts continued after Bob left, and her relatives grew concerned about little Eva and her two younger brothers and sister. Local authorities determined that Mamie required mental treatment, and in 1919, at the age of twenty-four, she was institutionalized in the state mental hospital, where she lived alone for her remaining fifty-seven years. The Epilogue traces the lives of Mamie and her parentless children and contrasts them with narratives emanating from anthropological, literary, and other outside commentators.

Mamie's oldest daughter, Eva, was my grandmother, and like her mother's, Eva's life was filled with poverty and hardship, testimony to the enduring challenges wrought by colonial expansion. As Native groups continue to recover from the aftermath of such collisions, these regional and personal histories bear witness to enduring historical truths. Throughout what we now call America, the nature of everyday life was forever transformed as violence swept over the land.

Notes

Introduction

1. Toni Morrison, *Playing in the Dark: Whiteness and the Literary Imagination* (Cambridge, Mass.: Harvard University Press, 1992), 91, 47, 52.
2. Studies of U.S. history have often maintained exceptional visions of the American experience, contradistinguishing the American past with other national histories. For surveys of recent challenges to such currents, see David W. Noble, *Death of a Nation: American Culture and the End of Exceptionalism* (Minneapolis: University of Minnesota Press, 2002), esp. 250–286. See also Kerwin Lee Klein, *Frontiers of Historical Imagination: Narrating the European Conquest of Native America, 1890–1990* (Berkeley: University of California Press, 1997).
3. Roland Barthes, *Mythologies,* trans. Annette Lavers (New York: Hill and Wang, 1972). As Joyce Appleby has argued, "For a long time American historical writing simply explained how the United States became the territorial embodiment of liberal truths." See Appleby, *Liberalism and Republicanism in the Historical Imagination* (Cambridge, Mass.: Harvard University Press, 1992), 2–3.
4. "Indian" is a problematic designation for the indigenous peoples of the Americas, one that has undergone critical interrogation and, in Canada, abandonment, where First Nations, Native, and Aboriginal commonly designate the status of Canada's First Peoples. In the United States, "Native American" has gained popularity, largely in an attempt to reject the homogenizing history of the term "Indian." While recognizing the constraining, contested usage of such terminology, this

study interchanges "Indian," "Native," and "indigenous" to describe aboriginal communities in North America, valuing the instructive past of such terms in an attempt to recapture and revise their representational power. While Indian history has recently become an honored subfield in American history, the field remains largely tied to the U.S. colonial period. See Ned Blackhawk, "Look How Far We've Come: How American Indian History Changed the Study of American History in the 1990s," *Organization of American Historians' Magazine of History* 19:6 (November 2005): 8–14.

5. Physiographically, the Great Basin begins west of the Wasatch Mountains in central Utah, while shared cultural traits, language, and historical experiences link Great Basin peoples to the Colorado Plateau and Rocky Mountains. See Charles B. Hunt, *Physiography of the United States* (San Francisco: W. H. Freeman, 1967), 308–347; Omer C. Stewart, *Indians of the Great Basin: A Critical Bibliography* (Bloomington: University of Indiana Press, 1982); and Warren L. D'Azevedo, "Introduction," *HBNAI,* 11: 1–14.
6. Eric Wolf, *Europe and the Peoples without History* (Berkeley: University of California Press, 1980). For Steward's legacies, see Richard O. Clemmer, L. Daniel Myers, and Mary Elizabeth Rudden, *Julian Steward and the Great Basin: The Making of an Anthropologist* (Salt Lake City: University of Utah Press, 1999), and citations therein for Steward's bibliography. For one example of Steward's influence in establishing Great Basin Indians as the evolutionary floor of human development, see Peter Farb, *Man's Rise to Civilization as Shown by the Indians of North America* (New York: E. P. Dutton, 1968).
7. For anthropology's imperialist legacies, see George W. Stocking Jr., *Colonial Situations: Essays on the Contextualization of Ethnographic Knowledge* (Madison: University of Wisconsin Press, 1991).
8. Homi K. Bhabha theorizes the intellectual quandaries incumbent upon being "amongst those whose very presence is both 'overlooked' and, at the same time, overdetermined." See Bhabha, *The Location of Culture* (New York: Routledge, 1994), 236. See also Linda Tuhiuai Smith, *Decolonizing Methodologies: Research and Indigenous Peoples* (London: Zed Books, 1999), esp. 1–41.
9. See Vine Deloria Jr., *Custer Died for Your Sins: An Indian Manifesto* (New York: Macmillan, 1969).
10. Max Weber pioneered the study of violence and state formation: "the relation between the state and violence is an especially intimate one . . . a state is a human community that (successfully) claims the *monopoly of*

the legitimate use of physical force within a given territory . . . The state is considered the sole source of the 'right' to use violence"; H. H. Gerth and C. Wright Mills, eds. and trans., *From Max Weber: Essays in Sociology* (New York: Oxford University Press, 1946), 78. The tensions between imperial historiographies and their simultaneous inabilities to grasp the colonial violence inherent in imperialism have forced reconsideration of innumerable national histories, especially in the aftermath of European decolonization and the enduring "postcolonial" challenge for former colonized populations. For a recent effort to expose such imperial currents in American cultural history, see Amy Kaplan, *The Anarchy of Empire in the Making of U.S. Culture* (Cambridge, Mass.: Harvard University Press, 2002).

11. For syntheses of Spanish colonialism in northern New Spain, see Thomas Hall, *Social Change in the Southwest, 1350–1880* (Lawrence: University of Kansas Press, 1988); and John L. Kessell, *Spain in the Southwest: A Narrative History of Colonial New Mexico, Arizona, Texas, and California* (Norman: University of Oklahoma Press, 2002).
12. For North American imperial-indigenous accommodation, see Richard White, *The Middle Ground: Indians, Empires, and Republics in the Great Lakes Region* (New York: Cambridge University Press, 1991). For a related attempt to complicate indigenous-state relations in Latin America as "no longer a simple celebration of subaltern agency," see Florencia E. Mallon, *Peasant and Nation: The Making of Postcolonial Mexico and Peru* (Berkeley: University of California Press, 1995), esp. 1–20.
13. Colin G. Calloway, *New Worlds for All: Indians, Europeans, and the Remaking of America* (Baltimore: Johns Hopkins University Press, 1997).
14. As R. Brian Ferguson and Neil L. Whitehead argue, "While the importance of history and the role of violent conflict may be readily seen, it is more difficult to know *what that recognition implies:* at the very least, it involves the need to revitalize our ideas about the ethnographic universe, going beyond the rejection of untenable notions of self-contained, stable local societies, *and instead developing a conceptual framework for understanding conflict and change as part of the historical process* underlying observed ethnographic patterns." See Ferguson and Whitehead, "The Violent Edge of Empire," in *War in the Tribal Zone: Expanding States and Indigenous Warfare,* ed. Ferguson and Whitehead (Santa Fe: School of American Research Press, 1992), 3 (emphasis added).
15. Physical pain, as Elaine Scarry argues, not only is "resistant to language but also actively destroys language," a notion suggesting that representations, in this case of indigenous trauma, are always partial and cannot

be fully measured. See Scarry, *The Body in Pain: The Making and Unmaking of the World* (New York: Oxford University Press, 1985), 172.

Remember the Sand Creek Massacre

By NED BLACKHAWK NOV. 27, 2014

NEW HAVEN — MANY people think of the Civil War and America's Indian wars as distinct subjects, one following the other. But those who study the Sand Creek Massacre know different.

On Nov. 29, 1864, as Union armies fought through Virginia and Georgia, Col. John Chivington led some 700 cavalry troops in an unprovoked attack on peaceful Cheyenne and Arapaho villagers at Sand Creek in Colorado. They murdered nearly 200 women, children and older men.

Sand Creek was one of many assaults on American Indians during the war, from Patrick Edward Connor's massacre of Shoshone villagers along the Idaho-Utah border at Bear River on Jan. 29, 1863, to the forced removal and incarceration of thousands of Navajo people in 1864 known as the Long Walk.

In terms of sheer horror, few events matched Sand Creek. Pregnant women were murdered and scalped, genitalia were paraded as trophies, and scores of wanton acts of violence characterize the accounts of the few Army officers who dared to report them. Among them was Capt. Silas Soule, who had been with Black Kettle and Cheyenne leaders at the September peace negotiations with Gov. John Evans of Colorado, the region's superintendent of Indians affairs (as well as a founder of both the University of Denver and Northwestern University). Soule publicly exposed

Chivington's actions and, in retribution, was later murdered in Denver.

After news of the massacre spread, Evans and Chivington were forced to resign from their appointments. But neither faced criminal charges, and the government refused to compensate the victims or their families in any way. Indeed, Sand Creek was just one part of a campaign to take the Cheyenne's once vast land holdings across the region. A territory that had hardly any white communities in 1850 had, by 1870, lost many Indians, who were pushed violently off the Great Plains by white settlers and the federal government.

These and other campaigns amounted to what is today called ethnic cleansing: an attempted eradication and dispossession of an entire indigenous population. Many scholars suggest that such violence conforms to other 20th-century categories of analysis, like settler colonial genocide and crimes against humanity.

Sand Creek, Bear River and the Long Walk remain important parts of the Civil War and of American history. But in our popular narrative, the Civil War obscures such campaigns against American Indians. In fact, the war made such violence possible: The paltry Union Army of 1858, before its wartime expansion, could not have attacked, let alone removed, the fortified Navajo communities in the Four Corners, while Southern secession gave a powerful impetus to expand American territory westward. Territorial leaders like Evans were given more resources and power to negotiate with, and fight against, powerful Western tribes like the Shoshone, Cheyenne, Lakota and Comanche. The violence of this time was fueled partly by the lust for power by civilian and military leaders desperate to obtain glory and wartime recognition.

Expansion continued after the war, powered by a revived American economy but also by a new spirit of national purpose, a sense that America, having suffered in the war, now had the right to conquer more peoples and territories.

The United States has yet to fully recognize the violent destruction wrought against indigenous peoples by the Civil War and the Union Army. Connor and Evans have cities, monuments and plaques in their honor, as well as two universities and even Colorado's Mount Evans, home to the highest paved road in North America.

Saturday's 150th anniversary will be commemorated many ways: The National Park Service's Sand Creek Massacre Historic Site, the descendant Cheyenne and Arapaho communities, other Native American community members and their non-Native supporters will commemorate the massacre. An annual memorial run will trace the route of Chivington's troops from Sand Creek to Denver, where an evening vigil will be held Dec. 2.

The University of Denver and Northwestern are also reckoning with this legacy, creating committees that have recognized Evans's culpability. Like many academic institutions, both are deliberating how to expand Native American studies and student service programs. Yet the near-absence of Native American faculty members, administrators and courses reflects their continued failure to take more than partial steps.

While the government has made efforts to recognize individual atrocities, it has a long way to go toward recognizing how deeply the decades-long campaign of eradication ran, let alone recognizing how, in the face of such violence, Native American nations and their cultures have survived. Few Americans know of the violence of this time, let alone the subsequent violation of Indian treaties, of reservation boundaries and of Indian families by government actions, including the half-century of forced removal of Indian children to boarding schools.

One symbolic but necessary first step would be a National Day of Indigenous Remembrance and Survival, perhaps on Nov. 29, the anniversary of Sand Creek. Another would be commemorative memorials, not only in Denver and Evanston but in Washington, too. We commemorate "discovery" and "expansion" with Columbus Day and the Gateway arch, but nowhere is there national recognition of the people who suffered from those "achievements" — and have survived amid continuing cycles of colonialism.

Correction: November 27, 2014

An earlier version of this article incorrectly stated that the American Indian leader Black Kettle was killed in the Sand Creek Massacre. He died at the Battle of Washita in Oklahoma in 1868.

Correction: December 6, 2014

An Op-Ed article last Friday attributed an erroneous distinction to the Union general Patrick Edward Connor and the Colorado governor John Evans, who were involved in massacres of American Indians in the 1860s. There is no state capital named for them. Ned Blackhawk, a professor of history and American studies at Yale and the coordinator of the Yale Group for the Study of Native America, is the author of "Violence Over the Land: Indians and Empires in the Early American West."

A version of this op-ed appears in print on November 28, 2014, on page A31 of the New York edition with the headline: Remember the Sand Creek Massacre.

3 * THE DISASTROUS POLICY OF TERMINATION

PEOPLE OFTEN FEEL guilty about their ancestors killing all those Indians years ago. But they shouldn't feel guilty about the distant past. Just the last two decades have seen a more devious but hardly less successful war waged against Indian communities. In the old days blankets infected with smallpox were given to the tribes in an effort to decimate them. In the past they were systematically hunted down and destroyed. Were an individual citizen to do this it would be classified as cold-blooded murder. When it was done by the U.S. Army it was an "Indian war." But during the past twenty years federal medical services have been denied various tribes, resulting in tremendous increase in disease.

The Congressional policy of termination, advanced in 1954 and pushed vigorously for nearly a decade, was a combination of the old systematic hunt and the deprivation of services. Yet

this policy was not conceived as a policy of murder. Rather it was thought that it would provide that elusive "answer" to the Indian problem. And when it proved to be no answer at all, Congress continued its policy, having found a new weapon in the ancient battle for Indian land.

The roots of termination extend backward in time to the early years of the Roosevelt administration. The New Deal ushered in a new program for the Indian people. The Meriam Report of 1928 had shown that Indian tribes were in a desperate situation. There had been no progress of any kind on the reservations since they were set up. The people were in the final stages of demise.

Pressures for reform coincided with the election of Roosevelt, who appointed John Collier as Commissioner of Indian Affairs. Collier was a well-known anthropologist of liberal persuasion. He quickly pushed the Wheeler-Howard Act through Congress in 1934 and gave the reservations their first taste of self-government in nearly half a century.

The Senate Interior Committee that handled Indian legislation kept alive its investigative powers over Indian Affairs by periodically renewing the original Congressional resolution which authorized it to initiate the Meriam Report investigation. The committee intended to ride herd on the programs of the New Deal lest any "foreign" influences should develop. It could not conceive of returning self-government to a people who should have disappeared long ago.

By 1943 the Senate Interior Committee was convinced that the Indian Bureau should be abolished. But the sentiment did not take hold in any discernible policy determinations because of the war.

The House Interior Committee, not to be outdone by its colleagues in the other chamber, authorized an investigation of Indian Affairs bv a special subcommittee headed by Karl Mundt, Republican of South Dakota. The committee reported that the Wheeler-Howard Act was not accomplishing its task of bringing the Indian people up to the level of their white neighbors.

In 1947 the Senate Civil Service Committee held hearings on ways that government payrolls could be cut and expenditures reduced. The Republicans had captured Congress that autumn and they were looking for defenseless New Deal programs to trim. They found a natural in the Bureau of Indian Affairs.

William Zimmerman, Acting Commissioner of Indian Affairs, was asked to give testimony on the possibility of reducing personnel in the bureau by releasing some of the tribes from federal supervision. The committee was primarily interested in a consolidation of functions and the subsequent saving of federal funds.

Zimmerman was anxious to remain a neutral party and so presented the committee with a series of recommendations, none of which would have resulted in substantial savings.

He classified the existing tribes into three categories. The first class was composed of tribes that could immediately be terminated from federal services, providing certain protections were given them. The second class consisted of tribes that might possibly achieve self-sufficiency within ten years following an intensified program of development. The last class had an indefinite time period in which federal services were needed.

In view of the three categories it is clear that Zimmerman had assumed the tribes would make substantial progress under already existing programs and take on increasing responsibilities for those programs. He also assumed that Congress would adopt a rational and understanding approach to the subject.

So Zimmerman laid out the criteria by which he had classified the tribes:

> . . . in making up these three groups of tribes, I took four factors into account.
>
> The first one is the degree of acculturation of the particular tribe. That includes such factors as the admixture of white blood, the percentage of illiteracy, the business ability of the tribe, their acceptance of white institutions and their acceptance by whites in the community.
>
> The second factor is the economic condition of the tribe, principally

> the availability of resources to enable either the tribe or the individuals, out of their tribal or individual assets, to make a reasonably decent living.
>
> The third factor is the willingness of the tribe and its members to dispense with federal aid.
>
> The last criterion is the willingness and ability of the State in which the tribe is located to assume the responsibilities.

There was no doubt that Zimmerman regarded Indian consent and understanding as among the important factors to be considered in any alteration of the existing relationship. But there was also an emphasis on the willingness of the state to assume responsibility for the tribe and its members.

Zimmerman had prepared sample withdrawal plans, which he shared with the committee members:

> I have prepared separate bills for the Klamath, Osage and Menominee tribes.
>
> I took those as examples, as specimens, because each of them has substantial assets, each of them has a small degree of tribal control, and each of them has indicated that it wants to assume more control, if not full control, of its tribal assets and its tribal operations.
>
> Each of those tribes further has prior legislation under which the Department supervises the operations. For that reason it seems to me best to suggest, *as types at least*, these three different tribes. [emphasis added]

The Acting Commissioner suggested three special plans by which the bureau might consider it possible to end federal supervision and enable the tribe to have some chance of success. For the Klamath, a rich timber tribe located near Crater Lake, Oregon, it was envisioned that all funds would remain subject to Congressional appropriation so that the tribal council would not be subjected to undue pressure for distribution by the reservation people.

A corporation to operate the massive Klamath forest by sustained-yield methods would be organized by the tribe. Officials would be subject to federal laws and courts for acts of

malfeasance, to guarantee proper administration of the corporation. Because of treaty rights of tax exemption the forest would remain untaxable until Congress provided otherwise in consultation with the tribe.

The plan advanced for the Menominee tribe of Wisconsin was similar. Earlier it had been awarded $1.5 million in a claim against the United States and took its judgment in land, consolidating its reservation into one large tract. The Menominees had previously successfully resisted the Allotment Act and issued use rights to members of the tribe instead of allotments. In that sense only were they different from the Klamaths, who had an allotted reservation.

The Menominees had a sawmill with a dual purpose—to provide jobs for tribal members and income for the tribe. Zimmerman foresaw a fifty-year period of tax exemption on the Menominee forest as the most feasible proposal.

The Osages had already distributed shares of their tribal estate in "headrights," allotted the land, and retained the subsurface mineral rights, which provided oil royalties to holders of headrights. The sample bill for the Osage provided that all funds administered by the Interior Department would henceforth be administered by the tribe, subject to audit at any time by Interior officials.

Proposals were also made that California and North Dakota take over the affairs of the tribes within their boundaries. The federal government would provide a subsidy to the states equal to what it had been spending on the Indians in the two states, to ensure that no programs be cut back. After a ten-year trial period the arrangement would be made permanent, unless Congress made other provisions. Part of the California proposal included the requirement that the state match a five-million-dollar development program for Indian families.

Every plan put forward by Zimmerman required that the tax immunity remain on Indian lands until the tribal enterprise was financially secure in its new method of operation. Plans also included provisions for approval by a clear majority of the adult

members of the tribes before they were to go into effect, and some proposals were not to be initiated by the bureau but had to come from the tribal governing body at its own request.

The suggestions were basically sound. They incorporated plans that had been discussed in the past between the bureau and the tribes. If carried out according to the original design, the program would have created a maximum of self-government and a minimum of risk until the tribes had confidence and experience in the program.

Unfortunately, the committee dropped Zimmerman's suggestions when it was discovered that the termination of even fifty thousand Indians would have had little effect on the Interior budget. Using the criteria of the committee—the reduction of federal expenditures—termination of Indian tribes was not a significant program. But discussion of the proposal provided the ammunition that would later be used to sink tribal ships of state.

Three years after the Senate hearings the House Interior Committee began a massive study of Indian Affairs. Unbelievably, it recommended using the philosophy of René Descartes, French rationalist of the 1600's, as a method of research:

> As a multitude of laws often only hampers justice, so that a State is best governed when, with few laws, these are rigidly administered; in like manner, instead of the great number of precepts of which Logic is composed, I believed that the four following would prove perfectly sufficient for me, providing I took the firm and unwavering resolution never in a single instance to fail in observing them.
>
> The first was never to accept anything for true which I did not clearly know to be such; that is to say, carefully to avoid precipitancy and prejudice, and to comprise nothing more in my judgment than what was presented to my mind so clearly and distinctly as to exclude all ground of doubt.
>
> The second, to divide each of the difficulties under examination into as many parts as possible, and as might be necessary for its adequate solution.
>
> The third, to conduct my thoughts in such order that, by commencing with objects the simplest and easiest to know, I might

> ascend little by little, and as it were step by step, to the knowledge of the more complex; assigning in thought a certain order even to those objects which in their own nature do not stand in a relation of antecedence and sequence.
>
> And last, in every case to make enumerations so complete, and reviews so general, that it might be assured that nothing was omitted.

In sum, the committee declared: "If we can order our treatment of materials in Indian Affairs after this fashion it should be possible to grasp firmly the essentials or the problems involved and to cope with them correspondingly well."

This insight was not the least of the committee's recommendations, however, as committee members fancied themselves to be powers of great historical importance. Thus they further proposed to use the Domesday survey of 1086 as the model for a twentieth-century investigation of Indian problems:

> This extensive report on an entire nation should serve as a model for the administration of Indian Affairs today. There is a need for an exact, highly localized and thorough accounting of all Indian properties and Indian tribes as a complete allotment and dissolution of separate Indian tribal economic and political organization is contemplated. A survey along the lines of the Domesday project would furnish an inventory of all the basic facts needed to complete Indian assimilation. The Congress and Federal Government exercise the function of sovereignty over the Indians in the same manner as that by the King of England over his domains. The title to Indian lands and federal public domain lands would be clearly and precisely stated for every locality. Present day information on Indian property and population is generally piecemeal, confused, and probably unreliable. There is a real need for a Domesday Survey of Indian Affairs.

Little did the general public or the Indian tribes realize the bizarre theories underlying Congressional thinking on termination.

If any other group had been subjected to research techniques of the era of William the Conqueror the nation would have risen in indignation and called for an investigation. But in the

whimsical world of the Interior committees, Indians were such an unknown commodity that the ridiculous made sense, the absurd was normal.

With this contemptuous announcement of royal power of Congressional committees, the stage was set for the disastrous era of the Eighty-third and ensuing congresses and the termination period in Indian Affairs.

The way had been prepared for this era by the attitude of Dillon Myer, a Truman appointee as Commissioner of Indian Affairs, who started the bureau on the termination trail when he had assumed office in 1950. Myer had been in charge of the Japanese internment camps during World War II and "knew" how to deal with minority rights.

He embarked on a withdrawal program in August of 1952, before Congress had even authorized its great Domesday study. "At this point," Myer wrote to his bureau employees, "I want to emphasize that withdrawal program formulation and effectuation is to be a cooperative effort of Indian and community groups affected, side by side, with Bureau personnel. We must lend every encouragement to Indian initiative and leadership. I realize that it will not be possible always to obtain Indian cooperation."

"Full understanding," Myer went on, "by the tribal membership should be attained in any event, and agreement with affected Indian groups must be attained if possible. In the absence of such agreement, however, I want our differences to be clearly defined and understood by both the Indians and ourselves. We must proceed, even though Indian cooperation may be lacking in certain cases."

The policy from Commissioner to field clerk was to get rid of Indians as quickly as possible, treaties or no. When the termination hearings were later held, the bureau had much to say. It gave every possible excuse to get rid of the particular tribe which was under consideration by the committee.

The Republicans entered the White House in the 1952 election and assumed control of Congress for the second time in two

decades. Two conservatives were named to head the Indian subcommittees in the Senate and House: Arthur Watkins, a Mormon from Utah, headed the Indian Subcommittee of the Senate Interior committee and E. Y. Berry from South Dakota headed the House counterpart. Both Watkins and Berry were determined to bring Indian Affairs to a swift conclusion. They had sat too long as junior members of the subcommittees not to relish the opportunity which now presented itself. They wanted to take the helm and make policy. Together they decided to hold joint hearings on all Indian bills so that there would be no conflicts between the Senate and House versions of legislation. A decision by the Joint Subcommittee could pass both houses of Congress simultaneously, and opposition as well as public awareness could be held to a minimum.

On June 9, 1953, the first shot of the great twentieth century Indian war was fired when Representative William Henry Harrison, a descendant of an old Indian fighter of the last century, introduced House Concurrent Resolution 108 in the Eighty-third Congress. HCR 108 declared the intention of Congress to terminate federal supervision at the "earliest possible time." Green light for Watkins and Berry. They waited only until the following February before launching their attack. And supervision, as it turned out, meant services only.

February, 1954, saw the beginning of a systematic attack on every tribe in the nation. Gone were the four factors which Zimmerman had used in 1947 to classify tribal readiness for termination. Watkins' idea was to get rid of as many tribes as possible before the 1956 elections. He feared that if the Great Golfer were not re-elected the movement would be stopped by a President who might pay attention to what was happening in the world around him.

The first termination case—concerning small bands of Paiutes in Utah—set the precedent for the Senate Interior Committee, from Arthur Watkins, conservative Republican from Utah in 1954, to Henry Jackson, pseudo-liberal Democrat from Washing-

ton in 1968. The basic approach of the Senate committee never varied for fourteen years. Unbearable pressures, lies, promises, and threats of termination were made whenever a tribe won funds from the United States because of past swindles by the federal government. Whenever a tribe needed special legislation to develop its resources, termination was often the price asked for the attention of the committee. And if a tribe compromised with the Senate committee it was on the road to termination. Quarter was asked but none given.

In this first case, Watkins made sure that some of his Utah Indians were the first to go in order to prove he was not picking on Indians of other states. It did not matter that the Paiutes had not been mentioned either by Zimmerman or in HCR 108. Watkins was determined to demonstrate fairness, as if once he had irrationally harmed Indians from his own state he would be free to do whatever he wanted with all those elsewhere.

He forced consent, if it can be called that, of these small bands of southern Utah by promising them recognition by the federal government of their tribal marriages. But when the legislation came out there was no mention of tribal marriages, only of removal of federal services. The Paiutes had been too poor to come to Washington for the hearings, and when they found out what Watkins had done it was too late. They were placed under a private trustee who rarely communicated with them, and in a more restrictive trusteeship than they had known when under federal supervision. Thus did Watkins "free" his Indians.

In another case, the Klamaths had received a judgment against the United States for $2.6 million. But they needed enabling legislation to spend it. Watkins withheld approval of the Joint Subcommittee until the Klamaths agreed to his termination bill. The state of Oregon was hardly consulted at all. Thus two basic factors of the four presented by Zimmerman for ending federal supervision were lacking from the very beginning. Termination of the Klamaths had neither tribal nor state willingness.

The Klamath bill had been so hastily written that it had to be amended to prevent a wholesale collapse of the lumber industry on the West Coast. Since it had originally called for immediate clear-cutting of eighty-million-dollars' worth of timber, the market appeared headed for total disaster because of the great quantity of wood that would suddenly depress the market. Strangely, there was no conspiracy to cheat the Klamaths, the legislation was simply so sloppily written that no one on the Senate or House committee realized what clear-cutting a massive forest meant. The committee members' only desire was to get the termination of the tribe over with as quickly as possible. If that meant cutting every tree in Oregon, they would have so authorized, simply to get on to another tribe.

In another example, the Kansas Potawatomi tribe was considered to be in such a low economic status that to assist it was felt to be too expensive. Better, the bureau said, to let the Potawatomis expire as private citizens than to have anyone find out how badly the federal government had shirked its responsibilities. Somehow they escaped the blow, although bureau assistance to them since 1954 has been nil.

In yet another example, the Alabama-Coushattas had a small reservation in Texas. They had been spared during the Texas Ranger sweep a century earlier because they had hidden Sam Houston when the Mexican government was after him during Texas' war with Mexico.

The bureau, meeting with the tribal council, told them the termination bill was concerned with forest management. They stated that any more cutting of timber on tribal lands would not be allowed unless the tribe agreed to the proposal. The tribe agreed, the law was quickly passed with little consultation with the state of Texas, and the tribe was placed under state trusteeship. There is still a question whether or not the constitution of Texas was violated.

Frantically the Joint Subcommittee searched for vulnerable and unsuspecting tribes for their termination program. Poor

tribes with no means to come to Washington and protest against proposals were in greatest danger. Absolute terror spread through Indian country as the power of the committee was arbitrarily used against the helpless Indian communities.

The Flatheads of Montana were saved only by the direct intervention of Mike Mansfield, who reminded the committee of the treaty rights of the tribe. The Florida Seminoles, 80 percent illiterate, were saved only through the intervention of the DAR's of that state.

Total relocation of the seven thousand Turtle Mountain Chippewas of North Dakota was considered. Watkins' plan was simply to relocate the Indians in a large city and forget about them. But the plan was blocked when North Dakota, in a fit of Christian charity, refused to provide any services whatsoever for the Chippewas should they be terminated.

The tragedy of the Menominee tribe of Wisconsin illustrates the extent of termination's failure. The tribe was one of the few paying for all its own services. The sum of $520,714.00 was budgeted by the tribe for the reservation the year before termination. The tribe invested $285,000 in construction projects, $56,745.00 for education, $47,021 for welfare, and $130,000 for health. It set aside $42,615 for law and order activities. The federal government, which was obligated to provide all of these services, actually spent only $95,000 for roads and $49,000 for education, on a matching basis with the state and tribe. The total federal cost per year for the Menominees was $144,000 or $50.85 per Indian. There was, consequently, not much to be saved by terminating them.

But they had won a $8.5 million judgment against the United States in the Court of Claims and needed legislation to distribute it. In 1908 federal legislation was passed which had given the Forest Service responsibility for administering the Menominee resources on a sustained-yield basis. In violation of this law, local government foresters had decided to clear-cut the forest, and the income which should have come to the Menominees through

the years on a sustained-yield basis was deprived them. Finally, in 1951 they had won their judgment against the United States, and the money was deposited to the tribe's account in the U.S. Treasury.

The Joint Subcommittee, particularly in the person of Watkins, was outraged that the tribe had been vindicated. They were determined to silence the Menominees once and for all. When a bill passed the House Interior Committee, which authorized the distribution of the judgment money, Watkins attached a provision to the bill in the Senate, requiring the tribe to submit to termination in order to get the money. The Menominees objected to the provision and Watkins held the bill until the end of the year.

There are varying reports on the sequence of developments after that. In 1960, when the Menominees went to Congress to get an extension on the date set for final termination of federal responsibilities, Senator Frank Church, then chairman of the Indian Subcommittee of the Senate, inquired of Mr. Lee of the Bureau of Indian Affairs just how the Menominee termination had come about. The record, as of 1960, is enlightening:

SENATOR CHURCH: Mr. Lee [from Interior] will you take me back a few years and tell me how this business got started? It is my understanding that originally the Menominee Tribe recovered a judgment against the Government which required legislation to distribute to the members of that tribe.

MR. LEE: That is correct.

SENATOR CHURCH: Legislation was proposed to effect a per capita distribution of this judgment fund.

MR. LEE: That is correct, $1,500.

SENATOR CHURCH: When it came to the Senate, the Senate amended the bill to provide that termination should take place in conjunction with the distribution of this money.

MR. LEE: That is correct. It was an interim step. In the meantime, Congress passed Senate Joint Resolution 108, which provided for the termination of certain tribes. I believe there were 10 tribes. Specifically——

SENATOR CHURCH: Was the Menominee Tribe one of the 10 tribes?

MR. LEE: The Menominee Tribe was one of the tribes. As you

have indicated, when H.R. 2828 was introduced in the 83rd Congress, it was passed by the House as a separate per capita bill of $1,500 per individual.

The Senate amended it and tacked termination on it and sent it back to the House. There were a number of conferences on it and finally, they worked out a compromise. This gets into the second question as to whether or not there was approval by the Indians.

SENATOR CHURCH: That is my second question. Did the Menominee Tribe, after this legislation was passed, then approve of termination by referendum of any kind?

MR. LEE: No, sir. As I recall, there was no referendum. The tribal delegates can correct me on this. They had a group that was negotiating with the conferees here in Washington and they stood up in the committees and agreed to this termination, I think, on the basis that the termination was coming regardless because of the resolution requiring termination.

SENATOR CHURCH: For this particular tribe?

MR. LEE: For this particular tribe.

SENATOR CHURCH: The question of termination was never taken to the Indians and put to a vote?

MR. LEE: As near as I know, there was never a general vote on termination in the tribe. Am I correct in that?

MR. WILKINSON: I can add one clarifying point to that. The chairman of the Indian Subcommittee of the Senate went to the reservation and met with the general council.

SENATOR ANDERSON: Senator Watkins.

MR. WILKINSON: That is right. There were approximately 150 people present. They voted that day to accept termination. There is one item which I thinks bears on it, which I think influenced the tribe to vote that way.

They were told that they could not have a per capita payment unless they accepted termination. Based on that, I felt they accepted it.

SENATOR ANDERSON: Senator Wakins did go there, he did present the matter, he did discuss it, he came back and reported to us that the tribe was enthusiastic for termination.

Of course, the answer was they were enthusiastic for the $1,500.

Senator Watkins had indeed gone to the Menominees and threatened the Indians. Recalling his visit, Watkins stated:

It was a very interesting experience. I appreciated your help in introducing me to those people and giving me the opportunity to see how they lived, how they felt about it. That was one of the most interesting experiences of the whole trip.

MR. WAUPOCHICK (a Menominee): We wish you could have stayed longer.

SENATOR WATKINS: I had the same experience visiting Europe, *the refugee camps of the Near East.* (emphasis added)

The Menominees had been so poor in comparision to other Americans that the only experience Watkins could relate his reservation visit with was his visit to refugee camps of the Near East after World War II.

The initial plan was for the Menominee forest to be turned over to the tribe for management. This plan was predicated on the fact that the Menominee tribe had over ten million dollars in the federal treasury. But the Menominees had to agree to termination in order to get a per capita distribution of that money authorized. Therefore the termination plan was based upon money that no longer existed.

Wisconsin strongly opposed the Menominees' termination. It was worried about the eventual effect of the plan on the community and the state. Mr. Harder, an official representing the Wisconsin Tax Commission, expressed the attitude of the state most concisely:

. . . I am concerned about that; because if they have to go to heavy taxation of their timberlands, that means they will have to cut on some other basis than their present sustained-yield method. And as soon as that happens, the forests will eventually deplete, and we may have a substantial welfare problem. That is a problem the State of Wisconsin now has with the Indians in the Bad River Reservation, where the lands were allotted, and the Indians sold their lands, and now they are on relief, in prosperous times as well as poor times. It is a continuing problem. And the State doesn't want anything like that to happen in this instance.

But Watkins, ideologically bound to traditional Republican myths, insisted that the state was more efficient than the federal government per se:

> Of course it is admitted the Federal Government moves slower than anybody else. The State government would be far more efficient. That is one reason we think federal supervision should be terminated, one among many reasons, because we can't move as fast as we should.

The tribal attorney, Mr. Wilkinson, appealed to the record of the Senate Civil Service Committee in which the original Zimmerman testimony was presented. Watkins callously informed him:

> If you want to comment on what he said, all right, but as far as I am personally concerned, and I think the rest of the committee, it is not going to make a lot of difference one way or another, except indicating that that far back this matter was discussed. So that there won't be any implication that certain parts of it haven't been brought up, I think that all of it should be included in this report and that will be the Chair's ruling.

So a reference to the Zimmerman recommendations which included the fifty-year tax exemption for the forest proved fruitless by the defenseless Menominees.

Their last argument was voiced by Antoine Waupochick, Chairman of the Menominee Advisory Council:

> History records that the Menominees have been loyal to this Government and have stood by their bargains when they have relinquished land to the United States. We think that your action should be governed by a desire to see that history will record that Congress was loyal to the Menominee people.

There was, however, no appeal for the tribe, either to historic commitments made by the federal government or to common sense of the present. Even after liberal Democrats took over the subcommittee after the 1958 sweep and firmly controlled the Senate in 1960, the attitude remained the same—dogmatic and idealistic:

> MR. GRIGNON [a Menominee]: . . . I believe if we are to terminate December 31, (the tribe was seeking an extension) with our economy so low where we cannot afford this county which is the cheapest for us to take, we will go until our money runs out. It is a question of what reserve we have in the fund.

SENATOR CHURCH: I think what Senator Anderson said was pretty wise. He suggested if you went on your own initiative, responsibility and resources, you might find a little resurgency of energy in the operation of the mill and things of that nature that might carry you along. It is the constant spoon feeding from the Federal Government that has held you back, is it not? You were getting ready for termination in 1954. Some tribes have terminated, you know, and they are getting along pretty well. But not the Menominees.

MR. GRIGNON: I believe one thing, Senator. If we were still making the kind of money as in 1958, I believe we certainly could terminate December 31, and be successful. If the economy was up, there would be no question in my mind.

Instead of providing assistance or admitting that a horrendous mistake had been made years ago, Frank Church admonished the Menominees to be more energetic.

But even Church, boy liberal from Idaho, had his moments of lucidity:

> This is the thing that disturbs me. We have come to the nub of this morning. All of the reasons that are put forth in support of extending the termination date make it plain that a 6 month extension is patently insufficient. This is evident on the face of the statement you have made. You support the extension because you say you have a marginal economy. You are going to have a marginal economy at the end of 6 months because to make it any other kind of economy is going to be an effort that will extend over many years.

The first War on Poverty by the Democrats was conducted in 1960 against a defenseless Indian tribe that asked only for justice. These same Senators who cold-bloodedly created a pocket of poverty in Wisconsin would later vote for the War on Poverty with good conscience.

With termination came the closing of the Menominee hospital. The tribe was unable, with the additional burden of taxation, to keep up its health program. Deprived of medical services and with poor housing, the infant death rate continued to rise. By July 1964, 14 percent of the county, which was the former reservation area, was receiving welfare payments. The State

Department of Public Welfare estimated that Menominee county needed a transfusion of ten to twenty million dollars to bring it up to par with other Wisconsin counties.

How much did the Menominee termination save the federal government? By 1960 the costs simply to plan for termination had become tremendous:

> MR. LEE: First, about how much money has been appropriated; there has been $500,000 appropriated to reimburse the tribe for their termination expenses. We have spent, including the reimbursement termination expenses $700,000 for special road construction, $644,000 I mentioned on special adult education program. We have already reimbursed $195,500 to the tribe for their termination expenses. We anticipate between now and the termination, if the termination does not drag on, another $161,000. HEW, as I understand it, has committed $510,000 for school construction. We have spent $136,000 in addition to agency expenses which were previously carried by the tribe. We are in the process of completing a survey for about $35,000. We have just made another assignment of a Bureau staff member mentioned this morning, of $6,000. This will bring a total we anticipate of $2,357,039 by December 31 (1960).

In addition to the $2,357,039, however, in 1961 the federal government had to give the Menominees $1,098,000 over a period of five years, to cover education and health subsidies for problems caused by termination. In 1966, because the county was rapidly going downhill, another law was passed giving the tribe another $1.5 million over a three-year period. By 1964 the state of Wisconsin had granted the tribe some $52,363 in special contributions to welfare costs. But by then the situation was so desperate that the state was forced to make a special grant of $1 million to individuals in the county to keep their shares in the Menominee Enterprises from going out of Menominee hands and disenfranchising the tribe from its forest.

Clearly, with some $5 million of special federal aid, over $1 million in state aid, and a rapidly sinking economy combined with increasing health and education problems and a skyrocketing tuberculosis rate, termination has not been a success for the

Menominees. It has been a rationally planned and officially blessed disaster of the United States Congress.

Whenever a tribe has been terminated all federal assistance stops. The number of Indian people who have died because health services were unavailable is difficult to define, but must certainly run into a significant number.

With the advent of the War on Poverty the push for termination has slowed, but certainly not stopped. Chief advocate of termination is James Gamble, staff member of the Senate Interior Committee, which is the parent committee of the Indian Subcommittee. Gamble has remained in the background while Henry Jackson, Chairman of the committee, has had to accept public responsibility for Gamble's moves against the tribes.

Rarely does a judgment bill come before the committee but what Gamble tries to have a termination rider attached. So powerful is Gamble that Jackson might be characterized as his front man. But Jackson is busy with his work on the Foreign Relations and other important committees and so he accepts Gamble's recommendations without much consideration of alternatives.

The chief termination problem in recent years has been that of the Colville tribe of Eastern Washington, Jackson's home state. In the closing years of the 1950's the Colvilles received some land back. This land had been part of the reservation and was opened for homestead. However, when some of it remained unused, the tribe asked for its return. Termination was the price the Colvilles were asked to pay for their own land.

Analysis of the Colville termination bill as it is now proposed reveals Gamble's method of operation. The bill provides that the act will become effective after a referendum of the adult members of the tribe. No provision is included to require that a majority of the enrolled adult members vote in the referendum. Thus a majority of fifty voters out of the five thousand plus tribal members would be sufficient to terminate the tribe. Zimmerman's original proposal, which incidentally contained no

reference to the Colvilles, provided for a majority of the enrolled adults to *initiate* any movement toward termination of supervision. The bill is comparable to a corporation being required to liquidate on the vote of those present at a stockholders' meeting, with no majority of stock being sufficient to carry the motion.

After the referendum is taken, the members will find out what they voted for. The reservation will then be appraised by three independent professionals and the three figures averaged. The average value is the price the United States will pay the tribe for its reservation. Any other group of American citizens would not dream of selling their property without knowing what the price was. Yet, since Congress is presumed to act with good faith toward the Indian people, this bill is considered to be sufficient justice for them. Can you imagine Henry Jackson, sponsor of the bill, walking into the offices of white businessmen in Everett, Washington, and asking them to sell him their property, with values to be determined six months after the sale? Jackson expects, and intends to write into law, a provision for Indians to do exactly this.

Section 15 of the bill is a typical Gamble gambit. There is a provision that while the money is being distributed, the Secretary of the Interior can determine whether any member of the tribe is incompetent and appoint a guardian for him. Incompetency is never mentioned as a requirement for voting in the first part of the bill. But hidden in the middle is a provision giving the Secretary of the Interior unlimited discretionary power over Indian people. Theoretically the Secretary could declare all of the Colvilles incompetent and place them under a private trustee. They would then be judged too incompetent to handle their own money, but competent enough to vote to sell their reservation. Is it any wonder that Indians distrust white men?

The major tribes of the nation have waged a furious battle against the Colville termination bill. Fortunately the House Interior Committee has been sympathetic to Indian pleas and has to date not passed the bill. Another mood, however, can come

over the House committee and sentiment may turn toward termination. This uncertainty creates fear and resentment among Indian people.

Under consideration at the present time is another termination bill. In 1964 the Seneca Nation of New York finally received its compensation for the land taken for the Kinzua Dam. Kinzua, as you will recall, was built by breaking the Pickering Treaty of 1794, which had pledged that the Senecas would remain undisturbed in the use of their land.

But before the Senecas could get the Senate Interior Committee to approve their judgment bill they had to agree to section 18, a termination rider, which required the Senecas to develop a plan for termination within three years. The Senate was determined to punish the tribe for having the temerity to ask for compensation for land which the United States had illegally taken.

If termination means the withdrawal of federal services in order to cut government expenditures, then the Seneca termination requirement is truly ironic. The only federal assistance the Senecas received in recent years was a staff man assigned by the Bureau of Indian Affairs to assist them in problems caused the tribe by the building of Kinzua Dam.

The Seneca bill proposes to capitalize annuities payable to the Senecas under a number of treaties and pay the tribe outright. Annuities amount to very little, but the Senecas regard them as highly symbolic, as they represent the historic commitments of the tribe and the United States. They have more of a religious and historical significance than they do monetary value.

Section 9 of the bill provides that the act shall not become effective until a resolution consenting to its provisions has been approved by a majority of the eligible voters of the Seneca Nation voting in a referendum. Why the difference between the Seneca bill and the Colville bill as to voting requirements? Gamble and Jackson are responsible for the Colville bill. The Bureau of Indian Affairs drafted the Seneca bill.

Termination is the single most important problem of the American Indian people at the present time. Since 1954 the National Congress of American Indians and most inter-tribal councils of the various states have petitioned the Senate committee and the Congress every year for a change in policy. There has been no change.

Sympathetic Senators and Congressmen have introduced new policy resolutions to take the place of the old HCR 108—which, Gamble insists, is Congressional policy though such resolutions usually die at the end of each Congress. Rarely do these new policy statements receive more than perfunctory attention. None are ever passed.

Indian people receive little if any help from their friends. Churches have been notably unsympathetic, preferring to work with the blacks, where they are assured of proper publicity. The attitude of the churches is not new. My father was fired from his post with the Episcopal Church for trying to get the church involved with the termination issue in the 1950's. Had the churches supported the Indian people in 1954, we would be tempted to believe their sincerity about Civil Rights today. But when the going is rough, churches disappear from sight. Judas, not Peter, characterizes the Apostolic succession.

The response from the American public has been gratifying at times, disappointing at other times. Public support for the Senecas was widespread but the land was still taken and a termination rider added. Interest on the Colville termination has not been great because the problem of fishing rights in the same area has received all of the publicity. In general, the public does not understand the issue of termination, and public statements of termination-minded Senators make it appear to be the proper course of action.

Too often termination has been heavily disguised as a plan to offer the Indian people full citizenship rights. Thus the Washington State legislature has been continually and deliberately misled by a few urban and termination-minded Colvilles into passing a resolution asking for the extinguishment of the Colville

tribal entity and the vesting of the Colville people with "full citizenship" rights.

In fact, the Citizenship Act of 1924 gave all Indians full citizenship without affecting any of their rights as Indian people. So the argument of second-class citizenship as a justification of termination is spurious from start to finish.

In practice, termination is used as a weapon against the Indian people in a modern war of conquest. Neither the Senecas nor the Colvilles were listed in the original discussion of termination by Acting Commissioner Zimmerman in 1947. Nor were these tribes listed in House Concurrent Resolution 108, which outlined termination and mentioned tribes eligible for immediate consideration.

Both tribes have had to submit to termination provisions in legislation which had nothing to do with the termination policy as originally defined by Congress. The Senecas and the Colvilles got caught in the backlash of Congressional ire at the Bureau of Indian Affairs. The Senecas had money coming to them because of the gross violation of their rights under treaty. The Colvilles wanted land returned which was theirs and which had been unjustly taken years before.

In the case of the Colvilles the record is doubly ironic. The tribe rejected the provisions of the Indian Reorganization Act and was determined to operate under a constitution of its own choosing. At the same time, under the IRA the Secretary of the Interior has full authority to return lands to the tribe, but he does not have authority to return lands to non-IRA tribes. Thus failure years before to adopt a constitution under the Indian Reorganization Act unexpectedly backfired on the tribe.

When the Kennedys and King were assassinated people wailed and moaned over the "sick" society. Most people took the assassinations as a symptom of a deep inner rot that had suddenly set in. They needn't have been shocked. America has been sick for some time. It got sick when the first Indian treaty was broken. It has never recovered.

When a policy is used as a weapon to force cultural confronta-

tion, then the underlying weakness of society is apparent. No society which has real and lasting values need rely on force for their propagation.

It is now up to the American people to make their will known. Can they condone the continual abuse of the American Indian by Congressmen and bureaucrats who use an unjust Congressional policy to threaten the lives and property of Indian people? Is the word of America good only to support its ventures overseas in Vietnam or does it extend to its own citizens?

If America has done to us as it wishes others to do to her, then the future will not be bright. America is running up a great debt. It may someday see the wholesale despoilation of its lands and people by a foreign nation.

AN INDIGENOUS PEOPLES' HISTORY OF THE UNITED STATES

THIS LAND

We are here to educate, not forgive.
We are here to enlighten, not accuse.

—Willie Johns, Brighton Seminole Reservation, Florida

Under the crust of that portion of Earth called the United States of America—"from California . . . to the Gulf Stream waters"—are interred the bones, villages, fields, and sacred objects of American Indians.[1] They cry out for their stories to be heard through their descendants who carry the memories of how the country was founded and how it came to be as it is today.

It should not have happened that the great civilizations of the Western Hemisphere, the very *evidence* of the Western Hemisphere, were wantonly destroyed, the gradual progress of humanity interrupted and set upon a path of greed and destruction.[2] Choices were made that forged that path toward destruction of life itself—the moment in which we now live and die as our planet shrivels, overheated. To learn and know this history is both a necessity and a responsibility to the ancestors and descendants of all parties.

What historian David Chang has written about the land that became Oklahoma applies to the whole United States: "Nation, race, and class converged in land."[3] Everything in US history is about the land—who oversaw and cultivated it, fished its waters, maintained its wildlife; who invaded and stole it; how it became a commodity ("real estate") broken into pieces to be bought and sold on the market.

US policies and actions related to Indigenous peoples, though

often termed "racist" or "discriminatory," are rarely depicted as what they are: classic cases of imperialism and a particular form of colonialism—settler colonialism. As anthropologist Patrick Wolfe writes, "The question of genocide is never far from discussions of settler colonialism. Land is life—or, at least, land is necessary for life."[4]

The history of the United States is a history of settler colonialism—the founding of a state based on the ideology of white supremacy, the widespread practice of African slavery, and a policy of genocide and land theft. Those who seek history with an upbeat ending, a history of redemption and reconciliation, may look around and observe that such a conclusion is not visible, not even in utopian dreams of a better society.

Writing US history from an Indigenous peoples' perspective requires rethinking the consensual national narrative. That narrative is wrong or deficient, not in its facts, dates, or details but rather in its essence. Inherent in the myth we've been taught is an embrace of settler colonialism and genocide. The myth persists, not for a lack of free speech or poverty of information but rather for an absence of motivation to ask questions that challenge the core of the scripted narrative of the origin story. How might acknowledging the reality of US history work to transform society? That is the central question this book pursues.

Teaching Native American studies, I always begin with a simple exercise. I ask students to quickly draw a rough outline of the United States at the time it gained independence from Britain. Invariably most draw the approximate present shape of the United States from the Atlantic to the Pacific—the continental territory not fully appropriated until a century after independence. What became independent in 1783 were the thirteen British colonies hugging the Atlantic shore. When called on this, students are embarrassed because they know better. I assure them that they are not alone. I call this a Rorschach test of unconscious "manifest destiny," embedded in the minds of nearly everyone in the United States and around the world. This test reflects the seeming inevitability of US extent and power, its destiny, with an implication that the continent had previously been *terra nullius,* a land without people.

Woody Guthrie's "This Land Is Your Land" celebrates that the

land belongs to everyone, reflecting the unconscious manifest destiny we live with. But the extension of the United States from sea to shining sea was the intention and design of the country's founders. "Free" land was the magnet that attracted European settlers. Many were slave owners who desired limitless land for lucrative cash crops. After the war for independence but preceding the writing of the US Constitution, the Continental Congress produced the Northwest Ordinance. This was the first law of the incipient republic, revealing the motive for those desiring independence. It was the blueprint for gobbling up the British-protected Indian Territory ("Ohio Country") on the other side of the Appalachians and Alleghenies. Britain had made settlement there illegal with the Proclamation of 1763.

In 1801, President Jefferson aptly described the new settler-state's intentions for horizontal and vertical continental expansion, stating: "However our present interests may restrain us within our own limits, it is impossible not to look forward to distant times, when our rapid multiplication will expand itself beyond those limits and cover the whole northern, if not the southern continent, with a people speaking the same language, governed in similar form by similar laws." This vision of manifest destiny found form a few years later in the Monroe Doctrine, signaling the intention of annexing or dominating former Spanish colonial territories in the Americas and the Pacific, which would be put into practice during the rest of the century.

Origin narratives form the vital core of a people's unifying identity and of the values that guide them. In the United States, the founding and development of the Anglo-American settler-state involves a narrative about Puritan settlers who had a covenant with God to take the land. That part of the origin story is supported and reinforced by the Columbus myth and the "Doctrine of Discovery." According to a series of late-fifteenth-century papal bulls, European nations acquired title to the lands they "discovered" and the Indigenous inhabitants lost their natural right to that land after Europeans arrived and claimed it.[5] As law professor Robert A. Williams observes about the Doctrine of Discovery:

> Responding to the requirements of a paradoxical age of Renaissance and Inquisition, the West's first modern discourses

> of conquest articulated a vision of all humankind united under a rule of law discoverable solely by human reason. Unfortunately for the American Indian, the West's first tentative steps towards this noble vision of a Law of Nations contained a mandate for Europe's subjugation of all peoples whose radical divergence from European-derived norms of right conduct signified their need for conquest and remediation.[6]

The Columbus myth suggests that from US independence onward, colonial settlers saw themselves as part of a world system of colonization. "Columbia," the poetic, Latinate name used in reference to the United States from its founding throughout the nineteenth century, was based on the name of Christopher Columbus. The "Land of Columbus" was—and still is—represented by the image of a woman in sculptures and paintings, by institutions such as Columbia University, and by countless place names, including that of the national capital, the District of Columbia.[7] The 1798 hymn "Hail, Columbia" was the early national anthem and is now used whenever the vice president of the United States makes a public appearance, and Columbus Day is still a federal holiday despite Columbus never having set foot on the continent claimed by the United States.

Traditionally, historians of the United States hoping to have successful careers in academia and to author lucrative school textbooks became protectors of this origin myth. With the cultural upheavals in the academic world during the 1960s, engendered by the civil rights movement and student activism, historians came to call for objectivity and fairness in revising interpretations of US history. They warned against moralizing, urging instead a dispassionate and culturally relative approach. Historian Bernard Sheehan, in an influential essay, called for a "cultural conflict" understanding of Native–Euro-American relations in the early United States, writing that this approach "diffuses the locus of guilt."[8] In striving for "balance," however, historians spouted platitudes: "There were good and bad people on both sides." "American culture is an amalgamation of all its ethnic groups." "A frontier is a zone of interaction between cultures, not merely advancing European settlements."

Later, trendy postmodernist studies insisted on Indigenous "agency" under the guise of individual and collective empowerment, making the casualties of colonialism responsible for their own demise. Perhaps worst of all, some claimed (and still claim) that the colonizer and colonized experienced an "encounter" and engaged in "dialogue," thereby masking reality with justifications and rationalizations—in short, apologies for one-sided robbery and murder. In focusing on "cultural change" and "conflict between cultures," these studies avoid fundamental questions about the formation of the United States and its implications for the present and future. This approach to history allows one to safely put aside present responsibility for continued harm done by that past and the questions of reparations, restitution, and reordering society.[9]

Multiculturalism became the cutting edge of post-civil-rights-movement US history revisionism. For this scheme to work—and affirm US historical progress—Indigenous nations and communities had to be left out of the picture. As territorially and treaty-based peoples in North America, they did not fit the grid of multiculturalism but were included by transforming them into an inchoate oppressed racial group, while colonized Mexican Americans and Puerto Ricans were dissolved into another such group, variously called "Hispanic" or "Latino." The multicultural approach emphasized the "contributions" of individuals from oppressed groups to the country's assumed greatness. Indigenous peoples were thus credited with corn, beans, buckskin, log cabins, parkas, maple syrup, canoes, hundreds of place names, Thanksgiving, and even the concepts of democracy and federalism. But this idea of the gift-giving Indian helping to establish and enrich the development of the United States is an insidious smoke screen meant to obscure the fact that the very existence of the country is a result of the looting of an entire continent and its resources. The fundamental unresolved issues of Indigenous lands, treaties, and sovereignty could not but scuttle the premises of multiculturalism.

With multiculturalism, manifest destiny won the day. As an example, in 1994, Prentice Hall (part of Pearson Education) published a new college-level US history textbook, authored by four members of a new generation of revisionist historians. These radical

social historians are all brilliant scholars with posts in prestigious universities. The book's title reflects the intent of its authors and publisher: *Out of Many: A History of the American People.* The origin story of a supposedly unitary nation, albeit now multicultural, remained intact. The original cover design featured a multicolored woven fabric—this image meant to stand in place of the discredited "melting pot." Inside, facing the title page, was a photograph of a Navajo woman, dressed formally in velvet and adorned with heavy sterling silver and turquoise jewelry. With a traditional Navajo dwelling, a hogan, in the background, the woman was shown kneeling in front of a traditional loom, weaving a nearly finished rug. The design? The Stars and Stripes! The authors, upon hearing my objection and explanation that Navajo weavers make their livings off commissioned work that includes the desired design, responded: "But it's a real photograph." To the authors' credit, in the second edition they replaced the cover photograph and removed the Navajo picture inside, although the narrative text remains unchanged.

Awareness of the settler-colonialist context of US history writing is essential if one is to avoid the laziness of the default position and the trap of a mythological unconscious belief in manifest destiny. The form of colonialism that the Indigenous peoples of North America have experienced was modern from the beginning: the expansion of European corporations, backed by government armies, into foreign areas, with subsequent expropriation of lands and resources. Settler colonialism is a genocidal policy. Native nations and communities, while struggling to maintain fundamental values and collectivity, have from the beginning resisted modern colonialism using both defensive and offensive techniques, including the modern forms of armed resistance of national liberation movements and what now is called terrorism. In every instance they have fought for survival as peoples. The objective of US colonialist authorities was to terminate their existence as peoples—not as random individuals. This is the very definition of modern genocide as contrasted with premodern instances of extreme violence that did not have the goal of extinction. The United States as a socioeconomic and political entity is a result of this centuries-long and ongoing colonial process.

Modern Indigenous nations and communities are societies formed by their resistance to colonialism, through which they have carried their practices and histories. It is breathtaking, but no miracle, that they have survived as peoples.

To say that the United States is a colonialist settler-state is not to make an accusation but rather to face historical reality, without which consideration not much in US history makes sense, unless Indigenous peoples are erased. But Indigenous nations, through resistance, have survived and bear witness to this history. In the era of worldwide decolonization in the second half of the twentieth century, the former colonial powers and their intellectual apologists mounted a counterforce, often called neocolonialism, from which multiculturalism and postmodernism emerged. Although much revisionist US history reflects neocolonialist strategy—an attempt to accommodate new realities in order to retain the dominance—neocolonialist methods signal victory for the colonized. Such approaches pry off a lid long kept tightly fastened. One result has been the presence of significant numbers of Indigenous scholars in US universities who are changing the terms of analysis. The main challenge for scholars in revising US history in the context of colonialism is not lack of information, nor is it one of methodology. Certainly difficulties with documentation are no more problematic than they are in any other area of research. Rather, the source of the problems has been the refusal or inability of US historians to comprehend the nature of their own history, US history. The fundamental problem is the absence of the colonial framework.

Through economic penetration of Indigenous societies, the European and Euro-American colonial powers created economic dependency and imbalance of trade, then incorporated the Indigenous nations into spheres of influence and controlled them indirectly or as protectorates, with indispensable use of Christian missionaries and alcohol. In the case of US settler colonialism, land was the primary commodity. With such obvious indicators of colonialism at work, why should so many interpretations of US political-economic development be convoluted and obscure, avoiding the obvious? To some extent, the twentieth-century emergence of the field of "US

West" or "Borderlands" history has been forced into an incomplete and flawed settler-colonialist framework. The father of that field of history, Frederick Jackson Turner, confessed as much in 1901: "Our colonial system did not start with the Spanish War [1898]; the U.S. had had a colonial history and policy from the beginning of the Republic; but they have been hidden under the phraseology of 'interstate migration' and 'territorial organization.'"[10]

Settler colonialism, as an institution or system, requires violence or the threat of violence to attain its goals. People do not hand over their land, resources, children, and futures without a fight, and that fight is met with violence. In employing the force necessary to accomplish its expansionist goals, a colonizing regime institutionalizes violence. The notion that settler-indigenous conflict is an inevitable product of cultural differences and misunderstandings, or that violence was committed equally by the colonized and the colonizer, blurs the nature of the historical processes. Euro-American colonialism, an aspect of the capitalist economic globalization, had from its beginnings a genocidal tendency.

The term "genocide" was coined following the Shoah, or Holocaust, and its prohibition was enshrined in the United Nations convention adopted in 1948: the UN Convention on the Prevention and Punishment of the Crime of Genocide. The convention is not retroactive but is applicable to US-Indigenous relations since 1988, when the US Senate ratified it. The terms of the genocide convention are also useful tools for historical analysis of the effects of colonialism in any era. In the convention, any one of five acts is considered genocide if "committed with intent to destroy, in whole or in part, a national, ethnical, racial or religious group":

> killing members of the group;
> causing serious bodily or mental harm to members of the group;
> deliberately inflicting on the group conditions of life calculated to bring about its physical destruction in whole or in part;
> imposing measures intended to prevent births within the group;
> forcibly transferring children of the group to another group.[11]

In the 1990s, the term "ethnic cleansing" became a useful descriptive term for genocide.

US history, as well as inherited Indigenous trauma, cannot be understood without dealing with the genocide that the United States committed against Indigenous peoples. From the colonial period through the founding of the United States and continuing in the twenty-first century, this has entailed torture, terror, sexual abuse, massacres, systematic military occupations, removals of Indigenous peoples from their ancestral territories, and removals of Indigenous children to military-like boarding schools. The absence of even the slightest note of regret or tragedy in the annual celebration of the US independence betrays a deep disconnect in the consciousness of US Americans.

Settler colonialism is inherently genocidal in terms of the genocide convention. In the case of the British North American colonies and the United States, not only extermination and removal were practiced but also the disappearing of the prior existence of Indigenous peoples—and this continues to be perpetuated in local histories. Anishinaabe (Ojibwe) historian Jean O'Brien names this practice of writing Indians out of existence "firsting and lasting." All over the continent, local histories, monuments, and signage narrate the story of first settlement: the founder(s), the first school, first dwelling, first everything, as if there had never been occupants who thrived in those places before Euro-Americans. On the other hand, the national narrative tells of "last" Indians or last tribes, such as "the last of the Mohicans," "Ishi, the last Indian," and *End of the Trail*, as a famous sculpture by James Earle Fraser is titled.[12]

Documented policies of genocide on the part of US administrations can be identified in at least four distinct periods: the Jacksonian era of forced removal; the California gold rush in Northern California; the post–Civil War era of the so-called Indian wars in the Great Plains; and the 1950s termination period, all of which are discussed in the following chapters. Cases of genocide carried out as policy may be found in historical documents as well as in the oral histories of Indigenous communities. An example from 1873 is typical, with General William T. Sherman writing, "We must act with vindictive earnestness against the Sioux, even to their

extermination, men, women and children . . . during an assault, the soldiers can not pause to distinguish between male and female, or even discriminate as to age."[13] As Patrick Wolfe has noted, the peculiarity of settler colonialism is that the goal is elimination of Indigenous populations in order to make land available to settlers. That project is not limited to government policy, but rather involves all kinds of agencies, voluntary militias, and the settlers themselves acting on their own.[14]

In the wake of the US 1950s termination and relocation policies, a pan-Indigenous movement arose in tandem with the powerful African American civil rights movement and the broad-based social justice and antiwar movements of the 1960s. The Indigenous rights movement succeeded in reversing the US termination policy. However, repression, armed attacks, and legislative attempts to undo treaty rights began again in the late 1970s, giving rise to the international Indigenous movement, which greatly broadened the support for Indigenous sovereignty and territorial rights in the United States.

The early twenty-first century has seen increased exploitation of energy resources begetting new pressures on Indigenous lands. Exploitation by the largest corporations, often in collusion with politicians at local, state, and federal levels, and even within some Indigenous governments, could spell a final demise for Indigenous land bases and resources. Strengthening Indigenous sovereignty and self-determination to prevent that result will take general public outrage and demand, which in turn will require that the general population, those descended from settlers and immigrants, know their history and assume responsibility. Resistance to these powerful corporate forces continues to have profound implications for US socioeconomic and political development and the future.

There are more than five hundred federally recognized Indigenous communities and nations, comprising nearly three million people in the United States. These are the descendants of the fifteen million original inhabitants of the land, the majority of whom were farmers who lived in towns. The US establishment of a system of

Indian reservations stemmed from a long British colonial practice in the Americas. In the era of US treaty-making from independence to 1871, the concept of the reservation was one of the Indigenous nation reserving a narrowed land base from a much larger one in exchange for US government protection from settlers and the provision of social services. In the late nineteenth century, as Indigenous resistance was weakened, the concept of the reservation changed to one of land being carved out of the public domain of the United States as a benevolent gesture, a "gift" to the Indigenous peoples. Rhetoric changed so that reservations were said to have been "given" or "created" for Indians. With this shift, Indian reservations came to be seen as enclaves within state' boundaries. Despite the political and economic reality, the impression to many was that Indigenous people were taking a free ride on public domain.

Beyond the land bases within the limits of the 310 federally recognized reservations—among 554 Indigenous groups—Indigenous land, water, and resource rights extend to all federally acknowledged Indigenous communities within the borders of the United States. This is the case whether "within the original or subsequently acquired territory thereof, and whether within or without the limits of a state," and includes all allotments as well as rights-of-way running to and from them.[15] Not all the federally recognized Indigenous nations have land bases beyond government buildings, and the lands of some Native nations, including those of the Sioux in the Dakotas and Minnesota and the Ojibwes in Minnesota, have been parceled into multiple reservations, while some fifty Indigenous nations that had been removed to Oklahoma were entirely allotted—divided by the federal government into individual Native-owned parcels. Attorney Walter R. Echo-Hawk writes:

> In 1881, Indian landholdings in the United States had plummeted to 156 million acres. By 1934, only about 50 million acres remained (an area the size of Idaho and Washington) as a result of the General Allotment Act of 1887. During World War II, the government took 500,000 more acres for military use. Over one hundred tribes, bands, and Rancherias

> relinquished their lands under various acts of Congress during the termination era of the 1950s. By 1955, the indigenous land base had shrunk to just 2.3 percent of its original size.[16]

As a result of federal land sales, seizures, and allotments, most reservations are severely fragmented. Each parcel of tribal, trust, and privately held land is a separate enclave under multiple laws and jurisdictions. The Diné (Navajo) Nation has the largest contemporary contiguous land base among Native nations: nearly sixteen million acres, or nearly twenty-five thousand square miles, the size of West Virginia. Each of twelve other reservations is larger than Rhode Island, which comprises nearly eight hundred thousand acres, or twelve hundred square miles, and each of nine other reservations is larger than Delaware, which covers nearly a million and a half acres, or two thousand square miles. Other reservations have land bases of fewer than thirty-two thousand acres, or fifty square miles.[17] A number of independent nation-states with seats in the United Nations have less territory and smaller populations than some Indigenous nations of North America.

Following World War II, the United States was at war with much of the world, just as it was at war with the Indigenous peoples of North America in the nineteenth century. This was total war, demanding that the enemy surrender unconditionally or face annihilation. Perhaps it was inevitable that the earlier wars against Indigenous peoples, if not acknowledged and repudiated, ultimately would include the world. According to the origin narrative, the United States was born of rebellion against oppression—against empire—and thus is the product of the first anticolonial revolution for national liberation. The narrative flows from that fallacy: the broadening and deepening of democracy; the Civil War and the ensuing "second revolution," which ended slavery; the twentieth-century mission to save Europe from itself—twice; and the ultimately triumphant fight against the scourge of communism, with the United States inheriting the difficult and burdensome task of keeping order in the world. It's a narrative of progress. The 1960s social revolutions, ignited by the African American liberation movement, complicated the origin nar-

rative, but its structure and periodization have been left intact. After the 1960s, historians incorporated women, African Americans, and immigrants as contributors to the commonweal. Indeed, the revised narrative produced the "nation of immigrants" framework, which obscures the US practice of colonization, merging settler colonialism with immigration to metropolitan centers during and after the industrial revolution. Native peoples, to the extent that they were included at all, were renamed "First Americans" and thus themselves cast as distant immigrants.

The provincialism and national chauvinism of US history production make it difficult for effective revisions to gain authority. Scholars, both Indigenous and a few non-Indigenous, who attempt to rectify the distortions, are labeled advocates, and their findings are rejected for publication on that basis. Indigenous scholars look to research and thinking that has emerged in the rest of the European-colonized world. To understand the historical and current experiences of Indigenous peoples in the United States, these thinkers and writers draw upon and creatively apply the historical materialism of Marxism, the liberation theology of Latin America, Frantz Fanon's psychosocial analyses of the effects of colonialism on the colonizer and the colonized, and other approaches, including development theory and postmodern theory. While not abandoning insights gained from those sources, due to the "exceptional" nature of US colonialism among nineteenth-century colonial powers, Indigenous scholars and activists are engaged in exploring new approaches.

This book claims to be a history of the United States from an Indigenous peoples' perspective but there is no such thing as a collective Indigenous peoples' perspective, just as there is no monolithic Asian or European or African peoples' perspective. This is not a history of the vast civilizations and communities that thrived and survived between the Gulf of Mexico and Canada and between the Atlantic Ocean and the Pacific. Such histories have been written, and are being written by historians of Diné, Lakota, Mohawk, Tlingit, Muskogee, Anishinaabe, Lumbee, Inuit, Kiowa, Cherokee, Hopi, and other Indigenous communities and nations that have survived colonial genocide. This book attempts to tell the story of

the United States as a colonialist settler-state, one that, like colonialist European states, crushed and subjugated the original civilizations in the territories it now rules. Indigenous peoples, now in a colonial relationship with the United States, inhabited and thrived for millennia before they were displaced to fragmented reservations and economically decimated.

This is a history of the United States.

EIGHT

"INDIAN COUNTRY"

Buffalo were dark rich clouds moving upon the rolling hills and plains of America. And then the flashing steel came upon bone and flesh.

—Simon J. Ortiz, *from Sand Creek*

The US Army on the eve of the Civil War was divided into seven departments—a structure designed by John C. Calhoun during the Monroe administration. By 1860, six of the seven departments, comprising 183 companies, were stationed west of the Mississippi, a colonial army fighting the Indigenous occupants of the land. In much of the western lands, the army was the primary US government institution; the military roots to institutional development run deep.

President Abraham Lincoln was inaugurated in March 1861, two months after the South had seceded from the union. In April, the Confederate States of America (CSA) seized the army base at Fort Sumter near Charleston, South Carolina. Of more than a thousand US Army officers, 286 left to serve the CSA, half of them being West Point graduates, most of them Indian fighters, including Robert E. Lee. Three of the seven army department commanders took leadership of the Confederate Army. Based on demographics alone, the South had little chance of winning, so it is all the more remarkable that it persisted against the Union for more than four years. The 1860 population of the United States was nearly thirty-two million, with twenty-three million in the twenty-two northern states, and about nine million in the eleven southern states. More than a third of the nine million Southerners were enslaved people of African heritage. Within the CSA, 76 percent of settlers owned no

slaves. Roughly 60–70 percent of those without slaves owned fewer than a hundred acres of land. Less than 1 percent owned more than a hundred slaves. Seventeen percent of settlers in the South owned one to nine slaves, and only 6.5 percent owned more than ten. Ten percent of the settlers who owned no slaves were also landless, while that many more managed to barely survive on small dirt farms. The Confederate Army reflected the same kind of percentages.[1] Those who, even today, claim that "states' rights" caused Southern secession and the Civil War use these statistics to argue that slavery was not the cause of the Civil War, but that is false. Every settler in the Southern states aspired to own land and slaves or to own *more* land and *more* slaves, as both social status and wealth depended on the extent of property owned. Even small and landless farmers relied on slavery-based rule: the local slave plantation was the market for what small farmers produced, and planters hired landless settlers as overseers and sharecroppers. Most non-slave-owning settlers supported and fought for the Confederacy.

LINCOLN'S "FREE SOIL" FOR SETTLERS

Abraham Lincoln's campaign for the presidency appealed to the vote of land-poor settlers who demanded that the government "open" Indigenous lands west of the Mississippi. They were called "free-soilers," in reference to cheap land free of slavery. New gold rushes and other incentives brought new waves of settlers to squat on Indigenous land. For this reason, some Indigenous people preferred a Confederate victory, which might divide and weaken the United States, which had grown ever more powerful. Indigenous nations in Indian Territory were more directly affected by the Civil War than anywhere else. As discussed in chapter 6, the southeastern nations—the Cherokees, Muskogees, Seminoles, Choctaws, and Chickasaws ("Five Civilized Tribes")—were forcibly removed from their homelands during the Jackson administration, but in the Indian Territory they rebuilt their townships, farms, ranches, and institutions, including newspapers, schools, and orphanages. Although a tiny elite of each nation was wealthy and owned enslaved Africans and

private estates, the majority of the people continued their collective agrarian practices. All five nations signed treaties with the Confederacy, each for similar reasons. Within each nation, however, there was a clear division based on class, often misleadingly expressed as a conflict between "mixed-bloods" and "full-bloods." That is, the wealthy, assimilated, slave-owning minority that dominated politics favored the Confederacy, and the non-slave-owning poor and traditional majority wanted to stay out of the Anglo-American civil war. Historian David Chang found that Muskogee nationalism and well-founded distrust of federal power played a major role in bringing about that nation's strategic alliance with the Confederacy. Chang writes: "Was the Creek council's alliance with the South a racist defense of slavery and its class privileges, or was it a nationalist defense of Creek lands and sovereignty? The answer has to be 'both.'"[2]

John Ross, principal chief of the Cherokee Nation, at first called for neutrality, but changed his mind for reasons similar to the Muskogees and asked the Cherokee council for authority to negotiate a treaty with the CSA. Nearly seven thousand men of the five nations went into battle for the Confederacy. Stand Watie, a Cherokee, held the post of brigadier general in the Confederate Army. His First Indian Brigade of the Army of the Trans-Mississippi was among the last units in the field to surrender to the Union Army on June 23, 1865, more than two months after Lee's surrender of the Army of Northern Virginia at Appomattox Courthouse in April 1865. During the war, however, many Indigenous soldiers became disillusioned and went over to the Union forces, along with enslaved African Americans who fled to freedom.[3]

Another story is equally important, though less often told. A few months after the war broke out, some ten thousand men in Indian Territory, made up of Indigenous volunteers, along with African Americans who had freed themselves and even some Anglo-Americans, engaged in guerrilla warfare against the Confederate Army. They fought from Oklahoma into Kansas, where many of them joined unofficial Union units that had been organized by abolitionists who had trained with John Brown years earlier. This was not likely the kind of war the Lincoln administration had desired—a multiethnic volunteer Union contingent fighting pro-slavery forces

in Missouri, where enslaved Africans escaped to join the Union side.[4] The self-liberation by African Americans, occurring all over the South, led to Lincoln's 1863 Emancipation Proclamation, which allowed freed Africans to serve in combat.

In Minnesota, which had become a non-slavery state in 1859, the Dakota Sioux were on the verge of starvation by 1862. When they mounted an uprising to drive out the mostly German and Scandinavian settlers, Union Army troops crushed the revolt, slaughtering Dakota civilians and rounding up several hundred men. Three hundred prisoners were sentenced to death, but upon Lincoln's orders to reduce the numbers, thirty-eight were selected at random to die in the largest mass hanging in US history. The revered leader Little Crow was not among those hanged, but was assassinated the following summer while out picking raspberries with his son; the assassin, a settler-farmer, collected a $500 bounty.[5]

One of the young Dakota survivors asked his uncle about the mysterious white people who would commit such crimes. The uncle replied:

> Certainly they are a heartless nation. They have made some of their people servants—yes, slaves. . . . The greatest object of their lives seems to be to acquire possessions—to be rich. They desire to possess the whole world. For thirty years they were trying to entice us to sell them our land. Finally the outbreak gave them all, and we have been driven away from our beautiful country.[6]

THE GENOCIDAL ARMY OF THE WEST

To free the professional soldiers posted in the West to fight against the Confederate Army in the East, Lincoln called for volunteers in the West, and settlers responded, coming from Texas, Kansas, California, Washington, Oregon, Colorado, Nebraska, Utah, and Nevada. Having few Confederates to fight, they attacked people closer to hand, Indigenous people. Land speculators in the trans-Mississippi West sought statehood for the occupied former Mexican territories in order to attract settlers and investors. Their eagerness to

undertake the ethnic cleansing of the Indigenous residents to achieve the necessary population balance to attain statehood generated strong anti-Indian hysteria and violent actions. Preoccupied with the Civil War in the East, the Lincoln administration did little to prevent vicious and even genocidal actions on the part of territorial authorities consisting of volunteer Indian haters such as Kit Carson.

The mode of maintaining settler "law and order" set the pattern for postwar genocide. In the most infamous incident involving militias, the First and Third Colorado Volunteers carried out the Sand Creek Massacre. Although assigned to guard the road to Santa Fe, the units mainly engaged in raiding and looting Indigenous communities. John Chivington, an ambitious politician known as the "Fighting Parson," led the Third Colorado.[7]

By 1861, displaced and captive Cheyennes and Arapahos, under the leadership of the great peace seeker Black Kettle, were incarcerated in a US military reservation called Sand Creek, near Fort Lyon in southeastern Colorado. They camped under a white flag of truce and had federal permission to hunt buffalo to feed themselves. In early 1864, the Colorado territorial governor informed them that they could no longer leave the reservation to hunt. Despite their compliance with the order, on November 29, 1864, Chivington took seven hundred Colorado Volunteers to the reservation. Without provocation or warning, they attacked, leaving dead 105 women and children and 28 men. Even the federal commissioner of Indian affairs denounced the action, saying that the people had been "butchered in cold blood by troops in the service of the United States." In its 1865 investigation, the Congress Joint Committee on the Conduct of the War recorded testimonies and published a report that documented the aftermath of the killings, when Chivington and his volunteers burned tepees and stole horses. Worse, after the smoke had cleared, they had returned and finished off the few survivors while scalping and mutilating the corpses—women and men, young and old, children, babies. Then they decorated their weapons and caps with body parts—fetuses, penises, breasts, and vulvas—and, in the words of Acoma poet Simon Ortiz, "Stuck them / on their hats to dry / Their fingers greasy / and slick."[8] Once back in Denver, they displayed the trophies to the adoring public in Denver's

Apollo Theater and in saloons. Yet, despite the detailed report of the deeds, neither Chivington nor any of his men were reprimanded or prosecuted, signaling a free field for killing.[9]

US Army colonel James Carleton formed the Volunteer Army of the Pacific in 1861, based in California. In Nevada and Utah, a California businessman, Colonel Patrick Connor, commanded a militia of a thousand California volunteers that spent the war years massacring hundreds of unarmed Shoshone, Bannock, and Ute people in their encampments. Carleton led another contingent of militias to Arizona to suppress the Apaches, who were resisting colonization under the great leader Cochise. At the time, Cochise observed:

> When I was young I walked all over this country, east and west, and saw no other people than the Apaches. After many summers I walked again and found another race of people had come to take it. How is it? Why is it that the Apaches wait to die—that they carry their lives on their finger nails? . . . The Apaches were once a great nation; they are now but few. . . . Many have been killed in battle.[10]

Following a scorched-earth campaign against the Apaches, Carleton was promoted to the rank of brigadier general and placed in command of the Department of New Mexico. He brought in the now-seasoned killing machine of Colorado Volunteers to attack the Navajos, on whom he declared total war. He enlisted as his principal commander in the field the ubiquitous Indian killer Kit Carson.[11] With unlimited authority and answering to no one, Carleton spent the entire Civil War in the Southwest engaged in a series of search-and-destroy missions against the Navajos. The campaign culminated in March 1864 in a three-hundred-mile forced march of eight thousand Navajo civilians to a military concentration camp at Bosque Redondo in the southeastern New Mexico desert, at the army base at Fort Sumner, an ordeal recalled in Navajo oral history as the "Long Walk." One Navajo named Herrero said,

> Some of the soldiers do not treat us well. When at work, if we stop a little they kick us or do something else. . . . We do not mind if an officer punishes us, but do not like to be treated

> badly by the soldiers. Our women sometimes come to the tents outside the fort and make contracts with the soldiers to stay with them for a night, and give them five dollars or something else. But in the morning they take away what they gave them and kick them off. This happens most every day.[12]

At least a fourth of the incarcerated died of starvation. Not until 1868 were the Navajos released and allowed to return to their homeland in what is today the Four Corners area. This permission to return was not based on the deadly conditions of the camp, rather that Congress determined that the incarceration was too expensive to maintain.[13] For these noble deeds, Carleton was appointed a major general in the US Army in 1865. Now he led the Fourth Cavalry in scorched-earth forays against Plains Indians.

These military campaigns against Indigenous nations constituted foreign wars fought during the US Civil War, but the end of the Civil War did not end them. They carried on unabated to the end of the century, with added killing technology and more seasoned killers, including African American cavalry units. Demobilized officers and soldiers often could not find jobs, and along with a new generation of young settlers—otherwise unemployed and often seeking violent adventure—they joined the army of the West, some of the officers accepting lower ranks in order to get career army assignments. Given that war was centered in the West and that military achievement had come to foster prestige, wealth, and political power, every West Point graduate sought to further his career by volunteering in the army. Some of their diaries echo those of combat troops in Vietnam, Afghanistan, and Iraq, who later were troubled by the atrocities they witnessed or committed. But most soldiers persevered in their ambition to succeed.

Prominent Civil War generals led the army of the West, among them Generals William Tecumseh Sherman, Philip Sheridan (to whom is ascribed the statement "The only good Indian is a dead Indian"), George Armstrong Custer, and Nelson A. Miles. The army would make effective use after 1865 of innovations made during the Civil War. The rapid-fire Gatling gun, first used in battle in 1862, would be employed during the rest of the century against Indigenous

civilians. Non-technological innovations were perhaps even more important, the Civil War having fostered an extreme patriotic ideology in the Union Army that carried over into the Indian wars. Now more centralized under presidential command, US forces relied less on state contributions and were thus less subject to their control. The prestige of the Department of War rose within the federal government, so that it had far more leeway to send troops to steamroll over Indigenous peoples who challenged US dominion.

The Union Army victory over the Confederate Army transformed the South into a quasi-captive nation, a region that remains the poorest of the United States well over a century later. The situation was similar to that in South Africa two decades later when the British defeated the Boers (descendants of the original seventeenth-century Dutch settlers). As the British would later do with the Boers, the US government eventually allowed the defeated southern elite to return to their locally powerful positions, and both US southerners and Boers soon gained national political power. The powerful white supremacist southern ruling class helped further militarize the United States, the army practically becoming a southern institution. Following the effective Reconstruction experiment to empower former slaves, the US occupying army was withdrawn, and African Americans were returned to quasi-bondage and disenfranchisement through Jim Crow laws, forming a colonized population in the South.

COLONIAL POLICY PRECEDES MILITARY IMPLEMENTATION

In the midst of war, Lincoln did not forget his free-soiler settler constituency that had raised him to the presidency. During the Civil War, with the southern states unrepresented, Congress at Lincoln's behest passed the Homestead Act in 1862, as well as the Morrill Act, the latter transferring large tracts of Indigenous land to the states to establish land grant universities. The Pacific Railroad Act provided private companies with nearly two hundred million acres of Indigenous land.[14] With these land grabs, the US government broke multiple treaties with Indigenous nations. Most of the western ter-

ritories, including Colorado, North and South Dakota, Montana, Washington, Idaho, Wyoming, Utah, New Mexico, and Arizona, were delayed in achieving statehood, because Indigenous nations resisted appropriation of their lands and outnumbered settlers. So the colonization plan for the West established during the Civil War was carried out over the following three decades of war and land grabs. Under the Homestead Act, 1.5 million homesteads were granted to settlers west of the Mississippi, comprising nearly three hundred million acres (a half-million square miles) taken from the Indigenous collective estates and privatized for the market.[15] This dispersal of landless settler populations from east of the Mississippi served as an "escape valve," lessening the likelihood of class conflict as the industrial revolution accelerated the use of cheap immigrant labor.

Little of the land appropriated under the Homestead Acts was distributed to actual single-family homesteaders. It was passed instead to large operators or land speculators. The land laws appeared to have been created for that result. An individual could acquire 1,120 or even more acres of land, even though homestead and preemption (legalized squatting) claims were limited to 160 acres.[16] A claimant could obtain a homestead and secure title after five years or pay cash within six months. Then he could acquire another 160 acres under preemption by living on another piece of land for six months and paying $1.25 per acre. While acquiring these titles, he could also be fulfilling requirements for a timber culture claim of 160 acres and a desert land claim of 640 acres, neither of which required occupancy for title. Other men within a family or other partners in an enterprise could take out additional desert land claims to increase their holdings even more. As industrialization quickened, land as a commodity, "real estate," remained the basis of the US economy and capital accumulation.[17] The federal land grants to the railroad barons, carved out of Indigenous territories, were not limited to the width of the railroad tracks, but rather formed a checkerboard of square-mile sections stretching for dozens of miles on both sides of the right of way. This was land the railroads were free to sell in parcels for their own profit. The 1863–64 federal banking acts mandated a national currency, chartered banks, and permitted the government to guarantee bonds. As war profiteers, financiers,

and industrialists such as John D. Rockefeller, Andrew Carnegie, and J. P. Morgan used these laws to amass wealth in the East, Leland Stanford, Collis P. Huntington, Mark Hopkins, and Charles Crocker in the West grew rich from building railroads with eastern capital on land granted by the US government.[18]

Indigenous nations, as well as Hispanos, resisted the arrival of railroads crisscrossing their farms, hunting grounds, and homelands, bringing settlers, cattle, barbed wire fencing, and mercenary buffalo hunters in their wake. In what proved a prelude to the genocidal decades to follow, the Andrew Johnson administration in 1867–68 sent army and diplomatic representatives to negotiate peace treaties with dozens of Indigenous nations. The 371 treaties between Indigenous nations and the United States were all promulgated during the first century of US existence.[19] Congress halted formal treaty making in 1871, attaching a rider to the Indian Appropriation Act of that year stipulating "that hereafter no Indian nation or tribe within the territory of the United States shall be acknowledged or recognized as an independent nation, tribe, or power with whom the United States may contract by treaty. Provided, further, that nothing herein contained shall be construed to invalidate or impair the obligation of any treaty heretofore lawfully made and ratified with any such Indian nation or tribe."[20] This measure meant that Congress and the president could now make laws affecting an Indigenous nation with or without negotiations or consent. Nevertheless, the provision reaffirmed the sovereign legal status of those Indigenous nations that had treaties. During the period of US-Indigenous treaty making, approximately two million square miles of land passed from Indigenous nations to the United States, some of it through treaty agreements and some through breach of standing treaties.

In an effort to create Indigenous economic dependency and compliance in land transfers, the US policy directed the army to destroy the basic economic base of the Plains Nations—the buffalo. The buffalo were killed to near extinction, tens of millions dead within a few decades and only a few hundred left by the 1880s. Commercial hunters wanted only the skins, so left the rest of the animal to rot. Bones would be gathered and shipped to the East for various uses. Mainly it was the army that helped realize slaughter of the herds.[21]

Old Lady Horse of the Kiowa Nation could have been speaking for all the buffalo nations in her lament of the loss:

> Everything the Kiowas had came from the buffalo. . . . Most of all, the buffalo was part of the Kiowa religion. A white buffalo calf must be sacrificed in the Sun Dance. The priests used parts of the buffalo to make their prayers when they healed people or when they sang to the powers above.
>
> So, when the white men wanted to build railroads, or when they wanted to farm or raise cattle, the buffalo still protected the Kiowas. They tore up the railroad tracks and the gardens. They chased the cattle off the ranges. The buffalo loved their people as much as the Kiowas loved them.
>
> There was war between the buffalo and the white men. The white men built forts in the Kiowa country, and the woolly-headed buffalo soldiers shot the buffalo as fast as they could, but the buffalo kept coming on, coming on, even into the post cemetery at Fort Sill. Soldiers were not enough to hold them back.
>
> Then the white men hired hunters to do nothing but kill the buffalo. Up and down the plains those men ranged, shooting sometimes as many as a hundred buffalo a day. Behind them came the skinners with their wagons. They piled the hides and bones into the wagons until they were full, and then took their loads to the new railroad stations that were being built, to be shipped east to the market. Sometimes there would be a pile of bones as high as a man, stretching a mile along the railroad track.
>
> The buffalo saw that their day was over. They could protect their people no longer.[22]

Another aspect of US economic development that affected the Indigenous nations of the West was merchant domination. All over the world, in European colonies distant from their ruling centers, mercantile capitalists flourished alongside industrial capitalists and militaries, and together they determined the mode of colonization. Mercantile houses, usually family-owned, were organized to carry

goods over long stretches of water or sparsely populated lands to their destinations. The merchants' sources of commodities in remote regions were the nearby small farmers, loggers, trappers, and specialists such as woodworkers and metalsmiths. The commodities were then sent to industrial centers for credit against which money could be drawn. Thus, in the absence of a system of indirect credit, merchants could acquire scarce currency for the purchase of foreign goods. The merchant, thereby, became the dominant source of credit for the small operator as well as for the local capitalist. Mercantile capitalism thrived in colonial areas, with many of the first merchant houses originating in the Levant among Syrians (Lebanese) and Jews. Even as mercantile capitalism waned in the twentieth century, it left its mark on Native reservations where the people relied on trading posts for credit, a market for their products, and commodities of all kinds—an opportunity for super-exploitation. Merchants and traders, often by intermarrying Indigenous women, also came to dominate Native governance on some reservations.[23]

As noted above, at the end of the Civil War the US Army hardly missed a beat before the war "to win the West" began in full force. As a far more advanced killing machine and with seasoned troops, the army began the slaughter of people, buffalo, and the land itself, destroying the natural tall grasses of the plains and planting short grasses for cattle, eventually leading to the loss of the topsoil four decades later. William Tecumseh Sherman came out of the Civil War a major general and soon commanded the US Army, replacing war hero Ulysses S. Grant when Grant became president in 1869. As commanding general through 1883, Sherman was responsible for the genocidal wars against the resistant Indigenous nations of the West.

Sherman's family was among the first generation of settlers who rushed to the Ohio Valley region after the total war that drove the people of the Shawnee Nation out of their homes, towns, and farms. Sherman's father gave his son the trophy name Tecumseh after the Shawnee leader who was killed by the US Army. The general had been a successful lawyer and banker in San Francisco and New York before he turned to a military career. During the Civil War, most famously in the siege of Atlanta, he made his mark as a proponent and practitioner of total war, scorched-earth campaigns against civil-

ians, particularly targeting their food supplies. This had long been the colonial and US American way of war against the Indigenous peoples east of the Mississippi. Sherman sent an army commission to England to study English colonial campaigns worldwide, looking to employ successful English tactics for the US wars against Indigenous peoples. In Washington, Sherman had to contend with the upper echelons of the military that were under the sway of Carl von Clausewitz's book *On War*, which dealt with conflict between European nation-states with standing armies. This dichotomy of training the US military for standard European warfare but also training it in colonial counterinsurgency methods continues in the twenty-first century. Although a man of war, Sherman, like most in the US ruling class, was an entrepreneur at heart, and his mandate as head of the army and his passion were to protect the Anglo conquest of the West. Sherman regarded railroads a top priority. In a letter to Grant in 1867 he wrote, "We are not going to let a few thieving, ragged Indians stop the progress of [the railroads]."[24]

An alliance of the Sioux, Cheyenne, and Arapaho Nations was blocking the "Bozeman Trail," over which thousands of crazed gold seekers crashed through Indigenous territories in the Dakotas and Wyoming in 1866 to reach newly discovered goldfields in Montana. The army arrived to protect them, and in preparation for constructing Fort Phil Kearny, Lieutenant Colonel William Fetterman led eighty soldiers out to clear the trail in December 1866. The Indigenous alliance defeated them in battle. Strangely, this being war, the defeat of the US Army in the battle has come down in historical annals as "the Fetterman Massacre." Following this event, General Sherman wrote to Grant, who was still army commander: "We must act with vindictive earnestness against the Sioux, even to their extermination, men, women, and children." Sherman made it clear that "during an assault, the soldiers can not pause to distinguish between male and female, or even discriminate as to age."[25]

In adopting total war in the West, Sherman brought in its most notorious avatar, George Armstrong Custer, who proved his mettle right away by leading an attack on unarmed civilians on November 27, 1868, at the Southern Cheyenne reservation at Washita Creek in Indian Territory. Earlier, at the Colorado Volunteers' 1864

Sand Creek Massacre, the Cheyenne leader Black Kettle had escaped death. He and other Cheyenne survivors were then forced to leave Colorado Territory for a reservation in Indian Territory. Some young Cheyenne men, determined to resist reservation confinement and hunger, decided to hunt and to fight back with guerrilla tactics. Since the army was rarely able to capture them, Custer resorted to total war, murdering the incarcerated mothers, wives, children, and elders. When Black Kettle received word from Indigenous spies within the army ranks that the mounted troops of the Seventh Cavalry were leaving their fort and headed for the Washita reservation, he and his wife rode out at dawn in a snowstorm, unarmed, to attempt to talk with Custer and assure him that no resisters were present on the reservation. Upon Black Kettle's approaching the troops with a hoisted white flag, Custer ordered the soldiers to fire, and a moment later Black Kettle and his wife lay dead. All told, the Seventh Cavalry murdered over a hundred Cheyenne women and children that day, taking ghoulish trophies afterward.[26]

COLONIAL SOLDIERS

Many of the intensive genocidal campaigns against Indigenous civilians took place during the administration of President Grant, 1869–77. In 1866, two years before Grant's election, Congress had created two all–African American cavalry regiments that came to be called the buffalo soldiers. Some four million formerly enslaved Africans were free citizens in 1865, thanks to the Emancipation Proclamation, which took effect in January 1863. The legislation was intended to have a demoralizing effect on the CSA, but it gave belated official recognition to what was already fact: many African Americans, especially young men, had freed themselves by fleeing servitude and joining Union forces.[27] Up to 1862, Africans had been barred from serving in their own capacity in the army. Now the Union Army incorporated them but at lower pay and in segregated units under white officers. The War Department created the federal Bureau of Colored Troops, and one hundred thousand armed Africans served in the unit. Their courage and commitment made them

the best and most effective fighters, although they had the highest mortality rate. At the end of the Civil War, 186,000 Black soldiers had fought and 38,000 had died (in combat and from disease), a higher death toll than that of any individual state. The state with the highest casualty count was New York, with troops comprising mostly poor white immigrant soldiers, largely Irish. After the war many Black soldiers, like their poor white counterparts, remained in the army and were assigned to segregated regiments sent west to crush Indigenous resistance.

This reality strikes many as tragic, as if oppressed former slaves and Indigenous peoples being subjected to genocidal warfare should magically be unified against their common enemy, "the white man." In fact, this is precisely how colonialism in general and colonial warfare in particular work. It is not unique to the United States, but rather a part of the tradition of European colonialism since the Roman legions. The British organized whole armies of ethnic troops in South and Southwestern Asia, the most famous being the Gurkhas from Nepal, who fought as recently as Margaret Thatcher's war against Argentina in 1983.[28] The buffalo soldiers were such a specially organized colonial military unit. As Stanford L. Davis, a descendant of a buffalo soldier, writes:

> Slaves and the black soldiers, who couldn't read or write, had no idea of the historical deprivations and the frequent genocidal intent of the U.S. government toward Native Americans. Free blacks, whether they could read and write, generally had no access to first-hand or second-hand unbiased information on the relationship. Most whites who had access often didn't really care about the situation. It was business as usual in the name of "Manifest Destiny." Most Americans viewed the Indians as incorrigible and non-reformable savages. Those closest to the warring factions or who were threatened by it, naturally wanted government protection at any cost.[29]

Many Black men opted for army service for survival reasons, as it gave them food and shelter, pay and a pension, and even some glory. The United States had its own motives for assigning Black troops to

the West. Southerners and the eastern population did not want thousands of armed Black soldiers in their communities. There was also fear that if they demobilized, the labor market would be flooded. For US authorities, it was a good way of getting rid of the Black soldiers *and* the Indians.

The Civil War also set the template for the rapid "Americanization" of immigrants. Jewish immigrants fought on both sides in the war, and as individuals they earned a level of freedom from US bigotry they had never experienced before.

Indian scouts and soldiers were essential to the army as well, both as individuals and as nations making war on other Indigenous nations. Many decades later, Native Americans have continued to volunteer in US wars in percentages far beyond their populations. Wichita Nation citizen Stan Holder appeared in a 1974 documentary film on the Vietnam War, *Hearts and Minds*, in which he explained his volunteering for service. While growing up he had heard the older people's stories about Wichita warriors, and, looking around, the only warriors he could identify were marines, so he enlisted in what he considered a warrior society. It is no accident that the US Marine Corps evokes that image in angry young men. As with Black men who volunteered in the Indian wars and enlisted and served in other wars, Native men seized the security and potential glory of the colonialist army.

The explicit purpose of the buffalo soldiers and the army of the West as a whole was to invade Indigenous lands and ethnically cleanse them for Anglo settlement and commerce. As Native historian Jace Weaver has written: "The Indian Wars were not fought by the blindingly white American cavalry of John Ford westerns but by African Americans and Irish and German immigrants."[30] The haunting Bob Marley song "Buffalo Soldier" captures the colonial experience in the United States: "Said he was a buffalo soldier / Win the war for America."[31]

The army of the West was a colonial army with all the problems of colonial armies and foreign occupation, principally being hated by the people living under occupation. It's no surprise that the US military uses the term "Indian Country" to refer to what it considers enemy territory. Much as in the Vietnam War, the 1980s covert wars

in Central America, and the wars of the early twenty-first century in Muslim countries, counterinsurgent army volunteers in the late-nineteenth-century US West had to rely heavily on intelligence from those native to the land, informers and scouts. Many of these were double agents, reporting back to their own people, having joined the US Army for that purpose. Failing to find guerrilla fighters, the army resorted to scorched-earth campaigns, starvation, attacks on and removals of civilian populations—the weapons of counterinsurgency warfare. During the Soviet counterinsurgency in Afghanistan in the 1980s, the UN High Commissioner for Refugees called the effect "migratory genocide"—an apt term to apply retrospectively to the nineteenth-century US counterinsurgency against Indigenous peoples.[32]

ANNIHILATION UNTO TOTAL SURRENDER

The US Army's search-and-destroy missions and forced relocations (ethnic cleansing) in the West are well documented but perhaps not normally considered in the light of counterinsurgency.

Mari Sandoz recorded one such story in her 1953 best-selling work of nonfiction *Cheyenne Autumn*, on which John Ford based a 1964 film.[33] In 1878, the great Cheyenne resistance leaders Little Wolf and Dull Knife led more than three hundred Cheyenne civilians from a military reservation in Indian Territory, where they had been forcibly confined, to their original homeland in what is today Wyoming and Montana. They were eventually intercepted by the military, but only following a dramatic chase covered by newspaper reporters. So much sympathy was aroused in eastern cities that the Cheyennes were provided a reservation in a part of their original homeland. A similar feat was that of the Nimi'ipuu (Nez Perce) under Chief Joseph, who tried to lead his people out of military incarceration in Idaho to exile in Canada. In 1877, pursued by two thousand soldiers of the US cavalry led by Nelson Miles, Nimi'ipuu led eight hundred civilians toward the Canadian border. They held out for nearly four months, evading the soldiers as well as fighting hit-and-run battles, while covering seventeen hundred miles. Some

were rounded up and placed in Pauls Valley, Oklahoma, but they soon left on their own and returned to their Idaho homeland, eventually securing a small reservation there.

The longest military counterinsurgency in US history was the war on the Apache Nation, 1850–86. Goyathlay, known as Geronimo, famously led the final decade of Apache resistance. The Apaches and their Diné relatives, the Navajos, did not miss a beat in continuing resistance to colonial domination when the United States annexed their territory as a part of the half of Mexico taken in 1848. The Treaty of Guadalupe Hidalgo between the United States and Mexico, which sealed the transfer of territory, even stipulated that both parties were required to fight the "savage" Apaches. By 1877 the army had forced most Apaches into inhospitable desert reservations. Led by Geronimo, Chiricahua Apaches resisted incarceration in the San Carlos reservation designated for them in Arizona. When Geronimo finally surrendered—he was never captured—the group numbered only thirty-eight, most of those women and children, with five thousand soldiers in pursuit, which meant that the insurgents had wide support both north and south of the recently drawn US-Mexico border. Guerrilla warfare persists only if it has deep roots in the people being represented, the reason it is sometimes called "people's war." Obviously, the Apache resistance was not a military threat to the United States but rather a symbol of resistance and freedom. Herein lies the essence of counterinsurgent colonialist warfare: no resistance can be tolerated. Historian William Appleman Williams aptly described the US imperative as "annihilation unto total surrender."[34]

Geronimo and three hundred other Chiricahuas who were not even part of the fighting force were rounded up and transported by train under military guard to Fort Marion, in St. Augustine, Florida, to join hundreds of other Plains Indian fighters already incarcerated there. Remarkably, Geronimo negotiated an agreement with the United States so that he and his band would surrender as prisoners of war, rather than as common criminals as the Texas Rangers desired, which would have meant executions by civil authorities. The POW status validated Apache sovereignty and made the captives eligible for treatment according to the international laws of

war. Geronimo and his people were transferred again, to the army base at Fort Sill in Indian Territory, and lived out their lives there. The US government had not yet created the term "unlawful combatant," which it would do in the early twenty-first century, depriving legitimate prisoners of war fair treatment under international law.

During the Grant administration, the United States began experimenting with new colonial institutions, the most pernicious of which were the boarding schools, modeled on Fort Marion prison. In 1875, Captain Richard Henry Pratt was in charge of transporting seventy-two captive Cheyenne and other Plains Indian warriors from the West to Fort Marion, an old Spanish fortress, dark and dank. After the captives were left shackled for a period in a dungeon, Pratt took their clothes away, had their hair cut, dressed them in army uniforms, and drilled them like soldiers. "Kill the Indian and save the man" was Pratt's motto. This "successful" experiment led Pratt to establish the Carlisle Indian Industrial School in Pennsylvania in 1879, the prototype for the many militaristic federal boarding schools set up across the continent soon after, augmented by dozens of Christian missionary boarding schools. The decision to establish Carlisle and other off-reservation boarding schools was made by the US Office of Indian Affairs, later renamed the Bureau of Indian Affairs (BIA). The stated goal of the project was assimilation. Indigenous children were prohibited from speaking their mother tongues or practicing their religions, while being indoctrinated in Christianity. As in the Spanish missions in California, in the US boarding schools the children were beaten for speaking their own languages, among other infractions that expressed their humanity. Although stripped of the languages and skills of their communities, what they learned in boarding school was useless for the purposes of effective assimilation, creating multiple lost generations of traumatized individuals.[35]

Just before the centennial of US independence, in late June 1876, then–Lieutenant Colonel Custer, commanding 225 soldiers of the Seventh Cavalry, prepared to launch a military assault on the civilians living in a cluster of Sioux and Cheyenne villages that lay along the Little Bighorn River. Led by Crazy Horse and Sitting Bull, the Sioux and Cheyenne warriors were ready for the assault and wiped

out the assailants, including Custer, who after death was promoted to general. The proud author of multiple massacres of Indigenous civilians, starting during the Civil War with his assault on unarmed and reservation-incarcerated Cheyennes on the Washita in Indian Territory, Custer "died for your [colonialist] sins," in the words of Vine Deloria Jr.[36] A year later, Crazy Horse was captured and imprisoned, then killed trying to escape. He was thirty-five years old.

Crazy Horse was a new kind of leader to emerge after the Civil War, at the beginning of the army's wars of annihilation in the northern plains and the Southwest. Born in 1842 in the shadow of the sacred Paha Sapa (Black Hills), he was considered special, a quiet and brooding child. Already the effects of colonialism were present among his people, particularly alcoholism and missionary influence. Crazy Horse became a part of the Akicita, a traditional Sioux society that kept order in villages and during migrations. It also had authority to make certain that the hereditary chiefs were doing their duty and dealt harshly with those who did not. Increasingly during Crazy Horse's youth, the primary concern was the immigrant defilement of the Sioux territory. A steady stream of Euro-American migrants clotted the trail to Oregon Territory. Young militant Sioux wished to drive them away, but the Sioux were now dependent on the trail for supplies. In 1849, the army arrived and planted a base, Fort Laramie, in Sioux territory. Sporadic fighting broke out, leading to treaty meetings and agreements, most of which were bogus army documents signed by unauthorized individuals. Crazy Horse was a natural in guerrilla warfare, becoming legendary among his people. Although Crazy Horse and other militants did not approve of the 1868 US treaty with the Sioux, some stability held until Custer's soldiers found gold in the Black Hills. Then a gold rush was on, with hordes of prospectors from all over converging and running rampant over the Sioux. The treaty had ostensibly been a guarantee that such would not occur. Soon after, the Battle of the Little Bighorn put an end to Custer but not to the invasion.

Indigenous peoples in the West continued to resist, and the soldiers kept hunting them down, incarcerating them, massacring civilians, removing them, and stealing their children to haul off to faraway boarding schools. The Apache, Kiowa, Sioux, Ute, Kick-

apoo, Comanche, Cheyenne, and other nations were attacked, leaving community after community decimated. By the 1890s, although some military assaults on Indigenous communities and valiant Indigenous armed resistance continued, most of the surviving Indigenous refugees were confined to federal reservations, their children transported to distant boarding schools to unlearn their Indigenousness.

GHOST DANCING

Disarmed, held in concentration camps, their children taken away, half starved, the Indigenous peoples of the West found a form of resistance that spread like wildfire in all directions from its source, thanks to a Paiute holy man, Wovoka, in Nevada. Pilgrims journeyed to hear his message and to receive directions on how to perform the Ghost Dance, which promised to restore the Indigenous world as it was before colonialism, making the invaders disappear and the buffalo return. It was a simple dance performed by everyone, requiring only a specific kind of shirt that was to protect the dancers from gunfire. In the twentieth century Sioux anthropologist Ella Deloria interviewed a sixty-year-old Sioux man who remembered the Ghost Dance he had witnessed fifty years before as a boy:

> Some fifty of us, little boys about eight to ten, started out across country over hills and valleys, running all night. I know now that we ran almost thirty miles. There on the Porcupine Creek thousands of Dakota people were in camp, all hurrying about very purposefully. In a long sweat lodge with openings at both ends, people were being purified in great companies for the holy dance, men by themselves and women by themselves, of course. . . .
>
> The people, wearing the sacred shirts and feathers, now formed a ring. We were in it. All joined hands. Everyone was respectful and quiet, expecting something wonderful to happen. It was not a glad time, though. All wailed cautiously and in awe, feeling their dead were close at hand.

> The leaders beat time and sang as the people danced, going round to the left in a sidewise step. They danced without rest, on and on, and they got out of breath but still they kept going as long as possible. Occasionally someone thoroughly exhausted and dizzy fell unconscious into the center and lay there "dead." Quickly those on each side of him closed the gap and went right on. After a while, many lay about in that condition. They were now "dead" and seeing their dear ones. As each one came to, she, or he, slowing sat up and looked about, bewildered, and then began wailing inconsolably. . . .
>
> Waking to the drab and wretched present after such a glowing vision, it was little wonder that they wailed as if their poor hearts would break in two with disillusionment. But at least they had seen! The people went on and on and could not stop, day or night, hoping perhaps to get a vision of their own dead, or at least to hear the visions of others. They preferred that to rest or food or sleep. And so I suppose the authorities did think they were crazy—but they weren't. They were only terribly unhappy.[37]

When the dancing began among the Sioux in 1890, reservation officials reported it as disturbing and unstoppable. They believed that it had been instigated by Hunkpapa Teton Sioux leader Tatanka Yotanka (Sitting Bull), who had returned with his people in 1881 from exile in Canada. He was put under arrest and imprisoned in his home, closely guarded by Indian police. Sitting Bull was killed by one of his captors on December 15, 1890.

All Indigenous individuals and groups living outside designated federal reservations were considered "fomenters of disturbance," as the War Department put it. Following Sitting Bull's death, military warrants of arrest were issued for leaders such as Big Foot, who was responsible for several hundred civilian refugees who had not yet turned themselves in to the designated Pine Ridge Reservation. When Big Foot heard of Sitting Bull's death and that the army was looking for him and his people—350 Lakotas, 230 of them women and children—he decided to lead them through the subzero weather to Pine Ridge to surrender. En route on foot, they encountered US

troops. The commander ordered that they be taken to the army camp at Wounded Knee Creek, where armed soldiers surrounded them. Two Hotchkiss machine guns were mounted on the hillside, enough firepower to wipe out the whole group. During the night, Colonel James Forsyth and the Seventh Cavalry, Custer's old regiment, arrived and took charge. These soldiers had not forgotten that Lakota relatives of these starving, unarmed refugees had killed Custer and decimated his troops at the Little Bighorn fourteen years earlier. With orders to transport the refugees to a military stockade in Omaha, Forsyth added two more Hotchkiss guns trained on the camp, then issued whiskey to his officers. The following morning, December 29, 1890, the soldiers brought the captive men out from their campsites and called for all weapons to be turned in. Searching tents, soldiers confiscated tools, such as axes and knives. Still not satisfied, the officers ordered skin searches. A Winchester rifle turned up. Its young owner did not want to part with his beloved rifle, and, when the soldiers grabbed him, the rifle fired a shot into the air. The killing began immediately. The Hotchkiss guns began firing a shell a second, mowing down everyone except a few who were able to run fast enough. Three hundred Sioux lay dead. Twenty-five soldiers were killed in "friendly fire."[38] Bleeding survivors were dragged into a nearby church. Being Christmastime, the sanctuary was candlelit and decked with greenery. In the front, a banner read: PEACE ON EARTH AND GOOD WILL TO MEN.

The Seventh Cavalry attack on a group of unarmed and starving Lakota refugees attempting to reach Pine Ridge to accept reservation incarceration in the frozen days of December 1890 symbolizes the end of Indigenous armed resistance in the United States. The slaughter is called a battle in US military annals. Congressional Medals of Honor were bestowed on twenty of the soldiers involved. A monument was built at Fort Riley, Kansas, to honor the soldiers killed by friendly fire. A battle streamer was created to honor the event and added to other streamers that are displayed at the Pentagon, West Point, and army bases throughout the world. L. Frank Baum, a Dakota Territory settler later famous for writing *The Wonderful Wizard of Oz*, edited the *Aberdeen Saturday Pioneer* at the time. Five days after the sickening event at Wounded Knee, on

January 3, 1891, he wrote, "The Pioneer [*sic*] has before declared that our only safety depends upon the total extermination of the Indians. Having wronged them for centuries we had better, in order to protect our civilization, follow it up by one more wrong and wipe these untamed and untamable creatures from the face of the earth."[39]

Three weeks before the massacre, General Sherman had made clear that he regretted nothing of his three decades of carrying out genocide. In a press conference he held in New York City, he said, "Injins must either work or starve. They never have worked; they won't work now, and they will never work." A reporter asked, "But should not the government supply them with enough to keep them from starvation?" "Why," Sherman asked in reply, "should the government support 260,000 able-bodied campers? No government that the world has ever seen has done such a thing."[40]

The reaction of one young man to Wounded Knee is representative but also extraordinary. Plenty Horses attended the Carlisle school from 1883 to 1888, returning home stripped of his language, facing the dire reality of the genocide of his people, with no traditional or modern means to make a living. He said, "There was no chance to get employment, nothing for me to do whereby I could earn my board and clothes, no opportunity to learn more and remain with the whites. It disheartened me and I went back to live as I had before going to school."[41] Historian Philip Deloria notes: "The greatest threat to the reservation program . . . was the disciplined Indian who refused the gift of civilization and went 'back to the blanket,' as Plenty Horses tried."[42] But it wasn't simple for Plenty Horses to find his place. As Deloria points out, he had missed the essential period of Lakota education, which takes place between the ages of fourteen and nineteen. Due to his absence and Euro-American influence, he was suspect among his own people, and even that world was disrupted by colonialist chaos and violence. Still, Plenty Horses returned to traditional dress, grew his hair long, and participated in the Ghost Dance. He also joined a band of armed resisters, and they were present at Pine Ridge on December 29, 1890, when the bloody bodies were brought in from the Wounded Knee Massacre. A week later, he went out with forty other mounted warriors who accompanied Sioux leaders to meet Lieutenant Edward Casey for

possible negotiations. The young warriors were angry, none more than Plenty Horses, who pulled out from the group and got behind Casey and shot him in the back of his head.

Army officials had to think twice about charging Plenty Horses with murder. They were faced with the corollary of the recent army massacre at Wounded Knee, in which the soldiers received Congressional Medals of Honor for their deeds. At trial, Plenty Horses was acquitted due to the state of war that existed. Acknowledging a state of war was essential in order to give legal cover to the massacre.

As a late manifestation of military action against Indigenous peoples, Wounded Knee stands out. Deloria notes that in the preceding years, the Indian warrior imagery so prevalent in US American society was being replaced with "docile, pacified Indians started out on the road to civilization."

> Luther Standing Bear, for example, recounts numerous occasions on which the Carlisle Indian Industrial School students were displayed as docile and educable Indians. The Carlisle band played at the opening of the Brooklyn Bridge in 1883 and then toured several churches. Students were carted around East Coast cities. Standing Bear himself was placed on display in Wanamaker's Philadelphia department store, locked in a glass cell in the center of the store and set to sorting and pricing jewelry.[43]

GREED IS GOOD

During the final phase of military conquest of the continent, surviving Indigenous refugees were deposited in Indian Territory, piled on top of each other in smaller and smaller reservations. In 1883, the first of several conferences were held in Mohonk, New York, of a group of influential and wealthy advocates of the "manifest destiny" policy. These self-styled "friends of the Indians" developed a policy of assimilation soon formulated into an act of Congress written by one of their members, Senator Henry Dawes: the General Allotment Act of 1887. Arguing for allotment of collectively held Indigenous

lands, Dawes said: "The defect of the [reservation] system was apparent. It is [socialist] Henry George's system and under that there is no enterprise to make your home any better than that of your neighbors. There is no selfishness, which is at the bottom of civilization. Till this people will consent to give up their lands, and divide among their citizens so that each can own the land he cultivates they will not make much more progress." Although allotment did not create the desired selfishness, it did reduce the overall Indigenous land base by half and furthered both Indigenous impoverishment and US control. In 1889, a part of Indian Territory the federal government called the Unassigned Lands, left over after allotment, was opened to settler homesteading, triggering the "Oklahoma Run."

Oil had been discovered in Indian Territory, but the Dawes Allotment Act could not be applied to the five Indigenous nations removed from the South, because their territories were not technically reservations, rather sovereign nations. In contradiction to the terms of the removal treaties, Congress passed the Curtis Act in 1898, which unilaterally deposed the sovereignty of those nations and mandated allotment of their lands. Indigenous territories were larger than the sum of 160-acre allotments, so the remaining land after distribution was declared surplus and opened to homesteading.

Allotment did not proceed in Indian Territory without fierce resistance. Cherokee traditionalist Redbird Smith rallied his brethren to revive the Keetoowah secret society. Besides direct action, they also sent lawyers to argue before Congress. When they were overridden, they formed a community in the Cookson Hills, refusing to participate in privatization. Similarly, the Muskogee Creeks resisted, led by Chitto Harjo, who was lovingly nicknamed Crazy Snake. He led in the founding of an alternate government, with its capital a settlement they called Hickory Ground. More than five thousand Muskogees were involved. Captured and jailed, when freed Harjo led his people into the woods and carried on the fight for another decade. He was shot by federal troops in 1912, but the legacy of the Crazy Snake resistance remains a strong force in eastern Oklahoma. Muskogee historian Donald Fixico describes a contemporary enclave: "There is a small Creek town in Oklahoma which lies within the Creek Nation. The name of this town is Thlopthlocco. Thlopth-

locco is a small independent community which operates almost independently. They are not very much dependent on the federal government, nor are they dependent on the Creek Nation. So they're kind of a renegade group."[44]

In 1907, Indian Territory was dissolved and the state of Oklahoma entered the Union. Under the Dawes and Curtis Acts, privatization of Indigenous territories was imposed on half of all federal reservations, with a loss of three-fourths of the Indigenous land base that still existed after decades of army attacks and wanton land grabs. Allotment continued until 1934, when it was halted by the Indian Reorganization Act, but the land taken was never restored and its former owners were never compensated for their losses, leaving all the Indigenous people of Oklahoma (except the Osage Nation) without effective collective territories and many families with no land at all.[45]

The Hopi Nation resisted allotment with partial success. In 1894, they petitioned the federal government with a letter signed by every leader and chief of the Hopi villages:

> To the Washington Chiefs:
>
> During the last two years strangers have looked over our land with spy-glasses and made marks upon it, and we know but little of what it means. As we believe that you have no wish to disturb our Possessions we want to tell you something about this Hopi land.
>
> None of us were asked that it should be measured into separate lots, and given to individuals for they would cause confusion.
>
> The family, the dwelling house and the field are inseparable, because the woman is the heart of these, and they rest with her. Among us the family traces its kin from the mother, hence all its possessions are hers. The man builds the house but the woman is the owner, because she repairs and preserves it; the man cultivates the field, but he renders its harvest into the woman's keeping, because upon her it rests to prepare the food, and the surplus of stores for barter depends upon her thrift.

> A man plants the fields of his wife, and the fields assigned to the children she bears, and informally he calls them his, although in fact they are not. Even of the field which he inherits from his mother, its harvests he may dispose of at will, but the field itself he may not.[46]

The petition continues, explaining the matriarchal communal society and why dividing it up for private ownership would be unthinkable. Washington authorities never replied and the government continued to carve up the lands, finally giving up because of Hopi resistance. In the heart of New Mexico, the nineteen Indigenous city-states of the Pueblo Indians organized resistance under US occupation using the legal system as a means of survival, as they had under Spanish colonialism and in their relationship with the republic of Mexico. In the decades after they had lost their autonomous political status under Mexico and were counted as former Mexican citizens under US law, both Hispanos and Anglo squatters encroached upon the Pueblos' ancestral lands. The only avenue for the Pueblos was to use the US court of private land claims. The following report reflects their status in the eyes of the Anglo-American judiciary:

> Occasionally the court room at Santa Fe would be enlivened by a squad of Indians who had journeyed thither from their distant Pueblos as witnesses for their grant. These delegations were usually headed by the governor of their tribe, who exhibited great pride in striding up to the witness stand and being sworn on the holy cross; wearing a badge on his breast, a broad red sash round his waist, and clad in a white shirt, the full tail of which hung about his Antarctic zone like the skirt of a ballet dancer, and underneath which depended his baggy white muslin trousers, a la Chinese washee-washee. The grave and imperturbable bow which the governor gave to the judges on the bench, in recognition of their equality with himself as official dignitaries, arrayed in that grotesque fashion, was enough to evoke a hilarious bray from a dead burro.[47]

Without redress for their collective land rights under the claims court, the Pueblos had no choice but to seek federal Indian trust status. After they lost in their first attempt, finally in 1913 the US Supreme Court reversed the earlier decision and declared the Pueblos wards of the federal government with protected trust status, stating: "They are essentially a simple, uninformed, inferior people."[48]

At the beginning of the twentieth century, sculptor James Earle Fraser unveiled the monumental and iconic sculpture *The End of the Trail*, which he had created exclusively for the triumphal 1915 Panama-Pacific International Exposition in San Francisco, California. The image of the near naked, exhausted, dying Indian mounted on his equally exhausted horse proclaimed the final solution, the elimination of the Indigenous peoples of the continent. The following year, Ishi, the California Yani who had been held captive for five years by anthropologists who studied him, died and was proclaimed "the last Indian." Dozens of other popular images of "the vanishing Indian" were displayed during this period. The film industry soon kicked in, and Indians were killed over and over on screens viewed by millions of children, including Indian girls and boys.

With utter military triumph on the continent, the United States then set out to dominate the world, but the Indigenous peoples remained and persisted as the "American Century" proceeded.

NOTES

INTRODUCTION: THIS LAND

Epigraph: Willie Johns, "A Seminole Perspective on Ponce de León and Florida History," *Forum Magazine* (Florida Humanities Council), Fall 2012, http://indiancountrytodaymedianetwork.com/2013/04/08/seminole-perspective-ponce-de-leon-and-florida-history-148672 (accessed September 24, 2013).

CHAPTER TEN: GHOST DANCE PROPHECY

Epigraph 1: "Sioux Ghost Dance Song Lyrics," documented and translated by James Mooney in 1894, *Ghost Dance*, http://www.ghostdance.com/songs/songs-lyricssioux.html (accessed December 10, 2013).

Epigraph 2: Quoted in Zinn, *People's History of the United States*, 525.

1. Slotkin, *Gunfighter Nation*, 1–2.
2. Ibid., 3.
3. "Blue Lake," *Taos Pueblo*, http://www.taospueblo.com/blue-lake (accessed October 2, 2013).
4. From the statement of James E. Snead, president of the Santa Fe Wildlife and Conservation Association, "Taos Indians—Blue Lake," in "Hearings before the Subcommittee on Indian Affairs of the Committee on Interior and Insular Affairs, U.S. Senate, 91st Congress, 2nd Session (September 19–20, 1968)," in *Primitive Law—United States Congressional Documents*, vol. 9, pt. 1 (Washington, DC: Government Printing Office, 1968), 216.
5. For the senators' arguments against the return of Blue Lake, see "Pueblo de Taos Indians Cultural and Ceremonial Shrine Protection Act of 1970," Proceedings and Debates of the 91st Congress, 2nd Session (December 2, 1970), *Congressional Record* 116, pt. 29, 39, 587, 589–90, 594. Nielson, "American Indian Land Claims," 324. The senators on the subcommittee were concerned about the Alianza Federal de Mercedes (later renamed the Alianza Federal de Pueblos Libres), formed in 1963 to pressure the federal government for reconsideration of land-grant settlements and the loss of the commons. The organization claimed that colonialism had robbed resources, depopulated communities in northern New Mexico, and impoverished the people. The Alianza was composed of many poor land-grant heirs and was identified primarily with a Texas-born Mexican, Reies López Tijerina. In June 1967, the National Guard was dispatched with tanks, helicopters, and infantry to Rio Arriba County in search of the agrarian Mexican rebels who had participated in the "Courthouse Raid" at Tierra Amarilla.

The incident and the government's response briefly focused national and international attention on northern New Mexico, and the land-grant issue, which had been resolved in the courts over sixty years before, once again became a live issue.

Several federal Spanish and Mexican land-grant cases have been brought in federal courts, one to the Supreme Court in 1952 that was denied a hearing: Martínez v. Rivera, 196 Fed. 2nd 192 (Circuit Court of Appeals, 10th Circuit, April 16, 1952). In 2001, following more than a century of struggle by Hispanic land grantees who were deprived of most of their landholdings after the United States occupied New Mexico in 1848, the US General Accounting Office began a study of the New Mexico land grants. The GAO issued its final report in 2004, but no action has yet ensued. US General Accounting Office, *Treaty of Guadalupe Hidalgo.*

16. See testimony of Pat McLaughlin, chairman of the Standing Rock Sioux government, Fort Yates, ND (May 8, 1976), at hearings of the American Indian Policy Review Commission, established by Congress in the act of January 3, 1975.
17. See Philip, *John Collier's Crusade for Indian Reform.*
18. King quoted in Dunbar-Ortiz, *The Great Sioux Nation*, 156.
19. For a lucid discussion of neocolonialism in relation to American Indians and the reservation system, see Jorgensen, *Sun Dance Religion*, 89–146.
20. There is continuous migration from reservations to cities and border towns and back to the reservations, so that half the Indian population at any time is away from the reservation. Generally, however, relocation is not permanent and resembles migratory labor more than permanent relocation. This conclusion is based on my personal observations and on unpublished studies of the Indigenous populations in the San Francisco Bay area and Los Angeles.

21. The American Indian Movement convened a meeting in June 1974 that founded the International Indian Treaty Council (IITC), receiving consultative status in the UN Economic and Social Council (ECOSOC) in February 1977. The IITC participated in the UN Conference on Desertification in Buenos Aires, March 1977, and made presentations to the UN Human Rights Commission in August 1977 and in February and August 1978. It also led the organizing for the Non-Governmental Organizations (NGOs) Conference on Indigenous Peoples of the Americas, held at UN headquarters in Geneva, Switzerland, in September 1977; participated in the World Conference on Racism in Basel, Switzerland, in May 1978; and participated in establishing the UN Working Group on Indigenous Populations, the UN Permanent Forum on Indigenous Issues, and the 2007 UN Declaration on the Rights of Indigenous Peoples. 'Just and lawful war' as genocidal war in the (United States) Northwest Ordinance and Northwest Territory, 1787–1832

Jeffrey Ostler

ABSTRACT

This article focuses on the United States Northwest Ordinance of 1787's profession of 'utmost good faith' towards Indians and its provision for 'just and lawful wars' against them. As interpreted by US officials as they authorized and practised war against native communities in the Northwest Territory from 1787 to 1832, the 'just and lawful wars' clause legalized wars of 'extirpation' or 'extermination', terms synonymous with genocide by most definitions, against native people who resisted US demands that they cede their lands. Although US military operations seldom achieved extirpation, this was due to their ineptness and the success of indigenous strategies rather than an absence of intention. When US military forces did succeed in achieving their objective, the result was massacre, as revealed in the Black Hawk War of 1832. US policy did not call for genocide in the first instance, preferring that Indians embrace the gift of civilization in exchange for their lands. Should Indians reject this display of 'utmost good faith', however, US policy legalized genocidal war against them.

Introduction

Did the United States establish a formal policy of genocide against American Indians? In his magisterial *The great father: the United States government and the American Indians*, published in 1984, Francis Paul Prucha wrote that '[t]he United States, of course, absolutely rejected a war of extermination against the Indians'. Prucha's 'of course' reflected a well-founded confidence that his judgement reflected a scholarly consensus. In recent decades, scholars have become more critical of US Indian policy than Prucha, although most continue to argue that the US did not adopt a policy of genocide. Gary Clayton Anderson's recent *Ethnic cleansing and the Indian: the crime that should haunt America* makes a strong distinction between ethnic cleansing and genocide and acquits the US of the latter, arguing that the government never embarked on a 'concerted effort to kill large numbers of people or indeed to annihilate a given people'.[1]

Scholars in genocide studies have been only partially effective in countering the thesis that the US never established a policy of genocide against American Indians. Arguments for the pervasiveness of genocide in the western hemisphere first became prominent at the time of the Columbus Quincentennial. David Stannard's *American holocaust: the*

CONTACT Jeffrey Ostler jostler@uoregon.edu

conquest of the New World and Ward Churchill's *A little matter of genocide*: *holocaust and denial in the Americas, 1492 to the present* argued that Europeans in the western hemisphere consistently committed genocide against indigenous people. As their titles announced, the narrative strategy in these works was to relate horrific event after horrific event (massacres, enslavements, epidemics), indict Europeans in the Americas for their greed, racism and bloodlust, and link these to the drastic decline of indigenous populations in the Americas, thus depicting an unrelenting and intentional process that closely resembled the Nazis' systematic annihilation of Jews.[2] Although Stannard and Churchill did not provide a detailed analysis of policy, their works conveyed the strong impression that Spain, Britain and the United States intended as a matter of policy to physically eliminate all American Indians. In part because of a generally conservative disposition among academic specialists in colonial American and US history, but also because of its excessive polemics, empirical overreaches and reductionism, the Quincentennial literature has never gained much traction among scholars of US relations with Native Americans. If the question is whether the United States pursued a policy of physically killing all Indians in the first instance, as the Quincentennial writers argued, Prucha and Anderson have the better of the debate, since the US government did not adopt such an overarching policy. US policymakers generally preferred that Indians cede their lands and go away (through assimilation, voluntary removal or a 'natural' process of disappearance) without having to kill them. It was cheaper that way and it gave less trouble to the consciences of men devoted to a project they wished to see and be seen as honourable.

But policy was not limited to policymakers' statements of what they ideally wished to happen. What if Indians refused the gift of 'civilization' in exchange for their lands? What if they defended their lands against settler invasions? Recent scholarship in genocide studies is more capable of accounting for these contingencies. Ben Kiernan observes that 'US policies towards Indians did not mandate genocide, but it was practiced when considered necessary', while Michael Mann points out that '[t]he effect of Indian resistance on even enlightened presidents drove to them to accept a Plan C, threatening genocide if they did not accept deportation'. Similarly, in a discussion of the Australian case with theoretical implications for settler colonial situations in general (the US included), A. Dirk Moses outlines a process of 'policy radicalization' related to the 'intensity of Indigenous resistance' that could lead to 'genocidal moments'. Nonetheless, genocide studies' move from an intentionalist to a structuralist approach and accompanying concepts such as 'society-led' (instead of 'state-led') genocides, 'relations of genocide' and 'logic of elimination' turns attention away from formally constructed policy, leaving the impression that wars of extermination and massacres were often improvised responses to policy breakdown rather than the result of legislation and formal decisions by policymakers that called for and sanctioned acts of genocide under certain conditions.[3] Benjamin Madley's recent documentation of state and federal government policies such as establishing scalp bounties and funding exterminatory militias returns attention to policy and suggests the need for further analysis of the location of genocide in US policy.[4]

This article argues that at the founding of the United States policymakers developed a clearly defined policy option for dealing with indigenous groups who resisted US demands that they cede their lands. This policy option called for the extirpation or extermination of such groups, terms that meant the intentional killing of a substantial portion of a group and so can be considered as genocidal under the 'restrictive' definition of the term

proposed by Frank Chalk and Kurt Jonassohn as 'a form of one-sided mass killing in which a state or other authority intends to destroy a group'. In citing this definition, I am not arguing for it as authoritative for analysing genocide as a general phenomenon. For the purposes of this article, Chalk and Jonassohn's definition is useful because there is considerable consensus, despite what Dan Stone refers to as a 'merry-go-round of definitional debates', that a government policy intentionally authorizing mass killing to destroy a group clearly qualifies as a policy of genocide.[5]

The Northwest Ordinance

The Northwest Ordinance of 1787 at first appears an unlikely document for identifying a foundational location for genocide in US Indian policy. Enacted in New York City by the Continental Congress as the Constitutional Convention was meeting in Philadelphia, the Northwest Ordinance was reaffirmed in 1789 during the first session of the US Congress.[6] At one time, what Frederick Jackson Turner termed the 'great Ordinance' was commonly celebrated, in Bernard Bailyn's words, for its 'brilliantly imaginative provisions … for opening up new lands in the West and settling new governments within them'. This it did through a series of provisions allowing for an orderly creation of territories in the area north of the Ohio River into the Great Lakes and their admission to the Union on

Figure 1. Northwest Territory.

an 'equal footing' with existing states. The states created were Ohio (1803), Indiana (1816), Illinois (1818), Michigan (1837) and Wisconsin (1848).[7]

In recent decades, scholars have continued to see the Ordinance as an effective means for reconciling the metropolitan priority to regulate the pace of US expansion with the frontier priority to resist the reestablishment of colonial rule, although they have more often registered the costs of US expansion for the region's indigenous people. Writing at the time of the Ordinance's bicentennial, Jack N. Rakove observed that the Ordinance 'solved the problem of the frontier by offering a means both to extend the empire of liberty and to incorporate these liberated territories into [an] extended republic'. For the 'original occupants of the Northwest Territory', he added, 'one people's liberty was another people's loss'.[8]

Historians have also expressed considerable ambivalence about the Ordinance's provision (in article 6) forbidding slavery in the Northwest Territory. Paul Finkleman acknowledges that '[t]he Ordinance certainly helped put slavery on the road to ultimate extinction in the area north of the Ohio River', but, he argues, not only did slavery remain a 'vigorous institution' within the region for decades, by implicitly sanctioning slavery in new territories in the south, the Ordinance had the effect of clarifying a national commitment to the expansion of slavery in that region. Similarly, George William Van Cleve has shown that article 6 was part of a 'western development bargain' in which southern political leaders accepted the Ordinance's anti-slavery provision (tempered by a fugitive slave clause and language respecting the property, presumably including slaves, of US citizens already residing in the territory) in exchange for northern states' withdrawal of support for a commercial treaty with Spain that would have denied southern states access to the Mississippi River. This allowed the Constitutional Convention to avoid the very real possibility of sectional stalemate and meant that the US would be committed to the western expansion of plantation slavery.[9] Van Cleve's analysis of the Ordinance's role in the creation of the Constitution contributes an additional dimension to its implications for Indians. Had the Constitution failed and the weaker Articles of Confederation remained in effect, settlement of the Northwest would still have occurred and Indians would undoubtedly have been threatened by local militias. But Indians might not have faced sustained federal military invasions. Expansion under the Articles of Confederation might also have encouraged breakaway republics with the resulting decentralization allowing Indians greater room for manoeuvre. The adoption of the Constitution, however, meant that Indians would be subject to an empire with relatively strong central authority that assumed that Indian lands would be converted into private property owned by white US citizens.

Of the Northwest Ordinance's 2,819 words, seventy-six concern Indians. Part of article 3, they read as follows:

> The utmost good faith shall always be observed towards the Indians, their lands and property shall never be taken from them without their consent and in their property, rights, and liberty, they never shall be invaded or disturbed, unless in just and lawful wars authorised by Congress; but laws founded in justice and humanity shall from time to time be made, for preventing wrongs being done to them, and for preserving peace and friendship with them.

Although the most recent full-length study of the Ordinance ignores article 3 altogether,[10] scholars' most common failing is to focus entirely on the 'utmost good faith' clause. Rakove sees this language as evidence of a 'reassessment of the naive and unjust assumptions in

which Congress had first acted towards the defeated tribes' in treating them as a 'conquered people' at the close of the Revolutionary War. Rakove goes on to say that unfortunately the 'hopeful intentions' of the Ordinance were undermined by 'practical factors that operated along the frontier' and so the Ordinance was unable to prevent the 'further deterioration of relations that led to the brutal and violent frontier war of the early 1790s'. Similarly, Prucha treats the 'utmost good faith' clause as an expression of a 'policy of justice toward the Indians'. Like Rakove, Prucha recognizes that because of an 'undeclared war between the frontiersmen and the Indians', the US eventually turned to 'military force' in the region, but neither he nor Rakove considers the structural relationship between article 3's profession of 'utmost good faith' towards Indians and its provision for 'just and lawful wars authorised by Congress'. The general impression is that article 3, including its anticipation of war (presumed to be both 'lawful' and 'just'), was a straightforward expression of good intentions but that these were undermined by forces or events unanticipated by policymakers and beyond their control. Occasionally, critically minded authors have suggested some dissonance between expressions of good faith and war, as in Reginald Horsman's sardonic remark that 'it was hardly likely that the American and Indian concepts of "just and lawful war" would be identical' or in the suggestion by Vine Deloria Jr. and David E. Wilkins that 'Congress never did bother to examine whether the wars it waged against the tribes in the West were just or lawful'. Overall, however, treatments of the Northwest Ordinance's article 3 exemplify what Patrick Wolfe calls 'the intentional fallacy', a mode of interpretation that 'privileges expressions of intention, no matter how contrary to historical experience, over collective outcomes, no matter how emphatic their historical regularity'. Even critical accounts that register a gap between intention and outcome, Wolfe continues, provide 'an ideological alibi for the negative outcomes of Indian administration', explaining them as 'policy failures or unintended consequences instead of systemic regularities'.[11]

'Extirpative war' as 'just and lawful' against resisting Indians

The Northwest Ordinance's provision for 'just and lawful wars' was not formulated as an abstract principle to be applied in some hypothetical future. It was a concrete option to deal with a formidable indigenous movement organized to resist US efforts to obtain Indian lands. Immediately after the US secured independence in the 1783 Treaty of Paris, Congress authorized a commission to inform Ohio Valley Indians of the US's intention to 'establish a boundary line between them and us' running from the mouth of the Great Miami River northeast to Lake Erie, thus giving the US most of the present-day state of Ohio.[12] In January 1785 when this commission informed Wyandots, Delawares, Ottawas and Ojibwes of this new boundary, native leaders objected that the land east of it was theirs. The commissioners bluntly replied, 'we claim the country by conquest'.[13] Although some Indians agreed to this new boundary in signing the 1785 Fort McIntosh Treaty, a larger number regarded this treaty as illegitimate and began organizing a multinational confederation to secure a boundary between the US and Indian country at the Ohio River. In late 1786, Mohawks, Wyandots, Delawares, Shawnees, Ottawas, Ojibwes, Potawatomis, Chickamauga Cherokees, Miamis, Weas and Piankashaws, calling themselves the United Indian Nations (UIN), informed the US Congress that any 'cession of our lands should be made … by the united voice of the confederacy' and called for a

peace conference. Should the US reject a reasonable settlement, the UIN was 'obliged to defend those rights and privileges which have been transmitted to us by our ancestors', a clear assertion of sovereignty and a right to self-defence.[14]

The message from the UIN reached Congress in July 1787. In response, Secretary of War Henry Knox recommended that Congress authorize a commission to negotiate a 'general treaty … with the tribes of [I]ndians'. Knox rejected the alternative, war, for two reasons. First, to fail to respond to the UIN's appeal would make it 'appear that we preferred War to Peace', thus placing a 'stain on the national reputation of America'. Second, for a 'small sum of money' it would be possible to purchase land from Indians, whereas a war 'may cost much blood and infinitely more money'. Congress accepted Knox's recommendation and further advised that the commissioners negotiating a treaty should reject 'a language of superiority and command' and instead 'treat with the Indians more on a footing of equality' and 'convince them of the Justice and humanity as well as the power of the United States'.[15]

Coming on the heels of the passage of the Northwest Ordinance, Congress's acceptance of Knox's recommendations has typically been seen as a repudiation of a policy of claiming Indian lands by right of conquest in favour of a new policy consistent with the 'utmost good faith' clause recognizing that Indian nations owned their lands and so requiring the US to purchase them.[16] Pragmatically, US officials hoped that displays of 'utmost good faith' would encourage Indians to accept land cessions without costly war. An avowed commitment to 'utmost good faith' also followed from the United States' paradoxical position as a postcolonial empire. Aziz Rana points out that the US was the 'first example' within European imperialism of a 'successful settler revolt against metropolitan rule'. As such, US leaders needed to demonstrate to themselves and to a watching world a commitment to the highest principles of 'civilization'; otherwise, an unprecedented experiment in constructing what Thomas Jefferson imagined as an 'empire for liberty' would fail.[17] Despite the adoption of an ostensibly new policy, however, basic premises were unaltered. The US might begin with gentler tones when asking Indians to give up their lands and would provide compensation, but indigenous sovereignty remained severely circumscribed. Not only would the US claim a right of pre-emption and so deny an indigenous right to sell lands to parties other than the federal government, more importantly, the US would not recognize an indigenous right to refuse to sell when presented with reasonable terms as defined by the US. As Horsman observes for the period from 1787 to 1812, '[i]n many cases treaties were still imposed upon the Indians, but the United States was henceforth at least to go through the motions of formal purchase of Indian rights'.[18] Nor would the US accept an indigenous right of self-defence.

In early 1788 the governor of the Northwest Territory, Arthur St. Clair, sent word to the UIN of his intention to negotiate. But before formal negotiations began, he made clear their parameters when he rejected a proposal by moderate confederationists for a compromise boundary between the US and Indian country on the Muskingum River (giving the US the eastern quarter of Ohio) and sent word that Indians must accept the Fort McIntosh Treaty boundary. Any departure from the earlier conquest policy would not entail a reconsideration of treaties dictated under that policy. St. Clair's inflexibility caused many members of the UIN to decide against attending the treaty council. When the council convened at Fort Harmar in December 1788 some leaders thought St. Clair might be open to

reconsider his insistence on the Fort McIntosh Treaty boundary. After days of discussion, however, it became clear that St. Clair was unwilling to give an inch. 'The United States … were much inclined to be at peace with all the Indians', he said, 'but if the Indians wanted war they should have war'. Utmost good faith had been shown. The consequence of rejecting US generosity was clear.[19]

Although some confederationists signed the Fort Harmar Treaty, most did not. In 1789 they turned to militancy to pressure the US to accept an Ohio River boundary, raiding colonial settlements and harassing military convoys and boats along the Ohio River. As Knox continued to receive reports of 'depredations of the Indians', in May 1790 he proposed a military expedition against 'the banditti Shawanese and Cherokees, and some of the Wabash Indians'. President George Washington approved this expedition and in June Knox ordered General Josiah Harmar and Governor St. Clair to make plans to 'extirpate, utterly, if possible, the said banditti'.[20] Three years after the adoption of the Northwest Ordinance, then, Knox provided an official interpretation of the phrase 'just and lawful wars' to mean wars of extirpation. Knox's statement, it is crucial to recognize, was not mere rhetoric; it was an official order.

On what basis did Knox consider a war of extirpation against 'banditti' Indians to be 'just and lawful'? Knox did not provide a rationale, evidence that the legitimacy of extirpative war against the 'merciless Indian savages' Thomas Jefferson identified in the Declaration of Independence was axiomatic.[21] Had Knox been asked to cite a legal authority, he would have turned to the Swiss jurist Emmerich de Vattel, author of *Law of nations* (1758) and widely regarded by US founders as the world's pre-eminent authority on law and war.[22] In the tradition of John Locke, whose 1690 *Second treatise of government* contrasted the 'wild Woods and uncultivated waste of *America* left to Nature without any improvements, tillage, or husbandry' with England's 'well Cultivated' lands, Vattel made a strong distinction between agricultural/civilized peoples who cultivated and improved the land and 'savage' peoples who ostensibly did not. In writing about North America, Vattel argued that the 'people of Europe, too closely pent up at home, finding land of which the savages stood in no particular need, and of which they made no actual and constant use, were lawfully entitled to take possession of it, and settle it with colonies'. From this legal grounding in the 'doctrine of discovery', Vattel further contended that 'those nations that inhabit fertile countries but disdain to cultivate their lands and chuse rather to live by plunder … deserve to be extirpated as savage and pernicious beasts' and that civilized nations had a 'right to join a confederacy for the purpose of punishing and even exterminating … savage nations … who seem to delight in the ravages of war'.[23] These formulations did not allow for extirpation of all Indians under all conditions, but they did provide a legal basis for extirpation under those Knox stipulated: against 'banditti' engaged in 'depredations'.

'Utmost good faith', extirpation and US military operations, 1790–94

What exactly did Knox sanction in ordering extirpation? In the late eighteenth and early nineteenth centuries the term was used interchangeably with extermination, a word, as Ben Kiernan explains, that meant 'utter destruction' and expressed the modern 'concept of genocide'.[24] US officials did not author a manual on wars of extirpation and so to comprehend Knox's intention in ordering a war of extirpation it is necessary to observe US

military forces at work in the Northwest Territory in the early 1790s.[25] Doing so also reveals how US officials cultivated an image of themselves as exercising 'utmost good faith' before going to war, an image necessary to assure themselves, an eastern public and a sceptical Europe that US expansion was proceeding 'with honor'.[26]

The military operation Knox authorized in 1790, commanded by Harmar, has seldom been considered in relation to genocide, but this is because historians have generally emphasized its failures at the expense of its intentions. Harmar's force, 1,400 strong, departed Fort Washington (present-day Cincinnati) in late September towards Indian villages on the upper Maumee River, marching, in the words of Wiley Sword, like a 'herd of elephants trampling through the underbrush'.[27] In October, as Harmar approached his target, he received intelligence that Indians were preparing to abandon their towns. Obviously intending to kill people before they could find safety, he sent a detachment 'to endeavor to surprise the Miami village' of Kekionga, but by the time these troops arrived, its residents were gone. Harmar ordered a detachment to 'reconnoitre the country' and then proceeded to the nearby town of Chillicothe. It, too, had been evacuated and so, as one of the officers recorded, 'the army all engaged burning and destroying everything that could be of use: corn, beans, pumpkins, stacks of hay, fencing and cabins, etc'. The army burned four other towns. Consistent with what John Grenier terms America's 'first way of war', a tradition dating to the early seventeenth century of 'extirpative war' manifested not only by the destruction of Indians' 'agricultural resources' but also 'the destruction of enemy noncombatants', Harmar was not content with material destruction and so ordered another detachment to 'surprise any parties' that might return to Kekionga. Rather than surprising Indians, however, Harmar's detachments provided targets for otherwise outnumbered Miamis, Potawatomis and Shawnees. On terrain they knew well, confederation fighters, led by Blue Jacket (Shawnee) and the Little Turtle (Miami), ambushed and overwhelmed both detachments, killing 178 US soldiers and militiamen in what became known as 'Harmar's Defeat'.[28] Confederation losses were fewer (between ten and forty men killed in combat),[29] but, as Barbara Alice Mann points out, small 'fractal massacres' had a devastating impact on Ohio Valley Indian nations with fairly small populations, especially when their cumulative impact over time is taken into account.[30] Although a failure on its own terms, then, Harmar's expedition did result in partial extirpation. The reason it did not achieve a more complete extirpation was not because of an absence of intent. Rather, the decisions of Indians to evacuate their towns rather than risk catastrophic violence and their capacity for effective counter-attack prevented the US from fulfilling its objective.

Soon after Harmar's defeat, St. Clair began planning a new expedition, but it would take months for him to assemble the necessary men and supplies. As confederation fighters launched attacks on colonizers in eastern Ohio in early 1791, Washington and Knox felt pressure to take immediate action. In March they authorized a quick-strike force of 750 Kentucky militiamen to attack Indian towns north of the Ohio. Knox's orders to the militia's commander, Brigadier General Charles Scott, were more specific than those he gave to Harmar. Instead of general 'extirpation', Scott was to 'assault the said towns, and the Indians therein … sparing all who may cease to resist, and capturing as many as possible, particularly women and children'. Captives would be used as hostages to ensure that Indians submitted to the terms of US expansion. But this did not mean that Scott's expedition would avoid killing non-combatants. When Scott's militia reached its

destination, the Wea town of Ouiatenon and satellite Wea and Kickapoo villages on the Wabash, he 'discovered the enemy in great confusion, endeavoring to make their escape over the river in canoes'. The detachment he ordered to pursue them 'destroyed all the savages with which five canoes were crowded'. Scott did not specify the age and sex of those killed, but almost certainly the canoes carried women, children and older men. In all, Scott burned several towns—mostly evacuated—and reported killing 'thirty-two, chiefly warriors of size and figure' and taking fifty-eight prisoners. Scott congratulated himself that 'no act of inhumanity has marked the conduct of the volunteers of Kentucky on this occasion', but his pursuit of people fleeing in canoes appears to have violated his orders to spare those not resisting. Higher officials did not question this action, indicating that they regarded non-combatant deaths as an acceptable aspect of extirpative war.[31] Overall, Scott's operation against Indians on the Wabash can be considered, like Harmar's, as partially extirpative. It achieved significant destruction, including the killing of non-combatants, but the destruction was less than it would have been had Scott achieved total surprise and/or had Indians chosen military confrontation under conditions unfavourable to them.

By contrast, St. Clair's much larger operation fell even farther short of its intention than Harmar's. With a force of 2,000 men, St. Clair left Fort Washington in September 1791. His destination was the Miami villages on the upper Wabash. Once he arrived there, according to Knox's orders, he was 'to strike them with great severity'. Confederation scouts had little difficulty monitoring the progress of what Colin Calloway describes as 'St. Clair's ponderous, noisy, tree-felling army, with its camp followers, bellowing oxen, and lumbering wagons'. When St. Clair was about fifty miles from his target, confederation strategists decided that their force of 1,200 men could surprise the US army and so attacked on 4 November, killing over 600 soldiers. This was the largest number of Americans killed by Indians in any single battle, far exceeding the 268 fatalities in the much better known 1876 Battle of the Little Bighorn. St. Clair's men did kill between twenty and thirty confederation fighters, but confederationists regarded these as acceptable losses in light of such an overwhelming victory. Judged by its impact, St. Clair's expedition can hardly be considered even partially extirpative (it did not burn a single cornstalk), but he did intend extirpation. Had all gone according to plan, St. Clair would have fulfilled Knox's orders to 'strike with great severity'.[32]

US policymakers' need to reconcile the practice of extirpative war with the humane disposition supposedly expressed in the Northwest Ordinance's 'utmost good faith' clause required constant cultivation. Thus, in reviewing the events that led to St. Clair's defeat, Knox assured Washington, and by extension metropolitan observers in the east and across the Atlantic, that the post-1783 treaties with Indians had been fairly conducted. The 'Miami and Wabash Indians' had been invited to come to Fort Harmar, Knox observed, but they had rejected the invitation. Instead, with other 'banditti' they 'continued their depredations'. The US had made further peace overtures but these 'were treated … with neglect' and 'outrages were renewed with still greater violence than ever'. Although Knox did not explicitly refer to the Northwest Ordinance, his account was obviously designed to establish that 'utmost good faith' had been shown and that Indians' rejection of this good faith meant, as he phrased it, that it was 'necessary to make an experiment of the effect of coercion'. The failure of this experiment meant that the '[p]ride of victory is too strong at present for [the confederation] to receive the offers of peace on reasonable

terms'. Since the confederation 'would probably insist upon a relinquishment of territory', for which they had 'no just claim' (a formulation which failed to recognize the various forms of coercion and lack of consensus undergirding the Fort Harmar and other treaties), Knox concluded that 'adequate military force should be raised as soon as possible'.[33] 'Just and lawful war' was becoming endless war.

Before an army could be raised, however, Knox and Washington promoted several diplomatic initiatives, some involving efforts to make direct contact with the confederacy, others involving efforts to enlist Haudenousaunee (Iroquois) intermediaries. Consistent with a general tendency to take US policymakers' expressions of their intentions at face value, historians have often represented these initiatives as a sincere and humanitarian 'peace offensive'.[34] Given that policymakers had already decreed that the confederacy's position lacked the slightest legitimacy and were predicting that confederation leaders would reject US conditions for peace, however, diplomacy was guided less by a desire to avoid war than to create the appearance that war was consistent with principles of justice. Consider the most elaborate of the diplomatic initiatives the US pursued, a peace commission authorized in early 1793. Knox instructed the commissioners to gain confederation leaders' consent to the Fort Harmar Treaty boundary, though if that failed, he authorized the commissioners to modify the boundary to allow Indians areas within this boundary that the federal government had not already granted to land companies. This, however, was a very modest concession and a repudiation not only of the confederation's position but of a compromise, floated by Haudenousaunee leaders Joseph Brant and Red Jacket, for a revised boundary at the Muskingum River. Not surprisingly, the confederation continued to insist on an Ohio River boundary and the legitimacy of 'defending our just rights against your invasions'. Knox, of course, would have preferred that confederationists accept his limited concession, thus avoiding the cost of fielding another army and risking another failure. But Secretary of State Thomas Jefferson observed that the cabinet's approval of this commission was 'merely to gratify the public opinion' and 'not from an expectation of success', making the overriding purpose of diplomacy plain enough.[35]

By 1794, with policymakers satisfied that they had shown 'utmost good faith' and General Anthony Wayne's Legion of the United States ready to march, US officials began the war that, given their premises, they had viewed as inevitable all along. Wayne proceeded cautiously along his route north from Fort Washington towards the confederation's headquarters at the Glaize in northwestern Ohio, deploying rangers and Indian scouts (Chickasaws and Choctaws) to closely monitor confederation forces and so avoid the fate of Harmar and St. Clair. Wayne's ultimate objective was to force the confederacy to agree to peace on US terms, or, in other words, to cease resisting US efforts to expropriate their lands. From US officials' perspective, there were various scenarios under which this could be accomplished. It was possible that confederation leaders, perceiving that Wayne's army could not be surprised and was in a position to inflict massive destruction, might sue for peace. In this case, little extirpation would occur. But should confederation resist, Wayne's army would attempt to inflict, in Knox's words, 'severe strokes to make them sensible how necessary a solid and permanent peace would be to prevent their utter extirpation'. By this logic, continued resistance would eventually mandate total annihilation.[36]

As Wayne's army drew near, an Ottawa named Kin-jo-i-no later recalled, 'all was consternation and fright throughout the villages. They fled from the corn fields on the fertile bottom lands. … Old women, burdened with immense packs strapped to their shoulders, followed their retreating families with all the haste their aged limbs would permit'. A few days later on 20 August 1794, as US troops moved down the Maumee, confederation leaders decided to attack at a place called Fallen Timbers. Weaker than it was a few years earlier and facing a stronger, more disciplined force, the confederation army was unable to turn back Wayne's. Indian casualties were significant (forty to sixty killed) but not in themselves devastating. Their inability to turn back Wayne's army, however, gave Wayne's men a free hand to continue the work of destruction already commenced, burning cabins and cornfields, uprooting gardens and despoiling graves along a fifty-mile stretch of the Maumee. After Fallen Timbers, confederation forces retreated to Fort Miami, a nearby British post. Expecting aid, they were stunned to find the gates closed in their faces, a betrayal they would remember for decades. The post's commander feared that assisting Indians against a US military operation might drag the empire into war at a time when Britain was already fighting revolutionary France. Deprived of British assistance and with their towns in ruins, most confederation leaders decided to accept Wayne's condition for peace—the cession of most of Ohio—rather than continue to fight. Their assent to the Greenville Treaty in 1795 brought to an end the war for Ohio.[37]

From 1790 to 1794 US military forces killed between 150 and 200 Indians, a significant number as measured as a percentage of small populations. The majority were combatants, but some, like those killed trying to escape Scott's attack in canoes, were non-combatants.[38] US troops also routinely razed crops and villages and frequently plundered graves. But a narrative in which Indians twice rout the US army and finally surrender after a battle (not a massacre) scarcely corresponds to the one-sided massive killing ordinarily associated with genocide. As the foregoing analysis has shown, however, US officials intended the military operations they authorized to inflict overwhelming violence, including the killing of significant numbers of non-combatants, against targeted indigenous communities. That these military operations did not realize their full potential was not because of an absence of genocidal intent. Rather, the salient variable is the inability of US forces to surprise and destroy native population centres. This was due to logistical problems for US armies operating in foreign territory, the incompetence of US military leaders, the competence of Indian military leaders (including their capacity to gather intelligence) and the decisions of confederation leaders to protect non-combatants by evacuating villages when necessary. Ironically, then, US incompetence and native competence combined to 'camouflage'[39] the genocidal potential of US military operations during this period.

'Just and lawful war' in the Northwest Territory, 1800—32

After 1795, as the United States continued to dispossess Indians in the Northwest Territory, government officials repeated earlier assertions of the legitimacy of exterminatory warfare against Indians who resisted US efforts to gain their lands. In the first decade of the nineteenth century, Indiana Territorial Governor William Henry Harrison, described by Robert Owens as President Thomas Jefferson's 'hammer', used a variety of tactics, including bribing, pitting leaders against each other, distributing whiskey and threatening to

withhold annuities, to secure a series of treaties that allowed the US to claim Indian lands in Michigan, Indiana and Illinois. As in the late 1780s, many Indians regarded these treaties as illegitimate. Under the leadership of two Shawnee brothers, Tenskwatawa (the Prophet) and Tecumseh, they organized a new confederacy.[40]

Faced with the re-emergence of indigenous resistance, in 1807 Jefferson instructed Michigan Territorial Governor William Hull to inform Potawatomis and Ojibwes near Detroit that 'if ever we are constrained to lift the hatchet against any tribe, we will never lay it down till that tribe is exterminated, or driven beyond the Mississippi'. Hull was also to notify the Indians that should they go to war, 'they will kill some of us; we shall destroy all of them'. Although a few scholars informed by genocide studies have quoted Jefferson's words, historians of Jefferson's Indian policy have generally ignored them, let alone seen them as a policy statement.[41] As an official presidential communication, however, Jefferson's threat of extermination was exactly that: an official reaffirmation of Knox's interpretation of the Northwest Ordinance's 'just and lawful wars' clause as legalizing exterminatory—that is, genocidal—warfare against resisting Indians. Again, Jefferson's threat was not simply rhetoric; it both reflected and constituted policy.

As in the early 1790s, US officials expressed a preference for peace, but once again peace was contingent on compliance with US demands that Indians accept land cessions. When confederation leaders refused to recognize the legitimacy of Harrison's treaties, in the autumn of 1811 Harrison marched on the confederation's headquarters at Prophetstown, thus igniting a new phase in the long war for the Northwest Territory.[42] Rather than rehearse the details of US military operations over the next several months, it is sufficient to say that, consistent with the patterns in the early 1790s, these operations intended to surprise Indian villages and so carried the potential for wholesale slaughter, but Indians thwarted this intention by evacuating their villages. US troops destroyed as many as two dozen villages in the region, including Prophetstown, rebuilt after Harrison razed it in November 1811 only to be torched again a year later by Kentucky militiamen. Indians suffered some casualties while defending their villages and fighting with their British allies during the war of 1812, but the total number directly killed was probably not much more than one hundred.[43]

Although US military operations in the 1790s and 1810s did not result in a major massacre of Indians, the potential for such operations to have precisely that result was eventually realized on the far western edge of the original Northwest Territory in the early 1830s. As before, the US went to war against a coalition of Indians—in this case, Sauks, Mesquakies (Foxes), Ho Chunks (Winnebagos), Potawatomis and Kickapoos—that objected to the legitimacy of a treaty containing a land cession. The treaty in question was signed in 1804 when Harrison, using veiled threats of war, convinced some Sauk and Mesquakie leaders to agree to cede lands in present-day northwestern Illinois and southwestern Wisconsin, while allowing occupancy of the ceded lands until an unspecified time when US citizens would require them. The majority of Sauks and Mesquakies did not sign the treaty and contended that those who did sign lacked authority to do so. In later years, some Sauks and Mesquakies, again under pressure, agreed to accept the 1804 treaty, though many, notably the Sauk leader Black Hawk, did not.[44]

In the late 1820s, when lead miners and agriculturalists invaded the region, US and Illinois officials declared that it was time to enforce the 1804 treaty and demanded that Indians on the east side of the Mississippi relocate west. Black Hawk and his allies refused. Though Black Hawk's people spent the winter of 1830–31 hunting west of the

Mississippi, in the spring Black Hawk along with well over a thousand followers returned to Saukenuk, for decades the capital of the Sauk nation, on the eastern side of the Mississippi. In late May 1831 Illinois Governor John Reynolds, citing the need 'to protect the Citizens of this State … from Indian invasion, and depredation', called up a force of 700 militiamen to 'remove [Black Hawk's band] *dead*, or *alive* over to the west side of the Missis[s]ippi'. To assert federal authority, General Edmund P. Gaines informed Reynolds that mobilizing the Illinois militia was neither 'necessary' nor 'proper' and immediately led regular troops from St. Louis to Fort Armstrong, not far from Saukenuk. In early June Gaines informed Black Hawk and his people that although the 1804 treaty required the Sauks to relinquish their lands east of the Mississippi, 'the humane disposition of the United States' and desire of 'your great Father' to 'treat you as friends and brethren' had led him to allow 'you to remain on the lands you sold, till the present time'. Now, though, '[y]ou must therefor without delay move to the west side of the Mississippi'. After Black Hawk replied that 'his Braves and People were unanimous in their desire to remain in their old fields', Gaines stated that if Black Hawk's band 'did not move in a few days, they would visited by troops and driven off'. Gaines's position reproduced the logic of the Northwest Ordinance: the US had demonstrated 'utmost good faith'; should the Indians continue to resist, they would be subject to 'just and lawful war'.[45]

For the moment, Gaines lacked sufficient force to compel Black Hawk to move, but a few weeks later, with the arrival of additional troops and an armed steamboat, Gaines prepared to attack Saukenuk. A massacre was avoided when Black Hawk's scouts detected Gaines's approach, allowing his people to escape across the Mississippi. Early the following April, Black Hawk and several hundred Indians, confident of British support, recrossed the Mississippi and headed up the Rock River towards the village of an important ally, the Ho Chunk prophet Wabokiesheik. Some days later, General Henry Atkinson met with the accommodationist Sauk leader Keokuk at Fort Armstrong. Atkinson informed Keokuk that Black Hawk and his followers 'can be easily crushed as a piece of dirt' and that if his band 'strikes one white man in a short time they will cease to exist'. Although Atkinson's words potentially left room for Black Hawk to capitulate and so avoid being slaughtered, they revealed a strong inclination to wage genocidal warfare.[46]

On 14 May 1832, a group of 280 Illinois militiamen commanded by Major Isaiah Stillman found Black Hawk's encampment. Black Hawk sent emissaries to Stillman with word of his intention to return west of the Mississippi, but Stillman took three of the emissaries prisoner and then fired on a party backing them up, killing three. Indians returned fire and killed twelve of Stillman's men. In the weeks after what became known as the Battle of Stillman's Run (Stillman's men had 'run' in panic), members of Black Hawk's band and other Indians in the region who had previously tried to remain neutral conducted several attacks on colonial settlements and military posts, killing perhaps sixty civilians and militiamen.[47] In late May Secretary of War Lewis Cass notified Atkinson that '[t]his commencement of hostilities, together with the previous conduct of the Black Hawk and his party, calls for the most prompt and efficient measures to chastise these Indians … '. Consistent with his earlier message to Keokuk, Atkinson informed the Commanding General of the Army Alexander Macomb in mid June of his intentions. Should 'the Sacs elude us and recross the Mississippi', he wrote, 'I will pursue them forthwith and never cease till they are anihilated [sic] or fully and severely punnished [sic] and subdued'.[48]

Over the next several weeks, US forces attempted to find Black Hawk and his people as they fled north into Wisconsin and then west towards the Mississippi. On 21 July, Illinois and Michigan territorial militiamen commanded by Henry Dodge and James Henry and guided by Ho Chunks auxiliaries caught up to Black Hawk's band on the Wisconsin River. In the Battle of Wisconsin Heights, Black Hawk's men held off the militia long enough to allow women and children, in the words of Black Hawk's autobiography, 'sufficient time to reach the island in the Ouisconsin', but militiamen killed several dozen of Black Hawk's fighters.[49] Black Hawk and his people continued to evade US forces until 1 August when the steamship *Warrior* intercepted them as they prepared to cross the Mississippi near the mouth of the Bad Axe River. Black Hawk raised a white flag, hoping to 'save our women and children', but the *Warrior*'s captain, Joseph Throckmorton, thought the white flag was a 'decoy' to trick him into bringing his vessel into range of Black Hawk's weapons. Throckmorton opened cannon fire on Black Hawk's band, killing twenty-three before departing to refuel.[50]

The next morning, Atkinson, Dodge and Henry, marching in from the east, attacked. The bulk of Black Hawk's men tried to hold off the attackers and allow non-combatants to cross the river. Some made it, but after a few hours, the *Warrior* returned and along with regular troops, militiamen and Menominee auxiliaries fired at people as they swam the river or sought cover on two islands in the main channel. By the end of the day, US forces and native auxiliaries had killed about 260 of Black Hawk's band, somewhere around half of its population, many of whom were non-combatants. Illinois militiamen did some of the killing, although it would be a mistake to conclude that they were more inclined than regular troops to fire indiscriminately at Black Hawk's people. According to a laudatory report by future president Zachary Taylor, the Sixth Regiment 'killed every Indian that presented himself on land, or who endeavored to seek safety by swim[m]ing the river'.[51] Rather than have US troops pursue survivors as they made their way west into Iowa, Atkinson encouraged Ho Chunks, Menominees and Santee Dakotas to continue the work of extermination. By late August, they had presented to US officials several dozen prisoners and over one hundred scalps. Although native auxiliaries were acting in their own interests in the context of a separate ongoing war against the Sauks and Mesquakies, the United States' use of them as a means of destruction was entirely consistent with the execution of a policy of using massive violence against resisting Indians.[52]

During what became known as the Black Hawk War, regular troops, volunteers and native auxiliaries killed well over 300 of Black Hawk's people, including a significant number of non-combatants. In so doing, they fulfilled an intention frequently expressed by General Atkinson, the officer in charge of the campaign, to annihilate Black Hawk's people. Higher officials were aware of Atkinson's intention and clearly approved of it as the campaign progressed. Importantly, too, once the war was over, higher officials ratified what had happened. Secretary of War Cass had nothing but praise for US actions against Black Hawk, observing in his November 1832 annual report that the 'campaign terminated in the unqualified submission of the hostile party, and in the adoption of measures for the permanent security of the frontier'. The following month when he addressed Congress, President Jackson endorsed Cass's conclusions, adding that '[t]he Indians were entirely defeated, and the disaffected band dispersed or destroyed … .

Severe as is the lesson to the Indians, it was rendered necessary by their unprovoked aggressions'.[53]

Some historians have offered 'balanced' interpretations of the war, holding the US and Black Hawk equally responsible for the conflict and emphasizing that the war could have been avoided had it not been for 'misunderstandings' or actions of 'rash members of both sides'.[54] Others have focused on Atkinson's 'blunder' in relying on Stillman's poorly disciplined militiamen, a perspective that assigns responsibility for the conflict to the US rather than Black Hawk's people but only in a very narrow sense while reinforcing a tendency to see the war as 'accidental'.[55] Like all eruptions of violence, the Black Hawk War and Bad Axe Massacre, of course, were not inevitable, but an excessive emphasis on contingency elides larger contexts and provides US imperialism with an alibi. More critically minded historians reject 'balanced' interpretations and, while allowing for some contingencies, see the outbreak of the conflict and the resulting massacre as expressing basic tendencies in US history. Cecil Eby focuses on 'The People' (frontiersmen/local militiamen), indicting them for characteristic actions of 'trespass[ing] on Sauk land' and 'open[ing] fire on the Sauk while they were advancing under a white flag'. At this and similar moments throughout US history, Eby adds, the 'professional army was called in', but 'often against its wishes' and only because 'The People demanded' it, thus separating frontier from metropole, society from policy. Similarly, drawing on Richard Drinnon's analysis of the 'metaphysics of Indian hating', Kerry A. Trask attributes Bad Axe to the 'revolutionary rage that created the nation' and resulted in 'a love of freedom and a glorification of violence'. While Trask's identification of a deeply rooted frontier mentality establishes an important context for Bad Axe and other cases of US violence against Indians, this line of interpretation also overlooks the congruity of metropolitan and frontier intentions and the expression of these intentions in policy.[56] There is no question that frontiersmen had genocidal intentions towards Black Hawk's people, but it is equally true that US officials did as well, especially after Black Hawk crossed the Mississippi River in April 1832. To be clear, officials did not intend to destroy all Indians, as evidenced by their recruitment of Ho Chunks, Menominees and Dakotas as well as their non-violence to accommodationist Sauks. Once they categorized Black Hawk as deserving of punishment and a threat to the frontier, however, they fully intended to destroy his people. The slaughter at Bad Axe is clearly encompassed by Chalk and Jonassohn's definition of genocide as 'a form of one-sided mass killing in which a state or other authority intends to destroy a group.'

Conclusion

Genocidal violence against indigenous people on the western edge of the Northwest Territory in 1832 was an intended consequence of a policy option that had been codified in New York City forty-five years earlier. From the 1780s into the 1830s, as they sought to transform Indian country into grids containing propertied citizens, US officials preferred that Native Americans accept dispossession with gratitude. This would allow US Americans to enjoy the benefits of territorial expansion at minimal expense, their consciences soothed and their sense of themselves as exceptional nourished by the fantasy that Indians endorsed their claim to have acted with 'utmost good faith'. If,

however, Indians spurned civilization's generosity, if Indians sought to retain and defend their ancestral lands from invasion, they would be subject to war, self-defined as 'just and lawful'. When war came, as it frequently did, US officials authorized military forces to practise a particular kind of war, one they termed extirpative or exterminatory. In most instances, US military forces were unable to fully accomplish their intention. But just as US expressions of 'utmost good faith' towards Indians should not deflect attention from war as a policy option, Indians' frequent success in blunting genocidal violence should not obscure the fact that when genocidal violence did occur it was not an aberration. Despite its spatial and temporal distance from the Northwest Ordinance, the slaughter at Bad Axe revealed the meaning of 'just and lawful war'.

18. Horsman, *Expansion and American Indian policy*, p. 42. Banner, *How the Indians lost their land*, p. 135, argues that government officials' statements that Indians had 'the right to refuse to sell' recognize ownership. The practice of US treaty making, however, consistently revealed an unwillingness to allow Indians to exercise that right in any permanent sense. A particular indigenous nation might refuse to agree to a particular offer and so might defer a land cession, but US officials would always return with a new proposal and would eventually categorize sustained opposition as unreasonable, thus sanctioning threats ranging from withdrawal of protection against settler aggression to war.

For Whom Sovereignty Matters

As a category of scholarship, activism, governance, and cultural work, sovereignty matters in consequential ways to understanding the political agendas, strategies, and cultural perspectives of indigenous peoples in the Americas and the Pacific. This is not to suggest that all indigenous peoples within these diverse regions share the same understanding of what sovereignty is or how it matters, nor that all of their concerns and labor can be reduced to sovereignty as a kind of raison d'être. Rather, following World War II, sovereignty emerged not as a new but as a particularly valued term within indigenous discourses to signify a multiplicity of legal and social rights to political, economic, and cultural self-determination. It was a term around which social movements formed and political agendas for decolonization and social justice were articulated. It has come to mark the complexities of global indigenous efforts to reverse ongoing experiences of colonialism as well as to signify local efforts at the reclamation of specific territories, resources, governments, and cultural knowledge and practices.

At the same time and owing much to its proliferation, sovereignty has become notoriously generalized to stand in for all of the inherent rights of indigenous peoples. Certainly many take for granted what sovereignty means and how it is important. As a result sovereignty can be both confused and confusing, especially as its normalization masks its own ideological origins in colonial legal-religious discourses as well as the heterogeneity of its contemporary histories, meanings, and identities for indigenous peoples.

Origins

In "Self-Determination and the Concept of Sovereignty," Lakota scholar Vine Deloria, Jr., writes that sovereignty originated as a theological term within early east Asian and European discourses: "Sovereignty is an ancient idea, once

used to describe both the power and arbitrary nature of the deity by peoples in the Near East. Although originally a theological term it was appropriated by European political thinkers in the centuries following the Reformation to characterize the person of the King as head of the state."[1] The king, or the sovereign, was thought to have inherited the authority to rule from God. This "divine right" was understood to be absolute, a power that was accountable only to the god from whom it originated.[2] The power was manifested specifically within the authority of the king to make war and govern domestic affairs (frequently in the name of God).[3]

The Protestant and Catholic churches, however, were also important governing powers during the early uses of sovereignty and consequently church doctrine impacted its meaning. The churches understood their roles as both the translators of the laws of God to the people and as governing the people's adherence to those laws, work sometimes interfered with or undermined by the king. Competing claims of legitimacy and sanction to speak for God and to rule over God's subjects between the church and the king, and between Protestants and Catholics, characterized the early politico-theological debates over sovereignty and who was sovereign. The church maintained that only God was the true sovereign and the church was the medium of God's will on earth, while the king claimed to be a sovereign who inherited from God the right to rule. While both understood sovereignty as an absolute power to govern, the views were diametrically opposed as to its revelation and exercise.

The powers of the church and the king slowly gave way through various political revolutions against the tyrannies of dogma and kingdoms to the ideologies and structures of the nation. The nation reorganized concepts of social status and responsibility from the obligations of subjects either of the church or of the kingdom to notions of citizenship, civil society, and democracy. In some of the early debates, it was argued that sovereignty emanated from individuals (citizens).[4] Individuals possessed rights to personal freedoms that informed their collective rights to rule themselves as nations. In other debates, sovereignty was linked to the "law of nations." Therein nations were based on the collective rights of individuals to civil society, life, happiness, property, justice, and defense; nations held rights to be free, independent, and respected as equals in the pursuit of securing the collective rights of their citizens.[5] In both kinds of debates, sovereignty was about figuring out the relationship between the rights and obligations of individuals (citizens) and the rights and obligations of nations (states). Sovereignty seemed to belong to nations but was then understood to originate either from the people who made up those nations or as a character of the nation itself (nationhood).[6] The

former assertion has defined the work of contemporary indigenous scholars and activists, who have argued that sovereignty emanates from the unique identity and culture of peoples and is therefore an inherent and inalienable right of peoples to the qualities customarily associated with nations.[7] The latter assertion has dominated legal debates over how nations exercise their sovereignty in relation to one another.[8]

In time the nation would be characterized by rights to "exclusive jurisdiction, territorial integrity, and nonintervention in domestic affairs," and these rights would be correlated to concepts of sovereignty.[9] The rights to jurisdiction and territory were modeled on concepts of individual personal freedom and linked to both secular and Christian ideologies about civilization.[10] Unaffiliated individuals, or individuals in kin groups, were believed to live in baser states of nature according to the demands of survival and dictates of instinct. They merely roamed upon the lands to acquire the material goods needed to survive. Social groups emerged as individuals or kin groups recognized their need for help and took on the responsibilities of aiding one another toward achieving their mutual goals for survival. Nations formed when social groups developed higher aspirations for civil society and government. Depending on the theorist, civility was evidenced by the existence of reason, social contract, agriculture, property, technology, Christianity, monogamy, and/or the structures and operations of statehood. These aspects of society or civilization were associated with the possession of sovereignty. Nations possessed the full measure of sovereignty because they were the highest form of civilization; individuals roaming uncultivated lands did not possess either civilization or sovereignty.[11]

In Christian ideology the dichotomy was not between the uncivil and civil but between the unbelieving and believing, though it would be false to suggest that these terms were mutually exclusive. The uncivil was equated with the unbelieving, the civil with the believing.[12] These associations were grounded in the projects of colonization and the congruous objectives of the nation and the church to civilize/christianize the uncivil/nonbelieving world in the name of God and the manifest destiny of the nation. In fact missionaries often went before and worked within the processes of establishing trade routes and military bases with national militaries in the name of extending God's kingdom on earth.[13] While some individual missionaries were highly critical of the colonial project and the church's complicity with the genocide and enslavement of indigenous peoples, the church as a sociopolitical institution consistently advanced and acted upon the notion of the rights of believers over those of nonbelievers, both to lands and resources and to existence as peoples.

The church even helped to sort through rival national interests over the rights to "discover" specific territories and exploit indigenous labor located therein. In many instances it is impossible to talk about a difference between the interests of the church and of the nation.[14] Many have argued, in fact, that the claim to the separation of church and state is ideologically and politically hypocritical.[15]

Out of the political and theological debates about what constituted the nation, debates deeply embedded within the ideologies and activities of colonialism, modern international law was defined as such. The two primary vehicles that served for the articulation of international legal precepts about nationhood, and so of the sovereignty with which such a character was defined, were the national constitution and the treaty. The constitution functioned as a document of nation formation and was used by colonists, rebellions, and commonwealths to assert territorial boundaries and the authority and terms of the nation-so-formed to govern within them. Yet the declarative status of the constitution disguised the fact that the nation so defined was contingent upon it being recognized as legitimate by other already recognized nations. Therefore custom within international law emerged around the treaty as a mechanism for both the exercise of nationhood and the recognition of national sovereignty. Treaties required that they be honored as legally binding compacts or agreements between nations, as the terms would be understood by the signatories. Nations recognized each other's status as nations by entering into treaties with each other. Territorial boundaries and jurisdiction dominated the specific articles of treaties throughout the colonial period. So too did peace, rights of passage, alliance in instances when other nations breached boundaries or interfered with government operations (i.e., broken treaties), and the like. The integrity of the exercise of nationhood and the recognition of sovereignty by treaty depended, of course, on the nation's honoring of the treaties into which it entered. However, because nationhood and sovereignty were interlocked through the entire discursive apparatus of treaty making, the recognition of one implied the recognition of the other.[16]

Inflections

Nations certainly put sovereignty to work during the colonization of the Americas and the Pacific to justify—by explanation or denial—the dispossession, enslavement, and genocide of indigenous peoples. In Australia, it was inflected through the doctrine of discovery to justify the complete dispossession of Aborigines from their lands and the outright refusal by the colonists to

enter into treaties with them. In Canada sovereignty was invoked to defend the use of military force, such as happened in the territories of Newfoundland and Nova Scotia, where most indigenous peoples were massacred by colonists during early conflicts over territorial rights.[17] In the southwestern region of the United States and northern parts of Mexico, it informed the efforts of the church to have the enslavement and conversion of nonbelievers supported by the military—first by Spain, then by Mexico, and later by an emergent immigrant class that would reform themselves as a state of the union.[18] In each instance the concept of sovereignty served the colonists in negating indigenous territorial rights and humanity while justifying the right of conquest by claims to national superiority.

The question that follows is whether the sovereignty of indigenous peoples was ever really recognized within international customary or documentary law. England, France, Canada, New Zealand, and the United States certainly negotiated, signed, and ratified treaties with indigenous peoples. Many have noted, however, that such efforts were less about the recognition and provision for the *sovereignty* of indigenous peoples than they were about the assertion of the respective nations' status as the more powerful sovereign within a given territory, against other European powers and over indigenous peoples.[19] Given the fact that every single treaty signed with indigenous peoples in the Americas and the Pacific was broken, it would seem to be so. England, France, Canada, New Zealand, and the United States used the treaty-making process to neutralize the political force of allied and individual indigenous groups and then deployed specific articles of signed treaties to secure the right over and against other European countries to relate with, trade, and govern with those groups as a matter of domestic policy. They understood perfectly well the precedence within international law that defined sovereignty through the attributes of territorial integrity and jurisdiction, and they were hardly likely ever to acquiesce these principles to indigenous peoples, by treaty or otherwise.

Yet the fact remains that indigenous peoples were recognized by England, France, Canada, New Zealand, and the United States as constituting nations that possessed rights to sovereignty—by treaty, by constitution, by legislative action, and by court ruling. Even U.S. Chief Justice John Marshall conceded that terms like *nation*, *sovereign*, and *treaty* had been used in colonial and U.S. law in reference to American Indian tribes and that the U.S. Supreme Court was therefore obligated to adhere to the internationally accepted definitions of those terms in relating to the tribes as independent sovereigns.[20] This is remarkable given the ideological force of theories of civilization and Christian theology that worked against the acknowledgment that indigenous peoples

possessed any such rights on the grounds that they lacked proper civility or belief in God. Still, adherence to the tenets of international law and Christian theology demanded that particular steps be taken in securing desired territories and claiming jurisdiction therein. European nations were required to treat with indigenous peoples in order to secure lands by cession and purchase; treaties resulted.

The contradictions within recognition-by-treaty histories are not in the moments of alleged adherence to international law by the nations of Europe and North America, who had to follow customary practices by entering into treaties with indigenous peoples in order that their territorial claims in the colonies be respected by one another. The blatant contradictions are between the recognition of the sovereignty of indigenous peoples through the entire apparatus of treaty making and the unmitigated negation of indigenous peoples' status and rights by national legislation, military action, and judicial decision.

The "Marshall trilogy"—*Johnson v. McIntosh* (1823), *Cherokee Nation v. Georgia* (1831), and *Worcester v. Georgia* (1832)—is probably one of the most important instances of these incongruities.[21] The trilogy provided the first substantive definition of sovereignty for American Indians by the U.S. judiciary and subsequently served to establish precedence for the trust relationship between the U.S. federal government and American Indian tribes (and, since 1972, Alaskan Native villages and, since 1920, Native Hawaiians). The way that the trilogy was taken up by England's Colonial Office in directing relations with indigenous peoples in Canada, New Zealand, and Australia signifies much about the international exchange of ideas regarding the character and rights of sovereignty for the nations of Europe and North America as well as the attempt to justify the denial of that status and rights for indigenous peoples.[22] The subjugation of indigenous peoples to U.S. plenary power through Marshall's fictionalized accounting of the doctrine of discovery provided the Colonial Office with the legal precedence it needed to justify its colonization of North America and the Pacific.

Johnson v. McIntosh involved competing claims to a single parcel of land in the state of Illinois between Johnson, who had acquired a deed to the land from the Piankeshaw, and McIntosh, who had acquired a deed to the land from the United States. It was determined that the Piankeshaw were in possession of the land when they issued the deed, as evidenced by two treaties that had been signed with the Illinois and Piankeshaw tribes in 1773 and 1775 over the lands in question. It was also determined that the U.S. had acquired title to those lands by those same treaties and subsequently had sold the parcel to McIntosh

(there was a dispute in the case over whether the parcel was located within the ceded area, but it was ruled that it had been).

The immediate question before the Supreme Court, as Marshall framed it in his opinion, was what kind of title the Piankeshaw had in the lands. Obviously it was a title that they could treat upon. Within the customs of international law, treaties implied nationhood and so sovereignty and so inherent territorial rights. While not missing the import of such links, Marshall sided with the defendant, whose argument he summarized as follows:

> The uniform understanding and practice of European nations, and the settled law, as laid down by the tribunals of civilized states, denied the right of the Indians to be considered as independent communities, having a permanent property in the soil, capable of alienation to private individuals. They remain in a state of nature, and have never been admitted into the general society of nations. All the treaties and negotiations between the civilized powers of Europe and of this continent, from the treaty of Utrecht, in 1713, to that of Ghent, in 1814, have uniformly disregarded their supposed right to the territory included within the jurisdictional limits of those powers. Not only has the practice of all civilized nations been in conformity with this doctrine, but the whole theory of their titles to lands in America, rests upon the hypothesis, that the Indians had no right of soil as sovereign, independent states.[23]

Effectively, Marshall rewrote treaty history by ruling that the treaties signed between American Indians and European powers functioned in a way contrary to the precepts of existing international law. Instead of recognizing the sovereignty of Indians, Marshall argued that the treaties had "disregarded" Indian land rights and so the status of Indians as "sovereign, independent states." Marshall's evidence for this "disregard" was not located within the fact or provision of the treaties but by the doctrine of discovery.

According to Marshall, the doctrine established that American Indians were not the full sovereigns of the lands that they possessed but were rather the users of the lands that they roamed and wandered over for purposes of shelter and sustenance. This distinction was informed by European worldviews, particularly the theories of English philosopher John Locke, who argued that hunter-gatherer societies "might have property in what they found or captured . . . but not in the land over which they traveled in its pursuit."[24]

While it was accepted that Indians maintained particular rights associated with their status as the original inhabitants of the land, the exclusive rights of

property in the land belonged to the nation who discovered the lands. Discovery was demonstrated by the appropriation of the lands for agriculture, which in turn secured the rights of the discovering nation to claim full sovereignty within the lands and against all other claims:

> Discovery is the foundation of title, in European nations, and this overlooks all proprietary rights in the natives. The sovereignty and eminent domain thus acquired, necessarily precludes the idea of any other sovereignty existing within the same limits. The subjects of the discovering nation must necessarily be bound by the declared sense of their own government, as to the extent of this sovereignty, and the domain acquired with it. Even if it should be admitted that the Indians were originally an independent people, they have ceased to be so. A nation that has passed under the dominion of another, is no longer a sovereign state. The same treaties and negotiations, before referred to, show their dependent condition.[25]

From the Lockean hunter-gatherer/agriculturalist dichotomy, and with the correlation in international law between sovereignty, jurisdiction, and territorial rights in hand, it followed in Marshall's reasoning that by virtue of their relationship to the land as hunter-gatherers, Indians had been made "subject to the sovereignty of the United States."[26] These were well-established facts, Marshall contended, of colonial law, which had treated Indians "as an inferior race of people, without the privileges of citizens, and under the perpetual protection and pupilage of the government" on the basis that they were not in full possession of the lands upon which they roamed and wandered.[27]

In lieu of full title to or property in the lands, Marshall offered "aboriginal title" as the legal definition for the kinds of rights that Indians had in the lands. This title presupposed their relationship to the lands as hunters-gatherers. It was "a mere right of usufruct and habitation, without power of alienation."[28] All "civilized nations" were "founded on this principle" and distinction.[29] No civilized person, Marshall went on, would expect those who had appropriated the lands for agriculture, and thereby acquired full title to the lands by right of discovery, to give up the lands to "natives" who merely wandered over them in search of materials to satisfy their immediate needs for clothing, shelter, and sustenance:

> By the law of nature, [Indians] had not acquired a fixed property capable of being transferred. The measure of property acquired by occupancy is determined, according to the law of nature, by the extent

> of men's wants, and their capacity of using it to supply them. It is a violation of the rights of others to exclude them from the use of what we do not want, and they have an occasion for. Upon this principle the North American Indians could have acquired no proprietary interest in the vast tracts of territory which they wandered over; and their right to the lands on which they hunted, could not be considered as superior to that which is acquired to the sea by fishing in it. The use in the one case, as well as the other, is not exclusive. According to every theory of property, the Indians had no individual rights to land; nor had they any collectively, or in their national capacity; for the lands occupied by each tribe were not used by them in such a manner as to prevent their being appropriated by a people of cultivators. All the proprietary rights of civilized nations on this continent are founded on this principle. The right derived from discovery and conquest, can rest on no other basis; and all existing titles depend on the fundamental title of the crown by discovery.[30]

Marshall's "aboriginal title" was directly at odds with the treaty-making efforts of the United States at the time. The treaty most certainly did recognize a title in the land that could be negotiated as well as the authority of the signatories to function as representatives of their governments. Under the precepts of international law, the 371 treaties ratified between the United States and indigenous peoples between 1778 and 1871 provided for the clear recognition of indigenous peoples as nations who could enter into treaties and, therefore, as nations who possessed jurisdiction and territorial rights. Yet Marshall's ruling in *Johnson v. McIntosh* maintained that indigenous peoples did not possess the kind of title in the lands that they could be and were negotiating by treaty.[31]

In 1830 the state of Georgia passed "an act to prevent the exercise of assumed and arbitrary power by all persons under pretext of authority from the Cherokee Indians, &c." The act sectioned Indian lands into state county districts, set up a process for state citizens to acquire individual parcels by lottery, required non-Indians to possess state permits to reside on Indian lands, declared all Indian laws null and void, outlawed public gatherings of Indians, and forbade the testimony of Indians against whites in court. The immediate impetus for the act was the discovery of gold on Cherokee lands in 1828, but the more foundational purpose was Georgia's aim, quickly followed by Alabama and Mississippi, to gain jurisdictional controls over Indian lands and to dissolve the political and economic clout of the powerful Cherokee.

With the support of their own multilingual lawyers educated in eastern U.S. universities, and diplomatic teams in Washington DC and London, the Cherokee sought an injunction against Georgia to stop it from applying laws that were obviously intended to "annihilate the Cherokee as a political society and to seize for the use of Georgia the lands of the nation which have been assured to them by the United States in solemn treaties."[32] The request for the injunction went before the Supreme Court.

In their arguments the lawyers for the Cherokee maintained that the Cherokee were a sovereign nation and that, as such, Georgia's laws could not be unilaterally enforced upon them. They based their arguments on the fact that the Cherokee had entered into treaty relations with the United States and so were a sovereign nation under the precepts of international law as well as according to the specific provisions of the treaties that provided for the protection of Cherokee rights by the U.S. government because of the Cherokee's demonstrated status as sovereigns.

The Supreme Court did not miss the implications of the Cherokee argument. Negating the significance of U.S. treaties signed with the Cherokee that suggested they possessed a sovereignty akin to that of the United States or European nations under the customs of international law, Marshall turned instead to article 1, section 8, paragraph 3 of the U.S. Constitution to render his opinion. The article provides that the federal branch of the U.S. government has the sole right and responsibility "to regulate Commerce with foreign Nations, and among the several States, and with the Indian tribes." Marshall argued that the clause intended to show a legal distinction between the categories of sovereigns that it employed—foreign nations, state governments, and Indian tribes. The task before the Court was to enumerate the distinction of "Indians tribes."

Assuming that "Indian tribes" were not foreign nations or state governments, Marshall posited that they were instead "domestic dependent nations" whose relationship to the U.S. federal government, as the juridical power charged with regulating commerce and collateral issues with them, was like that "of a ward to a guardian." These two enumerations—domestic dependent nationhood and the ward/guardian analogy—would set the legal precedence for defining relations between the United States and indigenous peoples.

Translated in subsequent court decisions and legislative action as the plenary power doctrine and trust or protectorate relationship, Marshall's concepts sought to secure U.S. interests in controlling indigenous peoples and their lands by defining their relationship to the United States as wholly subjected and conquered. Removed from the realm of the "foreign," "Indian tribes" were

likewise removed from the realm of international law, breaking any implied link between treaties, nationhood, sovereignty, territorial integrity, and jurisdiction that the United States would be obligated to recognize in Indians. Indian tribes were to be related to as "domestic" political entities whose specific rights to territorial integrity and jurisdiction were under the sole guardianship of the U.S. government. This allowed the United States to assume authority for representing tribal interests in matters of international law as well as to control the terms of the exercise of tribal sovereignty in the realm of domestic politics. Marshall effectively "passed [the Indian tribes] under" the governing authority of the United States and so made them "dependent" on U.S. protection from foreign and state interests.

Since under the U.S. Constitution only foreign nations can sue state governments before the Supreme Court, Marshall unsurprisingly denied the Cherokee request for an injunction against Georgia's laws on the basis that they were not a "foreign nation." Concerned about the legal implications of the decision, the Cherokee strategized a case that would force the Supreme Court to some accounting for the fact of U.S. treaty history with the Cherokee as a sovereign nation.

Missionaries Samuel A. Worcester, Elizur Butler, James Trott, Samuel Mays, Surry Eaton, Austin Copeland, and Edward D. Losure broke Georgia's newly passed law requiring that non-Indians possess a state license in order to reside on Indian lands. They were tried in state court and sentenced to four years of hard labor. Worcester appealed to the Supreme Court.

The same counsel from *Cherokee Nation v. Georgia* argued in *Worcester v. Georgia* that Worcester had entered Cherokee territory as a missionary under the authority of the U.S. president and with the approval of the Cherokee. They claimed that "the State of Georgia ought not to maintain the prosecution, as several treaties had been entered into by the United States with the Cherokee Nation by which that Nation was acknowledged to be a sovereign nation, and by which the territory occupied by them was guaranteed to them by the United States."[33] They further claimed that "the laws of Georgia under which the plaintiff in error was indicted are repugnant to the treaties, and unconstitutional and void, and also that they are repugnant to the Act of Congress of March, 1802, entitled 'An act to regulate trade and intercourse with the Indian Tribes.'"[34]

The Court recognized that the arguments made by the plaintiffs called into question not only the validity of Georgia's laws but "the validity of the treaties made by the United States with the Cherokee Indians."[35] The Court also acknowledged that the case raised questions about the jurisdictional authority

of the Cherokee within their own territories and in relationship to Georgia as provided for by U.S. treaty and federal statute. Did states have jurisdiction over Indian tribes? Could states make laws regulating the status and rights of Indian tribes over and against federal law? The Cherokee argued that they could not. They contended that they enjoyed a special relationship to the U.S. federal government because they were a sovereign nation, proven by the fact that since 1785 they had entered into twelve treaties with the government that would constitute the United States.[36]

To render the Court's opinion, Marshall returned to the doctrine of discovery to establish that the United States possessed full title in the lands and, by implication, over the peoples residing within them. As in *Johnson v. McIntosh*, he traced the passage of title from the colonists to England to the United States in order to demonstrate U.S. property in the lands and commensurate plenary power over the lands (again representing the Cherokee as "roaming" and "wandering" over the lands and not as agriculturalists with established rights of property in the soil—a representation in direct contradiction with the known history and culture of the Cherokee as agriculturalists).

Marshall then turned to the Treaty of Hopewell, signed in 1785 with the Cherokee, to prove that the Cherokee acknowledged not only that they were "under the protection of the United States of America, and of no other power" but that they had benefited directly from said protections as evidenced by the subsequent treaties they signed with the United States.[37] (In other words, that the Cherokee kept signing treaties with the United States proved to Marshall that they not only benefited from said relations but were acknowledging the United States as the more powerful sovereign in the territory.) Consequently, Marshall purported, the Cherokee were not a sovereign equal in political status and rights to the United States, as might be suggested by the conventions of international law regarding the relationship between signatories. Rather, the Cherokee were a sovereign possessing partial or limited powers as dependent wards under the more supreme governing authority that it had recognized and benefited from in the United States.

Next Marshall addressed the matter of the Cherokee's relationship to Georgia as a state of the union. He argued that Georgia, as all states, recognized by their own statutes that it was the federal government that held exclusive rights and responsibilities to regulate relations with the Indian tribes "with which no state could interfere" by virtue of the U.S. Constitution's commerce clause. He concluded: "The Cherokee nation, then, is a distinct community, occupying its own territory, with boundaries accurately described, in which the laws of Georgia can have no force, and which the citizens of Georgia have no right

to enter but with the assent of the Cherokees themselves, or in conformity with treaties and with the acts of Congress. The whole intercourse between the United States and this nation is, by our Constitution and laws, vested in the Government of the United States."[38]

The Court ruled that Georgia's 1830 act interfered with relations between the United States and the Cherokee, "the regulation of which, according to the settled principles of our Constitution, is committed exclusively to the Government of the Union." Marshall declared that Georgia's act was "in direct hostility with treaties, repeated in a succession of years, which mark out the boundary that separates the Cherokee country from Georgia; guaranty to them all the land within their boundary; solemnly pledge the faith of the United States to restrain their citizens from trespassing on it; and recognise the pre-existing power of the Nation to govern itself." Georgia's act was found to be "in equal hostility with the acts of Congress for regulating this intercourse and giving effect to the treaties." Marshall concluded that Georgia's laws were "unconstitutional and void" and granted Worcester a full pardon.[39]

Many have noted that U.S. president Andrew Jackson, who was instrumental in the passage of the Indian Removal Act of 1830, was so enraged by Marshall's opinion that he uttered something to the effect that Marshall had made his laws, let him enforce them. Jackson refused to send in the troops needed to defend Cherokee territory against Georgia's retaliatory encroachment and instead sent in commissioners to negotiate treaties for Cherokee removal to Indian Territory.[40]

Despite the superficial appearance of conflict in the Supreme Court's opinions in the Marshall trilogy, the decisions were in perfect keeping with the colonial objectives of the U.S. government at the time, a government that aimed to abrogate the means and abilities of Indian tribes to maintain their jurisdiction and territorial rights. The configuration of "Indian tribes" as being under the governing authority of the United States was neither adverse to nor undermining of the ultimate objective to dissolve Indian governments and dispossess Indians of their territories. And it certainly was not unique.

European nations likewise constructed themselves as sovereigns with abject rights to claim jurisdictional authority and territorial rights over indigenous peoples in their colonies throughout the Americas and the Pacific. The specific claims and exercises of their sovereign powers—militarily and otherwise—made almost incestuous use of each other's laws and policies to justify the dispossession, enslavement, and genocide of "their Indians." This is reflected in the opinions of Marshall's trilogy—which claimed that Indians had "passed under" U.S. plenary power, which in turn had a trust responsibility to govern

the Indians as a matter of domestic policy—and in the ways that these rulings were taken up by England's Colonial Office to justify the usurpation of indigenous territorial rights in Canada, Australia, and New Zealand.[41]

Though informed by international debates, no previous legislative or court decision had defined the "doctrine of discovery" as such.[42] Marshall invoked it as though it were a well-founded legal principle of international law. It took on the force of precedence because Marshall invented a legal history that gave it that status. In this history, Marshall defined "aboriginal title," "domestic dependent nations," plenary power, and trust as inevitable evolutionary legal principles of a civilized state. The history constructed indigenous peoples under the civilized governing authority of the United States. In this tale, the United States, as all progressing nations, was charged with the demands of adhering to the principles of international law but also burdened with the responsibilities of civilizing/Christianizing Indians into those more civilized/Christian legal beliefs and practices.

The entire self-fulfilling narrative of legal, moral, and social superiority offered in such claims to doctrine as Marshall's discovery reinvented a sovereignty for indigenous peoples that was void of any of the associated rights to self-government, territorial integrity, and cultural autonomy that would have been affiliated with it in international law at the time.[43] In junction with the fact that the specific story Marshall told affirmed British and then U.S. title to the lands in North America on the basis of the legal precedence of discovery that it fictionalized, it is unsurprising that Marshall's trilogy was taken up by the Colonial Office in England to direct relations with indigenous peoples and its colonists in Canada and the Pacific. As in the United States, these relations were embedded with the ideologies of race, culture, and identity that legitimated the narratives.[44]

In response to the perceived problems with the colonial rebellion in the United States, and settler violence against indigenous peoples in Canada, Australia, New Zealand, and the Cape Colony, the Colonial Office established a firm "rule of law" framework for developing its guidelines for colonization.[45] Colonies were expected to adhere to the letter of the law, not to interpret the law according to their own want or personal interest.[46] However, geographical distance made it virtually impossible for the Colonial Office to oversee, let alone enforce, its guidelines. The result was an incredibly incongruous relationship between England, its colonies, and indigenous peoples.

The primary legal point of reference for the Colonial Office was the British Royal Proclamation of 1763. The Proclamation was issued by King George III after the cession of New France to England by the Treaty of Paris. Basically it

determined English territorial boundaries and the terms for trade and governance within the Americas. In relationship to indigenous peoples, it asserted that the Crown possessed the sole right to acquire indigenous lands and prohibited the purchasing of lands by individuals from indigenous peoples. This directive necessitated that England enter into treaties with indigenous peoples in order to acquire title to desired areas before settlement.[47] Though not a law, the Proclamation was given the force of law by legislative action and court rulings in North America and the Pacific (including Marshall's trilogy).

Despite the Proclamation's directive, lands were occupied by English colonists without the required treaties in place. Violence against indigenous peoples occurred as individual colonies usurped lands from indigenous peoples and/or protected their interests to remain on lands they had illegally seized. The Aborigines in Australia, Maori in New Zealand, Beothuk in Newfoundland, and Tasmanians of Tasmania were some of the groups almost exterminated by colonists ignoring their own policy.[48]

In the 1830s and 1840s, Sir James Stephen was under-secretary of the Colonial Office (he had worked in the office as a legal advisor since the 1810s). Believing that the immediate genocide of Australian Aborigines had been "immoral," he turned to Marshall's opinion in *Johnson v. McIntosh* to help him write guidelines for William Hobson, the British consul in New Zealand, to treat with the Maori.[49]

> It [*Johnson v. McIntosh*] shows that the whole Territory over which those Tribes wandered was to be regarded as the property of the British Crown in right of discovery and conquest—and that the Indians were mere possessors of the soil on suffrance. Such is American Law. The British law in Canada is far more humane, for there the Crown purchases of the Indians before it grants to its own subjects. . . . Besides what is this to the case of New Zealand? The Dutch, not we, discovered it. Nearly a hundred years ago Captain Cook landed there, and claimed the Sovereignty for King George III. Nothing has ever been done to maintain and keep alive that claim. The most solemn Acts have been done in repudiation and disavowal of it. Besides the New Zealanders are not wandering Tribes, but bodies of men, till lately, very populous, who have a settled form of Government, and who have divided and appropriated the whole Territory amongst them. They are not huntsmen, but after their rude fashion, Agriculturalists.[50]

Stephen's invocation of *Johnson v. McIntosh* is based on Marshall's affirmation of the preeminence of English title within North America, as the first

discoverers (agriculturalists), and of the Proclamation as the force of law in determining title. These affirmations were required by Marshall in order to make the claim that the passage of title from England to the United States had established U.S. entitlement to the lands and to jurisdiction over and within them. The rationale served English interests. Far more interesting than the predictably flippant remarks about "American Law" and the superiority of English civility over American barbarity in Stephen's directive is his treatment of the discovery doctrine as a well-established legal precept read back into the Proclamation and out of Marshall's opinion. This history provided Stephen with the legal framework that he needed in order to direct English colonists to treat with the natives as a distinction of English civilization. His directive concludes by ordering Hobson to treat with the Maori.[51] Hobson responded by initiating the negotiations that would result in the Treaty of Waitangi of 1840 (see Fiona Cram, "Backgrounding Maori Views on Genetic Engineering," this volume).[52]

Marshall's trilogy also influenced numerous Canadian court decisions. The discovery doctrine was taken as an extension of the principles set forth in the Proclamation, especially in regard to the notion that the Crown alone enjoyed the right to treat with and purchase lands from First Nation peoples.[53] As in the United States it was decided that title to lands that were unceded or unpurchased by treaty could still be found to have been "extinguished" if settlement within the area had progressed unfettered—a convenient displacement of the impact of overt military aggression and dispossession of indigenous peoples on the progress of said settlements. As in U.S. case history, this logic provided an efficient justification for Canadian nullification of "aboriginal title" by treaty, by purchase, or by the default of colonization.[54]

One of the other legacies of the Marshall trilogy was the configuration of indigenous peoples as welfare beneficiaries.[55] The notion that indigenous peoples are *weaker than*, *wards*, *dependent*, and *limited* in power in relation to their colonial states has perpetuated dominant ideologies of race, culture, and identity. Within these identificatory practices, "indigenous people" are marked as yet another ethnic group within the larger national melting pot, where the goal is to boil out cultural differences and the national jurisdictions and territorial boundaries of indigenous groups by boarding schools, farming programs, citizenship, and adoption.[56]

As I have argued elsewhere, the *making ethnic* or *ethnicization* of indigenous peoples has been a political strategy of the nation-state to erase the sovereign from the indigenous.[57] To the extent that the nation-state can maintain that indigenous peoples are nothing but welfare recipients under its trust, the very

notion that indigenous peoples are members of sovereign political collectivities is made incomprehensible. This incomprehensibility works to collapse indigenous peoples into minority groups that make up the social rainbow of multicultural difference as a means of erasing their unique political status and rights under the precedence of international law.

The erasure of the sovereign is the racialization of the "Indian." These practices have had important consequences in shaping cultural perspectives about the relationship between indigenous identity and sovereignty, not only from the viewpoint of some dominant, privileged position but within indigenous communities as well.

On the one hand are all of the myriad social forces of oppression that have racialized (invented) an Indian identity that can be used to usurp indigenous sovereignty. These forces presuppose the legitimacy of an entire discourse of cultural authenticity, racial purity, and traditional integrity, which in turn legitimates assimilationist ideologies. In this discourse is the real Indian (the mythic full-blood traditionalist born and raised on the reservation in poverty and despair), romanticized as the last vestige of real Indian culture, and the fraud (the mythic mixed-blood urban Indian born and raised without any sense of Indian culture), demonized as the contaminant of all things Indian while serving as testimony to the successes of the colonial project. Nowhere in this discourse are real indigenous peoples permitted or heard to speak for themselves, and when they do, their self-definitions are incomprehensible.[58]

On the other hand are all of the ways that indigenous identity is foundational to the structure, exercise, and character of sovereignty. It is, in other words, impossible to separate Native Hawaiian identity from Native Hawaiian perspectives about and struggles for self-government; Chamorro identity from Chamorro struggles for jurisdictional integrity in Guam; Taíno identity from Taíno land rights; Makah identity from Makah whaling rights; Maori identity from Maori struggles for intellectual property rights. In the historical complexities and cultural richness and diversity of these and all indigenous communities is the truth of the heterogeneity of indigenous identity, not only in how indigenous peoples identify themselves and their cultures but in how their self-definitions inform the character of their unique political perspectives, agendas, and strategies for sovereignty.

Rearticulations

Following World War II *sovereignty* emerged as a particularly valued term within indigenous scholarship and social movements and through the media of cul-

tural production. It was a term around which analyses of indigenous histories and cultures were organized and whereby indigenous activists articulated their agendas for social change. It was also a term through which indigenous artists represented their histories, cultures, and identities, often in opposition to the erasures of their sovereignty by dominant ideologies of race, culture, and nationalism coined in the discourses of eugenics and American patriotism.

This is not to say that the concept of sovereignty was new to indigenous peoples. Certainly by the early 1600s it was a familiar and often belligerent self-descriptive against relentless military invasions and the social forces of colonization. It was employed to claim nationhood status and so collective rights to territorial integrity and governance as well as to define a humanity that was denied by the discourses of missionization. For example, the adoption of the designation Five Civilized Tribes by the Cherokee, Muskogee (Creek), Choctaw, Chickasaw, and Seminole in relations with the United States was an interesting discursive maneuver in this regard.[59] So were the exchanges between the members of the Haudenosaunee Confederacy and early U.S. government leaders about democracy and personal freedom.[60] Paiute writer and activist Sara Hopkins Winnemucca wrote *Life among the Piutes* to make an intellectual intervention against assimilationist ideologies and toward affirming American Indian humanity, cultural vitality, and land rights.[61] These and other self-definitions by the status and rights of sovereignty disrupted the solidity of dominant representations of indigenous peoples as savage heathens.

One of the most important reasons why sovereignty took on renewed currency following World War II was the oppositional perspective it signified toward the racist ideologies of beneficiarism that settled national policies during the preceding assimilationist period. Sovereignty had come to represent a staunch political-juridical identity refuting the dominant notion that indigenous peoples were merely one among many "minority groups" under the administration of state social service and welfare programs. Instead, sovereignty defined indigenous peoples with concrete rights to self-government, territorial integrity, and cultural autonomy under international customary law.[62] By doing so, it served to link indigenous peoples across the territorial borders of nation-states, refuting their position under the domains of domestic policy and reclaiming their status under the conventions and relations of international law.

Again the strategy was learned from previous generations. Since the initiation of conquest, indigenous leaders had assumed the relevance of a legal discourse that was, conventionally speaking, "not their own" as a way of claiming a status, and its associated rights, against the ideologies and prac-

tices of colonialism.[63] Of course, translating indigenous epistemologies about law, governance, and culture through the discursive rubric of sovereignty was and is problematic.[64] Sovereignty as a discourse is unable to capture fully the indigenous meanings, perspectives, and identities about law, governance, and culture, and thus over time it impacts how those epistemologies and perspectives are represented and understood.

Despite the problems of translation, indigenous peoples learned that how they represented themselves in international affairs mattered in consequential ways to how they were related to and what rights they were perceived to be claiming.[65] Refuting minority status was a refutation of the assimilationist ideologies that constructed indigenous peoples as ethnic minorities under the governing authority of the nation-state and a claim of the attributes of sovereignty customarily associated with nations.[66]

These discursive strategies were key as the world community mobilized attention on the rights of minority groups after World War II and in the context of the formation of the United Nations.[67] Within the political forums and policy agreements of the UN, indigenous peoples insisted on being identified as *peoples* (political collectivities) and not as *people* (minorities). The stakes in being so identified originated with the UN Charter, which affiliated the rights of *peoples* to *self-determination*—a legal category that came to be defined by both group and individual rights not to be discriminated against on the basis of race, ethnicity, gender, sexual orientation, or physical or mental ability, and to determine one's own governments, laws, economies, identities, and cultures. By taking on the self-definition of peoples with group and individual rights to self-determination, indigenous leaders were claiming a difference from minorities and a status akin to the status of nations.[68] The UN community has not missed the political importance of such links, as has been true within the signatory process of the *Declaration on the Rights of Indigenous Peoples*.

Written by an international consortium of approximately one hundred indigenous leaders from around the world over a decade's time, the *Declaration* translates human rights principles for indigenous peoples into the specific rights of self-determination, including provision for aspects of tradition, custom, property, language, oral histories, philosophies, writing systems, educational systems, medicines, health practices, resources, lands, and self-definition. Though there are some troubles with the conceptualization of what these particular rights mean, and many feel that the definitions do not go far enough, what remains interesting is how those who participated in the process chose to represent the rights as *indivisible* and *interdependent* aspects of their identities as sovereigns.[69] Human rights for indigenous peoples, in

other words, became translated to mean rights to a self-determination that was indelibly linked to sovereignty. So strong is this conceptualization that it is now virtually impossible to talk about what *sovereignty* means for indigenous peoples without invoking self-determination. As a consequence, sovereignty has been solidified within indigenous discourses as an inherent right that emanates from historically and politically resonant notions of cultural identity and community affiliation: "Sovereignty, in the final instance, can be said to consist more of a continued cultural integrity than of political powers and to the degree that a nation loses its sense of cultural identity, to that degree it suffers a loss of sovereignty."[70] "Sovereignty is inherent; it comes from within a people or culture."[71]

The link of sovereignty to peoples and cultures has been an important contribution to the precepts of human rights within international law by indigenous scholars and activists. The link has opened up debates about theories of humanity, notions of rights, and the authority of the nation-state to determine the legal substance of both. But it is also one of the most misunderstood and misrepresented aspects of how sovereignty matters. It is simultaneously and contradictorily true that many have mistaken an essentialist rhetoric for a politically strategic one, questioning what is perceived to be a gross reduction of everything from land rights to rug designs to sovereignty as a kind of raison d'être for all things indigenous.

The discursive proliferation of sovereignty must be understood in its historical context. The multiple social forces of globalization have reinvented colonial practices from the supposed confines of the nation as empire builder to the elusive networks of decentralized political economies and informatics.[72] These networks have perpetuated the kinds of exploitation of indigenous labor, products, resources, lands, and bodies conventionally ascribed to colonialism proper—that is, Colonialism with a capital C.[73] The almost aggressive self-definition of indigenous peoples by sovereignty is in large part a response to their continued experiences of exploitation and disempowerment under processes of globalization.[74] Fiercely claiming an identity as sovereign, and including multiple sociocultural issues under its rubric, has been a strategy of not merely deflecting globalization's reinvention of colonial processes but of reasserting a politically empowered self-identity within, besides, and against colonization.

It is also true that there is a troubling and troubled essentialism of sovereignty by indigenous scholars, community organizers, and cultural producers, evident in the moments when what it is or how it is important is taken-for-granted. Many find it troubling that indigenous histories and

cultures are often framed through sovereignty without a consideration of the ways in which its ideological origins might predispose a distortion or negation of indigenous epistemologies of law and governance.[75] What this means for the actual decolonization of indigenous cultures is complicated by how those origins impinge upon real revitalization efforts or effective decolonization strategies. Others find the links between sovereignty and particular cultural practices, such as certain aspects of basket weaving or food preparation, to flatten out, distort, or even make light of the legal importance and political substance of sovereignty.

What is important to keep in mind when encountering these myriad discursive practices is that sovereignty is historically contingent. There is no fixed meaning for what *sovereignty* is—what it means by definition, what it implies in public debate, or how it has been conceptualized in international, national, or indigenous law. Sovereignty—and its related histories, perspectives, and identities—is embedded within the specific social relations in which it is invoked and given meaning. How and when it emerges and functions are determined by the "located" political agendas and cultural perspectives of those who rearticulate it into public debate or political document to do a specific work of opposition, invitation, or accommodation. It is no more possible to stabilize what *sovereignty* means and how it matters to those who invoke it than it is to forget the historical and cultural embeddedness of indigenous peoples' multiple and contradictory political perspectives and agendas for empowerment, decolonization, and social justice.[76]

The challenge, then, to understand how and for whom sovereignty matters is to understand the historical circumstances under which it is given meaning. There is nothing inherent about its significance. Therefore it can mean something different during its original uses in the politico-theological discourses of the Catholic church than it did during Marshall's delivery of the Supreme Court's decision in *Worcester v. Georgia*, differing again in its links to concepts of self-determination and human rights and in the contexts of Alaskan Native, Native Hawaiian, or Maori or Aborigine struggles.

Understanding the problems of translating indigenous concepts of law, governance, and culture through the discourses of sovereignty requires unpacking the social forces and historical conditions at each moment when it is invoked as well as the social relations in which it functions. How did those forces cohere? What social conditions were the social actors confronting? What kinds of identities did they have stakes in claiming and asserting? In relationship to what other identities?[77]

Concurrent with associating sovereignty with self-determination has been

its linking to *self-government*.[78] In locating sovereignty within the idea of peoples who are collective political entities with inherent rights to decide their own laws and practice their own cultures, self-government has emerged as an attendant concept to signify rights to determine, practice, and transform multiple forms of social organization—in effect to decolonize social institutions from federal/state paternalism and to reformulate them along the lines of distinctive cultural perspectives. This is evident in everything from efforts to revitalize traditional forms of education and health care to reclamations of legal traditions and practices.

For instance a myriad of First Nation organizations in Canada—such as the Native Women's Association of Canada, Indian Women for Indian Rights, Assembly of First Nations, Native Council of Canada, Inuit Committee on National Issues, Inuit Tapirisat of Canada, Inuit Women's Association, and the Métis National Council—have almost unilaterally (though with important differences among them in political perspectives) made the assumption of band/reserve control over social programs and services like education, health care, child welfare, resource management, and economic development a key aspect of their movements to sovereignty by self-government. They have argued that not only should their unique cultural perspectives regarding education, health care, family, environmentalism, and communalism inform the structure and administration of these various types of social institutions but that sovereignty itself is a vacuous idea for indigenous peoples without providing for and guaranteeing their means and abilities to exercise it.[79]

Similarly, many indigenous peoples have revitalized their laws and legal practices in the contexts of their own juridical epistemologies and justice systems.[80] Several groups in Canada have returned to the model of the talking circle for deciding sentencing terms.[81] The Navajo have introduced the Peacemakers Court for mediation.[82] These efforts have been characterized by serious attention to inherited beliefs, stories, and ceremonies as well as a concern as to how best to entrench these cultural perspectives and practices within "tribal" law.[83]

One of the most powerful examples of these efforts is their implication for reforming nation-state policy, indicated by Australia's high court decision in *Mabo v. Queensland* in 1992. Eddie Koiki Mabo, Sam Passi, David Passi, Celuia Mapo Salee, and James Rice filed a legal claim of ownership to their "preconquest" lands on the island of Mer in the Torres Straight between Australia and Papua New Guinea. Their claim was based on their unique legal customs for naming (singing) territorial occupation, use, and responsibility. They argued that the said customs superseded English title, which had been illegally

asserted without proper treaty or purchase in violation of the principles outlined in England's own Proclamation and wrongly justified on the basis of Marshall's discovery doctrine.[84]

In response to the claim, the high court of Australia required Queensland to determine the facts of the case. However, while the case was still pending, Parliament passed the Torres Strait Islands Coastal Act, which stated that "any rights that Torres Strait Islanders had to land after the claim of sovereignty in 1879 is hereby extinguished without compensation."[85] The challenge to the act was taken to Australia's high court in *Mabo v. Queensland*.[86]

In what would be an unprecedented ruling until Canada's Supreme Court decision in *Delgamuukw v. British Columbia* in 1997, Australia's high court found that indigenous customary law was a valid body of legal precedence for deciding aboriginal title. It held that title existed prior to Captain James Cook's maps of the area and the formal establishment of the neighboring English colony of New South Wales in 1788. The ruling overturned the discovery doctrine on which England had asserted title to indigenous territories in Australia. In recognizing that prior title in the lands existed with the Aborigines, the high court acknowledged that indigenous title still existed in any region where it had not been legally ceded.[87] Following the court's ruling, Parliament passed the Native Title Act in 1993, which provided indigenous peoples with the means to claim territorial rights to unalienated lands. These statutes have not only reversed the precedence for determining aboriginal title through discovery in Australia but have affirmed indigenous customary law as a credible source of precedence in matters of national jurisdiction.[88]

What all of these various political movements indicate is an attempt by indigenous peoples to be recognized as sovereigns and to be related to by their nation-states as forming legitimate governments with rights to direct their own domestic policies and foreign affairs, unmediated by the regional contours of state/provincial politics and corporate interests. Unevenly but steadily, the movements have impacted the direction of national law and policy, as nation-states have been held accountable to the increasing validation of indigenous epistemologies in matters of territorial rights and governance. Corollary terms like *nations within* and *government-to-government* have been deployed by indigenous peoples to position themselves as comprising fully self-determining political entities invested with the power to be related to as sovereigns in matters ranging from treaty to intellectual property rights.[89]

Indigenous opposition to being characterized as minorities by self-defining as peoples with the sovereignty of self-determination and self-government has met the challenge of conservative political interests that deploy the discourses

of reverse racism to contest the terms of indigenous legal status, treaty and land rights, and economic self-sufficiency. The argument goes that indigenous peoples are only receiving these special funds and services on the basis of race and that such funds and services are therefore unconstitutionally discriminating against non-indigenous people.[90]

In the United States these discourses have been profoundly informed by anti–Affirmative Action movements that work to portray federal and state funding and services to indigenous peoples as nothing more than special benefits for a racial/minority group that perpetuates reverse discrimination. Therein anti-gaming, anti-recognition, and anti-sovereignty movements have coalesced by the reracialization of indigenous status and rights. Given their successes in challenging civil rights principles in university admissions and fellowship programs, and in recent Supreme Court decisions such as *Rice v. Cayetano* in 2000, many indigenous peoples in the United States and in U.S. territories such as Puerto Rico, Guam, and Samoa are justifiably concerned about the long-term implications of these efforts for treaty and land rights.[91]

These tensions likewise inform the now twenty-year revision process for the *Declaration on the Rights of Indigenous Peoples*, as member nations of the UN resist including the identification of indigenous groups as *peoples* because of the legal status that this would imply. At the UN meetings on race and human rights in South Africa in 2001, some nations conceded to the use of the term *peoples* as long as it was explicitly stripped of its legal connotations. As a result, indigenous peoples are identified as peoples in the *Declaration* but only as a matter of semantics.[92]

Reverberations

Despite the strategic deployments of sovereignty, many indigenous scholars have criticized its proliferation within indigenous discourses because of its etymological origins within European colonial law and Christian ideologies. In "International Law and Politics: Toward a Right to Self-Determination for Indigenous Peoples," Shawnee scholar Glenn T. Morris writes: "Indigenous peoples, as all colonized peoples, have come to realize the importance of semantics in their quest for self-determination."[93] As the ideological forces of colonialism bear down through the etymological origins, meanings, and histories of *sovereignty*, Morris questions "the usefulness of forcing indigenous reality into the forms [semantics] developed by Europeans."[94] Morris even anticipates an emergent field of inquiry within indigenous studies focusing on indigenous epistemologies of law and governance that move past the colonial legacies of concepts like sovereignty and nationhood.

A similar perspective is articulated by Mohawk scholar and activist Taiaiake Alfred in *Peace, Power, Righteousness: An Indigenous Manifesto* (1999) and "Sovereignty" (in this volume):

> But few people have questioned how a European term and idea—sovereignty is certainly not Sioux, Salish, or Iroquoian in origin—came to be so embedded and important to cultures that had their own systems of government since the time before the term *sovereignty* was invented in Europe. Fewer still have questioned the implications of adopting the European notion of power and governance and using it to structure the postcolonial systems that are being negotiated and implemented within indigenous communities today.[95]

For Morris, Alfred, and other indigenous theorists, sovereignty fails to interrogate the ideological bases on which it has emerged and functioned as a category. Accordingly, using it to theorize indigenous histories, governments, and epistemologies is not merely problematical but faulty because such configurations are perceived to distort rather than translate the representation and so understanding of indigenous epistemologies, laws, governments, and cultures. In order to decolonize indigenous peoples, they explain, a return to indigenous epistemologies and languages is required.

Paradoxically, Morris, Alfred, and others anticipate the need for a body of scholarship that has chosen to represent itself as "intellectual sovereignty."[96] What is common among these various writings is the explicit attempt by indigenous scholars to decolonize the theoretical and methodological perspectives used within analyses of indigenous histories, cultures, and identities from the legacies of intellectual colonialism. Fierce criticisms of the exploitative research practices of anthropology (ethnography) and history parallel attempts to revitalize and legitimize indigenous epistemologies as valid bodies of knowledge.[97]

What is interesting about the term "intellectual sovereignty" is its link to ongoing political and cultural movements working to rearticulate the rights of indigenous peoples to sovereignty by self-determination and self-government. While problematical for its occasional invocation of or reliance on racialized notions of cultural integrity and traditionalism, intellectual sovereignty has situated itself as a part of the various sociopolitical movements toward sovereignty, self-determination, and self-government and is understood by its authors to be an integral aspect of the configuration and import of their intellectual work.[98] Given ongoing social forces of intellectual exploitation and appropriation, it is understandable that indigenous scholars would want to

mark their projects as oppositional by situating them as part of a sociopolitical movement for sovereignty.[99]

Conclusion

Sovereignty is historically contingent. What it has meant and what it currently means belong to the political subjects who have deployed and are deploying it to do the work of defining their relationships with one another, their political agendas, and their strategies for decolonization and social justice. Therefore to understand how it matters and for whom, sovereignty must be situated within the historical and cultural relationships in which it is articulated. The specific social conditions that produce its meanings must be considered. This is not to say that etymology is unimportant. Sovereignty carries the horrible stench of colonialism. It is incomplete, inaccurate, and troubled. But it has also been rearticulated to mean altogether different things by indigenous peoples. In its link to concepts of self-determination and self-government, it insists on the recognition of inherent rights to the respect for political affiliations that are historical and located and for the unique cultural identities that continue to find meaning in those histories and relations.

67. It would be challenging to try to figure out what the long-term implications of the normalization of the discourses of sovereignty for indigenous peoples have been for theorizing indigenous epistemologies and perspectives of law and governance, because it is tempting—almost irresistible from the context of dominant ideologies of race and culture—to mark the authentic from the inauthentic, the pure from the contaminated, the traditional from the colonial. The fact remains that after hundreds of years of cultural exchange between indigenous peoples and colonial states, sovereignty's currency within indigenous discourses has been long established, and not always or necessarily to detrimental or disastrous ends (Dan Taulapapa McMullin, "The Passive Resistance of Samoans to U.S. and Other Colonialisms," this volume; Donna Ngaronoa Gardiner, "Hands Off—Our Genes: A Case Study on the Theft of Whakapapa" [paper presented at Sovereignty 2000 conference, University of California, Santa Cruz, May 2000]).

Indigenous peoples have impacted sovereignty in important ways, changing what it means within international law and politics. For while ideologies of race and culture would like us to look at the exchanges between indigenous and colonial peoples from the authority of the colonial to erase the indigenous from historical significance, the fact is that indigenous peoples have made an important difference in what sovereignty means (Michael P. Perez, "Chamorro Resistance and Prospects for Sovereignty in Guam," this volume; Déborah Berman Santana, "Indigenous Identity and the Struggle for Independence in Puerto Rico," this volume). Understanding this requires the consideration of the heterogeneity of the "local," of the impact of locally specific cultural perspectives on what sovereignty is and how it matters.

CUSTER DIED

FOR YOUR SINS

AN INDIAN MANIFESTO

BY VINE DELORIA, JR.

University of Oklahoma Press : NORMAN

2 * LAWS AND TREATIES

AFTER LYNDON B. JOHNSON had been elected he came before the American people with his message on Vietnam. The import of the message was that America had to keep her commitments in southeast Asia or the world would lose faith in the promises of our country.

Some years back Richard Nixon warned the American people that Russia was bad because she had not kept any treaty or agreement signed with her. You can trust the Communists, the saying went, to be Communists.

Indian people laugh themselves sick when they hear these statements. America has yet to keep one Indian treaty or agreement despite the fact that the United States government signed over four hundred such treaties and agreements with Indian tribes. It would take Russia another century to make and break as many treaties as the United States has already violated.

Since it is doubtful that any nation will ever exceed the record of the United States for perfidy, it is significant that statesmen such as Johnson and Nixon, both professional politicians and

opportunists of the first magnitude, have made such a fuss about the necessity of keeping one's commitments. History may well record that while the United States was squandering some one hundred billion dollars in Vietnam while justifying this bloody orgy as commitment-keeping, it was also busy breaking the oldest Indian treaty, that between the United States and the Seneca tribe of the Iroquois Nation, the Pickering Treaty of 1794.

After the Revolution it appeared necessary to the colonies, now states in the new confederation, that in order to have peace on the frontier a treaty would have to be signed with the Iroquois of New York. George Washington sent a delegation to Iroquois country headed by Timothy Pickering. In return for peace and friendship the United States promised to respect the lands and boundaries which the Iroquois had set for themselves and never to disturb the Indians in the use of their land. The United States also affirmed its promise that it would never claim the Indian lands.

In the early 1960's, however, a dam was built which flooded the major part of the Seneca reservation. Although the tribe hired their own engineer and offered an alternative site on which the dam would have been less expensive to construct and more efficient, the government went ahead and broke the treaty, taking the land they had decided on for the dam.

It has been alleged by people who had reason to know that this dam was part of the price of keeping Pennsylvania in line for John F. Kennedy at the 1960 Democratic convention.

Article III of the Pickering Treaty read:

> Now the United States acknowledge all the land within the aforementioned boundaries, to be the property of the Seneka nation; and the United States will never claim the same, nor disturb the Seneka nation, nor any of the Six Nations, or of their Indian friends residing thereon and united with them, in the free use and enjoyment thereof; but it shall remain theirs, until they choose to sell the same to the people of the United States, who have the right to purchase.

Rather than having a choice as to whether or not to sell to the United States, the Senecas were simply forced to sell. It was a buyer's market.

Hucksterism and land theft have gone hand in hand in American history. The tragedy of the past is that it set precedents for land theft today when there is no longer any real need to steal such vast areas. But more damage is being done to Indian people today by the United States government than was done in the last century. Water rights are being trampled on. Land is being condemned for irrigation and reclamation projects. Indian rights are being ground into the dirt.

It is fairly easy to trace the principal factors leading to the great land steals. The ideological basis for taking Indian land was pronounced by the Christian churches shortly after the discovery of the New World, when the doctrine of discovery was announced.

Discovery negated the rights of the Indian tribes to sovereignty and equality among the nations of the world. It took away their title to their land and gave them the right only to sell. And they had to sell it to the European nation that had *discovered* their land.

Consequently the European nation—whether England, France, Spain, or Holland—that claimed to have discovered a piece of land had the right to that land regardless of the people living there at the time. This was the doctrine of the Western world which was applied to the New World and endorsed as the will of God by the Christian churches of western Europe.

As early as 1496 the King of England, head of the English church, commissioned John Cabot to discover countries then unknown to Christian peoples and to take possession of them in the name of the English king. In Cabot's commission was the provision that should any prior Christian title to the land be discovered it should be recognized. Christianity thus endorsed and advocated the rape of the North American continent, and her representatives have done their utmost to contribute to this process ever since.

After the Revolution the new United States adopted the doctrine of discovery and continued the process of land acquisition. The official white attitude toward Indian lands was that discovery gave the United States exclusive right to extinguish Indian title of occupancy either by purchase or conquest.

It turned out that the United States acquired the land neither by purchase nor by conquest, but by a more sophisticated technique known as trusteeship. Accordingly few tribes were defeated in war by the United States, fewer still sold their land to the United States, but most sold some land and allowed the United States to hold the remainder in trust for them. In turn, the tribes acknowledged the sovereignty of the United States in preference to other possible sovereigns, such as England, France, and Spain. From this humble beginning the federal government stole some two billion acres of land and continues to take what it can without arousing the ire of the ignorant public.

This fight for land has caused much bitterness against the white man. It is this blatant violation of the treaties that creates such frustration among the Indian people. Many wonder exactly what their rights are, for no matter where they turn treaties are disregarded and laws are used to deprive them of what little land remains to them.

The original import of the treaties was allegedly to guarantee peace on the frontier. And the tribes generally held to their promises, discontinued the fighting, and accepted the protection of the United States over their remaining lands. Yet submission became merely the first step from freedom to classification as incompetents whose every move had to be approved by government bureaucrats.

Incompetency was a doctrine devised to explain the distinction between people who held their land free from trust restrictions and those who still had their land in trust. But it soon mushroomed out of proportion. Eventually any decision made by an Indian was casually overlooked because the Indian was, by definition, incompetent.

Indians often consider the history of the Jews in Egypt. For

four hundred years these people were subjected to cultural and economic oppression. They were treated as slaves without rights and property although the original promise of the Pharoah to Joseph, like the Indian treaties, spelled out Hebrew rights. Like the Great White Father, the Pharoah turned his back on his former allies and began official oppression and destruction of rights. Yet the Hebrews survived.

America's four-hundred-year period is nearly up. Many Indians see the necessity of a tribal regrouping comparable to the Hebrew revival of old.

What were the treaties and agreements that the United States violated? For the most part they were contracts signed with tribes living in areas into which the whites moved during the last century. Nearly a third were treaties of peace; the rest were treaties for land cession.

Some tribes signed a number of treaties. The Chippewa and Potawatomi signed over twenty treaties at one time or another. The Cherokees had a number of treaties which were basically land-cession treaties. The Sioux signed a great many treaties, primarily peace treaties. In the Far West many treaties were made, but never ratified by Congress, leaving them in a legalistic limbo.

A glance at some of the obscure provisions of the treaties indicates that there must have been no intention on the part of the United States to keep them. The United States was obviously promising things it could not, at least politically speaking, deliver. And the curious thing about court cases which have occurred since treaty days is that legal interpretation has been traditionally pro-Indian. Treaties must be interpreted as the Indians would have understood them, the courts have ruled. Unfortunately in many cases the tribes can't even get into court because of the ambiguous and inconsistent interpretation of their legal status.

The concept of dependency, a favorite topic in government agencies and Congress, originally came from the Delaware

Treaty of September 17, 1778. Dependency, as the term is used today, implies a group of lazy, dirty Indians loafing the day away at the agency. Indeed, this is the precise connotation which people love to give. But the actual provision in the Delaware Treaty is not a social or philosophical or even political theory of man. Rather it is a narrowly economic provision of dependency, as seen in Article V:

> Whereas the confederation entered into by the Delaware Nation and the United States renders the first dependent on the latter for all the articles of cloathing, utensils and implements of war, and it is judged not only reasonable, but indispensably necessary, that the aforesaid Nation be supplied with such articles from time to time, as far as the United States may have it in their power, by a well regulated trade . . .

Dependency, as one can easily tell from the article, was simply a trade dependency. Nowhere was there any inkling that the tribe would eventually be classified as *incompetent.* Indeed, the very next article, Article VI, implies that the United States considered the Delawares as competent as any people on earth:

> . . . the United States do engage to guarantee to the aforesaid nation of Delawares, and their heirs, all their territorial rights in the fullest and most ample manner as it hath been bound by former treaties, as long as they the said Delaware nation shall abide by and hold fast the chain of friendship now entered into. And it is further agreed on between the contracting parties should it for the future be found conducive for the mutual interest of both parties to invite any other tribes who have been friends to the interest of the United States, to join the present confederation, and to form a state whereof the Delaware nation shall be the head, and have a representation in Congress: Provided, nothing contained in this article to be considered as conclusive until it meets with the approbation of Congress.

During the darkest days of the Revolution, in order to keep the Indians from siding with the British and completely crushing the new little nation, the United States held out equality and statehood to the Delawares and any other tribes they could muster to support the United States. But when the shooting was

all over the Delawares were forgotten in the rush to steal their land.

This promise was not only made to the Delawares. In Article XII of the Hopewell Treaty of November 28, 1785 the United States promised the Cherokee Nation:

> That the Indians may have full confidence in the justice of the United States, respecting their interest, they shall have the right to send a deputy of their choice, whenever they think fit, to Congress.

The early dream of the Indian nations to achieve some type of peaceful compromise and enter the United States as an equal was brutally betrayed a generation later when, after winning the Supreme Court case *Worcester v. Georgia*, the President of the United States refused to enforce federal law and allowed the state of Georgia to overrun the Cherokee Nation. But in those days it was not uncommon for commissioners to promise the most enticing things in treaties, knowing full well that the United States would never honor them.

Treaties initially marked off the boundaries between the lands of the Indian nations and the United States. Early treaties allowed the tribes to punish white men violating their laws and borders, but since any attempt by the tribes to exercise this right was used as an incident to provoke war, that right was soon taken away "for the Indians' own protection."

Besides marking boundaries, treaties defined alliances between the United States and tribes in the eighteenth century. England and France were still very much involved in the acquisition of land and power on the continent and it was to the best advantage of the United States to have strong Indian allies to prevent a European invasion of the fledgling United States. Thus Article II of the 1791 Treaty with the Cherokees contained the provision that

> they also stipulate that the said Cherokee Nation will not hold any treaty with any foreign power, individual state, or with individuals of any state.

When Indian people remember how weak and helpless the United States once was, how much it needed the good graces of the tribes for its very existence, how the tribes shepherded the ignorant colonists through drought and blizzard, kept them alive, helped them grow—they burn with resentment at the treatment they have since received from the United States government.

It is as if a man had invited a helpless person to his home, fed and clothed him until he was strong and able to care for himself, only to have the person he had nursed wreak incredible havoc on the entire household. And all this destruction in the name of help. It is too much to bear.

Treaties were originally viewed as contracts. Many treaties contain the phrase "contracting parties" and specify that each party must agree to the terms of the treaty for it to be valid. It would have seemed that, if treaties were contracts, the United States was required under the impairment of contracts or due process clause to protect the rights of the Indian tribes. Or at least it so seemed to the Cherokees, Choctaws, and other tribes who continually went to court to establish their property rights. But, although on one occasion, New Jersey was not allowed to break a contract with a band of the Delawares, the federal government has not traditionaly recognized treaties as contracts. So tribes had no recourse in the federal courts although many treaties had provided that the tribes should have rights and that the United States should stand behind the treaty provisions as guarantor.

Often when discussing treaty rights with whites, Indians find themselves being told that "We gave you the land and you haven't done anything with it." Or some commentator, opposed to the welfare state remarks, "We gave the Indians a small piece of land and then put them on the dole and they are unable to take care of themselves."

The truth is that practically the only thing the white men ever gave the Indian was disease and poverty. To imply that Indians were given land is to completely reverse the facts of history.

Treaties settled disputes over boundaries and land cessions. Never did the United States give any Indian tribe any land at all. Rather, the Indian tribe gave the United States land in consideration for having Indian title to the remaining land confirmed.

The August 13, 1802 Treaty with the Kaskaskias is one of the clearest examples of this concept. When settlement was made, it was stated in Article I that the Kaskaskias were "reserving to themselves" certain lands. Often the phrase "to live and hunt upon, and otherwise occupy as they shall see fit" was used to indicate the extent of right and lands reserved (Treaty with the Wiandot, Delaware, Ottawa, Pattawatima, and Sac, January 9, 1789). Or a passage might state that "the United States [will] never interrupt the said tribes in the possession of the lands which they rightfully claim, but will on the contrary protect them in the quiet enjoyment of the same. . ." (Treaty with the United Tribes of Sac and Fox, November 3, 1804).

Indian rights to lands reserved by them are clearly stated in the treaties. Article II of the Treaty with the Wiandot, Delaware, Ottawa, Pattawatima, and Sac of January 9, 1789, states that

> (the United States) do by these presents renew and confirm the said boundary line; to the end that the same may remain as a division line between the lands of the United States of America, and the lands of said nations, forever.

And Article III of the same treaty elaborates on the Indian title to lands reserved:

> The United States of America do by these presents relinquish and quit claim to the said nations respectively, all the lands lying between the limits above described, for them the said Indians to live and hunt upon, and otherwise to occupy as they shall see fit.

Similarly Article II of the Treaty with the Weas, October 2, 1818, stated:

> The said Wea tribe of Indians reserve to themselves the following described tract of land . . .

The United States pledged over and over again that it would guarantee to the tribes the peaceful enjoyment of their lands. Initially tribes were allowed to punish whites entering their lands in violation of treaty provisions. Then the Army was given the task of punishing the intruders. Finally the government gave up all pretense of enforcing the treaty provisions. But it was many years before the tribes were shocked into awareness that the United States had silently taken absolute power over their lands and lives.

It was not only a shock, but a breach of common decency when Congress decided that it had absolute power over the once-powerful tribes. When the Supreme Court also decided that such should be the policy in *Lone Wolf v. Hitchcock*, the silent conquest of unsuspecting tribes was complete.

At the turn of the century an agreement was reached with the Kiowa, Comanche, and Apache tribes of Oklahoma in regard to their lands. When an act ratifying the agreement was presented before Congress in the form of a bill, a rider was placed on it which had the effect of providing for the allotment of lands in severalty to the members of the tribes and opening the remainder of their reservation to white settlement.

The law was totally unrelated to the previous agreement with the tribes. When the controversy reached the Supreme Court—in the case of Lone Wolf, a Kiowa leader, versus Hitchcock, then Secretary of the Interior—to enjoin the Interior Department from carrying out the allotment, the Supreme Court ruled against the tribes. It laid down the principle that the tribes had no title to the land at all. Rather the land was held by the United States and the tribes had mere occupancy rights. Therefore the power of Congress to dictate conditions of life and possession on the reservations was limited only by its own sense of justice.

That decision slammed the door on the question of morality and justice. It was like appointing a fox to guard the chicken coop. Under the theory expounded in *Lone Wolf* the Indians had no chance whatsoever to acquire title or rights to lands which had been theirs for centuries. And without the power to

acquire rights, they were cut loose from all power to enforce agreements that were generations old.

It had not been much over a century from the time when the United States had begged for its very existence to the time when it had broken every treaty—except the Pickering Treaty—and made the tribes beggars on their ancestral lands. Lands of which the United States had guaranteed to the tribes a free and undisturbed use became pawns in the old game of cowboys and Indians And everywhere Indians appealed for help there stood a man in chaps with a big black hat.

The subject of tax exemption of Indian lands is often raised. Most Indian tribes feel that they paid taxes for all time when they gave up some two billion acres of land to the United States. This, they claim, paid the bill quite a few centuries in advance. For certainly any bargain of a contract nature would have had to include the exemption of lands reserved and retained by the tribes for their own use or it would have been unreasonable to have assumed that tribes would have signed treaties.

Furthermore there is a real question about the right of the United States to tax Indians at all. Taxing authority and power are a function of the exercise of sovereignty. The United States never had original sovereignty over the Indian people, merely a right to extinguish the Indian title to land. Where, argue Indian people when questioned, did sovereignty come from?

Certainly the treaties do not support the contentions of the government with respect to sovereignty. The Treaty of the United Sac and Fox tribe of November 3, 1804, is a case in point. Article I states:

> The United States receive the united Sac and Fox tribes into their friendship and protection, and the said tribes agree to consider themselves under the protection of the United States, and of no other power whatsoever.

Here, certainly is not affirmation of sovereignty. At most it is a defense pact to protect the tribes and guarantee peace for the United States.

Early statutes in the colonies exempted Indians from taxation in Massachusetts, Connecticut, and Virginia and some of these still exist today. Each Thanksgiving the Virginia Indians still take a turkey, deer, clams, and other treaty payments to the Governor's mansion to fulfill their part of the treaty. The state of Virginia, at least, has kept its part of the treaty with the Virginia Indians.

Perhaps the clearest expression of exemption from taxation is contained in the Treaty of September 29, 1817, with the Wyandot, Seneca, Delaware, Shawanese, Potawatomees, Ottawas, and Chippeway. This treaty states in Article XV that

> The tracts of land herein granted to the chiefs for the use of the Wyandot, Shawnese, Seneca and Delaware Indians, and the reserve for the Ottawa Indians, shall not be liable to taxes of any kind so long as such land continues the property of the said Indians.

Succeeding treaties generally provided for lands to be held "as Indian lands are held." From this practice tribes have felt that their lands were tax free and the federal government has upheld the taxation theory of the tribes, although with an added twist. Current federal theory indicates the federal government supports tax exemption on the basis of its trusteeship rather than on the basis of its long-standing treaty promises.

Courts have generally upheld tribal claims to tax exemption. In *The Kansas Indians*, a Supreme Court case of the last century, Kansas was prohibited from taxing the lands of the Shawnees because they still kept their tribal entity intact and maintained their relationship with the federal government.

Such a decision would seem to indicate that tax exemption is a general right of Indian tribes based upon their cessions of land in the last century. Later courts have found reasons for tax exemption all the way from such exotic theories as Indians being a *federal activity* to a vague and generalized purpose of *rehabilitation* of the individual Indian, whose progress would be impeded by taxation.

Because taxation is such a nebulous and misunderstood concept, the general public usually believes that Indians *get away*

with millions of dollars of tax-free money. In fact, as has been pointed out many times, the income from taxing the entire Navajo reservation, some sixteen million acres, would be less than the income from taxing a large bank building in downtown Phoenix.

Another primary concern of the Indian people through the years has been the protection of their hunting and fishing rights. In the early days Indians preferred to feed themselves by hunting and fishing, and some tribes refused to move or change reservations until they were assured that there would be plenty of game available to feed their people.

The first few years after the Revolution saw a great movement of settlers westward, and although Indians ceded land, they rarely gave up their hunting rights on the land sold. The Treaty of August 3, 1795, with the Wyandots, Delawares, Shawanoes, Ottawas, Chippewa, Putawatimes, Miamis, Eel-River, Weea's, Kickapoos, Piankashaws, and Kaskaskias states in

> Article VII: The said tribes of Indians, parties to this treaty, shall be at liberty to hunt within the territory and lands which they have now ceded to the United States, without hinderance of molestation, so long as they demean themselves peaceably, and offer no injury to the people of the United States.

Recent conflicts between Indian people and the states of Idaho, Washington, and Oregon have stemmed from treaty provisions such as these by which Indian people reserved for themselves an easement on lands they ceded for hunting and fishing purposes. Today hunting and fishing are an important source of food of poverty-stricken Indian peoples, but they are merely a *sport* for white men in the western Pacific states. Yet the states insist upon harassment of Indian people in continual attempts to take by force what they promised a century earlier would be reserved for Indians forever.

It is the actions of scattered, yet powerful groups of white men breaking the treaties that cause nearly all of the red-white tensions today. Foremost of the whites violating Indian treaties have been the fish and game departments in Washington,

Oregon, Wisconsin, and Nevada and the Corps of Army Engineers.

Recently the Supreme Court once again had an Indian fishing case before it and the decision was so vague and indecisive that neither Indians nor the state could determine the next course of action.

The fishing controversy can be stated simply. Indians have reserved the right to hunt and fish off the reservation because there was not sufficient game on the reservations to feed their families. In the meantime, powerful sportsmen's clubs of overweight urbanites who go into the woods to shoot at each other each fall, have sought to override Indian rights, claiming conservation as their motive.

Meanwhile the general public has sat back, shed tears over the treatment of Indians a century ago, and bemoaned the plight of the Indian. In many instances, when the tribes have attempted to bring their case before the public, it has turned a deaf ear, claiming that the treaties are some historical fancy dreamed up by the Indian to justify his irresponsibility.

This despite the fact that during the period before the War of 1812 the United States government hurriedly sent emissaries to the western tribes and tried to force them to choose sides against Great Britain. Again when the life of the small nation was hanging in the balance, the United States was eager to have the support of the Indian tribes.

Article II of the Treaty with the Wyandots, Delawares, Shawanese, Senecas, and Miamies of July 22, 1814, provided that:

> The tribes and bands abovementioned, engage to give their aid to the United States in prosecuting the war against Great Britain, and such of the Indian tribes as still continue hostile; and to make no peace with either without the consent of the United States the assistance herein stipulated for, is to consist of such a number of their warriors from each tribe, as the president of the United States, or any officer having his authority therefore, may require.

Within a generation these same tribes that fought and died for

the United States against Great Britain were to be marched to the dusty plains of Oklahoma, dropped in an alien and disease-ridden land, and left to disappear. Hardly had the war been concluded when the first of a series of removal treaties began to force the tribes west across the Mississippi, first to Missouri and Arkansas, then on to Oklahoma. By 1834 the United States had pretty well cleared the eastern states of the former Indian allies.

On reviewing the record of the United States in its Indian treaties, it seems humorous to Indian people to hear the outraged cries against Communist domination and infidelity. Indeed, Czechoslovakia and Hungary got off easier with Russia than did America's allies in the War of 1812. And few Communist satellites have been treated as have the Five Civilized Tribes whose treaty rights were declared in the Supreme Court and yet who were powerless against the perfidy of Andrew Jackson.

Perhaps the greatest betrayal of Indian people was the treatment accorded the Choctaws. Treaty after treaty was signed with the Choctaws, one of the so-called Five Civilized Tribes (because they were so like white men), until the final treaty of Dancing Rabbit Creek forced them across the Mississippi to the parched plains of Oklahoma. The Choctaws stubbornly resisted each encroachment but were finally forced to make the long trek westward.

In an earlier treaty, ten years prior to Dancing Rabbit Creek, the Choctaws had asked for a provision guaranteeing that the United States would never apportion the lands of the tribe, as they preferred to hold their lands in common. So in the Treaty of January 20, 1825, Article VII, the United States provided that "the Congress of the United States shall not exercise the power of apportioning the lands."

Just prior to the admission of Oklahoma as a state, the lands of the Choctaw were allotted, although a minority opinion in the report on the Dawes Allotment Act stated that perhaps the Choctaw method of holding land in common was superior to

that of the white man because there was so little poverty among the members of the Five Civilized Tribes.

Today the Choctaws and people of the other "Civilized" Tribes are among the poorest people in America. Their little allotments have been subdivided and grown smaller. As they are sold the people move into friends' and neighbors' allotments, huddling there in absolute destitution.

During the drive to sever federal services in the 1950's the Choctaws were talked into agreeing to terminate the federal responsibilities. Over the last ten years they have waged a continual fight to postpone the time when they must surrender all lands, rights, and services. The condition of the people is so bad that only a massive crash program of development can save the tribe from its poverty. Yet in the ten years since termination was proposed the tribe and its members have even been denied the use of loan funds from the Interior Department which could be used to develop projects that would employ Choctaws.

There has been another side to the machinations of the United States government against the Indian tribes, however, and that was the unilateral action of the Congress. Paralleling treaty negotiations, throughout history statutes were continually passed by Congress to regulate Indian Affairs. Although a treaty would promise one thing, subsequent legislation, designed to expand the treaty provisions, often changed the agreements between tribe and federal government completely.

Continual infringement on treaty rights by statute rarely reached the ears of the tribesmen in time to remedy the situation either by further agreements or appeals to conscience. Some actions were outright thefts of land, such as the wholesale giveaway to railroads for construction purposes. Other detrimental laws were overtly philanthropic and seemed to reflect just dealings between the Congress and the tribes. But in all respects, the beneficial aspects of Congressional actions affecting Indian tribes have been so minute that they are irrelevant.

Congress has passed a number of important pieces of legisla-

tion which pertain to the relationships between the United States government and the various Indian tribes. Some of these stand out over the years as landmarks in the ever-changing federal policy.

Even prior to the Constitution, the Northwest Ordinance, passed by the Congress of the Articles of Confederation, outlined a lofty attitude and policy for dealing with Indian people:

> The utmost good faith shall always be observed towards the Indians; their land and property shall never be taken from them without their consent; and in the property, rights, and liberty, they never shall be invaded or disturbed, unless in just and lawful wars authorized by Congress; but laws founded in justice and humanity shall from time to time be made for preventing wrongs being done to them, and for preserving peace and friendship with them.

It was just a short time later that the Treaty with the Delawares, discussed above, was signed and the big push westward over the prostrate bodies of slaughtered Indians was begun.

Subsequent policies have generally referred to the policy of humanity and justice initially outlined by the Northwest Ordinance. Many a land steal has been covered up with the generalities of the Northwest Ordinance.

Certain influential white men knew quite early that the shores of the Great Lakes, particularly Lake Superior, contained immense deposits of copper and other minerals. And there was a desperate need for copper in early America. On April 16, 1800, a Joint Resolution was passed in Congress authorizing the President to determine whether Indian title to copper lands adjacent to Lake Superior was still valid and, if so, the terms on which Indian title could be extinguished.

In the Treaty of August 5, 1826, almost as if it were an afterthought, an article (III) stated:

> The Chippewa tribe grant to the government of the United States the right to search for, and carry away, any metals or minerals from any part of their country. But this grant is not to affect the title of the land, nor the existing jurisdiction over it.

The Chippewas, in the dark as to the importance of their mineral

wealth, signed the treaty. This was the first clear-cut case of fraudulent dealings on the part of Congress. Certainly no one could have accused the Congress of "utmost good faith."

Close examination of subsequent Congressional dealings shows a record of continued fraud covered over by pious statements of concern for their *wards.*

The basis for Congressional interference into the realm of Indian activities was originally the third clause in section 8 of Article I of the Constitution, which declared that Congress had the "power to regulate Commerce . . . with the Indian tribes. . . ." From this obscure phrase—which if we reread the early Delaware treaty was to provide the Delaware with modern utensils they needed—came the full-blown theory of the incompetency of the Indian, his wardship, and the plenary power of Congress to exercise its whim over Indian people.

The next important statute referring to the Indian people was the Act of March 3, 1819 (3 Stat 679), which was entitled "An act making provision for the civilization of the Indian tribes adjoining the frontier settlements." This act stipulated that:

> . . . for the purpose of providing against the further decline and final extinction of the Indian tribes adjoining the frontier settlements of the United States, and for introducing among them the habits and arts of civilization, the President of the United States shall be, and he is hereby authorized, in every case where he shall judge improvement in the habits and condition of such Indians practicable, and that the means of instruction can be introduced with their own consent, to employ capable persons of good moral character, to instruct them in the mode of agriculture suited to their situation . . .

In essence, although the treaties read that the United States would *never disturb* the tribes on the land they had reserved to themselves, Congress determined that it had the right to make Indians conform to their idea of civilization and outlined the great legislative attempt to make them into farmers.

Practically all subsequent legislation has revolved around the Congressional desire to make Indians into white farmers. Most laws passed to administer Indian lands and property have re-

flected the attitude that, since Indians have not become successful white farmers, it is perfectly correct to take their land away and give it to another who will conform to Congressional wishes.

One of the two most important laws passed in the last century was the Indian Trade and Intercourse Act of June 30, 1834 (4 Stat 729). This act concentrated mainly on the trade aspect of Indian Affairs and was supplemented by a companion act outlining the Bureau of Indian Affairs and its duties. From these two acts came the immense power of the Department of the Interior over the lives and property of the Indian people.

The other important law of the last century was the General Allotment Act, or the Dawes Act, passed in 1887 and amended in 1891, 1906, and 1910 until it included nearly every tribe in the country. The basic idea of the Allotment Act was to make the Indian conform to the social and economic structure of rural America by vesting him with private property.

If, it was thought, the Indian had his own piece of land, he would forsake his tribal ways and become just like the white homesteaders who were then flooding the unsettled areas of the western United States. Implicit in the ideology behind the law was the idea of the basic sameness of humanity. Just leaving tribal society was, to the originators of the law, comparable to achieving an equal status with whites.

But there was more behind the act than the simple desire to help the individual Indian. White settlers had been clamoring for Indian land. The Indian tribes controlled nearly 135 million acres. If, the argument went, that land were divided on a per capita basis of 160 acres per Indian, the Indians would have sufficient land to farm and the *surplus* would be available to white settlement.

So the Allotment Act was passed and the Indians were allowed to sell their land after a period of twenty-five years during which they were to acquire the management skills to handle the land. However, nothing was done to encourage them to acquire these skills and consequently much land was immediately leased to

non-Indians who swarmed into the former reservation areas.

By 1934 Indians had lost nearly 90 million acres through land sales, many of them fraudulent. The basic device for holding individual lands was the trust, under which an Indian was declared to be incompetent. Indians were encouraged to ask for their papers of competency, after which land was sold for a song by the untutored Indian who had never heard of buying and selling land by means of a paper.

Many Indians sold their land for a mere fraction of its value. Others received title to their land and lost it through tax sales. In general the policy was to encourage the sale of Indian lands, as it was believed that this process would hasten the integration of Indians into American society.

The churches strongly supported the Dawes Allotment Act as the best means available of Christianizing the tribes. Religion and private property were equated in the eyes of many churchmen. After all, these were the days when J. P. Morgan used to take entire trainloads to the Episcopal conventions and John D. Rockefeller had his Baptist advisor helping him distribute his wealth. Wealth was an index of sainthood.

Bishop William H. Hare, noted missionary bishop of the Episcopal Church, is said to have remarked that the Allotment Act would show whether the world or the church was more alert to its opportunity. In other words, it was to be a race between the stealers of men's land and the stealers of men's souls for two unrelated goals—90 million acres of land and the Christianizing of some of the feathered friends who lived on those lands.

It was, of course, no contest. The church came in a dead last. Indians were not magically turned into white, churchgoing farmers by their little plot of ground. Sharper white men than the missionaries, representing the Christians' traditional opponent, easily won the contest. And the American Indians were the losers. But at least they had the comfort of hearing the missionaries' sermons against greed.

Gone apparently was any concern to fulfill the articles of

hundreds of treaties guaranteeing the tribes free and undisturbed use of their remaining lands. Some of the treaties had been assured by the missionaries. The Indians had not, however, been given lifetime guarantees.

Perhaps the only bright spot in all of Indian-Congressional relations came at the beginning of the New Deal. Backed by a sympathetic President and drawn up by scholar John Collier—probably the greatest of all Indian commissioners—the Indian Reorganization Act was passed in 1934.

This act, known popularly as the Wheeler-Howard Act, provided for self-government of the reservations by the Indian residents. Written into the law was a prohibition on further allotment of Indian lands and provisions for land consolidation programs to be undertaken by the tribal councils in order to rebuild an adequate land base.

In many cases the Indian Bureau was authorized to buy land for landless Indians and to organize them as recognized tribal groups eligible for governmental services. Programs for rehabilitation were begun, Indians were given preference in hiring within the Bureau of Indian Affairs, and a revolving loan fund for economic development was created. Overall the IRA was a comprehensive piece of legislation which went far beyond previous efforts to develop tribal initiative and responsibility, but one provision was unfortunate. Once having voted down the acceptance of the provisions of the act, a reservation was forbidden from considering it again.

Unfortunately, Indian tribes were given only a short ten years under this act to bring themselves to an economic and social standard equal with their white neighbors. Following World War II the Congressional policy toward Indian self-government was to change radically. But that story deserves a special chapter in this book.

In looking back at the centuries of broken treaties, it is clear that the United States never intended to keep any of its promises. Like other areas of life, the federal government adapted its

policies to the expediency of the moment. When the crisis had passed, it promptly proceeded on its way without a backward glance at its treachery.

Indian people have become extremely wary of promises made by the federal government. The past has shown them that even the most innocent-looking proposal is often fraught with implications the sum total of which is loss of land.

Too often the attitude of the white man was, "Tell the Indians anything to keep them quiet. After they are settled down we can do what we want to do." Alvin Josephy brings this attitude out magnificently in his book *The Nez Perce Indians and the Opening of the Northwest.*

"What," people often ask, "did you expect to happen? After all, the continent had to be settled, didn't it?"

We always reply, "Did it?" And continue, "If it did, did it have to be settled in that way?" For if you consider it, the continent is now settled and yet uninhabitable in many places today.

There were many avenues open for the government besides wholesale theft. In Canada, for example, there are Indian reservations in every province. Indians have not had their basic governmental forms disturbed. They still operate with chiefs and general councils. Nor were they forced to remove themselves whenever and wherever the white man came. Nor did they have their lands allotted and then stolen piece by piece from under them.

It would have been fairly simple for the federal government to have provided a special legal status whereby Indian rights would have vested while keeping their original sovereignty and entitlements of self-government. There was no need for the government to abruptly change from treaty negotiations to a program of cultural destruction, as it did in 1819 with its Indian assimilation bill. And when the Five Civilized Tribes had adapted to a semi-white political structure the government could have supported the great experiment of the Cherokees instead of removing them to Oklahoma.

Even in the closing years of the last century, when the tribes

had by and large adapted from hunters to ranchers, the government could have kept its promises and left the tribes alone. There was no reason for it to allot the lands of the Choctaw. The United States had promised never to do so. Yet, in large measure, if there is Indian poverty today—and Indians rank lowest of any group in every conceivable statistic used to measure poverty—it is the fault of the United States government.

The betrayal of treaty promises has in this generation created a greater feeling of unity among Indian people than any other subject. There is not a single tribe that does not burn with resentment over the treatment it has received at the hands of an avowedly *Christian* nation. New incidents involving treaty rights daily remind Indian people that they were betrayed by a government which insists on keeping up the facade of maintaining its commitments in Vietnam.

The complicity of the churches too is just beginning to be recognized. After several hundred years of behind-the-scenes machinations, the attempt of the churches to appear relevant to the social needs of the 1960's is regarded as utter hypocrisy by many Indian people. If, they argue, the churches actually wanted justice, why haven't they said or done anything about Indian rights? Why do they continue to appear in bib-overalls at the Poor People's March? Why do they wait until a problem is nearly solved and then piously proclaim from the pulpits that they have discovered that the movement is really God's will?

Even today Indian rights are stuck in a legalistic limbo from which there is apparently no escape. When a tribe tries to get its rights defined it is politely shunted aside. Some tribes have gone to the Supreme Court to seek relief against the United States by claiming a violation of their rights as wards. They have been told in return that they are not wards but "dependent domestic nations." And when other tribes have sought relief claiming that they are dependent domestic nations, they have been told they are "wards of the government."

Under the laws and courts of the present there is no way for Indian people to get the federal government to admit they have

rights. The executive branch of the government crudely uses Indian lands as pawns in the great race to provide pork-barrel agencies with sufficient dam-building projects to keep them busy.

Until America begins to build a moral record in her dealings with the Indian people she should not try to fool the rest of the world about her intentions on other continents. America has always been a militantly imperialistic world power eagerly grasping for economic control over weaker nations.

The Indian wars of the past should rightly be regarded as the first foreign wars of American history. As the United States marched across this continent, it was creating an empire by wars of foreign conquest just as England and France were doing in India and Africa. Certainly the war with Mexico was imperialistic, no more or less than the wars against the Sioux, Apache, Utes, and Yakimas. In every case the goal was identical: land.

When the frontier was declared officially closed in 1890 it was only a short time before American imperialistic impulses drove this country into the Spanish-American War and the acquisition of America's Pacific island empire began. The tendency to continue imperialistic trends remained constant between the two world wars as this nation was involved in numerous banana wars in Central and South America.

There has not been a time since the founding of the republic when the motives of this country were innocent. Is it any wonder that other nations are extremely skeptical about its real motives in the world today?

When one considers American history in its imperialistic light, it becomes apparent that if morality is to be achieved in this country's relations with other nations a return to basic principles is in order. Definite commitments to fulfill extant treaty obligations to Indian tribes would be the first step toward introducing morality into American foreign policy.

Many things can immediately be done to begin to make amends for past transgressions. Passage of federal legislation acknowledging the rights of the Indian people as contained in the treaties can make the hunting and fishing rights of the Indians a reality.

Where land has been wrongfully taken—and there are few places where it has not been wrongfully taken—it can be restored by transferring land now held by the various governmental departments within reservation boundaries to the tribes involved. Additional land in the public domain can be added to smaller reservations, providing a viable land base for those Indian communities needing more land.

Eastern tribes not now receiving federal services can be recognized in a blanket law affirming their rights as existing communities and organized under the Indian Reorganization Act. Services can be made available to these communities on a contract basis and the tribes can be made self-sufficient.

Mythical generalities of what built this country and made it great must now give way to consideration of keeping contractual obligations due to the Indian people. Morality must begin where immorality began. Karl Mundt, in commenting on the passage of the Indian Claims Commission Bill in 1946, stated:

> . . . if any Indian tribe can prove that it has been unfairly and dishonorably dealt with by the United States it is entitled to recover. This ought to be an example for all the world to follow in its treatment of minorities.

The Indian Claims Commission opened a special commission for tribes that had been swindled in land transactions in the last century. But a great many cases have not been heard and a great many others which have been heard produced exceedingly harsh decisions against the tribes. In addition, eastern tribes were not allowed to press claims at all. And since the termination policy has been in effect, additional moral claims of tribes who were severely hurt by that policy have arisen.

The Indian Claims Commission is, or should be, merely the first step in a general policy of restitution for past betrayals. Present policy objectives should be oriented toward restitution of Indian communities with rights they enjoyed for centuries before the coming of the white man.

The world is indeed watching the behavior of the United States. Vietnam is merely a symptom of the basic lack of integrity

of the government, a side issue in comparison with the great domestic issues which must be faced—and justly faced—before this society destroys itself.

Cultural and economic imperialism must be relinquished. A new sense of moral values must be inculcated into the American blood stream. American society and the policies of the government must realistically face the moral problems created by the roughshod treatment of various segments of that society. The poverty program only begins to speak of this necessity, the Employment Act of 1946 only hinted in this direction. It is now time to jump fully into the problem and solve it once and for all.

Article 4

2005

By Eminent Domain or Some Other Name: A Tribal Perspective on Taking Land

Stacy L. Leeds

BY EMINENT DOMAIN OR SOME OTHER NAME: A TRIBAL PERSPECTIVE ON TAKING LAND

Stacy L. Leeds*

Private Property . . . is a Creature of Society, and is subject to the Calls of that Society, whenever its Necessities shall require it, even to its last Farthing.

Benjamin Franklin[1]

I. INTRODUCTION

Throughout the United States there is a backlash to recent eminent domain decisions.[2] People are dismayed their government has the power to force landowners to surrender their property so that a new owner can utilize the land for a different, arguably better use. This shockwave of vulnerability extends to landowners and legislatures from all political spectrums.[3] Moreover, it is hard to find a demographic group within the United States that is not outraged by recent eminent domain developments,[4] except American Indians.[5]

---

* Associate Professor of Law and Director, Tribal Law and Government Center, University of Kansas School of Law; Justice, Cherokee Nation Judicial Appeals Tribunal (Supreme Court). I would like to thank the University of Tulsa *Law Review* editors and staff for their hard work on this symposium issue. I would also like to extend my sincere gratitude to University of Kansas law students Mark Dodd, Benjamin Lowenthal, and William Reynolds for their diligent research assistance, and to the University of Kansas for continued support of faculty scholarship.

1. John F. Beggs, Student Author, *The Theoretical Foundations of the Takings Clause and the Utilization of Historical Conceptions of Property in the Ecological Age*, 6 Fordham Envtl. L.J. 867, 892 (1995) (citing Benjamin Franklin, *Queries and Remarks: Respecting Alterations in the Constitution of Pennsylvania*, in *The Writings of Benjamin Franklin* vol. 10, 59 (Albert Henry Smyth ed., Macmillan Co. 1907)).

2. Bruce Moyer, *Court's Decision Provokes Property Rights Backlash*, 52 Fed. Law. 10 (Sept. 2005).

3. *See id.* (describing a "firestorm of protest" by members of Congress and in state capitals across the country). Recently, House Representative Maxine Waters, a democrat from California remarked, "'The taking of private property for private use, in my estimation, is unconstitutional. It's un-American, and it's not to be tolerated. . . . This is not a partisan issue.'" Greg Simmons, *Bipartisan Support for Eminent Domain Reform*, http://www.foxnews.com/story/0,2933,169926,00.html (Sept. 20, 2005).

4. Many efforts to limit the reach of eminent domain have been initiated on the national, state, and local level. Silla Brush, *Real Angry Over Real Estate: Why a Recent Supreme Court Ruling Has Lots of Homeowners Hot Under the Collar*, U.S. News & World Rpt. 34 (Oct. 10, 2005). Nationally, the House of Representatives passed a nonbinding resolution criticizing the *Kelo v. City of New London*, 125 S. Ct. 2655 (2005), decision within a week of the ruling. *Brush, supra* (citing H.R. Res. 340, 109th Cong. (June 30, 2005)). The Senate has several proposed bills, including one by Texas Senator John Cornyn, that would limit federal funds to projects that use *Kelo*-like eminent domain for economic development projects. *Id.* (citing Sen. 1313, 109th Cong. (June 27, 2005)).

5. Others have made similar observations. Several postings to Internet web-boards and blogs make references to the wholesale takings of Indian lands as an irony to current eminent domain debates. For example, one website went as far as awarding a poetry prize for a poem entitled *Eminent Domain*, by John

For centuries, American Indians have seen their lands taken by federal and state governments without consent, and at times, without compensation.[6] Some Indian land takings have fallen squarely within the exercise of eminent domain powers,[7] but takings have routinely occurred under other theories that provide no legal remedy.[8] In both situations, the underlying rationale for the taking was the belief that Indians were not using the land as efficiently as another owner would.[9] In short, the "public good" necessitated the taking of land from the Indians, so the land could be redistributed to others who would make better use of the land. From these experiences, American Indians have long been confronted with the reality that no matter what legal interest one holds in property, those ownership interests are always subject to divestiture by the government, whether tribal, state, or federal.[10]

Parker. Creative-Poems, *Featured Poem Award*, http://www.creative-poems.com/poem.php?id=157905 (Aug. 14, 2005).

6. *E.g. Tee-Hit-Ton Indians v. U.S.*, 348 U.S. 272, 288–91 (1955) (holding unavailable compensation for lands where the United States did not recognize aboriginal title); *Sioux Tribe of Indians v. U.S.*, 316 U.S. 317, 331 (1942) (holding federal government owes no compensation for taking of lands that were set aside for Indians pursuant to an executive order); *Lone Wolf v. Hitchcock*, 187 U.S. 553, 567 (1903) (holding compensation for tribal government for lands allotted to individuals was a political question and unreviewable by the Supreme Court because Congress had plenary power to redistribute lands). *See also* Michael M. McPherson, Trustees of Hawaiian Affairs v. Yamasaki *and the Native Hawaiian Claim: Too Much of Nothing*, 21 Envtl. L. 453, 481 (1991) (noting Native Hawaiians received no compensation).

Even with treaty guarantees to the contrary, Indian lands were taken and not subject to review. The only recourse was to pursue compensation after the fact in the Court of Claims. Scott C. Hall, *The Indian Law Canons of Construction v. The* Chevron *Doctrine: Congressional Intent and the Unambiguous Answer to the Ambiguous Problem*, 37 Conn. L. Rev. 495, 508 (2005). The Indian Claims Commission Act of 1946 established a commission to adjudicate takings claims and allows tribes to seek compensation. 25 U.S.C. §§ 70–70v (2000). However, there is no remedy for return or exchange of lands. *Id.* Monetary compensation is the only remedy the United States allows. *Id.*

7. *See generally Cherokee Nation v. S. Kan. Ry. Co.*, 135 U.S. 641 (1890) (holding the federal government may exercise and delegate power of eminent domain over Cherokee fee simple lands within a Cherokee reservation and without tribal consent).

The Federal Power Act also authorizes eminent domain over Indian lands held in fee simple by an Indian tribe for purposes of utilities. 16 U.S.C. §§ 836, 836a (2000). *See Fed. Power Commn. v. Tuscarora Indian Nation*, 362 U.S. 99 (1960).

8. For a discussion of various theories for taking Indian land see *infra* pages 60–67.

9. Juan F. Perea, *A Brief History of Race and the U.S.-Mexican Border: Tracing the Trajectories of Conquest*, 51 UCLA L. Rev. 283, 292–93 (2003) (noting that in both the Mexican and Indian contexts, one rationale for dispossession of lands was the belief that Anglos could use the lands better and more productively); Judith V. Royster, *Mineral Development in Indian Country: The Evolution of Tribal Control Over Mineral Resources*, 29 Tulsa L.J. 541, 553 (1994) (noting that during allotment, Congress made policy decisions based on what they deemed was the most "efficient and wise use of Indian lands"); Dennis Wiedman, *The Miami Circle: Teacher of Respect for Nature, People, History, and Place*, 13 St. Thomas L. Rev. 269, 274 (2000) (noting one rationale for taking of Indian lands based on lack of use or the notion that the lands were empty).

10. While this article focuses primarily on federal action, there are many instances where state governments have targeted Indian lands for taking. *E.g. Cass County Jt. Water Resource Dist. v. 1.43 Acres of Land in Highland Township*, 643 N.W.2d 685, 687–89 (D.N.D. 2002) (upholding North Dakota eminent domain over fee lands owned by the Turtle Mountain Chippewa tribe); *see* Todd Miller, *Easements on Tribal Sovereignty*, 26 Am. Indian L. Rev. 105 (2001) (mentioning that state eminent domain powers can not be used to acquire lands held in trust by the federal govemment for the benefit of tribes or individual Indians); Robert B. Porter, *Building A New Longhouse: The Case for Government Reform within the Six Nations of the* Haudenosaunee, 46 Buff. L. Rev. 805, 873 (1998) (noting that beginning in 1971, New York acted in bad faith toward Indian land by eminent domain power, even though the power had long been denied by federal law; and that states cannot take Indian land (citing *Seneca Nation of Indians v. N.Y.*, 397 F. Supp. 685, 686 (W.D.N.Y. 1975) (holding the state had no power to apply state law to lands within Indian reservation))); Sheree R. Weisz, Student Author, *Constitutional Law–Federal Indian Law: The Erosion of Tribal Sovereignty*

There are interesting parallels to be drawn from the American Indian experience in land takings. This article reveals how federal actions have divested American Indians of vast land holdings using much of the same political and theoretical framework of today's eminent domain debate.[11] Noting that tribal governments, like their state and federal counterparts, have inherent sovereign powers, this article encourages tribes to exercise *their* eminent domain powers in order to reacquire and consolidate their land base. In conclusion, this article notes the mainstream backlash to eminent domain power has little to do with changes in the law. Eminent domain has, however, started affecting a different class of people.

II. EMINENT DOMAIN GENERALLY

Within the United States, the federal government has constitutional authority to seize private lands for public use provided the landowner is compensated.[12] The various states within the federal union also exercise the power of eminent domain pursuant to state constitutional provisions.[13]

The power of eminent domain can be traced back to Roman law,[14] and was a well-established concept long before the American Revolution.[15] But with the advent of the United States, there was a change in terms of how people viewed the power of the sovereign against the individual's right to property:[16] the expectation of individual rights to property increased significantly. Governmental seizure of individual property, even

---

as the Protection of the Nonintercourse Act Continues to be Redefined More Narrowly, 80 N.D. L. Rev. 205 (2004) (discussing state power of eminent domain of fee simple lands owned by tribes); *see also* Jessica A. Shoemaker, Student Author, *Like Snow in the Spring Time: Allotment, Fractionation, and the Indian Land Tenure Problem*, 2003 Wis. L. Rev. 729, 744–45 (2003) (discussing how the "continual taking of Indian lands under eminent domain" by both state and federal governments leads to a negative land base result even when there have been programs to increase tribal land bases through repurchase programs).

11. Tribal lands have been taken by eminent domain powers in several contexts. However, this article focuses on large-scale federal policies that have divested tribes of property on the basis of theories beyond eminent domain.

12. The Fifth Amendment of the U.S. Constitution provides "[no] private property be taken for public use, without just compensation." Eminent domain was recognized as an appropriate governmental power at common law. *See e.g. Kohl v. U.S.*, 91 U.S. 367, 372 (1875).

13. Some state constitutions explicitly grant the state the power of eminent domain. *E.g.* Cal. Const. art. I, § 19.

14. Timothy Sandefur, *A Natural Rights Perspective on Eminent Domain in California: A Rationale for Meaningful Judicial Scrutiny of "Public Use,"* 32 Sw. U. L. Rev. 569, 571–75, 571 n. 11 (2003) (noting that the public use limitation on governmental taking dates back to the Twelve Tables of Roman law: "No privileges, or statutes, shall be enacted in favor of private persons, to the injury of others contrary to the law common to all citizens, and which individuals, no matter of what rank, have a right to make use of." (internal quotation marks omitted)).

15. Matthew P. Harrington, *"Public Use" and the Original Understanding of the So-Called "Takings" Clause*, 53 Hastings L.J. 1245, 1252–53 (2002) (noting that prior to the American Revolution the power of eminent domain was well entrenched but was not limited by the public use doctrine).

16. With the emergence of the United States, the importance of individual property rights increased. *See* Robert Bejesky, *An Analytical Appraisal of Public Choice Value Shifts for Environmental Protection in the United States & Mexico*, 11 Ind. Intl. & Comp. L. Rev. 251, 264 (2001); J. Gordon Hylton, *Property Rights in John Marshall's Virginia: The Case of* Crenshaw and Crenshaw v. Slate River Company, 33 John Marshall L. Rev. 1175, 1176 (2000).

when compensated, would come to be viewed as "un-American,"[17] unless it was for a clear public use, such as a highway or a public park.

It is argued eminent domain powers, particularly the public use doctrine, have evolved in recent years. Some argue the public use limitation in the takings clause has been severely abused, with sovereigns having a newly recognized power to take private lands for redistribution to other private parties.[18] Critics suggest that present eminent domain powers are inconsistent both textually and ideologically with the framers' intent.[19]

Although the outcomes of recent court decisions might suggest an expansion of eminent domain powers, a review of prior cases reveals that the courts have historically deferred to the legislative and executive policy determinations in takings cases.[20] Very rarely have federal courts sided with landowners in takings cases.[21]

Condemnation of privately owned lands for uses such as water projects, roadways, parks and recreation areas, hospitals, and military bases are seldom challenged.[22] Once the government takes the land, there is no requirement that the government retain the right to exclude, or that citizens have an unqualified right to access the taken land.

Many of the first eminent domain cases involved a taking of land to make way for railroads.[23] In these cases, the federal government subsequently granted ownership of the taken lands to the railway corporation.[24] Critics of recent cases argue that the courts have taken the public use requirement almost out of existence by allowing private land to

17. Many Americans view property as a principled right. *See* Steve P. Calandrillo, *Eminent Domain Economics: Should "Just Compensation" Be Abolished, and Would "Takings Insurance" Work Instead?* 64 Ohio St. L.J. 451, 468 (2003).

18. *See e.g.* D. Benjamin Barros, *The Police Power and the Takings Clause*, 58 U. Miami L. Rev. 471, 522 (2004) (arguing the current state of takings law does not violate framers' intent).

19. *See e.g.* Nancy K. Kubasek, *Time to Return to a Higher Standard of Scrutiny in Defining Public Use*, 27 Rutgers L. Rec. 3 (2003) (arguing that framers' intent would not permit current state of takings law).

20. *See e.g. Hsiung v. City & County of Honolulu*, 378 F. Supp. 2d 1258, 1265 (D. Haw. 2005) ("In recent years, the Supreme Court has taken no action that would undermine this long standing authority. Rather, the Court's latest decisions regarding the power of eminent domain have only bolstered the 'longstanding policy of deference to legislative judgments in this field.'" (citing *Kelo*, 125 S. Ct. at 2663)); *HTK Mgt., L.L.C. v. Seattle Pop. Monorail Auth.*, 121 P.3d 1166, 1176 (Wash. 2005) ("Since the turn of the century, Washington courts have provided significant deference to legislative determinations of necessity in the context of eminent domain proceedings.").

21. One case representing the framers' intent that takings be limited to purely public uses is *Missouri Pacific Railway Company v. Nebraska*, 164 U.S. 403, 417 (1896) (holding that the taking of lands owned by a railroad was unconstitutional because the taking was considered a private function). The decision is frequently cited to suggest that courts have departed from the traditional interpretations of the takings clause. *See e.g. Hall v. City of Santa Barbara*, 797 F.2d 1493 (9th Cir. 1986); *State ex rel. Wabash Ry. Co. v. Pub. Serv. Commn. of Mo.*, 100 S.W.2d 522 (Mo. 1936); *St. v. Pub. Serv. Commn.*, 137 P. 1057 (Wash. 1914).

22. There are reasonable governmental interferences with property ownership to which most people agree. Property owners do not expect an absolute right to exclude. Police, firemen, and other governmental entities have a right to possess or use private property in certain circumstances. Moreover, when a legitimate public purpose for condemnation exists, most property owners do not expect to keep their homes. No matter how unpleasant it may be for the condemnee, few would expect to prevail in litigation that argues a property taken for a road, flood control measure, or hospital is based on illegitimate public purpose. For this reason, most takings claims are challenged on grounds of inadequate compensation.

23. *E.g. Cherokee Nation*, 135 U.S. at 642–43.

24. *E.g. Pacific Railroad Act*, Pub. L. No. 37-120, § 2, 12 Stat. 489 (1862) (providing for grants of land to the railroad companies).

be taken for the private economic benefit of others. This is hardly a new development in the law.[25]

When railroad companies became new owners of taken land there was little public outcry, perhaps because it happened in isolated instances and in remote areas. Other types of takings claims have also gone seemingly unnoticed by mainstream Americans, despite the large number of people that were impacted. One such category of takings that has failed to enrage mainstream Americans is the taking of lands considered slums or "blighted" areas.

Litigation of the "blight" cases began in the 1950s[26] and increased in number with the advent of urban renewal projects. Blight cases involve condemnation of land where the articulated public use is the removal of undesirable or unhealthy living conditions.[27] Yet, rarely are these cases initiated for the purpose of actually protecting the unfortunate residents from uninhabitable conditions or improving their standard of living. Instead, often private corporations, working in collaboration with state, federal, and local governments in urban renewal programs, are waiting in the wings to redevelop the land.[28]

By definition, "blight" is a highly subjective term which easily leads to expansive interpretations.[29] Condemnation of property may meet the public use requirement when it is taken for any number of reasons, including building dilapidation, deterioration, age, inadequate ventilation, population overcrowding, arrested economic development, traffic congestion; or where the area is conducive to ill health, juvenile delinquency, or high crime rates.[30]

In many states, condemnation proceedings may commence as soon as an urban renewal plan has been adopted through a local resolution declaring the need to acquire real property to execute the plan. Challenging these takings has proven difficult. Condemnation for the redevelopment of blighted areas has been repeatedly declared a sufficient public use to validate the taking, even though the condemned land ultimately goes to private entities.[31] The blight cases allow governments to take private land and redistribute that land to another private entity on the grounds that it is in the public's best interest. In many cases, these eminent domain actions have resulted in state-sanctioned

25. It is well recognized the sovereign may transfer private property to public ownership—such as for a road, hospital, or a military base. But it is equally well established that the sovereign may transfer private property to private parties, often common carriers, who make the property available for the public's use—such as with a railroad, a public utility, or a stadium.

26. *See Berman v. Parker*, 348 U.S. 26, 32 (1954). *Berman* is also cited by the *Kelo* Court; it deals with areas that were declared blighted and thus targeted for redevelopment. *Kelo*, 125 S. Ct. at 2663.

27. Ilya Somin, *Overcoming* Poletown: County of Wayne v. Hathcock, *Economic Development Takings, and the Future of Public Use*, 2004 Mich. St. L. Rev. 1005, 1034 (2004).

28. *See id.* at 1009–19 (discussing how Detroit and General Motors partnered to take land and create a new plant based on an economic development rationale).

29. *Id.* at 1034 (discussing the how the definition of blight has expanded).

30. These are merely examples of how subjective property conditions can be to constitute "blight." *See e.g. Oklahoma Urban Renewal Neighborhood Redevelopment Act*, Okla. Stat. Ann. tit. 11, §§ 38-101–38-123 (West 1994).

31. *See* Wendell E. Pritchett, *The "Public Menace" of Blight: Urban Renewal and the Private Uses of Eminent Domain*, 21 Yale L. & Policy Rev. 1 (2003).

redistribution of wealth and property rights.[32] Moreover, a disproportionate amount of communities of color and disadvantaged classes fall under statutory definitions of "blight."[33] As a result, the redistribution typically involves the taking of land belonging to the disadvantaged and transferring it to wealthier individuals and entities, such as private corporations. Only rarely does it work in reverse.

A rare exception, where the property interests of wealthier individuals were taken and redistributed to others, was seen in *Hawaii Housing Authority v. Midkiff*.[34] Through land reform legislation, the Hawaii legislature sought a reduction in high concentrations of land ownership as a way to address the state's sky-rocketing residential real estate market.[35] The law would potentially deprive large landholders, typically lands owned by a vast private trusts and estates, from maintaining long-term residential leases to much of their lands.[36] The legislation allowed leaseholders to petition a state agency to convert their leasehold interest to fee simple estates.[37] Under this process, lessees of the Bishop Estate, the largest private land owner in Hawaii, tried to avail themselves of the legislative conversion.[38] Litigation challenging the constitutionality of Hawaii's legislation followed.[39]

State action in *Midkiff* was challenged as nothing more than government seizure of private land for redistribution for the private use of another.[40] The United States Supreme Court upheld the taking, finding that the state's attempted reduction of land ownership concentration satisfied the public use requirement.[41]

Midkiff reinforced the judiciary's tradition of upholding takings, so long as the exercise of eminent domain is "rationally related"[42] to a public purpose.[43] The Court continued the precedent of deferring to the legislature to define public use.[44] State courts have been equally deferential to legislative determinations, and have mandated similar transactions where the new property owner is a private entity or individual.[45]

Although the *Midkiff* decision received scrutiny in the academic and legal community for arguably breaking new ground in public use jurisprudence,[46] there was

37. Until that point, the legislative act and the power of the Hawaii Housing Authority remained unused by the state for many years.

38. *Midkiff v. Tom*, 483 F. Supp. 62, 65 (D. Haw. 1979).

39. *Id.*

40. *Id.*

41. *Midkiff*, 467 U.S. at 244–45.

42. *Id.* at 241.

43. *Id.* at 242–45.

44. *Id.* at 230–31.

45. *See Hsiung*, 378 F. Supp. 2d 1258; *HTK Mgt., L.L.C.*, 121 P.3d 1166.

46. *See e.g.* Richard A. Epstein, *Takings: Private Property and the Power of Eminent Domain* 184 (Harv. U. Press 1990); Russell A. Brine, *Containing the Effect of* Hawaii Housing Authority v. Midkiff *on Takings for Private Industry*, 71 Cornell L. Rev. 428 (1986) (criticizing the *Midkiff* Court's "public purpose" interpretation).

no serious public outcry. Perhaps there was a lack of sympathy from mainstream Americans for the wealthy landowners of Hawaii. Likewise, in the blight cases, perhaps the average middle-class American failed to identify with the mostly low-income communities of color that had been displaced.

The public reaction to the Supreme Court's recent decision in *Kelo v. City of New London*[47] is a different matter.[48] The petitioners in *Kelo* were firmly rooted in a "regular" neighborhood. One petitioner was born in her home back in 1918 and had lived in New London her entire life.[49] The targeted neighborhood was part of an urban renewal plan, but this neighborhood differed from the typical blight situation because it was neither run-down nor crime ridden.[50]

Nevertheless, the community in *Kelo* was considered a "distressed municipality"[51] based on its economic condition and high unemployment rate.[52] A private non-profit entity began assisting the local government with economic development planning, and Pfizer Incorporated announced plans to build a research facility in the area, which would

47. 125 S. Ct. 2655 (2005).

48. Many states have proposed legislation or initiated studies on restrictions to their eminent domain statutes with Alabama, Delaware, and Texas legislators having already passed bills. Brush, *supra* n. 4, at 34. Responses vary greatly between states, and even within the same state. For example, Oklahoma statutes limit condemnation of private property for actual use by the public for projects like roads, schools, and parks. Dan Batchelor, *No Need to Fix What Isn't Broken*, The Oklahoman 13A (Oklahoma City, Okla.) (Sept. 30, 2005). It also includes condemnation for utilities that provide public services and for removing blight when property conditions are harmful to the public. *Id.* This has caused some to say that *Kelo* has no effect in Oklahoma because its statutes already restrict condemnation for economic development. *See id.*; *After* Kelo*: Drive Targets 'Takings' Decision*, The Oklahoman 10A (Oklahoma City, Okla.) (Sept. 22, 2005). But this has not stopped a petition drive to change the state constitution as well as several task forces that are studying the ruling to see if future legislative action is necessary. *Id.*

Similarly, in 2004 the Michigan Supreme Court held the use of eminent domain, like that used in *Kelo*, is not constitutional in their state. *Property: Lawmakers, Voters Should Adopt Amendment to Limit Takings*, Lancing St. J. 8A (Sept. 22, 2005) [hereinafter *Property*]. At least seven other states had laws in opposition to *Kelo* when it was decided. *Lawmakers: Trump* Kelo*—State, Federal Laws Needed to Preserve Property Rights*, Worcester Telegram & Gaz. A10 (Sept. 23, 2005). In Michigan, like many other states, the legislature is considering a constitutional amendment despite *Kelo* having no effect in the state, because many do not want to rely on a Court ruling that can be overturned. *See Property*, *supra*. They want a constitutional amendment that is not easily overturned. *Id.*

Ohio legislation is possibly the most creative. Senate Bill 167 would put a two-year moratorium on state agencies and local governments' ability to use eminent domain. *News Briefs: Eminent Domain Bill Vote Tuesday*, Cincinnati Enquirer 1C (Oct. 2, 2005). The bill also creates a task force to study what changes should be made in the future. *Id.*

Local governments in Connecticut have taken two stark positions. The Town Council in Trumbull introduced a resolution modeled after one already passed in Milford that would require a two-thirds majority vote of the Council for the use of eminent domain for public projects including new schools or roads and never for another's private use or development. Bill Cummings, *Protecting Land Often Tough Fight: Recent Ruling Indicates Courts Favoring Seizure*, Connecticut Post A1 (Oct. 2, 2005). But towns like Bridgeport and Stamford support *Kelo*'s use of eminent domain, arguing it is the only way to acquire land for redevelopment in urban areas, an issue that rural or suburban areas like Milford do not have to deal with since they do not lack available property. *Id.*

The City Council of Encinitas, California, is considering a proposal that any transfer of private property over to another private individual using eminent domain must pass a two-thirds vote in a regular election. Amitai Etzoni, *States to the Rescue*, 181 N.J. L.J. 27 (Sept. 26, 2005).

49. *Kelo*, 125 S. Ct. at 2660 (referring to Petitioner Wilhelmina Dery).

50. *Id.* at 2659–60. New London did not claim that the petitioners' well-maintained homes are the source of any social harm. *See id.* at 2660.

51. *Id.* at 2658 (internal quotation marks omitted).

52. *Id.* 2658–59.

require more land.[53] When the landowners refused voluntarily to sell their homes, condemnations proceedings were initiated.[54] The U.S. Supreme Court upheld the taking as a valid public use of promoting economic development.[55]

An unparalleled public outrage followed the Court's decision. The mainstream American public sympathized with the petitioners because they could identify with them. If the government can force the sale of,[56] or simply seize this neighborhood, nobody's home is safe.[57]

The *Kelo* decision is not, as many commentators have suggested, a departure from precedent in eminent domain law. Instead, it affirms a long history of judicial deference to the policy decisions of state and federal legislatures. Perhaps *Kelo* is most important because it extends the same feelings of vulnerability to mainstream America that have long permeated other groups of people. Perhaps the expectancy of private property owners has likely been misplaced all along. When resources are limited, federal and state governments have always determined one land use to be superior to another. These policy decisions have long resulted in taking of land from the inefficient use, followed by transfers of property interests, to the most efficient user.

Now that land resources in urban and suburban neighborhoods are depleting, mainstream Americans are finally being affected. Where was the outrage when American Indian lands were taken to make way for new settlers, or when inner-city apartment buildings were taken for office buildings and parking garages?

Is it that the perceived abundance of lands in the United States has given a false sense of security to mainstream American landowners? What if the expectations of individual property ownership, which are rooted deeply in the American gestalt, have been flawed from the start? Maybe the fee simple owner should have always expected that their land could be taken away to make way for a better use.

III. PROPERTY LAW MYTHS: EXPLAINING THE "UN-AMERICAN" TAKING TO THE LANDLESS INDIAN

Property rights debates invoke strong passions from all perspectives. But the present debate, and accompanying resistance against eminent domain powers, is largely an outgrowth of commonly held myths about property law within the United States. Present-day rhetoric tells us that it is frankly "un-American" for the government to take private property from one person and redistribute the land to another. One principle that

53. *Kelo*, 125 S. Ct. at 2659.

54. *Id.* at 2660.

55. *Id.* at 2668.

56. The most common avenue for "taking" land is when the government practically forces a property owner to sell their lands with the threat of condemnation. *Taking Land: Compulsory Purchase and Regulation in Asian-Pacific Countries* 349–75, 349 (Tsuyoshi Kotaka & David L. Callies eds., U. Haw. Press 2002) ("The use of *compulsory* purchase of private land is common throughout national, state, and local government jurisdictions in the United States." (emphasis added)) [hereinafter *Taking Land*].

57. Landowners feel vulnerable after the *Kelo* decision because it conflicts with their expectations about their own property. The public use requirement's basic conflict is between protecting private property rights while ensuring that all property be used in a manner most consistent with the public good. Intertwined in the conflict is what persons expect from their ownership rights. After the *Kelo* decision, many property owners do not know what to reasonably expect in terms of governmental interference with their property rights.

allegedly distinguishes the United States from the rest of the world is the high priority placed on individual rights, the most sacred of which are property rights.[58]

The irony of this story is that it is told, and whole-heartedly believed, by the very people whose individual ownership interests necessarily originated from the dispossession of another land owner, the American Indian. The history of federal Indian policy is replete with examples of land taken from one owner and redistributed to another who will presumably make better use of the land.[59]

In some areas of the United States, every single tract of land was previously owned, less than a century ago, by a tribal government or individual tribal citizen.[60] The reason these lands are now owned by non-Indians is simple: the United States took the lands from the Indians and redistributed them to non-Indians. The present owners, resting on a very short chain of title, are often the same people who profess the "un-Americanism" of current takings law.[61]

While takings of Indian land are innumerable and immeasurable, the following section will detail four examples of federal action involving all three branches of the government that lead to the dispossession of Indian lands to make way of non-Indian ownership. The similarities between these actions and the present day eminent domain debate are stunning. Each scenario involves (1) a governmental taking of property interest, (2) without the consent of the owner, (3) on the basis that the present owner is not using the land efficiently, followed by (4) a redistribution of lands to a private party that will put the land to a presumptively better use.

A. Doctrine of Discovery

When Europeans arrived in the Western hemisphere they discovered a pre-existing property owner.[62] Although Europeans viewed Indians as inferior non-Christian

59. *See infra* pages 60–67 (discussing the takings of Indian land under federal law).

60. For example, the eastern half of Oklahoma, including the Tulsa metropolitan area was owned in fee simple by one of five tribes prior to statehood. The Five Tribes, Cherokee, Chickasaw, Seminole, Creek, and Choctaw, received fee patents to the land in Indian Territory that eventually became eastern Oklahoma. *See Choctaw Nation v. Okla.*, 397 U.S. 620, 634–35 (1970). The tribal lands of these tribes were eventually allotted pursuant to tribally specific allotment agreements. *See e.g. Agreement with the Choctaw and Chickasaw* (July 1, 1902), 32 Stat. 641. Individual land ownership was only possible because of the allotment process, which the tribes resisted to no avail. Tribes were opposed to allotment and initially refused to negotiate an allotment agreement with the United States. Angie Debo, *And Still the Waters Run: The Betrayal of the Five Civilized Tribes* 32–35 (Princeton U. Press 1991). Only after allotment was complete could lands be alienated to non-Indians. Title searches in Eastern Oklahoma reveal a chain of title back to one of the Five Tribes following the allotment agreements. D. Faith Orlowski & Robbie Emery Burke, *Oklahoma Indian Titles*, 29 Tulsa L.J. 361, 362–67 (1993).

61. In December 2005, a citizen's group called "Oklahomans in Action" collected 170,000 signatures from Oklahomans who want to reign in the state government's eminent domain powers. Associated Press, *Petition Filed to Reign in Government Right to Eminent Domain*, The Oklahoman (Oklahoma City, Okla.) (Dec. 12, 2005) (available at http://www.kctv.com/Global/story.asp?S=4270730). In light of the circumstances surrounding the Five Tribes, *see supra* n. 60, these homeowners also derive their title from lands taken away from the tribes during the allotment process.

62. *See Johnson v. M'Intosh*, 21 U.S. 543, 574 (1823) ("[Indians] were admitted to be the rightful occupants of the soil, with a legal as well as just claim to retain possession of it, and to use it according to their own discretion.").

beings,[63] international law recognized that Indians had property interests that could not simply be ignored.[64] International law's "discovery doctrine"[65] governed the relations between European powers, and allowed them to recognize and acquire Indian lands.[66] Lands could either be purchased, or acquired, as the spoils of a "just war."[67] However, it was impermissible, under international law, for a European power to simply declare ownership over Indian lands without the consent or knowledge of the tribe.[68]

Moreover, early treaties between European powers and Indian tribes reflected that the Indians owned the land.[69] European powers were grantees who acquired their property interest through treaty negations in exchange for valuable consideration.[70] The very terms of these treaties recognized that the Indians, as the grantor, had the power to cede, transfer, or convey their lands.[71]

When one European power succeeded a previous sovereign, as did the United States after the American Revolution, title or ownership to all lands within the boundaries claimed did not automatically pass to the new sovereign.[72] To the contrary, a successor-in-interest sovereign merely obtained the right, to the exclusion of other European powers, to purchase or otherwise acquire lands from the Indians.[73] Yet, the doctrine of discovery merely governed the relationships between competing European sovereigns.[74]

The United States operated under this international approach early on. The new United States recognized Indian ownership of lands, even entering into treaties to obtain

66. *See generally id.* at § 1.02[1] (discussing the evolution of international law).

67. *Id.* at 16 ("In the 1960s, the Crown affirmed that land could not be claimed without Indian consent or after a just war against them." (footnote omitted)).

68. *Id.* at 14. Principles of Victoria continue to dominate discourse, *id.*:

> (1) that Indian peoples had both property rights and the power of a sovereign in their land; (2) that Indian lands could only be acquired with tribal consent or after a just war against them; and (3) that acquisition of Indian lands was solely a governmental matter, not to be left to individual colonists.

69. For example, the European powers did not simply declare themselves owners of the lands. They negotiated land transactions with tribal leaders. In the *Land Grant from the Ottawa and Chippewa of May 15, 1786*, the tribe conveyed lands to the British crown. Vine Deloria, Jr. & Raymond J. DeMallie, *Documents of American Indian Diplomacy: Treaties, Agreements, and Conventions, 1775–1979* vol. 1, 119–20 (U. Okla. Press 1999).

70. S. James Anaya & Robert A. Williams, Jr., *The Protection of Indigenous Peoples' Rights over Lands and Natural Resources Under the Inter-American Human Rights System*, 14 Harv. Human Rights J. 33, 68 (2001) ("Through the practice of treaty-making, the United States recognized Indian land and resource rights in traditional lands.").

71. In the *Land Grant from the Ottawa and Chippewa of May 15, 1786*, the Indian Chiefs, with consent of their nations, convey lands to European powers using the following language: "given, granted, enfeoffed, alienated & confirmed & by these Presents do give, grant & enfeoff, alien & confirm unto His Majesty George the Third, King of Great Britain, France & Ireland . . . a certain tract or parcel of Land . . . ." Deloria, Jr. & DeMallie, *supra* n. 69, at 119. This is the same type of language used to convey property interest in deeds.

72. *See Cohen's Handbook of Federal Indian Law*, *supra* n. 65 at 970–71.

73. *Id.*

74. *Id.*

Indian permission for federal troops to cross Indian lands.[75] Other treaties involved the outright purchase of lands from the tribes.[76]

Eventually, ownership conflicts arose over lands that were previously acquired from the Indian tribes. In *Johnson v. M'Intosh*,[77] a group claimed ownership in lands that were originally purchased directly from an Indian tribe.[78] The United States had subsequently acquired the same lands from the same tribe via an armistice treaty.[79] The individual's property interest clearly preceded the interest acquired by the United States.[80]

When asked to determine the status of the disputed land, the U.S. Supreme Court transformed, and ultimately diminished the property interests of all Indian tribes. Rather than recognizing that tribes, as the original owners of the lands, had the power to grant fee simple title to an individual or another sovereign, the Court simply reclassified the tribe's original property interest. The Court ruled the only property interest held by tribes was a right of occupancy, which was subject to extinguishment by the federal government only.[81]

The Court's action, though not an exercise of eminent domain, nonetheless constitutes a taking of a property interest. By judicial action, the federal government took a property interest away from the original owner by simply declaring that the original owner never held absolute title in the first place.[82] The Court never mentioned that both grantees, the individuals and the United States, clearly thought the Indian grantors had the full power to convey title. Simply put, the Court refused to recognize that the tribe ever owned a full property interest.

The Court's decision in *M'Intosh*, while devastating to Indians, also violated international law.[83] To justify the departure from precedent, the Court rationalized the

75. *E.g. Treaty with the Delawares, 1778* (Sept. 17, 1778), 7 Stat. 13. In Article III of the Treaty, the Delaware Indians promised to allow American troops Delaware lands during the American Revolution. *Id.*

76. *E.g. Treaty with the Creeks* (Aug. 7, 1790), 7 Stat. 35. In Article IV of the Treaty, the land boundaries to be purchased are set out along with annual payments for the tribe to "release, quit claim, relinquish and cede, all the land" in a particular area. *Id.*

77. 21 U.S. 543 (1823).

78. *Id.* at 543.

79. *Id.* at 562–63.

80. *Id.* at 562.

81. *Id.* at 562–63. From the federal government's perspective, extinguishment of Indian title does not constitute eminent domain. *See Shoshone Tribe of Indians v. U.S.*, 299 U.S. 476 (1937) (involving tribal suit to recover damages for appropriation of lands where the United States took lands for settlement of another Indian tribe). In *Shoshone Tribe of Indians*, the Shoshones argued the jurisdictional act, creating a court of claims, is an exercise of eminent domain based on the language that the final decree of the court "shall be in full settlement of all damages, if any, committed by the Government of the United States and shall annul and cancel all claim, right, and title of the Shoshone Indians in and to such money, lands, or other property." *Id.* at 493 (internal quotation marks omitted). The Court stated that it is not eminent domain, because it does not require the Shoshone to sue at all. *Id.* Moreover, the failure to sue or prosecute the suit, leaves liabilities as they were before the act was passed. *Id.* "The sovereign power is not exercised to extinguished titles or other interests against the will of tribal occupants by force of eminent domain." *Id.*

82. In doing so, the Supreme Court recognized its own power to take Indian property interests without just compensation by refusing to recognize the land belonged to Indians. *See* Rachel San Kronowitz et al., Student Authors, *Toward Consent and Cooperation: Reconsidering the Political Status of Indian Nations*, 22 Harv. Civ. Rights-Civ. Libs. L. Rev. 507, 534 (1987).

decision on the myth that Indians did not use the land efficiently and should therefore not be permitted to own the land. Justice Marshall wrote:

> We will not enter into the controversy, whether agriculturists, merchants, and manufacturers, have a right, on abstract principles, to expel hunters from the territory they possess, or to contract their limits.
>
> . . .
>
> But the tribes of Indians inhabiting this country were fierce savages, . . . whose subsistence was drawn chiefly from the forest. To leave them in possession of their country, was to leave the country a wilderness.[84]

Several scholars have pointed out that Justice Marshall's stereotypical view of all Indian land uses, and all Indians, is not supported by the evidence.[85] Many tribes, particularly the eastern tribes that would have had the most contact with colonial United States, were landed agrarian societies with elaborate property law systems.[86]

Nonetheless, the Court's perception, whether disingenuous or not, that Indians' land uses were less efficient and therefore inferior to non-Indians' land uses, served as partial justification for dispossession. *M'Intosh* paved the way for westward expansion by making it easier for the federal government to acquire Indian lands and redistribute those lands to non-Indian settlers. "Indian title" was unilaterally diminished by judicial interpretation to nothing more than a right of occupancy, which could be extinguished by the federal government without tribal consent.[87] Therefore, the chain of title for most lands in the United States begins with the extinguishment of Indian title, followed by subsequent redistribution from the federal government to an individual non-Indian.

B. Indian Removal

Although original Indian title after *M'Intosh* was considered merely a right of occupancy, full Indian ownership in lands was affirmatively recognized by the federal government in many treaties.[88] When lands guaranteed by treaty were subsequently taken by the federal government, tribes were entitled to compensation based on the value of the land at the time of the taking.[89]

That tribes received just compensation in some instances does not soften the effect, from the tribal perspective, of repeated actions by the federal government to invoke a

Rev. 1559, 1573–74 (2001) (describing Indian property systems in New England recognizing exclusive rights in land and discussing agricultural uses). The Iroquois tribes, which had a long history of contact with colonial Americans, "long recognized exclusive property rights in agricultural fields and homes." *Id.* at 1578.

87. *See M'Intosh*, 21 U.S. 543 (interpreting the nature of Indian property rights as a right of occupancy, but not absolute title).

88. For example, recognized title was acquired in the Treaty with the Sioux Indians, (Apr. 29, 1868), 15 Stat. 635, at Fort Laramie.

89. In contemporary takings claims, market value at the time of the taking, plus interest, is the preferred method of compensation. *See U.S. v. Sioux Nation of Indians*, 448 U.S. 371 (1980).

large scale compulsory purchase system[90] for the purpose of removing Indians from lands wanted for non-Indian settlement.[91]

The most common story of dispossession of Indian lands is likely the Cherokee Trail of Tears, a forced removal of the Cherokee people from their lands in the southeastern United States to lands within present-day northeastern Oklahoma.[92] But the Cherokee story is one of literally thousands of stories of tribes being relocated to new lands to make way for non-Indian settlements.[93]

The Indian Removal Act of 1830[94] codified the federal policy of relocating Indians to less desirable lands in the west to make way for non-Indian settlement. Making the case for Indian removal, President Andrew Jackson noted that non-Indians had long pressured tribes to retreat to other lands.[95] President Jackson promised this type of dispossession would not happen again:

> The pledge of the United States has been given by Congress that the country destined for the residence of this people shall be forever "secured and guaranteed to them." A country west of Missouri and Arkansas has been assigned to them, into which the white settlements are not to be pushed. . . . A barrier has thus been raised for their protection against the encroachment of our citizens.[96]

Once Indian removal became federal policy, it was simply not an option for tribes to retain their homelands. Instead, tribes could voluntarily sell their land to the federal government via treaty or be forcibly removed without compensation.[97]

In this context, tribes faced a similar decision as the landowners in *Kelo*. They could voluntarily accept the offers made for purchase of their lands, or the lands would be taken by the government. The difference of course, is that there were no judicial remedies available to the tribes should they decline the offer of purchase. The federal Indian removal policy was fortified by the military's physical seizure of homes and physical ouster of individual objectors.[98]

C. *Allotment*

After the tribes' forced relocation to new lands, new treaties once again recognized Indian property ownership in the lands.[99] Typically, the tribal government was recognized as being the beneficial owner, sometimes in fee simple absolute.[100] The tribal government controlled the land use of individual tribal citizens, and internal property transactions were governed by tribal law.[101]

Many tribes held their lands in common in a contiguous land base where non-Indian ownership of lands was prohibited.[102] It was the preference of the federal government that the tribal government, not individual Indians, owned the land.[103] If further land cessions were acquired from the Indians, it was much easier to have a single transaction with the tribal government, than to recognize, as a matter of federal law, that individual Indians had property rights.[104] Moreover, where tribal law unequivocally recognized and protected individual property interests, the federal government ignored them.[105] In a few short decades, the federal government began making deals with tribal governments for further land cessions.[106] Many of the negotiations led to land cessions by one tribe to make room for the forced relocation of yet another tribe.[107]

The continued need for Indian land for non-Indian settlement soon necessitated a new federal Indian policy. The new federal policy was set forth in the General Allotment Act of 1887.[108] One of the reasons for the new policy was, once again, the inefficiency of Indian land use. Indians were viewed as making inefficient use of their land because they allegedly did not promote or permit individual ownership of land. Like Justice Marshall's stereotypical commentary on Indian land use in *M'Intosh*, allotment's myth of common ownership has been refuted by many scholars.[109] Even

tribes in areas such as the Great Plains and the Pacific Northwest, who primarily relied on hunting and fishing economies, recognized individual property rights.[110] Tribal recognition of individual property rights became even more entrenched as their land became scarce within the confines of small reservation boundaries.[111]

The proponents of the allotment thought it was in the best interest of the tribes to abandon all forms of common ownership in favor of individual property rights.[112] It was believed, or at least stated, that common tribal ownership was stagnating any chance for economic or social development in Indian country.[113]

The allotment policy was firmly rooted in the notion that farming and other agricultural pursuits were the best uses for land.[114] Common lands should be divided into individual parcels so the individual Indian could become a farmer with the incentive to work harder and make the most profit from the land.[115] The policy, of course, ignored that many individual Indians had been farmers for many generations and that those Indian agriculturalists held individual title, under tribal law, to lands they had already improved.[116]

The federal government ordered all tribal lands to be allotted to individual Indians, with or without the consent of the tribes or the individual Indians.[117] In order to effectuate the transaction, the federal government typically took lands out of the ownership of the tribal government and redistributed those lands as the United States saw fit. As a procedural matter, this transaction was sometimes completed by forcing the tribal government to deed the lands directly to individual Indians,[118] and in these instances, the United States, as the middleman, was not a party to the actual conveyance.[119]

The tribal governments were never compensated for the loss of ownership, even when the transactions violated express treaty guarantees. The federal action of allotting lands without tribal consent, and in express violation of treaty guarantees, was unsuccessfully challenged in the federal courts. In *Lone Wolf v. Hitchcock*,[120] the Court upheld the authority of Congress to allot lands without tribal consent, even if the action

118. Allotment was often effectuated pursuant to an allotment agreement with a particular tribe, but the agreements do not represent the willing consent of the tribes. Tribes vehemently opposed allotment and only participated in allotment agreements to exercise some control over a process they could not stop.

119. The Cherokee Nation allotment deeds are from the Cherokee Nation to the individual. The United States is not part of the chain of title. The 1902 Agreement mentions the "Secretary of the Interior shall furnish the principal chief with blank patents" for the conveyances. Pub. L. No. 57-241, § 58, 32 Stat. 716 (1902).

120. 187 U.S. 553 (1903). *See also Cherokee Nation v. Hitchcock*, 187 U.S. 294 (1902) (holding the federal government has full administrative power of tribal lands, including the power to change the status of the land).

violated treaty provisions.[121] Further, the tribal governments were not entitled to compensation because the transaction was viewed not as a taking, but as an appropriate exercise of federal administrative power of tribal property,[122] even when the tribe owned the lands in fee simple absolute.

> In effect, the action of Congress now complained of was but an exercise of such power, a mere change in the form of investment of Indian tribal property, the property of those who . . . were in substantial effect the wards of the government. We must presume that Congress acted in perfect good faith in the dealings with the Indians . . . and that the legislative branch of the government exercised its best judgment in the premises.[123]

The allotment of tribal lands eventually led to the loss of most of the land that was still under tribal control at the end of the late nineteenth century. Ninety percent of the land owned by Indians at the time of European contact had already been taken before the allotment process ever began.[124]

The loss of land continued, and rapidly increased, following allotment.[125] One reason for rapid loss of land is that once the lands were parceled out to individual Indians, those lands were no longer under the watchful protection of either the federal government or the tribal government. Individual lands were freely alienable and could be acquired by state eminent domain, or by adverse possession.[126] The lands became subject to state debtor-creditor laws and forced sales for failure to pay state taxes.[127] Prior to allotment, only the federal government could acquire Indian lands.[128] After allotment, Indian lands could be acquired through private transactions like any other piece of land. The land transactions that followed almost always resulted in the land passing, once and for all, to non-Indians.[129]

D. Surplus Lands

As part of the allotment process, tribal lands were divided into individual parcels and conveyed to individual Indians. If there were any remaining lands within a tribe's territory after the allotments were redistributed to individual tribal citizens, the "surplus" lands were deeded to white settlers as homesteads.[130] These lands were deemed "surplus" because it was presumed the tribe did not need the land, or implicitly, that the tribe would not make good use of the lands. If a future tribal use for the lands could be

contemplated, there were other people who could make better uses of the land: the white settlers who the federal government had previously promised to keep away from Indian land.

White homesteaders acquired sixty-million acres of the Indian land through this federally sanctioned program.[131] Although tribes received some compensation for the surplus lands, their consent was irrelevant.[132] The tribes were required to cede their lands to the United States, the surplus lands were typically returned to the public domain, and homestead deeds to non-Indian private landowners followed.[133]

The redistribution of surplus lands provides the best analogy from the many examples in federal Indian law to the current eminent domain debate in light of *Kelo*. The surplus lands example clearly involves the governmental taking of property over the landowner's objection for the purpose of redistributing those lands to a private party. In the *Kelo* context, the legislative determination deemed commercial and economic development land use as superior to individual residential property. The surplus lands, though a less deliberative process, presumed non-Indian settlement would lead to more efficient land use than continued Indian ownership.

IV. THE LEGACY OF ALLOTMENT

Today, the allotted lands that remain under Indian control are highly fractionated with multiple co-owners sharing the same parcel of land deeded to a common ancestor.[134] The allotment process, that provided for disposal of surplus lands did not provide for subsequent generations: "The lands were not, of course, surplus. The formula used—160 acres for the head of the family, eighty acres for older children and wives, and forty acres for minor children, did not look even five years down the road to the future of the tribe."[135] Conventional wisdom presumed that allotment would be the end of the Indian problem, and there would eventually be no more Indians or Indian tribes.[136] The allotment process would prepare the Indians for ultimate United States citizenship and full inclusion into the American melting pot.[137] When that did not happen, the practical problems with allotment were quickly revealed, and those problems are exasperated with each passing generation. "If an adult man were capable of supporting his family on 160 acres, did that mean that his eighteen-year-old son could do so on eighty acres, and a decade later his twelve-year-old, now twenty-two, on forty

134. *See Hodel v. Irving*, 481 U.S. 704, 713 (1987).

135. Vine Deloria, Jr., *Reserving to Themselves: Treaties and the Powers of Indian Tribes*, 38 Ariz. L. Rev. 963, 978 (1996).

136. Some allotment acts even attempted to dissolve the tribal govemment or certain branches within the tribal government. *E.g.* Pub. L. No. 56-676, § 46, 31 Stat. 861 (1901) ("The tribal government of the Creek Nation shall not continue longer than March fourth, nineteen hundred and six, subject to such further legislation as Congress may deem proper.").

137. United States citizenship and inclusion was tied to the Indian's acceptance of allotted lands. Allotment meant that tribal members would lose their tribal citizenship and become citizens of the United States. Prucha, *supra* n. 91, at 260.

acres?"[138] When an original allottee dies, their property interest will pass, in intestate succession,[139] equally to all their children. With each generation, the number of co-owners increases, yet the tribal land base can never expand because it is locked into a finite number of parcels. As the number of co-owners increase, the property interest of each co-owner is diminished, and the more difficult it becomes to make efficient use of the land.[140]

Congress has recognized that highly fractionated allotments preclude any meaningful economic development in Indian country.[141] The allotment process that was premised on maximizing the efficiency of Indian land use has rendered most Indian land useless. There are multiple examples that illustrate the problem of fractionated ownership in Indian country, but the most famous description follows:

> Tract 1305 is 40 acres and produces $1,080 in income annually. It is valued at $8,000. It has 439 owners, one-third of whom receive less than $.05 in annual rent and two-thirds of whom receive less than $1. . . . The common denominator used to compute fractional interests in the property is 3,394,923,840,000. The smallest heir receives $.01 every 177 years. . . . The administrative costs of handling this tract are estimated by the Bureau of Indian Affairs at $17,560 annually.[142]

In attempt redress this legacy of allotment, Congress passed the Indian Lands Consolidation Act ("ILCA"),[143] which included a forced escheat provision where small fractional property interest, such as the example above, would revert to the tribal government.[144] The forced escheat provision only applied to lands that had an economic yield of less than one-hundred dollars per year.[145]

When challenged by individual Indian property owners, the U.S. Supreme Court struck down the ILCA as an unconstitutional taking of individual property without just compensation.[146] The problem with the ILCA was not a lack of public use, but a lack of compensation for property interests taken.

In response, Congress amended the ILCA by extending the time period over which economic viability of the subject lands would be gauged.[147] Congress's second pass at the ILCA was stricken by the Court on the same grounds.[148] Another amendment to the ILCA has now been enacted in hopes of reducing fractionated property interests.[149]

149. *See* Pub. L. No. 102-238, § 3, 105 Stat. 1908, 1908–09 (1991).

The ILCA sought to take some property interest and redistribute those lands back to the tribal government, so that tribal lands could be consolidated towards increased efficiency. Rather than have the federal government pass this type of law for redistribution of land, perhaps an exercise of tribal eminent domain power would be the best avenue to address arrested economic development in tribal communities.

The unilateral actions of the federal government created the need for tribal communities to become creative in re-establishing land base through land consolidation and acquisitions. But do tribes want to follow in the footsteps of the federal government in the exercise of these powers?

V. TRIBAL POWERS OF EMINENT DOMAIN

In recent years, some tribes have considered exercising eminent domain powers in the same manner as their federal, state, and local governmental counterparts. Tribal codes and constitutions have been amended to provide for the power to acquire lands within their political and territorial boundaries without the consent of the individual landowners.[150] In some instances, tribes and local state officials have teamed up to

150. For example, the Sisseton-Wahpeton Sioux Tribe provides for condemnation of trust or restricted lands within their jurisdiction:

> The Sisseton-Wahpeton Sioux Tribe shall have authority pursuant to this Chapter and in accordance with Section 8 of the Act of October 19, 1984, 98 Stat[.] 2411 (P.L. 98-513), to condemn trust or restricted land within the original exterior boundaries of the Lake Traverse Reservation, as described in Article III of the Treaty of February 19, 1867, 15 Stat. 505, for public uses, including the elimination of fractional heirship interests in such land, the consolidation of tribal interests in land and the development of tribal agriculture.

National Tribal Resource Center, *Sisseton-Wahpeton Sioux Tribe: Chapter 47 Condemnation of Trust or Restricted Land Under Power of Eminent Domain* § 47-01-01, http://www.tribalresourcecenter.org\ccfolder\sisseton_wahpeton_codeoflaw47.htm (accessed Oct. 30, 2005).

Section 47-02-01 provides for condemnation proceedings to be initiated by the tribe in tribal court for just compensation to be made for the property, and allows a jury to make that determination. Moreover, the jury determination requires a verdict of five-sixths of the jury as to the compensation. *Id.* at § 47-18-01. Section 47-09-01 notes that the United States is not an indispensable party but that the federal government does have the right to intervene in the proceedings.

The Eastern Band of Cherokee Indians Code allows power within the reservation when the Council deems it appropriate for a public purpose. National Tribal Justice Resource Center, *The Cherokee Code*, at § 40-1, http://tribalresourcecenter.org/ccfolder/eccodech40eminent.htm (accessed Aug. 24, 2005). The Tribal Council initiates by passing a resolution. *Id.* Compensation is provided for in Section 40-2. *Id.* at § 40-2. The courts will determine the value by a jury of six tribal members. *Id.* at § 40-3.

Although the Constitution was rejected, a proposed draft language to the Eastern Cherokee Constitution purported to take the power one step further, and apply it to all lands within the reservation. Article XIII entitled "Real Property" stated:

> The Council shall enact a comprehensive Property Code establishing a Land Office and governing a system of property for all lands within the Territory. The Property Code shall include provisions governing the issuance of patents in fee or any lesser interest, the establishment of a Registry, eminent domain, the recordation of patents, deeds, wills, trusts, leases, gifts, mortgages, liens, and other writings used to memorialize transactions of property interests, and land use and zoning. All property within the Territory, by whomever held, shall be deemed to have originated in a patent issues pursuant to the sovereign authority of the Band and such interests shall be recorded in the Land Office.

Richard Monette, Conference Presentation, *Preserving Our Sovereignty* (Miami, Fla., Feb. 10–12, 2005) (copy on file with author).

exercise the power of eminent domain collectively.[151] In these instances, states have acquired lands by condemning private lands and then redistributing the lands to tribal governments.[152] When the tribal government converts the land to commercial uses, the tribe then shares revenues with the state governments.[153]

Noting the controversy over eminent domain powers throughout the United States, the following section explores whether tribes have historically exercised the power in the past and whether tribes retain the power to acquire or re-acquire lands from private individuals.

VI. HISTORICAL TRIBAL EMINENT DOMAIN

Tribal nations are diverse in their history, culture, language, and legal traditions. It goes without saying that it is impossible to declare a monolithic "traditional" tribal viewpoint on whether tribal governments, prior to contact with Europeans, exercised the power of eminent domain or some equivalent.

Additionally, it goes without saying that Indians had a system of law for determining property rights prior to the day Columbus arrived on what are now North American shores.[154] It is inconceivable that the millions of people that populated the continent prior to European contact were aimlessly moving about with no norms, customs, or laws.

Prior to contact with Europeans, Indians recognized property rights, made conveyances of land, regulated trade, and exercised the full gamut of jurisdiction. But did they exercise the power of eminent domain, or an equivalent sovereign power, at that time?

Those tribes that truly practiced common ownership of lands, of which they have long been accused, exercised the highest form of governmental power. The permanent exclusion of private rights for the good of all citizens embodies a public use doctrine that far exceeds the eminent domain model. The tribal government, through the people, has pre-determined that all lands shall be used for the public good only, and there is no room for the recognition of private individual rights.

However, it is doubtful that many tribes practiced common ownership in the purest form.[155] The tribal government either owned the land, or the exercised usufructuary rights over specific territories.[156] It is well documented that conflicts were occurring between tribes prior to European contact and thereafter, in order to establish supremacy

156. *Id.*

over and ownership in land.[157] The myth of "wandering hordes"[158] of people attaching no value to property is one told by non-Indians seeking to seize Indian land or otherwise disregard Indian claims to land.[159]

Contrary to the prevailing myths, most tribes had some form of recognized private ownership in land, if not an elaborate property law scheme.[160] The Pueblos of the Southwest, the tribes of the southeastern United States, and the Iroquois were well known for having elaborate property schemes.[161]

Some of these tribal property law schemes protected individual property, and arguably protected private rights to a greater extent than the United States or their European predecessors. In previous works, I have suggested the Cherokee Nation, one of the tribes noted for an elaborate property law system of recognized individual property rights, did not traditionally provide for the governmental authority of eminent domain.[162] In the Cherokee system, individuals had protected property interest to surface rights and improvements, with the tribal government holding the underlying estate in common for the people. Although the Cherokee government did not expressly reserve to itself constitutional authority to take individual property for public use or otherwise,[163]

---

157. *See e.g. Lower Sioux Indian Community in Minn. v. U.S.*, 163 Ct. Cl. 329, 333–34 (1963) (bracket and ellipses in original):

> The Treaty of August 19, 1825, commonly called the "Treaty of Prairie des Chiens" or "Prairie du Chien," was the result of continuous warfare among the tribes of the Upper Mississippi region. The warring tribes were assembled at Prairie des Chiens and a treaty was entered into establishing boundaries among them in an attempt to remove the cause of their hostilities. The preamble of the treaty clearly bears this out:
>
> > The United States of America have seen with much regret, that wars have for many years been carried on between [the different tribes who were parties to the treaty] ***. In order, therefore, to promote peace among these tribes, and to establish boundaries among them ***, and thereby to remove all causes of future difficulty, the United States have invited [the different tribes who were parties to the treaty] *** to assemble together, and in a spirit of mutual conciliation to accomplish these objects ***.
>
> Thus it can be seen that the purpose of the treaty was to promote peace by establishing boundaries among the tribes "*** and thereby to remove all causes of future difficulty ***."

158. *Cherokee Nation v. Ga.*, 30 U.S. 1, 27 (1831). As part of his concurrence, Justice Johnson, *id.* at 27–28, noted:

> But I think it very clear that the constitution neither speaks of them as states or foreign states, but as just what they were, Indian tribes; an anomaly unknown to the books that treat of states, and which the law of nations would regard as nothing more than wandering hordes, held together only by ties of blood and habit, and having neither laws or government, beyond what is required in a savage state.

159. Seifert, *supra* n. 85, at 325–28.

160. Bobroff, *supra* n. 86, at 1571–96.

161. *Id.*

162. *E.g.* Leeds, *supra* n. 101, at 498 ("The idea of governmental taking by the Cherokee government, I must admit, is not a concept supported by early sources of Cherokee law.").

163. As evidence of this, see the Cherokee Constitution, art. 1, in *The Constitution and Laws of the Cherokee Nation: Passed at Tal-Le-Quah, Cherokee Nation, 1839*, at 5–6 (Gales & Seaton 1840) (emphasis in original), stating:

> Sec. 1. The boundary of the Cherokee Nation shall be that described in the treaty of 1833 between the United States and Western Cherokees, subject to such extension as may be made in the adjustment of the unfinished business with the United States.
>
> Sec. 2. The lands of the Cherokee nation shall remain common property; but the improvements made thereon, and in the possession of the citizens . . . respectively who made, or may rightfully be

nothing in the early Cherokee laws would have precluded the tribal government from passing a law to exercise the power of eminent domain if the tribal legislature found it necessary. Nonetheless, there is no indication that legislation to this effect was ever passed.[164]

In comparing the possibilities for eminent domain under tribal law in the historic sense, it appears that tribes would have fallen somewhere on the spectrum between those governments who control all land use, and therefore had no need for express eminent domain authority, to those tribes who valued private property to the extent they would never exercise eminent domain powers.

The range of tribal individual property rights in contrast to sovereign eminent domain powers is consistent with the range of divergent laws in a current survey of international law. There are countries in which the government is the sole property owner with no need to exercise eminent domain,[165] and those countries where the power, if exercised, is more constrained than the current United States system.[166] The same diversity of viewpoints would have existed at traditional tribal law.

VII. CONTEMPORARY TRIBAL EMINENT DOMAIN POWERS

Contemporary tribal governments have exercised eminent domain powers for various purposes. Some tribal codes expressly authorize the tribal legislature or executive branch to invoke the power when needed.[167] At least one tribal court has upheld tribal landowners' challenges to the exercise of tribal eminent domain.

---

in possession of them: *Provided*, That the citizens of the Nation possessing exclusive and indefeasible right to their improvements, as expressed in this article, shall possess no right or power to dispose of their improvements, in any manner whatever, to the United States, individual States, or to individual citizens thereof; and that, whenever any citizen shall remove with his effects out of the limits of this Nation, and become a citizen of any other Government, all his rights and privileges as a citizen of this Nation shall cease: *Provided, nevertheless*, That the National Council shall have power to re-admit, by law, to all the rights of citizenship, any such person or persons who may, at any time, desire to return to the Nation, on memorializing the National Council for such readmission.

164. Condemnation proceedings could very well be found upon review of Cherokee case law between 1839 and 1898. However, the Cherokee Nation's official governmental records and judicial opinions were seized by the Dawes Commission during allotment and are currently housed in the Oklahoma Historical Society, outside the custody of the Cherokee judiciary. The judicial opinions have never been published; remarks with respect to eminent domain are based on review of constitutional and statutory laws exclusively.

165. For instance, all lands in Cuba were nationalized in 1961. Edward Yates, *Central Planning Meets the Neighborhood: Land-Use Law and Environmental Impact Assessment in Cuba*, 16 Tul. Envtl. L.J. 653, 658 (2003). In Mozambique, ultimate ownership of lands rests with the state. Kendall Burr, *The Evolution of the International Law of Alienability: The 1997 Land Law of Mozambique as a Case Study*, 43 Colum. J. Transnatl. L. 961, 961–62 (2005).

166. Consider the example of New Zealand. Takings in New Zealand are highly regulated; there are numerous checks and balances required for a public purpose. *Taking Land, supra* n. 56, at 255–56. All takings must go through the Environment Court, and it appears to be more like actual public use than the American system that would allow an automatic conveyance to a third party. *Id.* at 255.

The compensation is better than the United States system: "The taking of land is not viewed in New Zealand as an invasion of a person's rights so much as a regulation of land use permitting compensation to those who are deprived in the interests of the broader society." *Id.* The compensation goes beyond the market value provided in the United States. The compensation can be in the form of "monetary compensation or by transfer of other property to the displaced parties." *Id.* "It is also intended to cover the costs incurred in the process as well as to provide a small sum for loss of employment." *Id.*

167. *See supra* n. 150 (discussing tribal codes and constitutional provisions).

The Navajo Nation case *Dennison v. Tucson Gas and Electric Co.*,[168] involved a taking of private land for a right of way.[169] The Navajo Supreme Court ruled that the taking violated Navajo law based on procedural grounds and due process considerations.[170] The question of whether the Navajo Nation had the power to take lands by eminent domain was answered in the affirmative:

> Eminent Domain is the power of any sovereign to take or to authorize the taking of any property within its jurisdiction for public use without the consent of the owner. It is an inherent power and authority which is essential to the existence of all governments.
>
> Therefore, as in this case, the sovereign (the Navajo Tribal Government), has the power and the authority to take or to authorize the taking of the Dennison property, all or part of it, without their consent. Plaintiffs' consent to the granting of the right-of-way is totally unnecessary.[171]

In *Dennison*, the Court noted that limitations on tribal eminent domain powers are found in the Indian Civil Rights Act of 1968 ("ICRA").[172] Section 1302(5)(8) of the ICRA states that "[n]o Indian tribe in exercising the powers of self-government shall: . . . take any private property for public use without just compensation."[173] The Navajo Bill of Rights,[174] contained similar limitations on the Navajo Nation.

The Navajo courts provided an historical account of tribal takings law:

> Furthermore, under the customary division of governmental powers into three (3) branches, executive, legislative, and judicial, the right to authorize the exercise of Eminent Domain is wholly legislative (Navajo Tribal Council) and there can be no taking of private property for public use against the will of the owner [without] direct authority from the legislative body (Navajo Tribal Council) and then the taking must be only in the manner as prescribed by the legislative body (Navajo Tribal Council).
>
> In 1960, the Navajo Tribal Council vested the exercise of the Eminent Domain power of the Navajo Nation in the Executive Branch of the Navajo Government, and provided by law the exact manner and the procedure to be followed in its execution or use.[175]

Under Navajo law, the tribal administrative agency is charged with estimating probable damages, and an offer is made to the landowner.[176] If the landowner refuses to accept the compensation offered, condemnation proceedings may follow.[177]

In *Dennison*, the proper procedures were not followed and the exercise of eminent domain was deemed illegal.[178] However, the power of the Navajo government to exercise eminent domain powers is recognized by the Navajo courts.

However, tribes are not exercising the power to acquire lands or reconsolidate land bases in large numbers. Tribal governments are cautious in exercising their inherent powers because numerous federal court cases, in recent years, have negatively impacted tribal sovereign powers.[179]

The tribes that expressly authorize eminent domain powers typically restrict the power to lands owned by tribal citizens within the tribe's political and territorial boundaries.[180] While takings by tribal governments include easements for road projects and utilities, the public use doctrine is incorporated to allow for more liberal interpretations.[181]

As a matter of federal Indian law, tribal takings of private lands will present the question of whether tribes retain eminent domain powers. Eminent domain is usually considered an inherent power of all sovereigns. If the tribal power is ultimately challenged in federal court, the courts will likely look to various textual sources to determine whether the tribal power has somehow been divested.

General principles of federal Indian law state that tribes may exercise inherent governmental powers, so long as those powers have not been voluntarily relinquished by the tribal government or expressly taken away by an act of Congress.[182] In recent years, the federal courts have added a third avenue for possible divestiture of tribal authority: if the federal courts find that the exercise of such power is inconsistent with the tribe's dependent status vis-à-vis the federal government.[183]

---

178. *Id.* at ¶ 72.

179. Many commentators are less reluctant to conclude that tribes retain eminent domain powers. *See e.g.* Philip P. Frickey, *A Common Law for Our Age of Colonialism: The Judicial Divestiture of Indian Tribal Authority over Nonmembers*, 109 Yale L.J. 1, 83 (1999) (describing the recognition of tribal eminent domain powers over fee simple lands within reservation boundaries as an aggressive measure that could be taken by Congress); Philip P. Frickey, *Domesticating Federal Indian Law*, 81 Minn. L. Rev. 31, 87 (1996) (suggesting tribes lack eminent domain powers); Ezra Rosser, *This Land is My Land, This Land is Your Land: Markets and Institutions for Economic Development on Native American Land*, 47 Ariz. L. Rev. 245, 310 (2005) (mentioning only the possibility of tribal exercise of eminent domain); Victoria Verbyla Sutton, *Divergent But Co-Existent: Local Governments and Tribal Governments Under the Same Constitution*, 31 Urb. Law. 47 (1999) (suggesting that tribal governments do not enjoy the power of eminent domain to the same extent that state and local governments do).

Only a few law review articles expressly conclude that tribes retain the power of eminent domain. *E.g.* Kirke Kickingbird, *What's Past is Prologue: The Status and Contemporary Relevance of American Indian Treaties*, 7 St. Thomas L. Rev. 603 (1995) (noting that the power of eminent domain is retained by tribes); Leeds, *supra* n. 101 (discussing options for exercise of tribal eminent domain power).

180. Examples include the Sisseston-Wahpeton Sioux Tribe and Eastern Band of Cherokee Indians. *See supra* n. 150 and accompanying text. Each of these limits the power to lands within the reservation boundaries or within the tribe's Indian country.

181. For example, consider the situation of the Eastern Band of Cherokee Indians. *See id.* (discussing the Council's determination of what constitutes "public use").

182. Felix S. Cohen noted in the most recent edition of the leading treatise in the field that

> [p]erhaps the most basic principle of all Indian law, supported by a host of decisions, is that those powers lawfully vested in an Indian nation are not, in general, delegated powers granted by express acts of Congress, but rather "inherent powers of a limited sovereignty which has never been extinguished."

Cohen's Handbook of Federal Indian Law, *supra* n. 65, at 206 (footnote omitted). *See also* Robert N. Clinton, Nell Jessup Newton & Monroe E. Price, *American Indian Law: Cases and Materials* 317–18 (3d ed., Michie 1991) (discussing Cohen's synthesis of the doctrine of inherent sovereignty).

183. *See* Frank Pommersheim, Lara*: A Constitutional Crisis in Indian Law?* 28 Am. Indian L. Rev. 299, 304 (2003–2004) (referencing judicial plenary power); Frank Pommersheim, *Coyote Paradox: Some Indian Law Reflections from the Edge of the Prairie*, 31 Ariz. St. L.J. 439, 462 (1999).

There is no indication that tribes have voluntarily relinquished their power of eminent domain. Of course, the question turns on a case-by-case evaluation of a particular tribe's history, but few tribes would have voluntarily relinquished their sovereign rights to regulate land use within tribe's own territory.

There is no indication that Congress has divested tribal governments of eminent domain powers through express legislation. In fact, Congress mentioned tribal eminent domain as a retained tribal power in the ICRA.[184] The ICRA provides certain civil rights protections, as a matter of federal law, to all persons, Indian and non-Indian, who come within the jurisdiction of tribal governments.[185] The power of eminent domain is specifically mentioned, and the Act simply requires that tribes who take lands for public use provide just compensation for takings.[186] The ICRA restricts tribal governments to the same extent the Bill of Rights restricts the federal government.[187]

The question of judicial implicit divestiture, as a relatively new way tribes could lose governmental powers, is difficult to predict. In recent decisions, the federal courts have tended to restrict the exercise of tribal inherent powers to lands over which the tribe or its members retain the right to exclude.[188] If this trend were extended, in a challenge to the tribal eminent domain powers, the power might be restricted to the taking of lands held by tribal citizens only.

Tribal eminent domain powers will most likely be treated by the federal court like other inherent tribal powers such as sovereign immunity and taxation that are retained, but limited by federal law.[189] Tribes continue to enjoy sovereign immunity, but it is recognized that tribal sovereign immunity can be waived by Congress.[190] Tribes also enjoy taxation powers, but those powers are limited to tribal lands or consensual relationships.[191]

The Bureau of Indian Affairs ("BIA") has recognized the right of tribal governments to take lands claimed by tribal members for public uses.[192] Professor Richard Monette shared the story of an Indian family who sought the assistance of the BIA when their tribal government attempted to build a helicopter landing pad on lands claimed by the family.[193] The BIA refused assistance to the tribal citizens noting that

185. *Id.* at § 1302.

186. *Id.*

187. Section 1302 of the ICRA states: "No Indian tribe in exercising powers of self-government shall take any private property for a public use without just compensation." 25 U.S.C. § 1302(5). Compare this language with the almost identical language of the takings clause of the United States Constitution: "No person shall . . . be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation." U.S. Const. amend. V.

188. *See e.g. Atkinson Trading Co. v. Shirley*, 532 U.S. 645 (2001); *Strate v. A-1 Contractors*, 520 U.S. 438 (1997); *Mont. v. U.S.*, 450 U.S. 544 (1981).

189. *See Kiowa Tribe of Okla. v. Mfg. Technologies, Inc.*, 523 U.S. 751, 754 (1998) ("As a matter of federal law, an Indian tribe is subject to suit only where Congress has authorized the suit or the tribe has waived its immunity.").

190. *Kiowa*, 523 U.S. at 753–57; *Santa Clara Pueblo v. Martinez*, 436 U.S. 49, 57–58 (1978).

191. *Merrion v. Jicarilla Apache Tribe*, 455 U.S. 130 (1982).

192. Ltr. from Robert R. McNichols, Bureau of Indian Affairs, Truxton Canon Field Office, to Guy Marshall, Jr. (May 9, 2003) (copy on file with author).

193. Monette, *supra* n. 150.

the tribal use served a "community purpose."[194] The BIA commented that the tribal power to take lands claimed by the family was "consistent with tribal law and traditions."[195] The example demonstrates a reluctance, on the part of the BIA, to allow private property interest to restrict the exercise of tribal governmental power.

The Internal Revenue Service ("IRS") is another federal agency that recognizes eminent domain as a retained tribal power.[196] The IRS Code contains provisions that treat tribal governments like state governments for certain tax purposes.[197] In internal agency reviews of the legislative history of these provisions, the IRS concluded the provisions should apply to an Indian tribal government that exercises inherent sovereign powers.[198] According to the IRS, among those inherent sovereign powers is the power to tax, the power of eminent domain, and police powers, such as control over zoning, police protection, and fire protection.[199]

Some state officials have agreed that eminent domain is a sovereign power of modern tribal governments, even in states where tribal powers have otherwise been diminished. For example, a 1985 Attorney General's Opinion for the state of Nebraska places eminent domain in the same category with tribal tax powers:[200]

> You ask if the Tribe will have additional powers regarding taxation and condemnation as a result of retrocession. The answer would appear to be "no." . . . Indian tribes retained broad authority in the areas of taxation and eminent domain (i.e., condemnation). . . .
>
> [A]ny exercise of [eminent domain powers of] the Tribe is subject to a number of limitations imposed by federal law, including due process, equal protection and just compensation considerations.[201]

Tribal governments should evaluate whether the exercise of eminent domain powers would be useful, particularly in combating fractionated ownership and land tenure problems that were created without tribal consent. As a retained element of inherent sovereignty, tribes have the same authority to avail themselves of the power as do federal and state governments. But tribes should move forward in policy determinations with the unique insight gained from having similar powers exercised against them. Perhaps tribal governments have the perspective to show the other two sovereigns how to exercise the power in a way that is more respectful of individual rights.

---

194. Ltr., *supra* n. 192.

195. *Id.* It is important to note that in this example, the land in this particular tribe is held in trust by the United States for the beneficial use of the tribe and the lands were never allotted to individuals.

196. Mark J. Cowan, *Leaving Money on the Table(s): An Examination of Federal Income Tax Policy Towards Indian Tribes*, 6 Fla. Tax Rev. 345, 363 n. 78 (2004) (noting that the three major sovereign powers of tribes, as mentioned in title 26, section 7871 of the U.S. Code, include taxation, eminent domain, and police powers).

197. 26 U.S.C. § 7871(a) (2000).

VIII. CONCLUSION

Over the years, American Indian people have come to view property rights differently from their non-Indian counterparts, but perhaps the *Kelo* decision brings the two groups closer together. The United States has consistently rationalized the taking of Indian lands on the premise that Indians do not make efficient use of land the way non-Indians do. Now the rationale for taking non-Indian lands is similar: land should be placed with the entities that will make the best use of those lands.

Indian people have known for some time that fee simple title is far from absolute. The notion that the government can take land at any time is a foundation of the American Indian experience. The inquiry as to what it is in the best interest of the "public" is an exceedingly broad question. American Indian people have watched their lands transferred to other individuals for centuries.

Are mainstream American families coming to realize what American Indians have known for generations? Eminent domain, and similar theories of land allocation, are rarely discussed when land resources are abundant. But when competing interests eye a particular tract of land, a hierarchy of preferred land uses emerges.

We have finally reached a resource crunch that brings to mainstream communities the truth about governmental power and private property rights. As one of my colleagues has aptly noted, "[i]t seems to violate the spirit of storytelling to declare a story 'wrong.'"[202] But perhaps the American people have simply gotten it wrong, both in their response to *Kelo*, and to their false security in private property rights. The laws governing eminent domain and other governmental powers have not changed, just the people affected.

OAK LAKE WRITERS' SOCIETY

This book is a publication of the Oak Lake Writers' Society, a state-wide organization of Dakota, Lakota, and Nakota writers. The Society is an outgrowth of the summer retreats for aspiring tribal writers that have taken place at South Dakota State University's Oak Lake Field Station since 1993. The primary goal of the Society is to contribute to the strengthening and preservation of Dakota, Lakota, and Nakota cultures through the development of culture-based writings.

Where Are They?

Charmaine White Face

There is an old legend of the Titonwan of the Oceti Sakowin. In it, animals desire to kill the first human beings, the two-leggeds, because they fear that the two-leggeds will destroy them and the other relatives on Unci Maka. But the winged ones have pity and want to help the two-legged beings. A great race is held around the Black Hills, more than 500 miles, and the winner will determine the fate of the human beings. The racetrack becomes red with the blood from the hooves, feet, and paws of the animals running the grueling race. But the magpie is smart and rides on a horn of the buffalo, the fastest runner with the most endurance. As they near the end, the magpie, who has conserved his strength, flies ahead of the buffalo and wins the race. As a result, human beings are allowed to live and the buffalo nation must provide for their needs.

In any natural field, one that has not been cultivated by human beings, there might be hundreds of species of plants. Each year, the field will change as seeds grow in relation to the amount of moisture, temperature, and sunlight available the previous winter and spring. But even though this ever-changing living tapestry produces varied kinds of plant life with each new year, there will always be one dominant plant: grass, broad leaf, or perhaps cacti. The less dominant will grow among the more prolific, sometimes in small family clusters, sometimes alone, standing proudly. Perbaps a bird flying overhead has dropped one seed on its way to feed its young, and the seed, left in a favorable position, has grown into a single entity, thus adding a touch of difference to an otherwise homogenous mixture.

Were human beings allowed to co-exist with each other and the rest of creation in certain geographic areas in an environmentally sustainable manner, just such a tapestry would develop over thousands of years. Such was the North American continent when the Europeans invaded. However, such a tapestry was not conceivable for Europeans, after almost 2,000 years of conquest, pillage, and use and abuse of what were known as "natural resources."

When Lewis and Clark traveled along the Missouri River, they were a part of this mindset. They could not know that the indigenous peoples they were encountering had cultures thousands of years old, very complex societal systems, and an understanding of nature that America still does not grasp today. Nor did Lewis and Clark, like the cultures of America or Europe today, realize or understand the indigenous peoples' comprehension of the vast spiritual dimensions of this world.

Lewis and Clark were merely the starter cells of a vast, cancerous way of thinking that is rapidly killing Unci Maka. That thinking started in Europe thousands of years ago. "Natural resources," whether they be oil, minerals, timber or crops, were to be used solely for the production of "things" for the enjoyment and comfort of human beings.

In their journals, Lewis and Clark described the countless numbers and new kinds of species they encountered: the large herds of buffalo drinking at the river, the amazingly graceful antelope and deer lowering their heads to the water in the early evening, the many kinds of waterfowl everywhere. They also expressed the need for interpreters for the many indigenous languages they were encountering, but only for the purpose of trade and business, only for the purpose of conquest and use.

So where are they? Where are the buffalo? Why are they not still running free across the prairies? Where are the black bears, the brown bears, the grizzly bears? Why are they not in the Black Hills? Where are the wolves? They live in family and clan units too. They once lived all over the Midwest. Where are the moose that once traveled in these areas? Where are the mountain sheep that lived so plentifully among the spires and tables in the Badlands?

Where are the plants that were not given Latin names by scientists and botanists but disappeared under plows, or water caused by dams, or were eaten by cattle? Where are the tallgrass prairies? There is a tiny one left in North Dakota, near Fargo, completely surrounded by farms. Yet, at one time, the tallgrasses, taller than a horse, were found all over in the Midwest. How many plants and animals will die, and how many threatened and endangered species will become extinct, so a new railroad line can be built through one of the last pristine grasslands? We are supposed to nevermind that railroad lines are obsolete and only increase air, water, and land pollution. After all, we are told, the railroad cars will carry what is left of the coal in Wyoming to points east. These are parts of the legacy of Lewis and Clark.

Where are the myriad streams of clean water that once flowed in the Black Hills, in the Badlands, all over the prairies, following each spring and summer rain? Where are the flocks of waterfowl that once covered the waterways in South Dakota? A pitiful few have become full-time residents of the location across from the mouth of the Bad River where Lewis and Clark encountered the Titonwan, that place which is now the capitol of the state of South Dakota.

Where are the thousands of trees, shrubs, and bushes that once lined the Missouri River and were the homes, shelter, and food for innumerable animals and birds? Where are the fish and turtles and other small aquatic life that needed the trees and shrubs and bushes to extend their branches over the water so that their breeding places would be shaded from the hot summer sun? Where are the insects that inhabited the trees, shrubs and bushes and were food for some of the water life?

Where is the clean air of the Great Plains? Now it is filled with the noxious fumes of mining for coal and methane and oil. It contains the radioactive particles of hundreds of abandoned uranium mines, particles to be breathed in by humans and cattle, to settle on grass and crops that will be eaten by humans and cattle, and to be carried by the wind elsewhere. These also are part of the legacy of Lewis and Clark.

Where are the Black Hills places that were sacred to the Titonwan and other indigenous nations? Is there a consequence for the destruction of something sacred? How many burial sites containing the remains of the ancestors of the Oceti Sakowin and other tribes have been crushed under cultivators so crops of winter wheat can bring in the almighty dollar? How many sacred places and burial sites, areas that were left in reverence for thousands of years on the prairies, are being considered for destruction so coal can be strip-mined to increase the pollution in the air? How many petroglyphs, places of communication with those wiser than the two-leggeds, have been vandalized with the initials of plunderers, or destroyed by "educated" people to be placed in museums? These are also the legacies of Lewis and Clark.

Where are my people, the Titonwan and the rest of the Oceti Sakowin? Where are the ones of whom Thomas Jefferson said, "On that nation, we wish most particularly to make a friendly impression, because of their immense power..."

Where is the honor of a nation that made treaties with the Oceti Sakowin bnt then violated them? Where is the integrity of a nation that would go against its own Constitution in order to have access to gold? Where is the humanity of a nation that would steal children to change them from being who the Creator made them to be?

Where are my people of whom William Clark said, "These are the vilest miscreants of the savage race, and must ever remain the pirates of the Missouri, until such measures are pursued, by our government, as will make them feel a dependence on its will for their supply of merchandise?"

Where are the thousands and thousands of Titonwans who perished from starvation, bullets, smallpox and other diseases after Lewis and Clark traveled up the Big Muddy? Where are the Wahpekute, the Wahpetonwan, the Mdewakantonwan, the Sisitonwan, the Ihanktonwan, and the Ihanktonwanna, the other six nations of the Oceti Sakowin?

Where are the children buried who died in residential boarding schools generation after generation? Where are the ones who survived the physical, mental, emotional, and spiritual abuse of the boarding schools and died later of the consequences of their experiences? Where are the burial sites of their parents, the ones who were prisoners of war, who whispered secrets to their grandchildren hoping a miracle would happen and some seed would remain of the Oceti Sakowin?

Where are the ancient family practices of the Oceti Sakowin? Where is the strong societal structure that forbid a son-in-law to talk to his mother-in-law? Where are the whipbearers so that no woman or child had to fear abuse at the hands of a man? Where are the old laws that guided nations for millennia to live and thrive on Unci Maka? These absences are the greatest tragedy of the legacy of Lewis and Clark.

cheap like our land
that was sold at four pennies an acre
but no indian was there that day
as whitemen sold to whitemen
making convenient policy makers

because back then
and maybe even now
indians were never seen as being equal
to the white people
just a copper penny
next to a shiny nickel

what would you do
if someone put a price tag on your home
and sold it with no remorse?
this country became
one big wholesale store
and it never closes
because there's always something to buy
and something to sell
and pretty soon
no one will be able to tell
...what truth really is

here's a nickel for your thoughts

Reflections on Mnisose after Lewis and Clark

Kathryn Akipa, Gladys Hawk, Craig Howe, Lanniko Lee, Kim TallBear, and Lydia Whirlwind Soldier

A Dialogue between members of the Oak Lake Writers' Society held at The Birdsong Inn and Guest House, Java, South Dakota, February 12, 2005

Kim TallBear In this collection of essays, we have decided to center the river as an actor, and not simply think of it as a subject or something simply acted upon in our response to Lewis and Clark. So, we—Craig and I —want to have you all philosophize about rivers as entities or beings in themselves. It's kind of an open question where you might talk about the meaning of the river to you personally, to your family, to your tribe.

Lanniko Lee All my life I have known the river to be part of a larger expression of our relationship to everything that is—everything that exists. A good example is what Arvol Looking Horse[1] published in his wonderful "World Peace and Prayer Day." In it he describes the earth as a living organism having anatomical functions similar to that of the human body. Mnisose, the river we know, is a major artery. As a major artery it is meant to flow for the life of the world.

In fact, long before scientists began speculating about the alleged benefits of changing the river, my family, like Arvol, talked about the river as doing the work of circulation. Circulation is the vital function of the Mnisose. After all, flowing water brings necessary changes. So when I think about the man-made dams that obstruct the river's flow, I can't help but grieve over the loss of a river flowing and the loss of its life-giving and healing forces coursing through Unci Maka, Grandmother Earth, to the ocean.

Another important conversation for indigenous people regarding caring for the earth is the ability of the rain forest to continue functioning in a healthy way. So much destruction of the rain forest is occurring. Soon it will not be able to do what it was meant to do—provide the essential respiratory exchange needed to keep body Earth healthy. Arvol's message was a proposal to all humanity that we pay attention to how the relationships of the parts of the world work and how we are all responsible for Earth's health. This is good Lakota reasoning.

I remember the elders of my family asking how the clouds would be able to come if there were no trees to call in the clouds. This was after hearing John F. Kennedy's speech about the progress and the good that would come after the river was dammed and hydroelectric power would be available to improve the lives of everyone. My recollection of those times is a mixture of strong emotions interfused with memories of ceremonies and

dire prophecies; photographs were taken by those who wanted to remember a river that was destined to be changed. Strong emotions were displayed; everyone living along the river was affected by those changes.

Kim Gladys and Lydia and Kathryn have also talked a lot about the effects on the people and also what the river meant to them personally. How do each of you feel about the Missouri River project and the inherent contradiction for Native people of referring to the River as a "project"?

Lanniko When I grew up, the river was at the center of conversations about the sacred. The river helps explain our belief about the sacred permeating our lives. Images of baptismals are prominent in my memory. All of the songs that we sing when we are burying our people who have grown up along the river are always focused on the water. Gladys can probably talk about that.

Gladys Hawk My piece in this anthology is my personal experience of the river. But it was the Grand River I was talking about. It wasn't far from the Missouri, though. I am also familiar with the Missouri just traveling back and forth to Mobridge. I write about a time when all of the river was still there, but it was being planned to be flooded. I remember seeing the surveyors when they came along the hillside right above our house; they were way up there, so I rode on my horse and I went up there and I asked them, "What are you doing?" There were two guys there with their tripods and they said, "Well, some day the water level is going to be this high" [gestures]. I looked at that and I looked down towards our house and to the river and to the east. I couldn't imagine it; I just could not imagine that. But that was when I was only about ten. And it wasn't until '58, '59 and '60, when I was in my twenties, when we actually saw it happen, when they cut down all the trees along the river and it was bare.

Kim Some of us here were talking last night in the kitchen about the sense of disbelief that people had. First of all, that morally the Army Corps could do this and second, that technologically it was possible. And I wonder if, because it took so long from planning to the actual flood, the sense of disbelief was really big? Or did people gradually accept it would happen?

Gladys I think they gradually accepted it. What more could they do? Their homes were taken away. I just want to say the impact that it had. There was an old man that lived where the bay is now. His name was Ed Hawk. He was an old man with a blind eye. All he had was just two little sorrel horses that he used for his wagon. He had them in the corral and one little log cabin where they wintered. And he lived in a one-room log house. He would not sign anything that the Corps brought in. He just stood his ground. And the Corps came in and they bulldozed his little house. [One gasp of disbelief, then 30 seconds of silence.]

Lydia The damming of the river displaced a lot of people and multiple generations from the river. It destroyed a way of life that was centuries old. I remember somebody telling me that their grandparents would go to the river every Sunday and sit on the bluffs overlooking the water just to see their land disappearing under the water. They would reminisce about the old days, their gardens, their livestock and their homes. And they would feel sad over how their lives had changed since their land was flooded.

As a Sicangu, I didn't grow np along the river. But when they started building the dam near Pierre, my dad worked on it for one summer. He was really torn about that, but he had to support a family. So he just worked on it one summer and then found work elsewhere. But I remember every summer my grandparents would take us to the river by Pickstown, Fort Randall, to see how far the water had come up. We would spend the day, go to Fort Randall and have a picnic and they would sit and talk about the river. They were in disbelief that this could be done. But I was a little kid and as a little kid you don't pay too much attention. As Sicangus we lived so many hours away from the river, but we still went to the river to see what was happening every summer.

Lanniko Another arrogant, irresponsible act occurred even before politicians set in motion those changes to the river. Locals took it upon themselves to move prayer stones off the river—very large boulders that had previously been prairie altars where mortals communed with the sacred. If you go down the river road here, you will see those prayer stones with hand marks on them made during prayer—prayers that were given for that river. One such group, not American Indians, decided to construct a building in Gettysburg, South Dakota; a big prayer stone was moved in to attract tourists to the community. Now if you want to visit one of these stones, you can visit the Dakota Sunset Museum and pay a fee to see the prayer stone, but not to touch it, nor do you have the open, private prairie setting to use the stone as it had been used for bundreds, possibly thousands of years. By moving those stones off the river—it's like another group of people is shaping even our memory. Between that and the river project, maybe they were thinking we would forget our past. Those who were involved in making the decisions to change the river—they knew what they were doing culturally and economically to our lives. I don't know how they can possibly be unaware of what they were doing.

Kim Kathryn, in your essay, you talked about your mom getting a new teaching appointment in Iowa and leaving Lower Brule. Did you actually see what happened after the flooding or did you leave before it got flooded?

Kathryn We left before it got flooded. But a couple of girls who my mom taught came with us on the move. And then when we took them back we heard the stories, the horrible things that happened with the flood. At the store the people would talk around the stove and they would sit there smoking and

they just couldn't believe it. "How could they do something like this? How is this possible?" They would ask. The underlying feeling that I remember as a child when I was probably about eight was "How could man think that he is so powerful that he could change the course of the river?" And I remember that there was almost a feeling of toksta. They are going to find out the river will take its own course eventually and it will come back on them. You can't change the course of something like that—so powerful—so mighty. Somewhere you're going to pay for it. That was the feeling of disbelief that the people around the stove and the women in their sewing circles had. It just seemed like such an absurd and far-fetched plan. How could the wasicu think like this?

It reminds me of when they decided to go to the moon in the later 60s—the same kind of idea—a kind of disbelief! [laughter]. But the dam in particular worried a lot of people because a lot of them could not afford to move the graves and they worried about their relatives. Sure enough, three weeks after the flooding they saw caskets floating down the river. That flabbergasted people in the Lower Brule area. Out of respect, I didn't want to put that scene in my essay. It could hurt people to be reminded of that. Some of them, those were their relatives.[2]

I remember such disbelief from my child's point of view. I didn't fully understand the whole thing. I just knew that a flood was coming and that the village would be goue—everything that we knew there. And I think that is the reason why I wrote in my piece about the happy memories as a child, to show the tragic loss. My point was to show that this is on the continuum of what began when Lewis and Clark sailed—the so-called progress of America and how it continues to impact Native Americans in modern times. When you lose a village where you did have such good memories—yes, some of them were tragic and life goes on—but when you lose a village like that and you know that you will never be able to walk in those places again because they're under water, it's hard to imagine.

Kim You just stated clearly the importance of the dam in the legacy of American progress. Lewis and Clark were also part of that movement towards "progress." I'm also interested in what you all have to say about the need to respect the river, its power, and the possible consequences of not respecting it.

Lydia I grew up listening to old people and their philosophies. One of the phrases that they always used was "mni wiconi," which means "water is life." It also means respect for water—respect for river. As long as you have water, there is life. The old people use that phrase in their prayers and everyday conversation.

Lanniko Vine Deloria and Dan Wildcat in their book, *Power and Place*, have also talked about Indian peoples' respect for the river.[3] They talk about our nnderstanding of the changing nature of the river, our understanding

of flood plains, of the appropriate places for habitation, and what kinds of things people did to fit their own lives into the balance by understanding the river's changes. They state that witb that knowledge, people were able to take care of themselves, while non-Indians build on the flood plains with a lot of investment and insurance. They make money off tragedies that they participate in creating. A critique of capitalism comes across in their book—a conversation about non-Natives who build on the flood plains and reap benefits from loss. They say we never did that because we had a responsibility for not just ourselves, but our whole family—for those communities along the river. We had to have a sense of our responsibility as humans, an understanding of the river phenomena and its changing nature. We had to respect it so that we could share that wisdom with those around us.

Let me give a couple of specific examples of how understanding and respecting the river translated into taking care of our families and communities. We sang songs wben we were burying our family members who had grown up and died along the river. We focused on the power of the water, both the sacred power and the power expressed in the cycles of nature. Each spring—as our elders taught us—the seasonal power expressed in floods brought about the renewal of the landscape, of life.

I have another example of how we linked river knowledge and river power to the knowledge and power in our human lives. Late one summer evening when my grandmother and I were down at the river getting water, a light breeze started the cottonwood leaves chattering overhead; she told me to stop and listen. A sliver of moon hung in the sky and she motioned up to it and then to the trees: "Listen to the cottonwood women talking," she said to me. I asked her what they were saying and she said that I should always remember that I am like the river and that one day I would flow and become a woman. Like the popping trees in the spring, and later when the ice was breaking, I would live a springtime, like the river, and bring life into the world. It was then that I learned about how tbe seeds of cottonwood trees are imbedded into the soft river soil by the swift moving waters that flooding causes in the spring run-off. I learned about the gift of life, and she made clear to me the Lakota saying, "Our children are sacred," with her explanation of how young cottonwood trees were the gifts of floods. I learned then to respect those powerful changes and appreciate our connection to the river, the trees, and the land.

Our everyday lives were spent learning lessons about change and our people used those lessons to make decisions like where to build our homes and where to plant our gardens. Immigrants have not learned much from American Indians when it comes to human connectedness to the land. Our understanding of home is probably because we know Earth as our grandmother, Unci Maka. Unfortunately, our perspective and the wisdom of our

elders are never fully appreciated, especially when it comes to stewardship, or when environmental changes are contemplated.

To go back to your comment about disbelief, I think it is untrue that indigenous people had no real sense of the power of technology. On the contrary, our people were more keenly aware of the power of making choices. It wasn't that we all disbelieved that the river's course could be changed. We were in disbelief that the wasicu would do such a thing. Our choices as Lakota people were made from a different way of discerning the world.

Kathryn I just want to make a comment about the Dakota world. Although I lived along this river as a child, we Dakota don't in general live that close to the river. Of course we do have the Mississippi, the Yellow Medicine, the Great Sioux, the Minnesota. . . a lot of rivers. The water was always a very big part of our lives too. It's like you say, Lydia, mni wiconi.

My father, my step-dad, Woodrow Keeble, was born in 1917. His dad was Isaac Keeble, who was very traditional, and never learned to speak a wasicu language. My step-dad used to tell us how to get up in the morning. The old way of making your day is to go out on your own to the east. You face the sunrise and when the sun breaks, you acknowledge the creator, "Wakan Tanka Tukansina." You acknowledge the day and the gift of life that you have and the woods and everything around you on every horizon. That is one of the important things that they did iu those days when we lived in camps—we always camped by some kind of water. You would go down in that sacred moment of silence early in the morning to greet the creator, to wash your face, or to use the water in some way to bless yourself. Because it is mni wiconi.

My dad used to tell about how when he was a little boy, his dad would tell them, all six of them, all boys, "Inajin po," and they would get up. They lived on the west side of Pickerel Lake and they would all have to run down to the lake and he would make them jump in the water. They would all have to go in for a swim in the morning, until the ice formed and they couldn't get through the ice any more. And if the little ones tried to complain, he would tell them that it makes your heart strong. And it made my dad's heart strong. He was North Dakota's most decorated war hero from World War II and Korea. He was never given the medal of honor that he was recommended for three times because it was a racial issue—and that's been acknowledged now. But that's just an aside—a plug for my dad! [Laughter]. He lived when it was important to greet your day with the water and to face the sun and commune with Wakan Tanka.

Kim I grew up in Flandreau [SD] mostly, always living about a half mile from the Big Sioux River. Every time I go by a river—it doesn't matter if it's that one or another one—I always look down and think, "I wonder where that goes?" It's always struck me that rivers are roads, yet I haven't spent a lot of time on rivers, canoeing or anything. But I've always felt that they are

going somewhere, going somewhere in a good way. I've always been interested in what's at the other end. I don't know if I focused on rivers as travel routes because I always wanted to go somewhere ever since I was small, to travel and see other places, or because there is something in my cultural memory—I don't know how to describe it—in which rivers were our roads. And I think rivers are still central to the Dakota landscape today.

Lydia Rivers were important boundaries for us. In land descriptions, in maps, in designating meeting places, a river would be mentioned. We had Lakota names for all of the rivers in our territory. The Mnisose was the grandfather river. The course of the river can be changed, but how does the change affect the environment? How does that change affect the lives of the people, the animal and plant nations? These were not issues that the government thought about when it built the dams. How many of those animals and plants that Lewis and Clark saw are now extinct? And, how many more will disappear? Can man ever replace what was lost?

Lanniko Last spring I went down to St. Louis and traveled back up the river during spring break. I went along the road coming up and I made a point of going off the road and I saw those levees, big mounds directing water up away from the river, and it reminded me of a picture from when I went to parochial school. We learned all about how the great gardens of the world in the Christian belief were created, how they were all built by slave labor. The whole idea was to turn the desert into the Garden of Eden. When I came up the river from St. Louis, I was reminded of all of that human energy needed to reshape the landscape, and how the newcomers didn't call us people of the river. Yet that's where we were *always*. We were instead called people of the plains.

And it became a self-fulfilling prophecy, that label, one that reminds us of what has been taken away from us. Whether it's the Big Sioux or the Grand or the Cheyenne, we were people of the rivers. Yet now some of our own people don't have an understanding of what the river is. Especially young people have no real understanding of that history. Many of them grew up away from the river, moved off the river to Eagle Butte and live on the Cheyenne River Reservation. They have very little understanding of the cottonwood stories, the fish stories. They don't interact with the landscape—which they can hardly do when they're in the [boarding school] dormitory or with parents or relatives who are caught up in BIA employment or tribal employment or they're in the churches—when they're part of the institutions that shape them with western thinking. They don't have the same kind of connection with the landscape which in itself is the primal, sacred language of the very being of indigenous people.

When Lewis and Clark came up, I can't help but think that with all their litany of what they saw, the things they described in their journals, that they were thinking in terms similar to the Garden of Eden. And the plant

life and birds and animals were there waiting for them to catalogue as new species, to re-name. They were coming from a Christian philosophy of understanding, of what happened in another part of the world. To name and catalogue—to try to know everything—is a way that is opposite to the way we had. We didn't go about naming objects, plants and phenomenon like Western explorers; our belief back then was that the "thing" gave its power and the knowledge of its being-ness to us. We didn't have names for everything because not everything gave us its name. The landscape is loaded with mysteries.

Certain plants gave us the power to heal when we used them and they gave us their names. Such knowledge came to those who made it their work to help others through healing. Those people were taught how to work with those things; they received that knowledge through dreams and the like. Today, people who hold such knowledge have also learned that it is not valued like scientific knowledge. We don't talk about those things today. Instead, our people give up that powerful knowledge to be treated by Indian Health Service and Western medical practitioners.

Kim Your comments bring to mind one of my pet peeves. I used to do environmental program planning for tribes and I don't like when people so often say that we are inherently environmentalists—that it's in our blood. Because I think that discounts the fact that we got knowledge of our landscape by interacting with it and having a relationship with it. We—or our ancestors—learned those things and cultivated that knowledge; they weren't just born with it. It's about practice. And if you don't acknowledge that, then you don't necessarily have to practice. So you lose a lot of knowledge by not using those resources every day like in the past and then having a thoughtful spiritual relationship with them.

But I was also interested in something else you said, Lanniko. Were you relating Lewis and Clark's classification of species to cultivating a landscape or creating a certain kind of landscape?

Lanniko The Christian heritage they inherited— Jefferson, Lewis and Clark—has a certain understanding of the Middle East and how the Middle East deserts were manipulated to be habitations for large numbers of people. So when we talk about large populations of outsiders coming into this country, what better way to accommodate them than to harness ideas—with roots in Middle East history—to build the nation and to overcome the landscape that was here to accommodate the European? That was what I was referring to when I said that there was a design. And that design is still evident along that path that I drove to St. Louis and back. There are long mounds that were created to hold the water, to pull that water farther away from the channel of the river in order to create farms. But now all the cities are choked with big plumes—pollution emissions in the air and effluents in the water. They've harnessed the power of the river but that

power has another objective now. Rather than being gardens, it is trapped by industries.

I think that with the advancing technology, the vision that was there has changed. I can't help but imagine that in the abundance of what Lewis and Clark saw, they must have felt they had fallen into some wonderful magical place. Whatever they saw when they were out there with their surveyors and looking at the raw, innocent landscape, seeing what potential was there—I would be very curious to see what they saw for the future of that landscape. What did they anticipate they would achieve?

Kim Craig, do you want to talk a little about your perspectives about what the intentions of Lewis and Clark were? We've had some debate amongst ourselves—more in the pieces we've written than in spoken conversation—about what the intentions and goals of Lewis and Clark and the Corps of Discovery were. For example, in terms of Lewis and Clark's classification of species, Lanniko made an interesting point in relating the classification to the eventual taming of the landscape. It's not a direct connection perhaps in terms of their goals, but can be seen as part of an overall vision.

Craig Howe Theirs was a scientific expedition. Jefferson charged them with recording all of those things that were new to science. It was not new to humanity. It was old knowledge to all of those Indian tribes. Lewis and Clark were documenting it for scientific purposes, so it was a new "discovery" for them. At most, in terms of future settlement, they were thinking about how to get trading posts up here. The records do not seem to support that they were considering that non-Lakotas or non-Indians would be living up here in vast numbers. It is hard for us to imagine, but at that time they couldn't see the US population exploding, I don't think. They were not that visionary. Jefferson himself thought it would take hundreds of years before non-Indians would get here. So the idea was not to be negative but to be good to Indian tribes because there was no way they could alone extract the resources of the area. There were too few Americans, so they had to try to figure out a way to use the Indians to exploit the natural resources while simultaneously making Indians dependent upon the US.

In the bigger picture today, I think we put a lot more emphasis on Lewis and Clark; we make them into a bigger event than they were. Because the non-Indians are celebrating the bicentennial of Lewis and Clark we too put too much emphasis on it. Lewis and Clark didn't *cause* anything in my mind. They came and they left.

Lydia It was the beginning of the end of the Mnisose, the beginning of the end to a way of life as our people knew it.

Craig The fact is that there were non-Indians here for decades before Lewis and Clark came.

Lydia But before them it wasn't a scientific expedition to record rivers and tribes and start counting Indians. The Europeans who came before them learned to live with the Natives. Lewis and Clark had a purpose to record what would be in their way when they did finally come. They were a scouting party. They learned that the Lakotas are a fierce tribe that they'd have to deal with. They were probably the first grave robbers to enter Lakota territory.

Lanniko I don't think we can speak of Lewis and Clark without speaking of Jefferson. He was a visionary individual. Anybody can *talk* about empire-building, but he had so many projects ongoing in different aspects of his personal life. And being the public man that he was, some of those projects spilled over into the public realm and this one was one of them.

Kim I just read something about Jefferson being essentially the first American archaeologist in that he started excavating the mounds on his property. Today, we all know about that method of scientific inquiry, but at that time, trying to decipher human history through examining human bones was not something people did. It was a very weird thing to go dig up bones and study them. So it is argued that he was very much a scientist in his own right.

But this brings me back to the idea that rather than Lewis and Clark's individual intentions or even those of Jefferson, what's more important is what that journey has come to symbolize for people. That's why Kathryn's point is interesting—that they were part of another continuum, not necessarily that they directly impacted something but that they were part of a broader cultural movement that resulted in the kinds of things that you're talking about in your pieces about the taming of rivers. But that also gets back to Craig's point too: You don't have to attribute to them intention or necessarily direct responsibility for these things. But certainly I would view them as part of American westward expansionism because science is part of that. Science was very much a tool of expansionism.

Craig Yes, science also involves "discovery." Another kind of wanting to be the first . .

Lanniko Politics too. You don't want to forget that. You can't practice science without practicing politics.

Kim It was one of Jefferson's big political tools, right? Science.

Lanniko Yes. To me that's just another language for being able to be intrusive. The whole business of excavating is the story of European expansion and control.

Craig What Jefferson was trying to do was give the fledgling United States a "History." In Europe they had the castles and ruins, and so what he was trying to do when he wrote a paper about this was to show that over here there was a history. He also wanted to show how things were even bigger over here than in Europe. So he was looking for these mastodon bones. . .

Kim Yes, Jefferson and others were having fights with French naturalists who said "Oh, *nothing* has happened over there." So, if you know that he was fighting with French naturalists and trying to prove that there was history here worth talking about . . .

Craig Right! So he used American Indians to show them how much better this continent was. "Look, American Indians are taller and stronger and did more than you Europeans and your ancestors." Jefferson, on that level, was promoting the noble savage. He was promoting a sense of indigenousness here. Later, maybe he argued another side, but at that time he was trying to give the US an identity separate from Europe. And he argued, "What does the US have that Europe doesn't? It has this indigenous history, it has American Indians and it has the landscapes and the species that are unique here—that you do not have over in Europe and so that's what makes this new country strong." That is what would give this country a unique identity.

Kim I see that as an early sign of Euro-Americans trying to become indigenous here.

Craig And that's why when they dressed up at the Boston Tea Party, they didn't dress up as colonists. They dressed up as Mohawks. The whole idea was to take on the identity of the land so they became Indians in order to fight against the British.

Kim So why are Lewis and Clark so important now? Is it just because we all the feel the need to respond to the commemoration? I certainly never thought about them before the bicentennial very much. I remember knowing who they were—we probably all heard about them in school. But have others of you thought about them extensively and the repercussions of what they did?

Lanniko Not me. But I realize that the bicentennial event is an attempt to rejuvenate a sense of belonging here. People are all capitalizing on an historical event in order to have some prominence here today. There are squabbles all up and down the river about how to sell the bicentennial. Although more recently there has been more positive language. I just heard on public radio about the indigenous perspective, indigenous commemorations. But that also seems like another effort to try to bring capitalist enterprise to this part of the world. As Americans we've exhausted everything; we've wasted and exhausted so much that we're now looking at capitalizing on history to get the world to come and see and spend their money here.

Kim It sounds like you're talking not only about whites but about indigenous people too.

Lanniko Yes! Absolutely! It's cultural enterprise—cultural tourism that they're hoping to achieve, not only whites but Indians too. They're talking about the positive financial repercussions of the Lewis and Clark commemoration today as a result of people coming to this part of the world to see who we are . . .

Kim Craig was saying in an earlier meeting that the Lewis and Clark centennial in 1904 was not such a big deal, right?

Craig Right.

Kim So, Lewis and Clark have in fact been revitalized as historical figures. In 1904, most Americans didn't know who they were.

Craig Yeah, it wouldn't even be close to how it is now.

Lydia Now, they're creating American heroes for their own history books.

Kathryn I didn't really think about them before this commemoration. In school, yes, they were some more wasicu people I had to learn about. But when I was a kid, the only thing that was interesting about them—in depictions of them—they kind of looked more like us. I thought, "How come they wear clothes like that?" They weren't going around with the little powdered wigs and the fluffy blouses. They looked more like real people—the way they were dressed. But they were still wasicus. I never really gave it too much thought. My thing as a kid was trying to keep them all straight. I had to keep all these American heroes straight in my mind and I didn't really make too much effort to do that [laughs].

Lydia They also took Indians and created Indian heroes for their own history —those Indians who helped white people. When you're a little kid trying to hang on to your identity and your cultural pride and you see those Indians who helped the whites destroy our way of life, like Sacajawea, you began to wonder why people cannot accept and appreciate differences. If we don't conform, we cannot be successful in the eyes of the whites.

Gladys Who interpreted that name? I always ask that because I'm curious. Apparently in 1904 they must have had a dedication in Mobridge because my oldest sister had a picture of my grandfather and my grandmother—they were young then—standing near a monument to Sacajawea just across the river from Mobridge. There was a chain fence around it and all of our relatives were standing there. The women had on shawls, of course. I thought "that must have been an important day." They must have dedicated that monument that day. My grandparents, they said "Zintkala Winyan."

Lydia What?! Oh, I always thought "wea" in Sacajawea sounded like "woman" [referring to winyan, the L/D/Nakota the word for "woman"]. Zintkala Winyan, oh, Bird Woman.

Gladys Zintkala Winyan, that's how they talked about her and it means Bird Woman.

Lydia Now that makes sense! I always wondered about that name. In Lakota "saca" means, something brittle and hard. Some people were even pronouncing it "Sacacawea." You know what "caca" means so that couldn't be right.

Gladys I was wondering if "Sacajawea" was a spin-off of "Zintkala Winyan," that the wasicus couldn't pronounce it. I wondered if that was the best that they could do and now we know her as Sacajawea.

Kathryn Is that what it means in her language?

Craig She had two names. One is Shoshone and one is Hidatsa. And one of them, I think, means Bird Woman. But it would have been strange if she had a Lakota name because Lakotas never saw her. She was never on this stretch of the river.

Gladys But I heard them talking about her where I grew up, "Zintkala Winyan." She was known. I never heard of Lewis and Clark, but people talked about *her*.

Craig I can't remember hearing about Lewis and Clark at school.

Lydia I remember seeing pictures, the explorers standing in canoes and pointing toward the west and wearing buckskin clothing like real frontiersmen.

Kathryn This whole bicentennial has forced me to look at it. Of course, as an adult you have a different view when you know the history that has ensued.

Lanniko When I was a girl, I somehow got it fixed in my head that Sacajawea was a barren woman. "Saca, saca," which in Lakota means dry or shriveled up, like someone's hands when they have been in water a long time. And then "wea," which sounds like "winyan", and I put that together to mean *dry woman*. That's what got stuck in my head [laughter]. I was a child interpreting "Who was this woman? She couldn't have children from a man of her own people." I had this really wild imagination! I thought she could only have a child with a wasicu, a Frenchman. She had Little Pompy.[4]

Kim Do you think she is more important to non-Indians then to Indians, because we don't talk about her that much?

Craig Sacajawea makes the Voyage of Discovery a great story because then it's a multi-gender and multi-cultural story. That's why it resonates with people so strongly.

Lanniko That's the reason that we created the Unity Fest and the Sacajawea Learning Center in Mobridge [SD]. The reason why we did it there is because people from other places in the world know about Mobridge because of the brutalities that have been publicized all over the world in newspapers. So when strangers come through the door who have that knowledge, some of them do ask questions and I refer them to our efforts to try to change that history with the Unity Fest, to learn about one another and

hopefully have some better understanding of our human-ness, our frailties and also our capabilities to relate to each other in a positive way.

Craig I think again that if we look at the historical documents, none of the Winter Counts mention Lewis and Clark. So if we use that as a milestone, was this event that important? Little Big Horn is so important to non-Indians. It's the most written-about battle. And Lewis and Clark are so important to non-Indians. But again, using the Winter Counts as evidence, Lewis and Clark are not that important.

Lydia It's not that Little Big Horn was not an important event to us, but that people were afraid to talk about it because they were afraid of retaliation. It couldn't be put in a winter count because then it could be taken as evidence against those involved. Bad enough the 7th Cavalry took revenge against Big Foot and his band at Wounded Knee.

Kim Kiowa writer N. Scott Momaday has stated that "Lewis and Clark remains in my mind one of the great epic odysseys in American history." So what's your interpretation of such a perspective?

Lydia For the Americans it is [an epic odyssey] in their history, but I don't see it that way.

Craig I think in human history it is an epic odyssey. We have to go beyond "the" Indian viewpoint as if there is a single Indian viewpoint and we have to judge Lewis and Clark on where they fit in the big picture of human history. At that time and in this place they tried to do something that they thought was really, really important. It was against a lot of odds that they fulfilled their mission, although they failed in the main thing they went to look for—that [water] passage to the Pacific. And they had to realize that failure early and yet they soldiered on. In lots of ways, they brought all types of new knowledge back. They were outdated by the time they got back. To me, that's the important point—that they didn't *cause* anything. By the time they got back, they were meeting non-Indians going up the river. You can read the journals; all the way down, they were meeting non-Indians coming up the river. They weren't the first. All these peoples along this stretch of the river had seen non-Indians before.

Kim I think that's how "the" history books are portraying them, as being the first.

Craig And a lot of us buy into that. Lewis and Clark wanted to be the first—that was their whole goal. And by us perpetuating the idea that they were the first, they're winning in a sense—we're still bought into their incorrect history. They weren't the first—they weren't even close to the first. They weren't that important as individuals. But that journey, as a journey, was on this almost epic scale in terms of the importance it has had to this nation. The truthfulness of these epic journeys is a whole different issue. But

a lot of nations have these epic journeys and we can have that in the migration stories of Native tribes. This was the epic journey for this nation.

Kim So, it's more the way the story is told than perhaps what actually happened?

Craig And I think the great thing for us, the great opportunity we have, is that it's in historical time and we have the documents so that we don't have to treat it as myth. We can come back and interrogate it. And we can challenge that epic journey of this nation. And we can challenge it using the technologies and the techniques of that nation. And I think we have abundant evidence to challenge that—the truth value of that epic journey.

Kim I don't mean to pick on Momaday, because it's important to know the context in which he made his statement. But while one might truthfully make that statement, as a Native person I would never say that without also saying "and this is what it means to us—it doesn't mean the same thing to us." Liz [Elizabeth Cook-Lynn, a founding member of the Oak Lake Writers] has also pointed out that he said he was in awe of the Lewis and Clark journey.

Craig I can see it! If you sent 40 guys with the knowledge they had at that time, to do all that, it's awe-inspiring at some level. I'm awed by the fact they were able to do it. Now, that doesn't mean that I think it's an awesome thing, right? I'm awed by the fact that they decided they would do that. How it's played out I think is completely wrong. And that's part of what I'm trying to do is to show that the myth that came out of that is a myth not based on fact.

Kim And a related question is, "How is what came out of the Voyage of Discovery operative today?" What are the contemporary manifestations of it globally? This idea of expeditionary force—voyage and discovery—still resonates in foreign policy discussion today. Liz gets at that in her essay included in this collection—the discovery and the saving of people—those kinds of dialognes are still pervasive in American culture today and the fact that we are a moral nation that has God as our symbol. So you're not just colonizing for self-interested reasons, but you're colonizing because you're saving the world and you're bringing democracy to the world. She relates this still pervasive idea to the ways Lewis and Clark is celebrated today.

Craig To me, that's not what they were doing.

Kim No, not necessarily what *they* were doing, but it's the way the story is told—it's what the story means. She's saying the story means something to Americans—it's part of that overall belief system. In a way, it doesn't matter what Lewis and Clark themselves intended.

Craig Maybe we should talk about the differences between Lewis and Clark? It's kind of "the hero," singular, isn't it? Two men made into one word. To what extent do we differentiate between them?

Kim I know I didn't think about them as individuals until I read Ambrose's book that foregrounds Lewis.[5] Now I know that they were very different people and their lives had very different outcomes.

Kathryn My son, Zion, had a comment about that. He said "I think I might have committed suicide too if you had named me Meriwether. Meriwether, that's a jacked-up name!" [laughter]

Craig It is interesting, the insistence on that being basically one word when at least one side of the equation—Lewis—was a tormented being.

Lydia In the end of my piece, I wrote, "What was he thinking when he put that buffalo robe on the floor and ended up killing himself?

Kathryn I wondered that too, why did he do all of that? Almost like . . .

Lydia Like he might have had some regrets.

Kathryn Maybe that's what it was—almost like a ceremonial act. It seemed like he was trying to soothe his mind.

Craig Apparently a number of individuals from the expedition had significant difficulties. Several of them were charged with homicides after the expedition. They had problematic lives beyond the experience of the expedition. But in terms of Lewis, the Slaughter book argues that those guys had to adjust to a new way of thinking and a new way of being and basically that Clark was able to become more Indian and Lewis couldn't and that just led to his spiral downward.[6] Slaughter uses writings by Clark to show that he starts to talk like they record the Indians talked. And he wrote a speech abont their horses being stolen even before they were stolen. In his journal he wrote a speech about how he was going to talk about it even thongh it hadn't happened yet—that in a dream he heard the horses talk to him and say they'd be taken. It's jnst really interesting. Becanse Clark *could* accommodate himself to this new way of *being* out there—he lived, whereas Lewis couldn't accommodate himself. He was too "civilized" and he couldn't accommodate himself to this other mindset.

Kathryn Do you have any historical insight as to why he committed this suicide the way that he did? Did he leave any notes?

Craig He was in debt, big time. He was snpposedly mismanaging funds and he had the worst case of writer's block. He got back and he hadn't written one word. He was supposed to write np the journals because he was supposedly the best writer. And he didn't write one word from 1806-1809 despite pressure from Jefferson to publish.

Kim If you read Stephen Ambrose's *Undaunted Courage,* he makes the case that by our standards today, Lewis would probably have been considered mentally ill—bipolar disorder—although they didn't have that term then. He didn't deal as well as Clark emotionally with the trials of being immersed in other cultures and with a bunch of charges who didn't always do things the way he wanted them done.

Craig For small offenses he would go ballistic. And these are things we don't hear about. For example, a hatchet was stolen. Well, they didn't know it was stolen. A hatchet was lost and Lewis wanted to burn that Indian camp—the whole camp. The guy was almost off his rocker. I think Cruzatte tried to kill him [langhter]. I think you can make a strong argument that Cruzatte tried to kill him. The story is that Cruzatte thought Lewis was an elk and shot him, but I think he knew it was Lewis and he really *tried* to shoot him and because he only had one eye, he missed and got him in the bntt! [laughter]

But before we stop, Gladys, if you feel comfortable, I'd like to hear the rest of that story about Ed Hawk. Was this along the Grand River where he lived?

Gladys That's right. In fact, the Corps built a park there—it's called Indian Camp. And people still come there—there are RV hookups there. That was part of the plan of the Corps.

Craig So the water was backing up from the Missouri River dam up the Grand River? And so they came in and they just bulldozed his house?

Gladys Yes, but he was living along the Missouri—he was at the part where the Fool Soldiers Band commemoration was, near the place they call Mile Long Bridge.

Craig So what's the fuller story on that? Why did they just come and bulldoze him?

Gladys He wasn't the only one. But he just wouldn't sign and he was in his 80s. The water was backing up and I think they just wanted him out of there becanse they wanted to clear that bottom land as much as they could.

Kim So if they bulldozed and you didn't sign, does that mean you didn't get any compensatiou at all?

Gladys I don't know that. . . But many people were instantly displaced—were made instantly homeless.

Craig What happened to Mr. Hawk? Do you know?

Gladys I know that they finally moved him into a house in town—in Wakpala [SD]. And he lived there a very short time and then of course he died. This displacement really had an effect on a whole bunch of families because whole families lived together. And now they were displaced and they could

no longer live together as family units and so they had hard times. They had hard times finding places. And I kind of blame our tribe for this in part—I'm not putting the whole blame on them. They weren't educated enough to really have a big plan up there to meet the needs of these people who were suffering.

So, there was a white man from McLaughlin. His name was Wendell Keller. He moved a bunch of these one-room shacks into town and boy he was making lots of money off of that, charging rent. No running water, and of course no indoor bathrooms. So there were a lot of people coming in and making money off of these people. And so that's an impact of the flooding—a direct impact and I blame that on the river [project]. Even though for all the good that it did, we're back to square one. There's no water there. I mean there's a lake there, but we have water problems everywhere, on the reservation especially. So that's just what I experienced with my own eyes and my own knowledge during that time. So I couldn't tell you more than what I know.

Craig Do you know what happened to those two sorrel horses of Ed Hawk's?

Gladys When he moved into town, there was no place. The grazing land was gone. What could you do with them? People who had a lot of horses, who had a lot of chickens—there was no place to take them in town. There was no place where maybe they could put up a chicken coop and continue with that way of life. So, I don't know what happened. They probably sold them.

Craig Or people might have just taken them too. . .

Lydia People were self-sufficient then. They raised stock and they had gardens and then to be placed into town where they had no income, no water, and no lights. . .

Gladys You know, there was a cultural side to the loss too. My grandmother died when I was only about 11. But I lived with her during that time. And here's what I saw. When she had a hide she would take it down to the river and she would stake it on the side of the water that was flowing—for days, I don't know how many days. That was her way of cleansing that hide and stretching it out and drying it—using part of it for rawhide and the other part for tan hide—for the tops of the moccasins. So that cultural way was also taken from us. I don't know how they tan hides now. They even have classes on it: "How to tan hide." When I saw that, I thought "Oh, my God!" The way that I saw it certainly can't be what they're teaching. Because I saw it step by step by step, how she did it. If I were to tan hide, I would want a river close by so I could do it the particular way that my grandmother did. But if I were to do that today, I'd keel over because I am no longer the resourceful person that my grandmother was at 80. You see, the loss of that way of life is what the river [project] did to us.

The other thing that I've noticed is that we can no longer go by the weather and predict how we're going to prepare. I think that has a lot to do with the water and the trees. What little trees we had are no longer there. We could predict different things by the river, the trees, the birds, the animals—the way they acted.

Kim But if the river's changed and the birds and animals are gone, you have no way of knowing.

Gladys You have no way of knowing all of those things. We lived so close and we depended on these birds and animals, on how they acted, how they sang, the owls at night. Now we watch the TV and they tell us the weather forecast and that's what we're going by today. But the Indians had their own natural ways of interpreting a lot of that.

Lydia Cultural knowledge.

Craig Can that cultural knowledge—can those interpretive skills and abilities—can new ones develop along this type of a river?

Gladys Probably, but not as thorongh as the way I was raised.

Lanniko So much knowledge needs to be a part of the language for you to have a conversation. We need a new language and a new knowledge of that landscape—new because the landscape has changed after the river changed. And in order to articulate our ongoing experiences, to interact, to be reflective, to listen to the small voice and the great barrenness which is our river today—we need the kind of language I'm talking about, the kind of language that's been lost to a great degree and that we need to redevelop.

Lydia It will probably take generations to develop that new conversation.

Gladys It begins in the soil. The soil has changed. For example, let's say that you want to transplant ceyaka[7] along the river. Maybe it will grow. Maybe it won't. But it all depends on that soil that's underneath. It has changed from the flooding. What did it bring? We don't know. So whether or not that will be an annual plant that grows by itself—you don't know that. You can't depend on that. Whereas when the river was there, you knew where to go to pick certain things because you knew it was there.

Craig So, in a positive long-term look, we as a people can develop that new type of relationship?

Gladys I think it's possible. We can try, I guess. There are people out there who are trying that. At Sitting Bull College, Linda Bishop-Jones teaches about native plants—ethnobotany.

Lanniko Her educational foundation is in traditional western botany. The tribal aspect of it is new to her program and our elders have been helping bring her knowledge up to where we have a compatible understanding of the landscape. She is learning the plants' stories.

Kathryn I don't think it will ever get to that again—to what Mrs. Hawk is telling us about—that we'll have all of the elements around us that can tell us how the winter's going to be, how tomorrow's going to be. My grandpa used to talk about that and I never even memorized it, how he used to ask, when the beavers build their lodges in a certain part of the lake, is it close to the shore or out in the middle? He would predict the winter by that. My grandma used to say how the day would be tomorrow by the sunset. She would say, when it goes down as a red ball like that it will be a good day—a sunny and clear day tomorrow and then you can do things outside. But I think technology interrupts that too much and I think that kind of knowledge is only going to be relegated to universities, colleges, and special interest sections of bookstores. I think that we ourselves as Native people are too interrupted by technology. It's permeated our modern, daily Indian-ness. In the TV generation you can really see the loss of our language. Up on my reservation, a lot of the cultural ways are leaving us because of that technology. It's a double-edged sword. We can watch KELO-land news and see these blizzards forming way out there and coming in—these Alberta Clippers. But if we were out on our own, especially now, without that knowledge that died with our grandparents, we'd be probably caught in a blizzard and die for our lack of knowledge.

Lydia So, are we beaten down and are we quitting? Hell no! [laughter all around]

Gladys The change in environment has also affected our stories—stories associated with the river. But now, with the way the water is, say, and twenty years down the line, are there going to be stories on that same level—of, say, Inktomi—that were associated with all of these elements of the surrounding area, the land and everything? They won't be the same and so it has affected that possibility. Let me give you an example. Inktomi stories about coyote, rabbit, and others—common stories that were native to us—were associated with all of the natural elements. They came out of the natural environment that we were familiar with. But if you take away the natural world as we knew it, you can no longer create or tell the stories. You can't tell the stories anymore to younger generations because those animals are no longer there to be used to tell the stories in order to teach the values those stories were intended to teach. And the stories don't resonate with the young people because of that.

Lydia Disrupting the river disrupted a way of life and a way of transferring knowledge. It broke a link. And it was not just the river, but also the boarding schools.

Gladys There is an absence there. The whole generation is changing. The other thing is, and I know that this is probably on all the reservations, but we are really experiencing on Standing Rock a lot of young people taking their

own lives. Now we try to reason as to why. She [gesturing to Lydia] talked about that one time and she came up with some possible reasons—one of which was that children have nothing to do. Their parents are not there. We have a different way of life today where one parent is working here and the other is working over there. When the children come home from school, there is no parent there. Right away, they turn the TV on and they play these games and they see all of this drama—all of this crime. And when they have a personal problem—and everyone has problems—who are they going to turn to talk about it?

When we were growing up, we and our parents were constantly associated with the land and the river. We had something to do. We had our parents to listen to us, to tell us when to plant, how to take care of a horse. Even that by itself could be a whole class, how to take care of a horse. Now that generation today has no experience with any kind of things that make sense to them except the fact that they want to copy other kinds of generations, listen to hip-hop. They want to be noticed. There really are no black and white answers to why they take their lives. We just buried one here about two weeks ago, I think. The young man who killed himself was 16 and absolutely a nice-looking young man. Now, even his parents don't know why he did that. At his funeral—they had a huge funeral for him—they heard some younger ones saying, "Do you think that if we killed ourselves, we'd have a big funeral like this? Are they going to pay attention to us?" That's what we're hearing, because we're aggrandizing that young man through this funeral. He's actually a hero in their sight and that's a sad part of it.

Lydia The kids don't have the outlets that we had growing up. Like when we had problems, we had ceremonies. We went into a sweat to pray and talk about our problems in the sweat. And people, you know, talked to you afterwards and encouraged you. When we were kids and we went into a ceremony, everyone listened and people supported and encouraged one another, but some people don't have that anymore. The positive thing is that people are realizing what was almost lost and they are relearning and restoring what was nearly lost.

Lanniko When I was growing up, the river was not just industry to us. It gave us fuel, water, food, furniture, clothing, toys. Everything that we had came from the river—including the bullhead puppets [laughter].[8] Up the river were little dams where there were little creeks where those bullheads were. But what I was going to say was that we had not just a physical sense of who we were, but we were tired at night from the work. We would go to bed and sleep and our nights were filled with wonderful dreams of our experiences. And now we have a generation of young people who don't have such experiences—such interpretations of a world in their dreams. I wonder about that all the time. If they don't have that way of contributing to

the community, by hauling wood to the elders, such things that bring value to us as a person—are they turning their knowledge of who they are—in terms of our community—inward? Do they look to see a worthless being, a person who is in the way or who is the butt of someone else's anger? If you are a young person in today's world, this is what the aftermath of the river changing has brought. There is a world of difference between understanding through knowledge of place how the world has come about and understanding the world through what these young people have—canned knowledge.

Across from the [Sacajawea Learning] center we have in Mobridge, I have watched a whole hillside slide into the river. Every time she comes over [gesturing to Gladys], we go out and look at that hill. We're going to go over there [gesturing to the group]. We need to be on that river when we're talking about it! We need to be physically standing on the river to look out across, to see the hills; the places we once played on are now silt. Who is telling the story of this devastation? It's good that we have something to say about the bicentennial commemoration, but the more important conversation is related to the ongoing legacy of scientists trying to put their imprint on the landscape—tearing up the land. And even our Indian people feel they need to engage successfully in making money off the land in order to survive. But as Indian people, we used to know and live off the resources that were there. We knew not to alter it in such a way that those resources would then not be there for us.

Kim There's one final question that should be addressed. What are your hopes for this book—why do you think it's important that we have this conversation? Why did you want to be a part of this project in the first place?

Kathryn I feel it is important to have Native voices speaking about this whole thing. It seems that many times nationally in the United States our voices are so little and do not have impact, nor are they sought. I thought that this was a good opportunity to be able to say something. And as we have said, writing is cathartic. The loss that I experienced as a child in Lower Brule—if you write about it you don't have to go out and hatchet somebody [laughter].

Lydia I feel similar to Kathryn. This is an opportunity to express ourselves—our thoughts—what we really think about that journey and how it affected all of us.

Craig I think it's a chance to write something that's contrary. It's a chance to examine the Lewis and Clark myth using the evidence. Collectively, as Oak Lake Writers, it's a wonderful opportunity to participate with published authors who are Lakota, Nakota, or Dakota. I think it's important to promote that type of literature. In terms of the book itself, it will be evident that we don't all think the same and that is a very important educational message—that is, that there isn't "the" Indian viewpoint on this. We're going to have viewpoints on the importance of Lewis and Clark and all aspects of this bicentennial commemoration.

Gladys It's an opportunity to preserve our personal experiences as we lived along the river and for readers to try to understand and to imagine how it really was when now there is nothing there to help us go back and investigate how it was.

Lanniko I have a fourteen-year-old daughter and I want her knowledge of history to be whole—not just what's in a textbook. When we look at the standard South Dakota geography book, there's no mention of what we've been discussing here and yet that is a sanctioned part of the curriculum that has been developed for all of our public schools, including the tribal schools. And that's the reason I feel that it's important to make what little contribution I can make to bringing that history that is not in any textbook.

Also, we can't really begin a conversation about Indians' role as stewards unless we talk about participating in river management. How can we get the river flowing again or help make changes that will recover the resources that were lost? We have something that non-Native people don't have. They need to be able to digest someone else's experience of the phenomenon of Mnisose before they can have a re-direction in their thinking.

Kim My reason is much the same as Craig's. First, I was thrilled when I heard about the Oak Lake Writers because I lived on both coasts for a while and grew weary of being the only Indian among other writers. I didn't want to serve the purpose people too often wanted me to serve—to have the perspectives and demeanor they expected me to have. When Liz told me about the Oak Lake Writers, I thought "Wow, I can sit around with other Dakota, Lakota and Nakota people" and that is a unique opportunity, as is being in South Dakota with other writers. Having grown up here, I always thought the great writers were in other places, but they're here too. So, I was very inspired by that.

Second, because I focus on "cultural studies," for lack of a better term, I am really interested in the cultural politics surrounding Lewis and Clark today. I'm not so much interested in who they were as individuals. What is fascinating is the way Americans are constructing an identity and using them as symbols. And so this is a chance to think about American nationalism, particularly white American nationalism. Lewis and Clark are a good vehicle for thinking about and critiquing those ideas.

NOTES

[1] A Lakota traditional chief and the keeper of the Sacred Buffalo Calf Pipe.

[2] Editors' note: Kathryn Akipa was uncomfortable mentioning in her autobiographical piece (also published in this collection) the caskets on the river. She felt that using that image might be to capitalize in her individually written piece on particularly painful memories of the desecration of the dead.

However, she was more comfortable leaving the reference in the dialogue transcript because the image was shared in conversation among L/D/Nakota people, thereby representing an exchange or mutual remembering rather than an individual promulgation.

[4] "Little Pompy" (a nickname apparently given by Clark) is what Lanniko remembers Lakota people calling Jean-Baptiste Charbonneau, the son of Sacajawea and the Corps of Discovery interpreter, Touissant Charbonneau.

[5] Stephen E. Ambrose, *Undaunted Courage: Meriwether Lewis, Thomas Jefferson, and the Opening of the American West* (New York: Simon & Schuster, 1996).

[6] Thomas P. Slaughter, *Exploring Lewis and Clark: Reflections on Men and Wilderness* (New York: Alfred A. Knopf, 2003).

[7] Lakota word for "tobacco."

[8] Just prior to the taping of the dialogue, Lanniko Lee told the group a hilarious story from her childhood. Her uncles made puppets from the heads of bull head fish they caught in Mnisose. They dressed the puppets up in hats and made wigs for them and put on impromptu puppet shows at the dinner table.

Solitary

Kim TallBear

for Arlene Heminger Lamb

A chair in grass that turns to sand
and rocks at the river.
The rod, the flies bright painted or
nightcrawlers,
what was needed for
slow water.
She was a fisherwoman.
She had a granddaughter who stayed
cool in green rooms all day
not liking sun, breathed cream-coffee
turned cold in her grandmother's cup.
The fisherwoman sat
solitary, breathing rocks, wet
like earth, breathing sweet grass, the field.
'Cross the narrow water,
old, dry, cut boughs,
shade for the people,
the old dance grounds.
Perhaps she imagined bells jingle,
the hide of the drum, a deep voice
contest calling.
She must have felt her house
at her back, a mile up the road.
She'd wanted it so long.

Why the Founder of Standing Rock Sioux Camp Can't Forget the Whitestone Massacre

We must remember we are part of a larger story. We are still here. We are still fighting for our lives on our own land.

LaDonna Bravebull Allard at Sacred Stones camp along the banks of the Cannonball River. Photo by Kat Eng.

LaDonna Bravebull Allard *posted Sep 03, 2016*

On this day, 153 years ago, my great-great-grandmother Nape Hote Win (Mary Big Moccasin) survived the bloodiest conflict between the Sioux Nations and the U.S. Army ever on North Dakota soil. An estimated 300 to 400 of our people were killed in the Inyan Ska (Whitestone) Massacre, far more than at Wounded Knee. But very few know the story.

As we struggle for our lives today against the Dakota Access pipeline, I remember her. We cannot forget our stories of survival.

Just 50 miles east of here, in 1863, nearly 4,000 Yanktonais, Isanti (Santee), and Hunkpapa gathered alongside a lake in southeastern North Dakota, near present-day Ellendale, for an intertribal buffalo hunt to prepare for winter. It was a time of celebration and ceremony—a time to pray for the coming year, meet relatives, arrange marriages, and make plans for winter camps. Many refugees from the 1862 uprising in Minnesota, mostly women and children, had been taken in as family. Mary's father, Oyate Tawa, was one of the 38 Dah'kotah hanged in Mankato, Minesota, less than a year earlier, in the largest mass execution in the country's history. Brigadier General Alfred Sully and soldiers came to Dakota Territory looking for the Santee who had fled the uprising. This was part of a broader U.S. military expedition to promote white settlement in the eastern Dakotas and protect access to the Montana gold fields via the Missouri River.

As my great-great-grandmother Mary Big Moccasin told the story, the attack came the day after the big hunt, when spirits were high. The sun was setting and everyone was sharing an evening meal when Sully's soldiers surrounded the camp on Whitestone Hill. In the chaos that ensued, people tied their children to their horses and dogs and fled. Mary was 9 years old. As she ran, she was shot in the hip and went down. She laid there until morning, when a soldier found her. As he loaded her into a wagon, she heard her relatives moaning and crying on the battlefield. She was taken to a prisoner of war camp in Crow Creek where she stayed until her release in 1870.

Where the Cannonball River joins the Missouri River, at the site of our camp today to stop the Dakota Access pipeline, there used to be a whirlpool that created large, spherical sandstone formations. The river's true name is Inyan Wakangapi Wakpa, River that Makes the Sacred Stones, and we have named the site of our resistance on my family's land the Sacred Stone Camp. The stones are not created anymore, ever since the U.S. Army Corps of Engineers dredged the mouth of the Cannonball River and flooded the area in the late

1950s as they finished the Oahe dam. They killed a portion of our sacred river.

I was a young girl when the floods came and desecrated our burial sites and Sundance grounds. Our people are in that water.

This river holds the story of my entire life.

I remember hauling our water from it in big milk jugs on our horses. I remember the excitement each time my uncle would wrap his body in cloth and climb the trees on the river's banks to pull out a honeycomb for the family—our only source of sugar. Now the river water is no longer safe to drink. What kind of world do we live in?

Look north and east now, toward the construction sites where they plan to drill under the Missouri River any day now, and you can see the old Sundance grounds, burial grounds, and Arikara village sites that the pipeline would destroy. Below the cliffs you can see the remnants of the place that made our sacred stones.

Of the 380 archeological sites that face desecration along the entire pipeline route, from North Dakota to Illinois, 26 of them are right here at the confluence of these two rivers. It is a historic trading ground, a place held sacred not only by the Sioux Nations, but also the Arikara, the Mandan, and the Northern Cheyenne.

Again, it is the U.S. Army Corps that is allowing these sites to be destroyed.

The U.S. government is wiping out our most important cultural and spiritual areas. And as it erases our footprint from the world, it erases us as a people. These sites must be protected, or our world will end, it is that simple. Our young people have a right to know who they are. They have a right to language, to culture, to tradition. The way they learn these things is through connection to our lands and our history.

If we allow an oil company to dig through and destroy our histories, our ancestors, our hearts and souls as a people, is that not genocide?

Today, on this same sacred land, over 100 tribes have come

together to stand in prayer and solidarity in defiance of the black snake. And more keep coming. This is the first gathering of the Oceti Sakowin (Sioux tribes) since the Battle of the Greasy Grass (Battle of Little Bighorn) 140 years ago. When we first established the Sacred Stone Camp on April 1 to stop the pipeline through prayer and non-violent direct action, I did not know what would happen. But our prayers were answered.

We must remember we are part of a larger story. We are still here. We are still fighting for our lives, 153 years after my great-great-grandmother Mary watched as our people were senselessly murdered. We should not have to fight so hard to survive on our own lands.

My father is buried at the top of the hill, overlooking our camp on the riverbank below. My son is buried there, too. Two years ago, when Dakota Access first came, I looked at the pipeline map and knew that my entire world was in danger. If we allow this pipeline, we will lose everything.

We are the river, and the river is us. We have no choice but to stand up.

Today, we honor all those who died or lost loved ones in the massacre on Whitestone Hill. Today, we honor all those who have survived centuries of struggle. Today, we stand together in prayer to demand a future for our people.

LaDonna Bravebull Allard wrote this article for YES! Magazine. LaDonna is the Standing Rock Sioux Tribe's Section 106 Historic Preservation Officer. She is also the Founder and Director of the Sacred Stone Camp, a spirit camp established in April 2016 on her family's land on the Standing Rock Reservation, as a center of cultural preservation and spiritual resistance to the Dakota Access pipeline.

OP-ED CONTRIBUTOR

Taking a Stand at Standing Rock

KIM RYU

By DAVID ARCHAMBAULT II
AUGUST 24, 2016

Near Cannon Ball, N.D. — It is a spectacular sight: thousands of Indians camped on the banks of the Cannonball River, on the edge of the Standing Rock Sioux Reservation in North Dakota. Our elders of the Seven Council Fires, as the Oceti Sakowin, or Great Sioux Nation, is known, sit in deliberation and prayer, awaiting a federal court decision on whether construction of a $3.7 billion oil pipeline from the Bakken region to Southern Illinois will be halted.

The Sioux tribes have come together to oppose this project, which was approved by the State of North Dakota and the United States Army Corps of Engineers. The nearly 1,200-mile pipeline, owned by a Texas oil company named Energy Transfer Partners, would snake across our treaty lands and through our ancestral burial grounds. Just a half-mile from our reservation boundary, the proposed route crosses the Missouri River, which provides drinking water for millions of Americans and irrigation water for thousands of acres of farming and ranching

lands.

Our tribe has opposed the Dakota Access pipeline since we first learned about it in 2014. Although federal law requires the Corps of Engineers to consult with the tribe about its sovereign interests, permits for the project were approved and construction began without meaningful consultation. The Environmental Protection Agency, the Department of the Interior and the National Advisory Council on Historic Preservation supported more protection of the tribe's cultural heritage, but the Corps of Engineers and Energy Transfer Partners turned a blind eye to our rights. The first draft of the company's assessment of the planned route through our treaty and ancestral lands did not even mention our tribe.

The Dakota Access pipeline was fast-tracked from Day 1 using the Nationwide Permit No. 12 process, which grants exemption from environmental reviews required by the Clean Water Act and the National Environmental Policy Act by treating the pipeline as a series of small construction sites. And unlike the better-known Keystone XL project, which was finally canceled by the Obama administration last year, the Dakota Access project does not cross an international border — the condition that mandated the more rigorous federal assessment of the Keystone pipeline's economic justification and environmental impacts.

The Dakota Access route is only a few miles shorter than what was proposed for the Keystone project, yet the government's environmental assessment addressed only the portion of the pipeline route that traverses federal land. Domestic projects of this magnitude should clearly be evaluated in their totality — but without closer scrutiny, the proposal breezed through the four state processes.

Perhaps only in North Dakota, where oil tycoons wine and dine elected officials, and where the governor, Jack Dalrymple, serves as an adviser to the Trump campaign, would state and county governments act as the armed enforcement for corporate interests. In recent weeks, the state has militarized my reservation, with road blocks and license-plate checks, low-flying aircraft and racial profiling of Indians. The local sheriff and the pipeline company have both called our protest "unlawful," and Gov. Dalrymple has declared a state of emergency.

It's a familiar story in Indian Country. This is the third time that the Sioux Nation's lands and resources have been taken without regard for tribal interests. The Sioux peoples signed treaties in 1851 and 1868. The government broke them before the ink was dry.

When the Army Corps of Engineers dammed the Missouri River in 1958, it took our riverfront forests, fruit orchards and most fertile farmland to create Lake Oahe. Now the Corps is taking our clean water and sacred places by approving this river crossing. Whether it's gold from the Black Hills or hydropower from the Missouri or oil pipelines that threaten our ancestral inheritance, the tribes have always paid the price for America's prosperity.

Protecting water and our sacred places has always been at the center of our cause. The Indian encampment on the Cannonball grows daily, with nearly 90 tribes now represented. Many of us have been here before, facing the destruction of homelands and waters, as time and time again tribes were ignored when we opposed projects like the Dakota Access pipeline.

Our hand continues to be open to cooperation, and our cause is just. This fight is not just for the interests of the Standing Rock Sioux tribe, but also for those of our neighbors on the Missouri River: The ranchers and farmers and small towns who depend on the river have shown overwhelming support for our protest.

As American citizens, we all have a responsibility to speak for a vision of the future that is safe and productive for our grandchildren. We are a peaceful people and our tribal council is committed to nonviolence; it is our constitutional right to express our views and take this stand at the Cannonball camp. Yet the lieutenant governor of North Dakota, Drew Wrigley, has threatened to use his power to end this historic, peaceful gathering.

We are also a resilient people who have survived unspeakable hardships in the past, so we know what is at stake now. As our songs and prayers echo across the prairie, we need the public to see that in standing up for our rights, we do so on behalf of the millions of Americans who will be affected by this pipeline.

As one of our greatest leaders, Chief Sitting Bull of the Hunkpapa Lakota, once said: "Let us put our minds together and see what life we can make for our children." That appeal is as relevant today as it was more than a century ago.

David Archambault II is the chairman of the Standing Rock Sioux tribe.

NO

DAKOTA ACCESS PIPELINE

PROPOSED DAPL ROUTE

Cannonball, SD – On April 1st, 2016, tribal citizens of the Standing Rock Lakota Nation and ally Lakota, Nakota, & Dakota citizens, under the group name “Chante tin’sa kinanzi Po” founded a Spirit Camp along the proposed route of the bakken oil pipeline, Dakota Access.

The Dakota Access Pipeline (DAPL), owned by Energy Transfer Partners, L.P., is proposed to transport 450,000 barrels per day of Bakken crude oil (which is fracked and highy volatile) from the lands of North Dakota to Patoka, Illinois. The threats this pipeline poses to the environment, human health and human rights are strikingly similar to those posed by the Keystone XL. Because the DAPL will cross over the Ogallala Aquifer (one of the largest aquifers in the world) and under the Missouri River twice (the longest river in the United States), the possible contamination of these water sources makes the Dakota Access pipeline a national threat.

This Spirit Camp is called Iŋyaŋ Wakháŋagapi Othí, translated as Sacred Rock, the original name of the Cannonball area. The Spirit Camp is dedicated to stopping and raising awareness the Dakota Access pipeline, the dangers associated with pipeline spills and the necessity to protect the water resources of the Missouri river. We reject the appropriation of the name “Dakota” in a project that is in violation of aboriginal and treaty lands. The word Dakota means “the People” in the Dakota/Lakota/Nakota language and was never intended to be used in a project which violates traditional ceremonial areas.

Chante tin’sa kinanzi Po is a grassroots group with the following mission statement: “They claim this mother of ours, the Earth, for their own use, and fence their neighbors away from her, and deface her with their buildings and their refuse.” – Chief Sitting Bull. His way of life is our way of life–standing in opposition to the Dakota Access Pipeline is our duty. Group: Chante tin’sa kinanzi Po translates as People, Stand with a Strong Heart!

The Dakota Access threatens everything from farming and drinking water to entire ecosystems, wildlife and food sources surrounding the Missouri. The nesting of bald eagles and piping plovers as well as the quality of wild rice and medicinal plants like sweet grass are just a few of the species at stake here. We ask that everyone stands with us against this threat to our health, our culture, and our sovereignty. We ask that everyone who live on or near the Missouri River and its tributaries, everyone who farms or ranches in the local area, and everyone who cares about clean air and clean drinking water stand with us against the Dakota Access Pipeline!

Everyone is welcome to join the Spirit Camp located at the conffluence of the Cannon Ball and Missouri River on the Standing Rock Sioux Reservation to pray, share food and stories and connect with the land and water that is being threatened by the Dakota Access Pipeline.

For more infomation:

FACEBOOK.COM/CAMPOFTHESACREDSTONE/

GOFUNDME.COM/SACREDSTONECAMP

We will not allow this pipeline to cross our land, water, and sacred sites.

We will not allow Dakota Access to trespass on our treaty territory and destroy our medicines and our culture. From the horse ride that established the Camp of the Sacred Stones, to the 500-mile Run for Our Lives relay that delivered our recommendations to the Army Corps of Engineers, with the hundreds of community members who met with Army Corps Colonel Henderson on April 29, and the ongoing vigilance of our prayers, we are committed to stopping the Dakota Access Pipeline.

"The place where pipeline will cross on the Cannonball is the place where the Mandan came into the world after the great flood, it is also a place where the Mandan had their Okipa, or Sundance. Later this is where Wisespirit and Tatanka Ohitika held sundances. There are numerous old Mandan, Cheyenne, and Arikara villages located in this area and burial sites. This is also where the sacred medicine rock [is located], which tells the future."
LaDonna Bravebull Allard (Lakota, Dakota)

"The dangers imposed by the greed of big oil on the people who live along the Missouri river is astounding. When this proposed pipeline breaks, as the vast majority of pipelines do, over half of the drinking water in South Dakota will be affected. How can rubber-stamping this project be good for the people, agriculture, and livestock? It must be stopped. The people of the four bands of Cheyenne River stand with our sister nation in this fight as we are calling on all the Oceti Sakowin or Seven Council Fires to do so with our allies, both native and non native in opposing this pipeline."
Joye Braun (Cheyenne River)

DAPL Violates Numerous Federal Laws

Fort Laramie Treaty of April 29, 1868

The DAPL violates Article 2 of the 1868 Fort Laramie Treaty which guarantees that the Standing Rock Sioux Tribe shall enjoy the "undisturbed use and occupation" of our permanent homeland, the Standing Rock Indian Reservation. The U.S. Constitution states that treaties are the supreme law of the land.

Executive Order 12898 on Environmental Justice

All agencies must determine if proposed project disproportionately impacts Tribal community or other minority community.
The DAPL was original routed to cross the Missouri River north of Bismarck. The crossing was moved to "avoid populated areas", so instead of crossing upriver of the state's capital, it crosses the aquifer of the Great Sioux Reservation.

Pipeline Safety Act and Clean Water Act

DAPL has not publicly identified the Missouri River crossing as high consequence. The Ogallala Aquifer must be considered a"high consequence area", since the pipeline would cross critical drinking water and intakes for those water systems.The emergency plan must estimate the maximum possible spill (49 CFR §195.452(h)(iv)(i)). DAPL refuses to release this information to the tribe.

National Environmental Policy Act (NEPA)

A detailed Environmental Impact Statement (EIS) must be completed for major actions that affect the environment. Also, the Army Corps of Engineers must comply w/ NEPA for the permit for the Missouri River crossing. The way agencies get around this is to provide a lesser study, a brief Environmental Assessment (which Dakota Access has done). A full EIS would be an interdisciplinary approach for the integrated use of natural and social sciences to determine direct and indirect effects of the project and "possible conflicts...with Indian land use plans and policies (and) cultural resources" 40 CFR §1502.16

Executive Order 13007 on Protection of Sacred Sites

"In managing federal lands, each executive branch agency shall avoid adversely affecting the physical integrity of such sites." There are historical ceremony sites and burial grounds in the immediate vicinity of the Missouri River crossing. The Corps must deny the DAPL permit to protect these sites in compliance with EO 13007.

EXCERPTS FROM STANDING ROCK SIOUX TRIBE RESOLUTION NO. 406-15 - SEP 2, 2015

WHEREAS, the Standing Rock Indian Reservation was established as a permanent homeland for the Hunkpapa, Yanktonai, Cuthead and Blackfoot bands of the Great Sioux Nation: and
WHEREAS, the Dakota Access Pipeline threatens public health and welfare on the Standing Rock Indian Reservation; and
WHEREAS, the Standing Rock Sioux Tribe relies on the waters of the life-giving Missouri River for our continued existence, and the Dakota Access Pipeline poses a serious risk to Mni Sose and to the very survival of our Tribe; and .
WHEREAS, the horizontal direction drilling in the construction of the pipeline would destroy valuable cultural resources of the Standing Rock Sioux Tribe; and
WHEREAS, the Dakota Access Pipeline violates Article 2 of the 1868 Fort Laramie Treaty which guarantees that the Standing Rock Sioux Tribe shall enjoy the "undisturbed use and occupation" of our permanent homeland, the Standing Rock Indian Reservation;

NOW THEREFORE BE IT RESOLVED, that the Standing Rock Sioux Tribal Council hereby strongly opposes the Dakota Access Pipeline; and
BE IT FURTHER RESOLVED, that the Standing Rock Sioux Tribal Council call upon the Army Corps of Engineers to reject the river crossing permit for the Dakota Access Pipeline...

Indigenous Youth Are Building a Climate Justice Movement by Targeting Colonialism

Monday, 20 June 2016 00:00

By Jaskiran Dhillon (/author/itemlist/user/52316), Truthout (http://truth-out.org) | Report

Rezpect Our Water campaign youth leaders (left to right) Tokata Iron Eyes, AnnaLee Yellow Hammer, Precious Winter Roze Bernie and Winona Gayton stand in defense of land and water. (Photo: Kettie Jean)

"Climate change is the defining issue of our time." These urgent words came from 16-year-old Xiuhtezcatl Roske-Martinez, a young Indigenous man raised in the Aztec tradition, at a United Nations General Assembly event (http://indiancountrytodaymedianetwork.com/2015/07/05/video-15-year-old-climate-warrior-address-un-calls-climate-change-human-rights-issue) on climate change held on June 29, 2015. Roske-Martinez is the youth director for Earth Guardians (http://www.earthguardians.org/new-page-1/), a nonprofit organization centered on galvanizing global youth leadership to defend the planet for current and future generations (http://www.justiceforgirls.org/uploads/2/4/5

through school-based presentations, legal challenges (http://ourchildrenstrust.org/sites/default/files/16.04.08MTD.Decision.PR_.pdf), eco hip-hop and public talks -- elevating the voices of young people near and far and empowering them to become forces of change in their own right.

Upon learning the federal courts upheld the rights of youth on April 8, 2016, in a landmark constitutional climate change case (http://www.ourchildrenstrust.org/sites/default/files/16.04.08MTD.Decision.PR_.pdf) brought forward by Our Children's Trust (http://ourchildrenstrust.org/about) (representing 21 youth plaintiffs) against the US federal government and fossil fuel industry, Roske-Martinez made the following public statement:

> When those in power stand alongside the very industries that threaten the future of my generation instead of standing with the people, it is a reminder that they are not our leaders. The real leaders are the twenty youth standing with me in court to demand justice for my generation and justice for all youth. We will not be silent, we will not go unnoticed, and we are ready to stand to protect everything our "leaders" have failed to fight for. They are afraid of the power we have to create change. And this change we are creating will go down in history.

And change things they will.

Roske-Martinez is not alone in his pursuit of environmental justice through the harnessing of young people's power, experiential knowledge and visioning of a future world where balance has been restored on Earth. He is part of a growing battalion of Indigenous youth warriors (https://www.culturalsurvival.org/publications/cultural-survival-quarterly/what-important-indigenous-youth-speak) railing against the failure of governments, fossil fuel companies, domestic and international monitoring agencies, and human rights organizations to acknowledge the grave environmental destruction surfacing in the wake of Western-born models of industrialization (https://unsettlingamerica.wordpress.com/2013/11/05/for-our-nations-to-live-capitalism-must-die/) and to be accountable around climate recovery. They are calling out the relentless rise of a global, capitalist social order (https://www.theguardian.com/books/2014/sep/22/this-changes-everything-review-naomi-klein-john-gray) promoting an extreme form of economic growth (http://www.truth-out.org/progressivepicks/item/28933-climate-change-is-violence) that results in the skyrocketing of wealth for few at the great expense of many.

Demanding the environmental movement contend first and foremost with the

across Native North America are mounting resistance efforts to protect their ancestral homelands from further exploitation. This is a timely endeavor, as natural gas and oil extraction continue unabated throughout Turtle Island (http://indiancountrytodaymedianetwork.com/2011/09/30/canada-and-united-states-are-turtle-island), with lethal aftereffects, as recently witnessed with the Fort McMurray wildfire (http://www.newyorker.com/news/daily-comment/fort-mcmurray-and-the-fires-of-climate-change) that burned the city to the ground. Simultaneously, Indigenous youth are developing locally based solutions to address the toxic impact of extractive processes on their communities. Indigenous Nations are often situated on the frontlines and forced to deal with the immediate fallout of environmental degradation such as contaminated soil (http://www.scientificamerican.com/article/contaminated-culture-native-people-struggle-with-tainted-resources/), open-air wastewater pits (http://www.livescience.com/47535-tar-sands-ponds-toxic-and-unstable.html) and poisoned water sources (http://www.reuters.com/article/us-usa-indigenous-un-idUSBRE8431Q220120504). For Indigenous peoples, youth have always been at the heart of society (https://www.youtube.com/watch?v=28u7BOx0_9k), and future generations are a key motivation for the practice of maintaining balance with the world of relations.

These young people are bold and brave. They are innovative and imaginative. And they are organizing through an arsenal of tactics that reflect a profound and intergenerational commitment to the land, water and air upon which everything is dependent -- the sacred building blocks of life itself. It's a commitment, in fact, that predates the colonial founding of the settler states of Canada and the USA (http://rabble.ca/columnists/2015/01/land-relationship-conversation-glen-coulthard-on-indigenous-nationhood).

Violence on the Land, Violence on Our Bodies

Violence on the Land, Violence on Our Bodies Artwork, Native Youth Sexual Health Network. (Image: Konsmo)

On June 6, 2016, the Native Youth Sexual Health Network (http://nativeyouthsexualhealth.com) (NYSHN), in partnership with Women's Earth Alliance (http://womensearthalliance.org) (WEA), released a report and toolkit entitled "Violence on the Land, Violence on our Bodies: Building an Indigenous Response to Environmental Violence (http://landbodydefense.org/uploads/files/Violence%20on%20the%20Land%20and%20Body%20Report%20and%20Toolkit%202016.pdf)." The multiyear initiative aims to articulate an explicit connection between violence on the land and violence to the body by exposing how strategies of colonization,

on the very intersection between Indigenous territory and people. As a staff member from NYSHN told Truthout, "This resource was built by community to help to

continue mobilizing responses to assaults on both our bodies and lands, giving direct tools and strategies for resistance and harm reduction to colonial and environmental gendered violence."

The report underscores the systematic environmental violence (http://www.un.org/esa/socdev/unpfii/documents/EGM12_carmen_waghiyi.pdf) experienced by Indigenous communities continuing to live under conditions of occupation. It also showcases the widespread resistance efforts that mark a clear distinction between Indigenous ways of being in relation to the land (http://www.silvafor.org/assets/silva/PDF/DebMcGregor.pdf) and those perceptions held by settlers, the latter being heavily influenced by the principle of *terra nullius (http://www.un.org/press/en/2012/hr5088.doc.htm)* outlined in the Doctrine of Discovery (http://ili.nativeweb.org/sdrm_art.html), which was used to justify the seizure and subsequent desecration of Native lands more than 500 years ago. Terra nullius is a Latin phrase meaning "nobody's land," a colonial invention of European international law legitimating the idea that any land deemed "unoccupied or unsettled" could be acquired as a "new territory" by a sovereign state, and that the laws of that state would apply in the new territory.

NYSHN is a grassroots network by and for Indigenous youth that works across issues of sexual and reproductive health, rights and justice in the United States and Canada. To create the report, members of NYSHN travelled to some of the most severely impacted Indigenous homelands to document the lived realities on the frontlines. They uncovered stories about how extractive industries have drilled, mined and

These energy projects have resulted in massive economic gains for transnational corporations (http://www.theguardian.com/environment/true-north/2016/may/12/the-arsonists-of-fort-mcmurray-have-a-name), but have come at a significant cost to Indigenous peoples, disproportionately impacting Indigenous women (http://grist.org/climate-energy/making-the-connections-on-tar-sands-pollution-racism-and-sexism/), two-spirit people (https://www.theguardian.com/music/2010/oct/11/two-spirit-people-north-america) and youth. As Amanda Lickers (Turtle Clan, Seneca), a youth participant and advocate working with NYSHN, puts it, "The reason women [are] attacked is because women carry our clans. That's where we get our identity as nations. So if you destroy the women, you destroy the nations and then you get access to the land." The multilayered wreckage caused by environmental violence is broad ranging and devastating in scope -- gender violence (http://www.cbc.ca/news/canada/british-columbia/missing-women-amnesty-international-1.3281541), higher rates of drug and alcohol abuse, murders and disappearances (http://www.huffingtonpost.com/georgianne-nienaber/murder-mahem-and-mexican-_b_4646552.html), reproductive illness and toxic exposure (https://inciteblog.wordpress.com/2010/08/19/international-indigenous-womens-environmental-and-reproductive-health-symposium-declaration/), direct threats to culture and Indigenous lifeways (http://www.ammsa.com/node/6945), and an undermining of Indigenous political claims to governance and self-determination all reared their ugly heads in the report.

The testimonies also make it clear that the inception of this environmental violence first found its footing in the equally abhorrent processes of conquest and domination over nature that was necessary to bring Canada and the United States into being -- a realization that takes the founding of the Native environmental justice movement (http://indiancountrytodaymedianetwork.com/2015/09/18/uranium-mining-book-explores-wastelanding-navajo-nation-161788) back to 1492. "We are talking about how we experience climate change and environmental destruction as a direct result of colonization," Lickers told Truthout in an interview about the project. "The root problem is not climate change per se, the root problem is the occupation of our territories and these anti-Indigenous world views that see the natural world as separate from human existence." Indigenous-youth-led organizations such as NYSHN, then, are doing the important work of challenging the political vernacular and analytic focus within the dominant climate justice movement -- a movement that exercises deliberate amnesia about the complex and colonial power structures and legacies (https://www.opendemocracy.net/uk/anna-lau/climate-stories-environment-colonial-legacies-and-systemic-change) that have driven the world to

and gendered critique at the center of deliberations over climate crisis.

No More Pipelines

Across the plains of North Dakota, Indigenous youth have been speaking truth to power (http://www.independent.co.uk/news/world/americas/13-year-old-native-american-s-petition-to-stop-oil-pipeline-reaches-80000-signatures-a7024426.html) by attempting to stop the building of the Dakota Access Pipeline (http://indiancountrytodaymedianetwork.com/2016/05/23/dakota-access-pipeline-construction-begins-despite-standing-rock-sioux-objections-164566), a project of Dallas-based Energy Transfer Partners. If approved, the pipeline would transport oil from the Bakken region of North Dakota across four states to Pakota, Illinois through a route that traverses underneath the Missouri River twice and runs alongside the Standing Rock Reservation (http://thinkprogress.org/climate/2016/05/05/3774984/dakota-access-pipeline-indigenous-opposition/).

The Standing Rock Sioux get their drinking water from the Missouri River. Consequently, the proposed pipeline serves as a direct threat to their water sources and would be an environmental assault on the community if a spill were to occur. Energy Transfer Partners has assured the people of Standing Rock that the pipeline would be closely monitored, but given the historical relations between Indigenous peoples and the United States (http://www.beacon.org/An-Indigenous-Peoples-History-of-the-United-States-P1164.aspx), the tribe has little faith that their safety and interests will be upheld. The record on spillage is bleak. In 2012-2013, there were 300 oil pipeline breaks (https://secure.earthjustice.org/site/Advocacy?cmd=display&page=UserAction&id=1861) in North Dakota alone.

When Indigenous youth in the region heard about the pipeline proposal, they initiated a campaign called Rezpect Our Water (http://rezpectourwater.com) to make their voices heard, raise public awareness, and ultimately halt the pipeline project. Drawing on oral histories of Indigenous political resistance in her homelands, Tokata Iron Eyes, a 12-year-old Lakota young woman and one of the lead youth organizers in the campaign, explained to me her motivation for joining the struggle: "Our ancestors are the ones that died fighting for this land, so that makes me think that *we* have a duty to fight for our land. And we are obligated to protect the soil and the water and everything that is sacred like that. Whatever happens with the pipeline and climate change -- that is going to be affecting us, this generation. And it will affect the next generation too." Tokata and her youth comrades are holding rallies, organizing spiritual relay runs (http://lastrealindians.com/run-for-

through formal and informal teach-ins, writing letters (http://respectwaterfall.com/category/the-letters/), circulating petitions (https://www.change.org/p/jo-ellen-darcy-stop-the-dakota-access-pipeline), and creating videos (https://www.youtube.com/watch?v=XL0aq05t7ds) to get their message out and to remind the broader public that the United States is still, and has always been, Indigenous land.

The role of Indigenous young women coming together in this campaign has also been paramount, signaling the enduring strength of Indigenous women's leadership in questions of tribal governance. "Women were the people who held the tribe together and they were the willpower of the tribe and its strength. So, just knowing that we come from such powerful genes makes us feel strong inside," Tokata offered in an interview with Truthout. "So I feel that even if the men aren't fighting for us and our land, then we as young women have an obligation to fight for ourselves and our people. I feel like I need to fight for my kids and my grandchildren, and my grandmas who can't fight for themselves anymore."

Decolonization and Indigenous Resurgence: The Path to Real Climate Justice

The work of these Indigenous young people demands a critical evaluation of the construction of the climate justice movement. The colonial violence that fostered the ruination of the planet in the first place has, for the most part, been blurred out of focus in public dialogue on this topic. An accurate examination of the social and political causes of climate change requires a close look at the history of genocide (http://www.truth-out.org/news/item/29954-the-native-american-genocide-and-the-teaching-of-us-history), land dispossession and concerted destruction of Indigenous societies and cultural practices that has come alongside the irreversible damage wrought by environmental destruction.

Siku Allooloo (http://briarpatchmagazine.com/contributors/view/allooloo-siku), an Inuit-Taino writer and community organizer from Denendeh (Northwest Territories, Canada), recently gave a keynote at the 2016 Girls Climate Summit (http://phennd.org/update/girls-climate-summit/) in Philadelphia, Pennsylvania, where she spoke about her work bringing youth and elders together on the land to discuss climate change impacts on their ways of life. In an interview with Truthout, Allooloo said:

> Indigenous peoples are living with the overlapping effects of colonialism,

> commitment to protecting all that generates life, both within our ancestral practices and the life-giving forces within the land. This is why Indigenous peoples throughout the world -- and primarily Indigenous women and girls -- are at the very forefront of movements for decolonization and climate justice.

She urged the delegates, ages 9 to 18, to place these realities front and center in their strategizing around climate justice.

As each of these young leaders have made evident, this is not only a fight about climate, but also an ancient, anti-colonial fight over the seizure of land and its translation into a commodity that can be bought and sold, the exploitation of Earth and air resources, and the elimination of entire peoples for the pursuit of conquest and profit.

It is not enough to protect the environment from grave industrial harm; we must also dismantle the very systems from which these industries stem -- systems that perpetuate violence against humans and homelands alike. As such, climate justice organizing must go hand in hand with decolonization (http://www.yesmagazine.org/peace-justice/dancing-the-world-into-being-a-conversation-with-idle-no-more-leanne-simpson) efforts by fostering and growing the leadership of Indigenous youth, supporting large-scale land restitution projects for Indigenous Nations (https://taiaiake.files.wordpress.com/2015/01/ahf-restitution-article.pdf), reinforcing the revitalization of Indigenous governance systems (https://muse.jhu.edu/article/587729) and channeling resources into the frontline resistance (http://unistoten.camp) of Indigenous peoples across Turtle Island.

Simply put: Close attention must be paid to the wisdom and knowledge of Indigenous youth and their communities as they attempt to heal and protect our planet from the harm that comes in the wake of a never-ending demand for more energy, regardless of the cost.

JASKIRAN DHILLON (/AUTHOR/ITEMLIST/USER/52316)

colonialism, anthropology of the state, anti-racist feminism, colonial violence and youth studies. Her first book, forthcoming with University of Toronto Press in 2017, *Prairie Rising: Indigenous Youth, Decolonization, and the Politics of Intervention*, provides a critical, ethnographic account of state interventions in the lives of urban Indigenous youth. She is currently an assistant professor of global studies and anthropology at The New School in New York City.

'The Way of the Fat-Taker is No Good'

Lakota Giving and Justice

Posted: November 26, 2015 | **Author:** Editors | **Filed under:** Uncategorized |Leave a comment
Two young, uniformed soldiers knocked at the door of a humble Lakota log house on the Lower Brule Sioux Indian Reservation, or the Kul Wicasa Oyate. An older Lakota woman, a widow, answered the door. She collapsed to the ground sobbing before the two the men could tell her, in a language she couldn't understand, her only son was killed in combat. They left her with a sorry your son's body wouldn't be returned and here's a check for hundreds of dollars.

After local clergy encouraged the mourning woman, she cashed the check. As per Lakota custom, the fourth day after finding out her only son was killed, she cut her hair. The hundreds of dollars from the severance pay was soon given away. All her worldly possession, including her wood stove, were set outside her house. Relatives and community members came by, offered words of condolences, songs of healing, and they took everything from her already humble home.

That night she slept on the bare floor.

The next day, relatives brought her food, as she began the yearlong sacred duty of caring for her son's spirit. Everyday after that, the community came by her home, bringing gifts of food, cooking utensils, and blankets. Hunters would set aside meat after every kill for her. A couple of potatoes and squash were picked for from the community gardens and given to her. Pies and soups were made for her.

After a year, she was nurtured back to health physically and materially, re-acquiring the necessary items for her home to keep warm and to keep her fed. Her physical needs were cared for as she cared for the spiritual needs for her son's spirit.

Lakota customary law disallows needless suffering in times of abundance and plenty. It's an embarrassment to have relatives wanting and in need or deprived of basic humanity.

It's an affront to Wolakota to have others in want, need, and material deprivation. This, to my mind, was perhaps the most concrete aspect of Lakota kinship.

This also worked the other way around. Those who hoarded or 'took the fat'—or wasicu—were criminal. Narcissism and greed were punishable by stripping individuals of material wealth or forcing them to give away all their possessions as a means of repentance.

If humility, unsiiciyapi, was not practiced, it was enforced as the highest ideal of ikce wicasa, the common people.

Poverty in Lakota society does not, however, solely equate to material wealth. One is pitiful or poor, or unsica, if they are deprived of belonging and home.

This worked internally and externally. Often, families adopted other poor natives or non-natives, caring for their spiritual and material well-being. Those violating this code, too, were punished, mocked, and shamed—and sometimes killed or their wealth expropriated.

The highest insult in Lakota is to be greedy, to be wasicu.

Stories exist of Lakota headmen and women sitting side by side in council. Amongst themselves, the leaders would wear the most humble attire (not the headdresses or beautiful beadwork we're so used to seeing) and speak with brevity and clarity. To do otherwise could result in ejection from leadership and one could be viewed negatively as long-winded or worse greedy.

In my short life, these teachings have stuck with me and guided my actions as ikce wicasa. The rampant commercialization of Lakota 'culture,' however, troubles me. Many non-Lakota (and Lakota) have taken up Lakota ways, especially 'spirituality' like the sundance or other ceremonies, but they have ignored the most concrete aspect of Wolakota, in my opinion—the giveaway.

It was after all not the sundance that was first banned under the 1887 Civilization Regulations, but it was the giveaway or the potlatch ceremony that was first targeted because it posed the greatest threat to the imposed reservation social order. Giveaways kept in tact and promoted the classless, non-hierarchical, and radically anti-materialist political and social structure. In this structure, women owned all the domestic material wealth, like the house and everything in it, and had final say on how these materials were used and distributed.

Anti-capitalism and anti-patriarchal social relations posed the biggest threats to the acquisition of Native lands and subduing Native peoples. Native people were not colonized because of our culture, but because we were 'Indians'—being 'Indian' meant being attached to a land base where relationships to that land required maintaining idealized reciprocal social relations among ourselves and the nonhuman world. Being 'Indian' meant defending this social organization attached to land.

To eliminate a people to gain access to desired lands and resources requires annihilating their relationship to that land and therefore their social relations. That's settler colonialism.

Today, Lakota culture is a readily available commodity to be consumed by anyone, stripped of its concepts of justice and equal social relations. It appears to have become like any other religion, something anyone can take up to 'discover oneself.'

While it is encouraging to see the revitalization and resurgence of cultural practices, it is equally disturbing to see what aspects of this way of life are taken up and promoted at the expense of others.

For example, there is a rise in 'restorative justice' practices, which focus on the 'healing' of individuals committing offenses in Indian Country. These are positive and progressive movements away from the punitive system of mass incarceration. Yet, they typically only apply to Native on Native crimes and often center perpetrators not victims. They also limit the application of justice to broader society. We still cannot apply our models of justice to non-Native individuals and societies committing acts of violence against our lands and peoples.

Another troubling trend is the over emphasis on healing *just* lands and water—singing songs and revitalizing cultural relationships—while often ignoring the rampant violence against Native women, youth, poor, unsheltered, and LGBTQ2 relatives. As we scale up land based direct actions against the nonconsensual trespass of corporate and state agencies on Indigenous lands, I am reminded of the powerful insights of Kwagiulth scholar and activist Sarah Hunt:

> So what would happen if every time an Indigenous woman had her personal boundaries crossed without consent, we were moved to act in the same way as we've seen to the threat of a pipeline in our territories – the nonconsenual crossing of territorial boundaries? We would see our chiefs and elders, the language speakers, children and networks of kin, all in our regalia, our allies and neighbors all across the generations show up outside the house of a woman who had been hurt to drum and sing her healing songs. What if we looked to the land for berries and to the ocean for fish and herring eggs and seaweed to help her body to heal? What if we put her within a circle of honor and respect to show her that we will not stand for this violence any longer. We would bring her food and song and story, we would truly protect her self-determination and to defend the boundaries of her body which had been trespassed and violated.

With the historic defeat of the Keystone XL pipeline across Lakota treaty territory, we need to also take seriously Wolakota—what it means and how we treat each other and the land. Indigenous bodies, land, and water are not abstract things that can be healed through prayer alone. As our leaders and allies bravely declared war against TransCanada and defeated them, we should expect the same attention given to those materially and physically deprived of a dignified life. It would require not just a political revolution but a radical restructuring of our social relations—how we relate to each other indelibly affects how we relate to the nonhuman world.

In closing, I began this essay with a story of healing during the Second World War. Years later, the woman and her nation, the Kul Wicasa Oyate, would be violently removed from their bottomlands on the Mni Sose, the Missouri River. Our lands were flooded by massive earthen rolled dams and our way of life was forever disrupted.

What would justice look like if we applied the same model of healing shown in this story and in Lakota customary law to those wasicu institutions who flooded our lands and destroyed our life ways? Would our allies stand with us knowing justice would involve a radical reciprocity, redistribution, and restructuring of resources and wealth for a more just future? Would they expropriate the wealth and resources extracted from us with the same fervor they have taken up our culture? Will they give away their wealth and privilege and join us?

I hope so. After all, we have given so much.

Hecetu Welo!

Fighting for Our Lives: #NoDAPL in Historical Context

by Nick Estes

Little has been written about the historical relationship between the movement against the Dakota Access Pipeline and the longer histories of Oceti Sakowin (The Great Sioux Nation) resistance against the trespass of settlers, dams, and pipelines across the Mni Sose, the Missouri River. This is a short analysis of the historical and political context of the #NoDAPL movement and the transformative possibilities of the current struggle.

Thousands have camped along the banks of the Missouri River at Cannon Ball in the Standing Rock Sioux Indian Reservation to halt the construction of the Dakota Access Pipeline (DAPL), which promises to carry half a million barrels of heavy crude oil a day across four states, under the Missouri River twice, and under the Mississippi River toward the Gulf of Mexico for global export. Camp Oceti Sakowin, Red Warrior Camp, and Sacred Stone Camp, the various Native-led groups standing in unity against DAPL, have brought together the largest, mass-gathering of Natives and allies in more than a century, all on land and along a river the Army Corps of Engineers claims sole jurisdiction and authority over.

How and why did this happen?

In 1803 the wasicu — the fat-takers, the settlers, the capitalists — claimed this stretch of the river as part of what became the largest real estate transaction in world history. The fledgling U.S. settler state "bought" 827 million acres from the French Crown in the Louisiana Purchase and sent two white explorers, Lewis and Clark, to claim and map the newly acquired territory. None of the Native Nations west of the Mississippi consented to the sale of their lands to a sovereign they neither recognized nor viewed as superior. It was only after we rebuffed Lewis and Clark for failing to pay tribute for their passage on our river that they labeled the Oceti Sakowin "the vilest miscreants of the savage race." Thus began one of the longest and most hotly contested struggles in the history of the world.

The Louisiana Purchase

For the next hundred years, the U.S. led various unsuccessful military campaigns to suppress, annihilate, and dispossess us of our rightful claim to the river and our lands. Despite popular belief, we were never militarily defeated. Red Cloud's War and the War for the Black Hills led to the military defeat of the U.S. Calvary, most famously the annihilation of General George Armstrong Custer's forces at the Battle of

Greasy Grass in 1876. These wars, for our part, were entirely defensive. The Oceti Sakowin signed peace treaties with the invading settler government. The 1854 and 1868 Fort Laramie treaties provided temporary reprieve and defined the vast 25-million-acre territory of what became the Great Sioux Reservation, which stretched from the eastern shore of the Missouri River to the Bighorn Mountains. Four decades of intense warfare, however, took its toll. More than ten million buffalo were slaughtered to starve us out. Settler hordes invaded and pillaged our Black Hills for its gold. Our vast land base diminished and the treaties were nullified when Congress passed the Indian Appropriations Act of 1876, which abolished treaty-making with Native Nations, and the Black Hills Act of 1877, which illegally ceded the Black Hills and created the present-day reservation system.

The Oceti Sakowin has vigorously opposed these bald imperialistic maneuvers to usurp our self-determining authority over our lives and lands. Settler society entreated the Oceti Sakowin for the 1854 and 1868 agreements, not the other way around. We entered these relationships with the understanding that both parties respected a common humanity with the people and the lands. In our view, the settler state lost its humanity when it violated the treaties. Every act on our part to recover and reclaim our lives and land and to resist elimination is an attempt to recuperate that lost humanity — humanity this settler state refuses and denies even to its own.

1868 Fort Laramie Treaty Territory

South Dakota and North Dakota statehood also played a major role in suppressing the Oceti Sakowin. Although we have never signed any treaties with these states, they lay claim to the destinies of our lands, our river, and our people. To do so, they have always used violence and hatred. In 1890, a year after statehood, these two states drummed up anti-Indian sentiment to further break up and open reservation lands for settlement. As a result, they fabricated the Ghost Dance crisis; called for federal troops to intervene to protect white property that resulted in the assassination of our military and political leaders such as Crazy Horse and Sitting Bull; and resulted in the killing of over 300 mostly unarmed women, children, and elders at Wounded Knee in the Pine Ridge Indian Reservation.

Outright murder was never enough. The Dawes Allotment Act of 1887 and the creation of five smaller reservations attempted to factionalize the Oceti Sakowin and opened up “surplus” lands to white homesteaders. From 1907 to 1934, millions of acres of the remaining Great Sioux Reservation were lost. In the early 1900s, Missouri River Basin states began organizing to usurp Native water rights for large-scale irrigation projects. These states envisioned a dam system that would create large reservoirs that would primarily flood Native lands. But there was a major problem. In 1908, a U.S. Supreme Court decision held that tribes maintained access and control of water within original treaty territory, even if that territory was diminished. This became known as the Winters Doctrine. For the Missouri River, the Oceti Sakowin possessed the prior claim to both the river and its shorelines as spelled out in the 1851 and 1868 Fort Laramie Treaties.

Historic and present day treaty lands

An opportunity for the states arose. After unseasonal mass flooding, Congress passed the Flood Control Act in 1944 — or what became known as the Pick-Sloan Plan authorizing the Army Corps of Engineers and the Bureau of Reclamation to erect five dams on the mainstem of the river. All of which targeted and disproportionately destroyed Native lands and lives. Of the five Pick-Sloan dams, four flooded the lands of seven nations of the Oceti Sakowin: the Santee Sioux Tribe, the Yankton Sioux Tribe, the Sicangu Oyate, the Lower Brule Sioux Tribe, the Crow Creek Sioux Tribe, the Cheyenne River Sioux Tribe, and the

Standing Rock Sioux Tribe. Of the 611,642 condemned acres through eminent domain in what was called the "taking area," these nations lost 309,584 acres of vital bottomlands. Inundation also forced more than a thousand Native families, in patent violation of treaties and without their consent, to relocate. Entire communities were removed to marginal reservation lands, and many were forced to leave the reservation entirely. As a result of condemnation, the Army Corps of Engineers claims sole jurisdiction over the river and its shoreline.

Pick-Sloan Dams

The dams, which promised and delivered wholesale destruction, coincided and worked in tandem with the federal policies of termination and relocation. In 1953, Congress passed House Concurrent Resolution 108 (HCR 108) that inaugurated termination policy, and called for the immediate termination or ended federal recognition of the Flathead, Klamath, Menominee, Potawatomi, and Turtle Mountain Chippewa tribes. That same year, Congress passed Public Law 280 (PL 280) that authorized states to assume criminal and civil jurisdiction over Native lands. The Bureau of Indian Affairs supported these programs and carried out the Indian Relocation Act of 1956 that relocated thousands from the reservation to far-off urban centers. HCR 108, PL 280, relocation, and the Pick-Sloan dams did not just promote assimilation — they enforced genocide and elimination.

Through termination, relocation, and massive flooding, however, colonialism created its own gravediggers. The Oceti Sakowin unified to thwart the state of South Dakota's attempts to implement PL 280 to overthrow Native governments and assume control over their lands. Natives on relocation also began to organize. Groups such as the National Indian Youth Council and the American Indian Movement (AIM) formed in the urban centers to combat the wholesale destruction of Native life on- and off-reservation. In 1973, AIM occupied Wounded Knee in the Pine Ridge Indian Reservation, which was a culmination of more than a decade of Red Power organizing. The occupation was the catalyst for a mass gathering of thousands at Standing Rock in 1974, which resulted in the founding of the International Indian Treaty Council. At Standing Rock, more than 90 Native Nations from around the world built the foundations of what would become four decades of work at the United Nations and the basis for the 2007 Declaration on the Rights of Indigenous Peoples.

The International Indian Treaty Council, the international arm of the American Indian Movement, was founded at Standing Rock in 1974.

The anti-colonial uprising taking place in Oceti Sakowin treaty territory and spilling onto the world stage was met with violent state repression. AIM leaders were assassinated and many were imprisoned. For example, Native leader Leonard Peltier, who participated in this movement for the life and dignity of his people, to this day sits behind bars as one of the longest serving political prisoners in United States history. From 1977 to 2012 South Dakota's prison population increased 500 percent. One-third of its prison population is Native, although Natives make up only nine percent of the total population.

With the advent of tarsands extraction and heavy crude pipelines destroying water supplies and scorching the earth, Natives and the Oceti Sakowin have once again reunited. This unification first targeted tarsands and pipeline construction in so-called Canada in First Nations' territory. Successful blockades have halted pipelines. In 2014, the Oceti Sakowin began a massive organizing effort, with help from allies, against the Keystone XL (KXL) pipeline that, too, threatened to cross the Missouri River. Our Nation is made up of some of the poorest people in the Western hemisphere organizing to oppose a fossil fuel industry made up of some of the most powerful and wealthiest people on the planet. Despite these odds KXL was defeated

on November 6, 2015. After mass protests, the Obama administration denied the pipeline's permit.

Two important lessons were drawn from the KXL struggle that were carried into #NoDAPL. The power of multinational unity between Natives and non-Natives was one of the movement's successes. The other proved the transformative power and potential of anti-colonial resistance to successfully mobilize poor people against the rich and powerful — and win!

The Red Nation riders at the #NoDAPL camp.

Like our ancestors' wars of the nineteenth century, our current war is also defensive — it is to protect water and land from inevitable spoliation in the name of profit. The #NoDAPL movement is explicitly nonviolent, which accounts for its mass appeal to Native and non-Native communities. In spite of this, political violence as a tactic of state repression has emerged against water protectors who engage in nonviolent direct action to disrupt the construction of the pipeline *as well as* those not engaged in direct actions. Natives at or near camp — whether involved in direct actions or not — are also targets for surveillance and repression. The camp and the Standing Rock reservation are under constant surveillance. The reason: Native bodies stand between corporations and their money. Halting the accumulation of capital, which in this context is the exploitation of our river and lands, has piqued settler ire and spite.

The prolonged peaceful encampment practices an unsettling counter-sovereignty. It has drawn the support and solidarity of more than 200 Native Nations and countless thousands of allied forces sending a clear message to corporate interests: North Dakota cannot manage its Indians and the "Indian Problem" is out of control. After all, controlling the "Indian Problem" has always meant maintaining unrestricted access to Native lands and resources and keeping Indians silent, out of view, and factionalized. At Standing Rock, an unarmed, nonviolent prayer camp poses such a serious threat to settler proprietary claims that North Dakota Governor Jack Dalrymple, who has direct ties to the oil and gas industry, has deployed the full force of the Highway Patrol and the National Guards. These forces are not there to service an impoverished Native community or protect the integrity of the land and river. They are there to carry out the will of DAPL backers Energy Transfer Partners, some of the richest and most powerful people in the world who have used attack dogs against unarmed, nonviolent water protectors. More than 60 have been arrested, including journalists. Violent state repression has not ceased.

The #NoDAPL "United Nations" of Native Nation flags

The Army Corps of Engineers, who maintains jurisdiction over the river in violation of the 1854 and 1868 Fort Laramie Treaties, claims it holds the final say about whether the DAPL can cross the Missouri River. The #NoDAPL encampment, in an exercise in Native sovereignty, sits atop lands claimed by the Corps, who only recently "permitted" the camp's presence. On September 9, the Department of Interior, the Department of Justice, and the Corps also issued a joint statement halting — for now — the construction of the pipeline under the Missouri River as the Standing Rock Sioux Tribe's case against DAPL will be considered and reviewed. This was a victory — a temporary halt of construction at a key site — and proof that this enemy, no matter how powerful, violent, or spiteful, too, can be defeated if Native people refuse to back down and continue to act in unity and cooperation. While construction halted under the river, it continues everywhere else. So too do direct actions. So too does the peaceful encampment. And so too must our focus and support on #NoDAPL. The encampment will remain until the pipeline is completely defeated.

Oceti Sakowin and Native resistance, as it has for centuries, will also continue until our common enemy is defeated.

The Red Nation delegation at the #NoDAPL camp

Early lessons from this ongoing struggle can be drawn to help strategize future possibilities:

- The colonial state does not possess, and never has possessed, the moral high ground. It defends corporate access to Native lands and uses violence as a political tactic to maintain its contested authority over the land. The North Dakota National Guard has never in its history been deployed in force against an unarmed "domestic" population– until now. The National Guard and the Highway Patrol protect corporate interests and enforce the colonial state's monopoly on violence against the most vulnerable and marginalized populations – Native people.
- The prayer camp has galvanized multinational unity, primarily mobilizing everyday people in defense of Native sovereignty, self-determination, and treaty rights.
- Treaty rights, and by default Native sovereignty, protect everyone's rights. In this case, they protect a vital fresh water source for millions – the Missouri River.
- #NoDAPL anti-colonial struggle is profoundly anti-capitalist. It is the frontline. It is the future.
- The profits that corporations like Energy Transfer Corporation reap from colonial projects like the DAPL should be seized and used to repair damage to the land and river. With this also comes a long-term goal to restore the Missouri River to its rightful protectors – the Oceti Sakowin – and its natural path. This means the Army Corps of Engineers must relinquish its claim to the river and begin to demolish the Pick-Sloan dams so that the river and its people may once again live.

Obama Pipeline Plot Twist Is Not a Victory—And Could Erase the Struggle

The illusion of victory is a dangerous thing. We could undo what we have built at Standing Rock, this unprecedented act of Native American collective resistance.

Private security used pepper spray and attack dogs.

Photo by Dell Hambleton.

Kelly Hayes *posted Sep 10, 2016*

All Native struggles in the United States are a struggle against erasure. The poisoning of our land, the theft of our children, the state violence committed against us — we are forced to not only live in opposition to these ills, but also to live in opposition to the fact that they are often erased from public view and public discourse, outside of Indian Country. The truth of our history

and our struggle does not match the myth of American exceptionalism, and thus, we are frequently boxed out of the narrative.

The struggle at Standing Rock, North Dakota, has been no exception, with Water Protectors fighting tooth and nail for visibility, ever since the Sacred Stone prayer encampment began on April 1.

For months, major news outlets have ignored what's become the largest convergence of Native peoples in more than a century. But with growing social media amplification and independent news coverage, the corporate media had finally begun to take notice. National attention was paid. Solidarity protests were announced in cities around the country. The National Guard was activated in North Dakota.

The old chant, "The whole world is watching!" seemed on the verge of accuracy in Standing Rock.

And then came today's ruling, with a federal judge finding against the Standing Rock Sioux, and declaring that construction of the pipeline could legally continue. It was the ruling I expected, but it still stung. I felt the sadness, anger and disappointment that rattled many of us as we received the news. But then something happened. Headlines like, "Obama administration orders ND pipeline construction to stop" and "The Obama Administration Steps In to Block the Dakota Access Pipeline" began to fill my newsfeed, with comments like, "Thank God for Obama!" attached to them.

Clearly, a major plot twist has occurred. But it's not the one that's being sold.

To understand that this isn't the victory it's being billed as, you have to read the fine print in the presently lauded joint statement from the Department of Justice, the Department of the Army and the Department of the Interior:

"The Army will not authorize constructing the Dakota Access pipeline on Corps land bordering or under Lake Oahe until it can

determine whether it will need to reconsider any of its previous decisions regarding the Lake Oahe site under the National Environmental Policy Act (NEPA) or other federal laws."

Note what's actually being said here, what's being promised and what isn't.

What is actually being guaranteed?

Further consideration.

But this next section is a little more promising, right?

"Therefore, construction of the pipeline on Army Corps land bordering or under Lake Oahe will not go forward at this time. The Army will move expeditiously to make this determination, as everyone involved—including the pipeline company and its workers—deserves a clear and timely resolution. In the interim, we request that the pipeline company voluntarily pause all construction activity within 20 miles east or west of Lake Oahu."

So things are on hold at Lake Oahe until the powers that be think it through some more—with no assurances about how they'll feel when it's all said and done. The rest is a voluntary ask being extended to the company.

Let's reflect on that for a moment: A company that recently sicced dogs on Water Protectors, including families, who stepped onto a sacred site to prevent its destruction, is being asked to voluntarily do the right thing.

But the thing is, they probably will. For a moment. Because what's being asked of them isn't an actual reroute. Right now, all that's being asked is that they play their part in a short term political performance aimed at letting the air out of a movement's tires.

Presidential contender Hillary Clinton was beginning to take a bit of heat for her silence on the Standing Rock struggle. Between Jill Stein's participation in a lockdown action, broadening social media support for the cause, and the beginnings of substantial media coverage, #NoDAPL was on the verge of being a real thorn in Clinton's side. And with more than 3,000 Natives gathered in an

unprecedented act of collective resistance, an unpredictable and possibly transformational force was menacing a whole lot of powerful agendas.

So what did the federal government do? Probably the smartest thing it could have: It gave us the illusion of victory.

As someone who organizes against state violence, I know the patterns of pacification in times of unrest all too well. When a Black or Brown person is murdered by the police, typically without consequence, and public outrage ensues, one of the pacifications we are offered is that the Department of Justice (DOJ) will investigate the shooting. It's a deescalation tactic on the part of the state. It helps transition away from moments when rage and despair collide, creating a cooling off period for the public. "Justice" is still possible, we are told. We are asked to be patient as this very serious matter is investigated at the highest level of government, and given all due consideration.

The reality, of course, is that the vast majority of investigations taken up by the DOJ Civil Rights Division end in dismissal – a batting average that's pretty much inverse to that of other federal investigations. But by the time a case gets tossed at the federal level, it's probably not front page news anymore, and any accumulated organizing momentum behind the issue may have been lost — because to many people, the mere announcement of a federal investigation means that the system is working. Someone is looking into this, they're assured. Something is being done. Important people have expressed that they care, and thus there is hope.

So how is this similar to what's happening with Standing Rock?

It's the same old con game.

Federal authorities are going to give a very serious matter very serious consideration, and then… we'll see.

The formula couldn't be clearer.

As the joint statement says, "This case has highlighted the need for a serious discussion on whether there should be nationwide reform

with respect to considering tribes' views on these types of infrastructure projects."

Discussion.

How many times have marginalized people been offered further discussion when what they needed was substantive action? And how often has the mere promise of conversation born fruit for those in a state of protest?

But this is a great moment for the Democrats. A political landmine has been swept out of Hillary Clinton's path, and Obama will be celebrated as having "stopped a pipeline" when the project has, at best, been paused. After all, an actual pause in construction, outside of the Lake Oahe area, assumes the cooperation of a relentless, violent corporation, that has already proven it's wiling to let dogs loose on children to keep its project on track.

But Dakota Access, LLC probably will turn off its machines — for a (very) little while. They'll wait for the media traction that's been gained to dissipate, and for the #NoDAPL hashtag to get quieter. They'll wait until the political moment is less fraught, and their opposition is less amped. And then they will get back to work — if we allow it.

Here's the real story: This fight has neither been won nor lost. Our people are rising and they are strong. But the illusion of victory is a dangerous thing. Some embrace it because they don't know better, some because they need to. We all want happy endings. Hell, I long for them, and I get tired waiting. But if you raise a glass to Obama and declare this battle won, you are erasing a battle that isn't over yet. And by erasing an ongoing struggle, you're helping to build a pipeline.

A History and Future of Resistance

The fight against the Dakota Access Pipeline is part of a centuries-long indigenous struggle against dispossession and capitalist expansionism.

by Julian Brave NoiseCat & Anne Spice

Occupiers at the Pine Ridge Reservation in 1973. AP

Mounted Lakota warriors, their horses resplendent in traditional regalia, charge a line of law enforcement. They gallop headlong, push back the police, pull up only at the last moment, and then circle back for more.

The scene could be the Battle of the Little Bighorn, circa 1876. But it's not. Here, along the banks of the Missouri River, just beyond the boundary of the Standing Rock Sioux reservation in North Dakota, indigenous land and water defenders are standing together to block the Dakota Access Pipeline, which threatens their land, water, ancestral burial grounds, and future generations. They are part of a decades-long struggle to assert and reclaim indigenous lands, jurisdictions, and sovereignties. And they are doing so on ground that has given rise to indigenous resistance for centuries.

For the average American, it's easy to mistake the resistance at Standing Rock for a one-time re-run: indigenous warriors emerge from the wild, put up a brief, fierce, but ultimately tragic fight before succumbing to progress and providence. Cowboys and Indians II: Pipeline edition.

Vine Deloria Jr, the father of Native American Studies, called this the "cameo theory" of American history. In this version of events, indigenous people are cast in fleeting roles — movie set extras in the grand drama of American progress — only to be dropped from the next episode's storyline.

But such a narrative obscures the fact that indigenous people — not only in the United States, but across the settler colonized Angloworld in Australia, Canada, and New Zealand — have starred in a series of long-running, quietly successful movements to oppose natural resource extraction and neoliberal colonization.

At Standing Rock and across indigenous territories, indigenous peoples are resisting hundreds of years of dispossession, subjugation, and elimination committed in the name of capitalist accumulation and white possession. As indigenous people put their bodies on the line to resist the Dakota Access Pipeline, they are fighting for their sovereignty while offering an alternative relationship to land, water, and each other.

The fight for our shared future is on.

Remember Wounded Knee

In the United States, the modern roots and spiritual center of indigenous struggle are interred at the village of Wounded Knee on the Oglala Lakota Nation's Pine Ridge Reservation. There, on December 28, 1890, the Seventh Cavalry intercepted a band of some four hundred Miniconjou and Hunkpapa Lakota from the Cheyenne River and Standing Rock reservations under the leadership of Chief Bigfoot, and ordered them to camp along the banks of Wounded Knee Creek.

The Lakota were followers of the prophet Wovoka's Ghost Dance movement, which taught that the dead would return, the colonists would be driven off, and tribes would be united, bringing peace and prosperity to the dispossessed. The movement inspired indigenous people across the continent, while fomenting fear among settlers along the frontier.

On the morning of December 29, during a confused effort to disarm the encampment, a shot rang out. With Hotchkiss guns already trained on the camp, the cavalry opened fire, slaughtering Lakota people and even some of their own soldiers. Cavalrymen hunted down women and children as they fled.

Once the last shot was fired, more than three hundred Lakota lay dead on the plains. Their corpses were left to freeze for three days before the army hired civilians to bury them in a mass grave. As laborers shoveled dirt over the slain bodies, indigenous land was opened to settlement.

Eighty years later, the spirit of the Ghost Dance and the memory of Wounded Knee inspired the Red Power movement. Resistance and optimism for a better future rolled across the continent from the occupation of Alcatraz in the West to the takeover of the Bureau of Indian Affairs (BIA) building in the East.

On the Trail of Broken Treaties in 1972, the young, militant, and photogenic American Indian Movement (AIM) released its "Twenty Point Position Paper," which called on the United States government to respect, re-forge, and even rewrite treaties as the basis for nation-to-nation relationships with the continent's first peoples. That call to recognize indigenous sovereignty and honor the treaties endures today.

In February 1973, the Oglala Sioux Civil Rights Organization (OSCRO) invited AIM to Pine Ridge to help remove BIA-backed Tribal Chairman Dick Wilson, a menacing leader who thought nothing of using his private militia, the Guardians of the Oglala Lakota Nation (GOONs), to suppress dissent and opposition. Wilson, charged with corruption, intimidation, and abuse, had avoided impeachment.

On the night of February 27, 1973, in a brilliant act of political theater, a fifty-four-car caravan of Oglala and AIMsters took up arms and liberated Wounded Knee under the terms of the broken Fort Laramie Treaty of 1868. TV stations and newspapers across the country lit up with news of the occupation. "Armed Indians Seize Wounded Knee, Hold Hostages," read the front-page headline in the *New York Times*.

Within hours, a stand against Wilson turned into an armed standoff against the United States government. In a list of demands sent to the Justice Department, the activists called for immediate Senate hearings on Indian treaties and prompt investigation into the BIA at Sioux reservations across South Dakota. They courted the press, played hardball with government negotiators, and began smuggling food, activists, and supplies into the village.

In a decision unbeknownst to journalists, rumored among AIM activists, and in clear violation of the Constitution, the United States military was called in to quash the protest. Relying on the intelligence of the FBI's infamous COINTELPRO program, military commanders in duck-hunting gear called the plays and coordinated law enforcement, deploying armored vehicles and air force munitions.

Wilson's GOONs, armed with shotguns, set up roadblocks beyond federal lines to stop protesters, sympathizers, and news cameras. As in Cuba, the Congo, and other corners of the colonized world, the United States government demonstrated its willingness to ally with a tyrant as long as that tyrant's interests aligned with its own.

AIM warriors held their ground with hunting rifles, .22s, and an AK-47 carried back from the jungles of Vietnam. Federal law enforcement responded with a .50-caliber arsenal, tear gas, and fighter jet flyovers.

On April 17, Frank Clearwater, a Cherokee who had arrived from North Carolina with his pregnant wife the day before, was shot in the head. He died on April 25. The next day, a bullet pierced the heart of Oglala Vietnam veteran Buddy Lamont. He was buried with a one-hundred-gun salute next to Chief Bigfoot's band, his coffin draped in the flags of the nations he served: the United States, and the Independent Oglala Nation.

Before it was over, the OSCRO and AIM had held Wounded Knee for an astounding seventy-one days. Their rebellion galvanized indigenous people across the country — and around the world.

In Canada, Red Power forced a shift in indigenous policy from assimilation to recognition. In Australia, the fight for aboriginal land rights won significant political and legal victories. And in Aotearoa/New Zealand, the Maori Renaissance successfully pressured the Crown to honor the Treaty of Waitangi, which to this day structures Crown-Maori relations.

The Indigenous Struggle Today

The struggle against the Dakota Access Pipeline is rooted in this history. Indeed, the pipeline violates the same treaty that underwrote the AIM occupation of Wounded Knee. And just as AIM demanded respect for the treaties and indigenous sovereignty, the Standing Rock Sioux are demanding that the Fort Laramie Treaty be honored and the land and water be protected.

The people who have endured centuries of dispossession and attempted elimination — the poorest of the poor, the most likely to be killed by law enforcement, the most easily forgotten — are still here and still fighting. They have built alternatives within and beyond capitalism for hundreds of years. They are the carriers of traditions of indigenous resistance and resurgence simultaneously rooted in Lakota land and history, and global in scope.

In recent decades, this struggle has been threatened by neoliberal cooptation. Repelled by a colonizing state, many indigenous groups found themselves in an uneasy alliance with neoliberals who denounced "big government" and jumped at the opportunity to slash the welfare state and restructure tribes as junior corporate partners in the global economy. "Tribal sovereignty" became increasingly conflated with owning and profiting from an Indian casino.

Yet despite the absence of a free-market critique in some indigenous circles, Standing Rock and other actions have emerged as exemplary counterweights to this pernicious drift.

And elsewhere, indigenous land protectors are also navigating the currents of globalization to great effect. The Unist'ot'en camp in northern British Columbia has, thus far, blocked construction of numerous potential and proposed pipelines through their territory, building a space where indigenous lifeways can persist on lands defined by industry as an "energy corridor." In Minnesota, the energy company Enbridge recently shelved plans for the Sandpiper pipeline, partially in response to tribal opposition. And the Obama administration nixed the Keystone XL Pipeline, after facing enormous pressure from tribes and their allies.

In each of these instances, indigenous peoples are more than cameo extras. They are central protagonists in the fight against the forces of capitalist expansion, who would destroy the land and water, and trample indigenous sovereignty, all for the purposes of resource extraction.

At Standing Rock, disparate tribes have set aside differences and come together as one. People from indigenous nations across the continent have travelled thousands of miles to stand with them. Indigenous people are rallying in support from New York City to San Francisco. Together, they are envisioning a future without a Dakota Access Pipeline, and enacting a future where indigenous nations exercise their rights to define a more just, equal, and sustainable path forward, as stewards of land, water, humanity, and each other.

At Standing Rock, the audacious vision for an indigenous future, handed down from Wounded Knee and global in force, is alive and well. This is how you Ghost Dance in 2016.

IN THE UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF COLUMBIA

STANDING ROCK SIOUX TRIBE
P.O. Box D
Building No. 1., North Standing Rock Avenue
Fort Yates, ND 58538,

Plaintiff,

v.

U.S. ARMY CORPS OF ENGINEERS
441 G Street NW
Washington, DC 20314-1000,

Defendant.

Case No.

COMPLAINT FOR DECLARATORY AND INJUNCTIVE RELIEF

INTRODUCTION

1. This is a complaint for declaratory and injunctive relief. The Standing Rock Sioux Tribe ("Tribe") brings this action in connection with federal actions relating to the Dakota Access Pipeline ("DAPL"), a 1,168-mile-long crude oil pipeline running from North Dakota to Illinois. The Tribe, a federally recognized American Indian Tribe with a reservation in North Dakota and South Dakota, brings this case because defendant U.S. Army Corps of Engineers ("Corps") has taken actions in violation of multiple federal statutes that authorize the pipeline's construction and operation. The construction and operation of the pipeline, as authorized by the

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

Corps, threatens the Tribe's environmental and economic well-being, and would damage and destroy sites of great historic, religious, and cultural significance to the Tribe.

2. This complaint involves two kinds of claims. First, the Tribe brings an as-applied challenge to Nationwide Permit 12 ("NWP 12"), issued by the Corps in 2012 pursuant to the federal Clean Water Act ("CWA") and Rivers and Harbors Act ("RHA"). DAPL crosses hundreds if not thousands of federally regulated rivers, streams, and wetlands along its route. The discharge of any fill material in such waters is prohibited absent authorization from the Corps. Federal authorization under these statutes, in turn, triggers requirements under the National Historic Preservation Act ("NHPA"), intended to protect sites of historic and cultural significance to Tribes like Standing Rock. In issuing NWP 12, however, the Corps authorized discharges into federal waters without ensuring compliance with the NHPA. In essence, in enacting NWP 12, the Corps pre-authorized construction of DAPL in all but a handful places requiring federal authorization without any oversight from the Corps. In so doing, the Corps abdicated its statutory responsibility to ensure that such undertakings do not harm historically and culturally significant sites.

3. Second, on July 25, 2016, the Corps issued multiple federal authorizations needed to construct the pipeline in certain designated areas along the pipeline route. One such authorization allows DAPL to construct the pipeline underneath Lake Oahe, approximately half a mile upstream of the Tribe's reservation. Others authorize the DAPL to discharge into waters of the United States at multiple locations in the Tribe's ancestral lands. The Tribe brings this challenge because these authorizations were made in violation of the CWA and its governing regulations and without compliance with NHPA, and the National Environmental Policy Act ("NEPA").

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

4. The Tribe seeks a declaration that the Corps violated the NHPA in issuing NWP 12, and an injunction preventing the Corps from using NWP 12 as applied to DAPL and directing the Corps to ensure full compliance with § 106 at all sites involving discharges into waters of the United States. The Tribe further seeks a declaration that the July 25, 2016 authorizations were made in violation of the CWA, NEPA, and NHPA, and an order vacating all existing authorizations and verifications pending full compliance with the CWA, NEPA, and NHPA.

JURISDICTION AND VENUE

5. This case states a claim under the Administrative Procedures Act, 5 U.S.C. § 701 et seq. ("APA"), which authorizes a federal court to find unlawful and set aside any final agency action that is "arbitrary and capricious, an abuse of discretion, or otherwise not in accordance with law." *Id*. § 706. Jurisdiction arises under 28 U.S.C. § 1362 ("district courts shall have original jurisdiction all civil actions, brought by any Indian Tribe or band with a governing body duly recognized by the Secretary of the Interior, wherein the matter in controversy arises under the Constitution, laws, or treaties of the United States"); § 2201 (declaratory relief); § 2202 (injunctive relief).

6. Venue in this district is appropriate under 28 U.S.C. § 1391(e) because it is the district in which the defendant resides and in which "a substantial part of the events or omissions giving rise to the claim occurred."

PARTIES

7. The Standing Rock Sioux Tribe is a federally-recognized Indian tribe with a governing body recognized by the Secretary of the Interior. The Tribe is a successor to the Great Sioux Nation, a party to the two Treaties of Fort Laramie in 1851 and 1868. In those Treaties, the Sioux ceded a large portion of their aboriginal territory in the northern Great Plains, but

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

reserved land rights "set apart for the absolute and undisturbed use and occupation" of the Indians.

8. The reservation established in the 1851 Treaty of Fort Laramie included extensive lands that would be crossed by the proposed pipeline. The Tribe has a strong historical and cultural connection to such land. Despite the promises made in the two Fort Laramie treaties, in 1877 and again in 1889, Congress betrayed the treaty parties by passing statutes that took major portions of this land away from the Sioux. In 1889, Congress stripped large portions of the Great Sioux Reservation that had been promised to the Tribe forever, leaving nine much smaller Sioux reservations, including Standing Rock. In the modern area, the Tribe suffered yet another loss of lands, this time in connection with the same Oahe dam and Reservoir. In 1958, the Corps took 56,000 acres of bottomlands on the Standing Rock reservation for the Oahe project without the Tribe's consent or agreement.

9. Since time immemorial, the Tribe's ancestors lived on the landscape to be crossed by the DAPL. The pipeline crosses areas of great historical and cultural significance to the Tribe, the potential damage or destruction of which greatly injures the Tribe and its members. The pipeline also crosses waters of utmost cultural, spiritual, ecological, and economic significance to the Tribe and its members. The Tribe and its members have been, are being, and unless the relief sought herein is granted, harmed by the Corps' failure to comply with environmental and historic preservation laws.

10. The U.S. Army Corps of Engineers is an agency of the United States government, and a division of the U.S. Army, part of the U.S. Department of Defense. It is charged with regulating any dredging and filling of the waters of the United States under § 404 of the CWA and § 10 of the RHA.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

11. By filing this action, the Tribe does not waive its sovereign immunity and does not consent to suit as to any claim, demand, offset, or cause of action of the United States, its agencies, officers, agents, or any other person or entity in this or any other court.

STATUTORY AND REGULATORY BACKGROUND

I. THE CLEAN WATER ACT

12. Congress enacted the CWA in order to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters." 33 U.S.C. § 1251(a). To accomplish this goal, the CWA prohibits the discharge of any pollutant, including dredged spoil or other fill material, into waters of the United States unless authorized by a permit. *Id*., § 1311(a). Unless statutorily exempt, all discharges of dredged or fill material into waters of the United States must be authorized under a permit issued by the Corps. *Id*., §§ 1344(a)–(e).

13. The Corps is authorized to issue two types of permits under § 404: individual permits and general permits. *Id*. The Corps issues individual permits under § 404(a) on a case-by-case basis. *Id*., § 1344(a). Such permits are issued after a review involving, among other things, site specific documentation and analysis, public notice and opportunity for a hearing, public interest analysis, and formal determination. 33 C.F.R. § 322.3; Parts 323, 325.

14. The CWA also authorizes the Corps to issue "general" permits on a state, regional or nationwide basis. 33 U.S.C. § 1344(e). Such general permits may be issued for any category of similar activities that "will cause only minimal adverse environmental effects when performed separately, and will have only minimal cumulative adverse effect on the environment." *Id*. "No general permit … shall be for a period of more than five years after the date of its issuance." 33 U.S.C. § 1344(e)(2). The purpose of this approach to permitting is to "regulate with little, if any, delay or paperwork certain activities that have minimal impacts." 33 C.F.R. § 330.1(b).

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

15. The Corps issued the current set of 48 nationwide permits ("NWPs") in February of 2012. 77 Fed. Reg. 10184 (Feb. 21, 2012). The 2012 NWPs in "most cases" authorize discharge into regulated waters without any further process involving the Corps. In effect, the NWP pre-authorizes certain categories of discharge, without any additional approval from, or even notification to, the Corps. 33 C.F.R. § 330.1(e)(1). In other instances, discharges cannot occur until the proponent of the action files a "pre-construction notification" ("PCN") to the Corps, and receives verification that the proposed action is consistent with the terms of the NWP. *Id*. § 330.6(a). The specifics of whether or not a PCN is required are spelled out in each individual NWP as well as a series of "general conditions" accompanying the NWP. 77 Fed. Reg. at 10282 (listing 31 general conditions).

II. THE RIVERS AND HARBORS ACT

16. The Rivers and Harbors Act of 1899 is the nation's oldest environmental law. The statute prohibits a number of activities that impair ports, channels and other navigable waters. Unlike the CWA, which applies in all waters of the United States, the RHA applies only in "navigable" waters, defined as waters subject to the ebb and flow of the tides, or waters that are "presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce." 33 C.F.R. § 329.4.

17. Section 10 of the RHA, 33 U.S.C. § 403, among other things, makes it unlawful "to excavate or fill, or in any manner to alter or modify the course, location, condition, or capacity of" any navigable water without a permit from the Corps. Like § 404 permits, § 10 permits may be issued as individual permits or pursuant to the NWP program and are generally subject to many of the same regulations.

18. Tunneling under a navigable water requires a section 10 permit from the Corps, even without any discharge into navigable waters. 33 C.F.R. § 322.3(a) ("For purposes of a

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

section 10 permit, a tunnel or other structure or work under or over a navigable water of the United States is considered to have an impact on the navigable capacity of the waterbody.").

19. A separate provision of the RHA, known as "Section 408," makes it unlawful to "build upon, alter, deface, destroy, move, injure, obstruct by fastening vessels thereto or otherwise, or in any manner whatever impair the usefulness of any sea wall, bulkhead, jetty, dike, levee, wharf, pier, or other work built by the United States" without a permit from the Corps. 33 U.S.C. § 408. Unlike Section 10 permits, § 408 permits cannot be issued pursuant to the NWP program but are only issued as individual permits. Prior to issuance of a § 408 permit, the Corps must determine whether the use or occupation will be injurious to the public interest or impair the usefulness of the project.

III. THE NATIONAL HISTORIC PRESERVATION ACT

20. Section 106 of the National Historic Preservation Act ("NHPA") requires that, prior to issuance of a federal permit or license, federal agencies shall take into consideration the effects of that "undertaking" on historic properties. 54 U.S.C. § 306108. Agencies "must complete the section 106 process prior to the approval of the expenditure of any Federal funds on the undertaking or prior to the issuance of any license." 36 C.F.R. § 800.1.

21. The NHPA defines undertaking as "a project, activity, or program funded in whole or in part under the direct or indirect jurisdiction of a Federal agency, including— (1) those carried out by or on behalf of the Federal agency; (2) those carried out with Federal financial assistance; (3) those requiring a Federal permit, license, or approval; and (4) those subject to State or local regulation administered pursuant to a delegation or approval by a Federal agency." 54 U.S.C. § 300320; 36 C.F.R. § 800.16(y).

22. Early in the NHPA process, an agency must determine the area of potential effects ("APE") of a federal undertaking. 36 C.F.R. § 800.4(1)(1). The APE is defined by regulation to

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

include the area "within which an undertaking may directly or indirectly cause alterations in the character or use of historic properties…. The [APE] is influenced by the scale and nature of an undertaking and may be different for different kinds of effects caused by the undertaking." *Id*. § 800.16(d).

23. The Section 106 process requires consultation with Indian Tribes on federal undertakings that potentially affect sites that are culturally significant to Indian Tribes. 36 C.F.R. § 800.2(c)(2); 54 U.S.C. § 302707 (properties "of traditional religious and cultural importance to" a Tribe may be included on the National Register, and federal agencies "shall consult with any Indian Tribe…that attaches religious or cultural significance" to such properties). Consultation must occur regarding sites with "religious and cultural significance" even if they occur on ancestral or ceded land. *Id*. § 800.2(c)(2)(II)(D).

24. Under the consultation regulations, an agency official must "ensure" that the process provides Tribes with "a reasonable opportunity to identify its concerns about historic properties, advise on the identification and evaluation of historic properties….articulate its views on the undertaking's effects on such properties, and participate in the resolution of adverse effects." *Id*. § 800.2(c)(ii)(A). This requirement imposes on agencies a "reasonable and good faith effort" by agencies to consult with Tribes in a "manner respectful of tribal sovereignty." *Id*. § 800.2(c)(2)(II)(B).

25. Acting "in consultation with … any Indian tribe … that might attach religious and cultural significance to properties within the area of potential effects, the agency official shall take steps necessary to identify historic properties within the area of potential effects." *Id*. §800.4(b). The agency must evaluate the historic significance of such sites, and determine whether they are potentially eligible for listing under the National Register. *Id*. § 800.4(c).

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

26. If the agency determines that no historic properties will be affected by the undertaking, it must provide notice of such finding to the state and tribal historic preservation offices, and the Advisory Council on Historic Preservation ("ACHP"), which administers the NHPA. *Id*. § 800.4(d). The regulations give those parties the opportunity to object to such a finding, which elevates the consultation process further. *Id*.

27. If the agency finds that historic properties are affected, it must provide notification to all consulting parties, and invite their views to assess adverse effects. *Id*. Any adverse effects to historic properties must be resolved, involving all consulting parties and the public. *Id*. § 800.6. If adverse effects cannot be resolved, the process is elevated again to the ACHP and the head of the agency undertaking the action. *Id*. §800.7. Until this process is complete, the action in question cannot go forward.

28. The ACHP authorizes agencies to adopt their own regulations for implementing its § 106 obligations. Such regulations must be reviewed and approved by the ACHP in order to be valid. *Id*. § 800.14.

29. The Corps has adopted procedures intended to satisfy its § 106 obligations. *See* App. C to 33 C.F.R. Part 325. Those procedures, which predate amendments to the NHPA that significantly broaden the role of Tribes in the § 106 process, have never been approved by the ACHP. Several courts have concluded that the Corps' NHPA procedures are legally invalid. However, the Corps continues to follow these procedures for purposes of § 106 consultation, including in the process surrounding DAPL.

30. Section 106 regulations also provide an alternative compliance mechanism under which agencies can negotiate a "programmatic agreement" with the ACHP to resolve "complex project situations or multiple undertakings." 36 C.F.R. § 800.14(b). Such agreements are

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

suitable for "when effects on historic properties are similar and repetitive or are multi-State or regional in scope;" "when effects on historic properties cannot be fully determined prior to approval of an undertaking;" or when "nonfederal parties are delegated major decisionmaking responsibilities," among other situations. *Id*. § 800.14(b)(1). Programmatic agreements require consultation with Tribes, among others, as well as public participation.

31. The Corps has never adopted a programmatic agreement with the ACHP regarding its CWA/RHA permits or any other activity.

IV. THE NATIONAL ENVIRONMENTAL POLICY ACT

32. NEPA, 42 U.S.C. §§ 4321–4370f, is our "basic national charter for protection of the environment." 40 C.F.R. § 1500.1(a). It makes environmental protection a part of the mandate of every federal agency. 42 U.S.C. § 4332(1).

33. NEPA seeks to ensure that federal agencies take a "hard look" at environmental concerns. One of NEPA's primary purposes is to ensure that an agency, '"in reaching its decision, will have available, and will carefully consider, detailed information concerning significant environmental impacts.'" *Robertson v. Methow Valley Citizens Council,* 490 U.S. 332, 349 (1989). NEPA also "guarantees that the relevant information [concerning environmental impacts] will be made available to the larger audience," including the public, "that may also play a role in the decisionmaking process and the implementation of the decision." *Id.*

34. NEPA requires agencies to fully disclose all of the potential adverse environmental impacts of its decisions before deciding to proceed. 42 U.S.C. § 4332(C). NEPA also requires agencies to use high quality, accurate scientific information and to ensure the scientific integrity of the analysis. 40 C.F.R. §§ 1500.1(b), 1502.24.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

35. If an agency action has adverse effects that are "significant," they need to be analyzed in an environmental impact statement ("EIS"). 40 C.F.R. § 1501.4. If it is unclear whether impacts are significant enough to warrant an EIS, it may prepare an "environmental assessment" ("EA") to assist in making that determination. *Id*. If the agency determines that no EIS is required, it must document that finding in a "finding of no significant impact" ("FONSI").

36. NEPA's governing regulations define what "range of actions, alternatives, and impacts [must] be considered in an environmental impact statement." 40 C.F.R. § 1508.25. This is in part what is known as the "scope" of the EIS. The EIS must consider direct and indirect effects. The direct effects of an action are those effects "which are caused by the action and occur at the same time and place." 40 C.F.R. § 1508.8(a). The indirect effects of an action are those effects "which are caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable." 40 C.F.R. § 1508.8(b).

37. An agency must also analyze and address the cumulative impacts of a proposed project. 40 C.F.R. § 1508.25(c)(3). Cumulative impacts are the result of any past, present, or future actions that are reasonably certain to occur. Such effects "can result from individually minor but collectively significant actions taking place over a period of time." 40 C.F.R. § 1508.7.

FACTUAL ALLEGATIONS

I. INTERESTS OF THE STANDING ROCK SIOUX TRIBE

38. Since time immemorial, the Tribe's ancestors—the Oceti Sakowin, also known as the Great Sioux Nation—used and occupied a broad area throughout the northern Great Plains, including much of the area that DAPL proposes to traverse with its pipeline. Within this broad region, tribal members followed migrating buffalo herds and traversed a landscape filled with cultural and historical significance central to the Tribe's identity.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

39. The Tribe's traditional and ancestral territory extends well beyond the current Reservation's exterior boundaries, encompassing lands that are the subject of this action. The Corps and other federal agencies have repeatedly acknowledged the traditional use of lands within and around the DAPL route by the Tribe's ancestors.

40. The Tribe's cultural resources are historically and culturally interrelated over the entirety of the land within the Tribe's traditional territory, within and outside of the exterior boundaries of the Reservation. Protection of the Tribe's cultural heritage is of significant importance to the Tribe. Destruction or damage to any one cultural resource, site, or landscape contributes to destruction of the Tribe's culture, history, and religion. Injury to the Tribe's cultural resources causes injury to the Tribe and its people.

41. Cultural resources of significance to the Tribe are located on the lands that are the subject of this action and adjacent lands. In addition to specific archaeological sites that have been identified to date, there are numerous significant culturally important sites that have not been identified. The lands within the pipeline route are culturally and spiritually significant.

42. The Tribe and its members also have a cultural interest in preserving the quality of the land, water, air, fauna, and flora within the Tribe's traditional territory, within and outside the Reservation. For example, the Tribe is concerned with impacts to the habitat of wildlife species such as piping plovers, least tern, Dakota skipper, and pallid sturgeon, among others. The Tribe has a particular concern for bald eagles, which remain federally protected and play a significant role in the Tribe's culture, and which would be adversely affected by the proposed pipeline. The Tribe is greatly concerned with the possibility of oil spills and leaks from the pipeline should it be constructed and operated, particularly into waters that are of considerable economic, religious, and cultural importance to the Tribe.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

II. THE CORPS' ISSUANCE OF NWP 12

43. The Corps issued the current suite of 48 NWPs, covering a wide array of potential activities involving discharges into regulated waters, in February of 2012. 77 Fed. Reg. 10184 (Feb. 21, 2012). Of relevance here, NWP 12 governs "utility line activities." *Id*. at 10271. NWP 12 authorizes the "construction, maintenance, repair and removal of utility lines and associated facilities" in waters of the United States, providing that the activity does not result in the loss of greater than a ½ acre of waters "for each single and complete project." Counterintuitively, a "single and complete project" in the case of linear projects like utility lines is any crossing of a separate waterbody. 33 C.F.R. § 330.2(i). Under this definition, a pipeline like DAPL is made up of hundreds if not thousands of "single and complete projects."

44. The NWP defines "utility line" to include "any pipe or pipeline for the transportation of any gaseous, liquid, liquescent, or slurry substance, for any purpose." 77 Fed. Reg. at 10271. The Corps considers pipelines carrying crude oil to be covered by NWP 12.

45. Under NWP 12, preconstruction notification ("PCN") to the Corps by a non-federal project proponent, and a verification from the Corps, is required if any one of several criteria is met. *Id*. at 10272. If none of the criteria are met, the proponent is authorized by NWP 12 to proceed with the work in regulated waters without additional notification to, or approval from, the Corps. None of the NWP 12-specific criteria relates to historic or cultural preservation.

46. The NWP program also includes a set of general conditions that are applicable to all NWPs, include NWP 12. General Condition 20 ("GC 20") addresses historic properties. Under GC 20, a non-federal permittee must submit a PCN "if the authorized activity may have the potential to cause effects to any historic priorities listed on, determined to be eligible for listing on, or potentially eligible for listing on the National Register of Historic Places, including previously unidentified properties." *Id*. at 10284. If a PCN is provided, the Corps purports to

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

comply with § 106 of the NHPA prior to verifying that the NWP is applicable, and work may not commence until such verification is provided. 33 C.F.R. § 330.5(g)(2). Conversely, if no PCN is provided, no § 106 process occurs.

47. GC 20 puts the responsibility on the proponent, not the Corps, to determine whether historic or culturally significant properties are present, and requires Corps' verification only if the proponent finds such sites and reports them to the Corps via a PCN.

48. NWP 12 was formally adopted by the Corps in a "Decision Document" signed by Major General Michael J. Walsh on Feb. 13, 2012. In responding to public comment regarding potential impacts to tribal sites, the Decision Document states that compliance with NHPA on NWP implementation is carried out via GC 20.

III. FACTS RELEVANT TO CHALLENGE TO NWP 12

49. The proponent of DAPL proposes to construct a major crude oil pipeline across 1,168 miles through North Dakota, South Dakota, Iowa, and Illinois. The pipeline will have a capacity of 570,000 barrels of crude oil per day, making it one of the largest crude oil pipelines in the nation, carrying over half of the current capacity of North Dakota's oil production.

50. DAPL is one of several pipelines that have been proposed for the North Dakota oil production area, some of which have been moving on a slower timeline due to environmental review requirements. DAPL has moved aggressively to get the pipeline constructed as quickly as possible.

51. The pipeline's route passes through the Tribe's ancestral lands, and areas of great cultural, religious and spiritual significance to the Tribe. Construction of the pipeline includes clearing and grading a 100-150 foot access pathway nearly 1200 miles long, digging a trench as deep as 10 feet, and building and burying the pipeline. Such work would destroy burial grounds,

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

sacred sites, and historically significant areas in its path. These sites carry enormous cultural importance to the Tribe and its members.

52. DAPL claims to have completed cultural resource surveys along the entire pipeline length. However, the out-of-state, non-Tribal consultants hired by DAPL to do cultural surveys are unable to assess the potential cultural significance of sites in this area to the Tribes. Only Tribally trained and approved consultants have the ability to assess such sites. The Tribe has never had the opportunity to discuss protocols for cultural surveys, or participate in the surveys that were conducted. Instead, it was provided copies of partial surveys after they were completed.

53. Compared to other pipelines, DAPL has taken a highly unusual approach to Corps permitting for activities involving discharges into regulated waters. Rather than seek Corps' verifications on all waters of the U.S. in which pipeline construction would cause a discharge, as has been typical, DAPL has only sought Corps' verification for a tiny minority of the impacts to federally regulated waters.

54. For example, DAPL's route through North Dakota is 359 miles. A 2015 "Wetlands and Waterbodies Delineation Report" provided to the state Public Service Commission identifies 263 waterbodies and 509 wetlands that would be impacted by the pipeline. However, this information was never provided to the Corps. Instead, DAPL submitted PCNs for only two of these sites, at crossings of the Missouri River. Neither of these PCNs was submitted based on potential impacts to historic sites.

55. In South Dakota, DAPL would cross 273 miles. DAPL's state Public Utilities Commission filings reveal 288 waterbody crossings and 102 acres of wetlands impacts.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

However, DAPL only provided the Corps with PCNs for 10 of these sites. None of the PCNs in South Dakota was triggered by impacts to historic sites.

56. In both states, this delineation of waterbody impacts was only partially complete, as DAPL did not have landowner access to all sites along the pipeline route. Accordingly, some of the features were estimated through desktop analysis. The ultimate number of waterbody and wetland impacts remains unknown.

57. One of the two places in North Dakota where Corps authorization is required is at Lake Oahe, where the pipeline would cross underneath the Lake (a dammed section of the Missouri River) immediately upstream of the Tribe's reservation.

58. Due to its concerns about the configuration of the pipeline and inadequacies in the regulatory process, the Tribe has participated extensively in the public process associated with the permits, including filing numerous formal technical comments on the Lake Oahe crossing, meeting with Corps' leadership and staff, and communicating with elected representatives and agency officials to express concerns. The Tribe has repeatedly conveyed to the Corps and other government officials the significance of its concerns and the risks to the Tribe about moving ahead with the pipeline in its current configuration. The Tribe has in particular highlighted the inadequacies of the Corps' § 106 consultation process with regard to historic and cultural impacts at the Lake Oahe site.

59. On July 25, 2016, the Corps issued the NWP 12 verification and other authorizations required at the roughly 204 sites in the four states for which verification has been requested along the pipeline's entire length. However, prior to that time, construction started along the remainder of the route, including construction involving discharges into the hundreds if

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

not thousands of sites where pipeline construction involves discharges into waters of the United States, but for which no PCN is required.

60. The Tribe has repeatedly expressed concerns to the Corps regarding construction in waters of the United States pursuant to NWP 12 without any section 106 consultation on historic impacts. On June 30, 2016, the Standing Rock Tribal Historic Preservation Officer, Jon Eagle Sr., wrote to the Corps District Commander regarding the extensive work proceeding without any § 106 consultation under NWP 12. This letter explained that non-Tribal archaeologists were unable to appreciate the cultural significance of Tribal historic sites, and that his office had found the DAPL cultural surveys, conducted by out-of-state archaeologists with no training in the cultural practices of the Oceti Sakowin to be "gravely deficient."

61. The letter requested that the Corps declare that all impacts to waters of the United States had potential historic impacts and requested that the Corps require PCNs from all such crossings, so that full § 106 consultation could occur.

62. In response, the regulatory branch chief of the Corps' Omaha district invited Mr. Eagle's office to participate in "monitoring" for "post construction discoveries of cultural resources and/or burials" at six sites subject to PCNs in North and South Dakota. The Corps did not respond to the issue to which Mr. Eagle's letter was actually addressed, specifically, cultural impacts at sites that are not subject to a PCN.

63. The Tribe's concerns were highlighted in June of 2016 when archaeologists working on behalf of Upper Sioux Tribe discovered a site of great religious and cultural significance to Oceti Sakowin in the pipeline's route in Iowa. The site was not discovered by DAPL during its cultural resource surveys, even though it lay directly in the pipeline's route.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

64. The pipeline will also impact historic and culturally significant sites in uplands along the pipeline's route in between areas of Corps' jurisdiction. The Corps views any impacts to such uplands sites as outside of its responsibility under § 106, as the Corps interprets §106 to apply only within the immediate area of CWA jurisdiction.

65. The ACHP regulations take a different approach. In a May 6, 2016 letter to the Corps regarding DAPL, the ACHP explained that its regulations "define the undertaking as the entire project, portions of which may require federal authorization or assistance." Even where the jurisdiction is limited to particular portions of a project, the ACHP explained, "the federal agency remains responsible for taking into account the effects of the undertaking on historic properties." The letter concluded that given the close relationship between the project and multiple federal approvals, "a greater effort to identify and evaluate historic properties" was required.

66. In a May 19, 2016, letter, the ACHP formally objected to the Corps' finding of "no effect" at the site of the Lake Oahe crossing, one of only two sites in the entire state of North Dakota for which the Corps even purported to engage in § 106 consultation. The ACHP asserted that the Corps misapplied § 106 by considering only historic properties within its areas of jurisdiction, when it should consider indirect impacts to historic sites in uplands that could not occur but for the Corps' authorization to discharge into waters of the United States.

67. At the time of filing this complaint, DAPL has not executed agreements with all landowners, and eminent domain proceedings are underway in several states. Additionally, several lawsuits have been filed against DAPL and state regulatory agencies which challenge the legality of DAPL approvals, and seeking the remedy of vacating such approvals, which would

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

require DAPL to stop work. However, DAPL has chosen to move ahead with construction in places where regulatory approval is secured and where landowner consent has been obtained.

68. DAPL has been repeatedly told by state regulatory agencies that any construction prior to the completion of the regulatory and eminent domain process is at its own risk. DAPL has repeatedly acknowledged that it bears the risk of starting construction prior to the completion of the regulatory and legal process.

IV. GENERAL FACTS REGARDING THE CORPS' ISSUANCE OF THE § 408 PERMITS AND CWA VERIFICATIONS

69. On July 25, 2016, the Corps' issued authorizations pursuant to § 408 of the RHA for DAPL to cross federally managed or owned lands on the Missouri River in two places, at Lake Sakakawea and Lake Oahe, roughly 230 miles apart. Accompanying this authorization, the Corps released a final environmental assessment ("EA") and "finding of no significant impact" ("FONSI") with respect to two components of the DAPL in North Dakota. The EA and FONSI concluded that these two small segments of the pipeline did not have sufficient adverse environmental impact to warrant preparation of an environmental impact statement ("EIS"), which would have triggered substantially broader environmental review, a closer comparison of alternatives, and greater public engagement.

70. This decision authorizes DAPL proponents to begin drilling a pipeline path underneath each of the two reservoirs, install the pipeline, and begin operating it to transport crude oil in the Tribe's culturally significant ancestral lands, and adjacent its reservation. DAPL has notified Tribes that construction at the site is scheduled to begin on July 30, 2016.

71. Also on that date, the Corps issued verifications pursuant to the CWA and RHA finding that 204 crossings of jurisdictional waters of the United States, for which PCNs had been filed, met the terms of NWP 12. The verifications include federally protected waters in four

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

states: North Dakota (2 verifications), South Dakota (10 verifications), Iowa (61 verifications), and Illinois (45 verifications). The verifications authorize DAPL proponents to begin construction of the pipeline through federally regulated streams, rivers, and wetlands, and operate the pipeline to transport crude oil in the Tribe's culturally significant ancestral lands, and adjacent its reservation. DAPL has notified Tribes that construction is set to begin at such many of these sites on or before August 1, 2016.

72. On January 5, 2016, the St. Louis District of the Corps released a public notice announcing that it intended to authorize another segment of the pipeline under § 408 of the RHA. That segment crossed federal flowage easements and federally managed levees on the Illinois River. To date, no permit or even draft environmental review document has been issued for this segment of the pipeline.

73. On or about December 17, 2015, the U.S. Fish and Wildlife Service ("FWS") released a draft EA for yet another segment of the pipeline. That EA reviewed potential impacts of the pipeline over grassland easements held by FWS and managed for wildlife values. A final EA and FONSI were issued by the FWS on June 22, 2016.

74. The current proposed route crosses Lake Oahe a half of a mile upstream of the Tribe's reservation boundary, where any leak or spill from the pipeline would flow into the reservation. The Tribe and its members have been deeply concerned about the potential impacts of the Lake Oahe crossing since its inception, for two primary reasons. First, the Tribe relies on the waters of Lake Oahe for drinking water, irrigation, fishing, and recreation, and to carry out cultural and religious practices. The public water supply for the Tribe, which provides drinking water for thousands of people, is located a few miles downstream of the proposed pipeline crossing route. Additionally, the cultural and religious significance of these waters cannot be

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

overstated. An oil spill from the pipeline into Lake Oahe would cause an economic, public health and welfare, and cultural crisis of the greatest magnitude.

75. Pipeline leaks and spills are routine in both new and old pipelines. A segment of the Keystone pipeline built in 2010 recorded 35 leaks in its first year of operations. A study of North Dakota's pipelines revealed over 300 leaks in two years, most of which were unreported to the public. Major spills from crude oil pipelines have occurred recently on the Kalamazoo and Yellowstone Rivers, with devastating economic and environmental impacts. The Corps does not require, and DAPL does not propose, any technology or mitigation approaches that reduce risk relative to other recent pipelines that have been the source of major and minor spills and leaks in recent years.

76. Second, the Lake Oahe crossing will take place in an area of great cultural, religious and spiritual significance to the Tribe. Construction of the pipeline, which includes clearing and grading a 100-150 foot access pathway nearly 1200 miles long, digging a trench as deep as 10 feet, and building and burying the pipeline, would destroy burial grounds, sacred sites, and historically significant areas on either side of Lake Oahe. These sites carry enormous cultural importance to the Tribe and its members.

77. Construction of pipelines involves other significant environmental impacts, including massive amounts of water required for hydrostatic testing and permanent maintenance of a 50-foot right of way above the pipeline.

78. The confluence of the Cannonball and Missouri Rivers, where the crossing would take place, is a sacred place to the Tribe. It is a place of great historical significance, serving as a place of peace, prayer, and trade where traditional enemies could meet without risk of violence.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

There are numerous sacred stones and historically important sites in the immediate landscape of the Lake Oahe Crossing, few of which have been fully evaluated by Tribal archaeologists.

79. The Corps operates Oahe dam, downstream of the Lake Oahe crossing, for flood control and other purposes. The result of its management is that water levels fluctuate greatly in the reservoir, with attendant erosion, scouring, and deposition of sediments. The geomorphology of the segment of Lake Oahe to be crossed by the pipeline is highly dynamic.

80. Due to its concerns about the configuration of the pipeline and inadequacies in the regulatory process, the Tribe has participated extensively in the public process associated with the permits, including filing numerous formal technical and legal comments on the Lake Oahe crossing, meeting with Corps' leadership and staff, and communicating with agency officials to express concerns. The Tribe has repeatedly conveyed to the Corps and other government officials the significance of its concerns and the risks to the Tribe about moving ahead with the pipeline in its current configuration.

V. SPECIFIC FACTS RELATED TO NHPA COMPLIANCE FOR JULY 25, 2016 AUTHORIZATIONS

81. The confluence of the Cannonball and Missouri Rivers is sacred ground to the Standing Rock Sioux people. It is rich in history, and it is rich in cultural and religious significance. Industrial development of that site for the crude oil pipeline has a high potential to destroy sites eligible for listing in the National Register.

82. The Corps undertook a process to consider the impacts of the Missouri River crossing on historic and culturally significant sites that was flawed in multiple respects. It defined the "area of potential effects" ("APE") for the Lake Oahe crossing exceptionally narrowly to include only a tiny parcel immediately surrounding the horizontal directional drilling ("HDD") pits on each side of the river and a narrow strip for an access road and "stringing area"

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

on the west side of the crossing. On the east side of the river, the APE is difficult to determine because in some of the Corps' figures, the "project workspace" includes both the access road and stringing area, while in others only the HDD pit is included.

83. The Corps' attempts at § 106 consultation omit the actual pipeline route that will be entering and existing the HDD borehole. The pipeline itself will involve 100-150 yard swath of industrial development—clearing, grading, excavation of a 6 to 10 foot trench, and construction work to shape and place the pipeline.

84. It is likely that such development would destroy any historic or culturally significant sites in its path. There are already known but unevaluated historic sites—in other words, sites that may be eligible for protection under the National Historic Preservation Act ("NHPA")—in the direct path of the pipeline immediately in the area of the HDD crossing. For example, according to the draft EA, several sites are directly in the pipeline's path in the first mile outside of the HDD site.

85. Consultation with the Tribal Historic Preservation Office ("THPO") on the DAPL, which would be routed just outside the reservation boundary, on ancestral land with great cultural and religious importance to the Standing Rock Sioux Tribe, has been profoundly inadequate. The Tribe has never been able to participate meaningfully in assessing the significance of sites that are potentially affected by the project.

86. The non-Tribal consultants hired by DAPL to do cultural surveys are not equipped to suitably assess the potential cultural significance of sites in this area. The Tribe has never had the opportunity to discuss protocols for cultural surveys or participate in the surveys that were conducted.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

87. The Tribe's first record of correspondence from the Corps related to the DAPL is dated February 12, 2015, when a Corps representative emailed the THPO asking if there were concerns related to preliminary bore hole testing to be conducted at the HDD site.

88. The THPO, Ms. Waste'Win Young, wrote back immediately objecting to the Corps' conclusion that no historic properties would be affected by the bore hole drilling, documenting numerous specific important sites that could be affected as well as the cultural significance of the area generally, and requesting a full Class III survey with tribal archaeologists before any work was done.

89. No response to this urgent correspondence was ever provided, despite several follow up requests from the THPO, and the work was done without any additional tribal consultation or process. Many months later, in a September 16, 2015 letter, a Corps official stated that the § 106 process *had ended* on January 18, 2015—nearly a month *prior* to the Corps' initial email about the project.

90. On February 17, 2015, the Corps sent the THPO a generic form letter seeking to initiate consultation under § 106 on the DAPL. The THPO wrote back immediately, committing the SRST to participation in the § 106 process, highlighting the significance of the site, and recommending full Class III surveys with tribal involvement.

91. In the months that followed, both the THPO and the Chairman of the SRST followed up with numerous additional letters to the Corps outlining concerns about cultural impacts, and seeking to engage the Corps in a good-faith consultation process as required by § 106 regulations.

92. However, no response was received from the Corps to this correspondence until September of 2015, when another letter was sent to the Tribal Chairman that again inquired "if

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

you would like to consult" on the pipeline project. The letter asked for any "knowledge or concerns regarding historic properties" that the Tribe wanted the Corps to consider. A deadline of less than a month later was provided.

93. The THPO responded promptly, outlining the Tribe's significant concerns with properties on the site, and its ongoing exclusion from the § 106 process. The THPO observed that "it has become clear that the Corps is attempting to circumvent the Section 106 process" and urged it to broaden its review to include affected areas outside the Corps' jurisdiction, as required by governing regulations. The Corps did not respond to this letter.

94. Instead, the Corps' next action was to publish a draft environmental assessment ("EA") that included not a single mention of the potential impacts of the pipeline project on the SRST or areas of historic and cultural significance to the Tribe. The draft EA also stated incorrectly that the SRST THPO had indicated to DAPL that the Lake Oahe site avoided impacts to tribally significant sites.

95. SRST submitted extensive comments on the EA, on three occasions, highlighting both the flaws in the § 106 consultation process as well as the significant cultural resources that could be harmed by the project.

96. Additionally, the Corps received critical letters from the U.S. Environmental Protection Agency, the U.S. Department of Interior, and the ACHP, all of whom questioned the Corps' approach to consultation with the SRST. The ACHP observed that it had "not been provided evidence that the Corps has met" the requirements of § 106, observing that "there is likely to be significant tribal interest" and that "[t]he Corps' approach to meeting its government-to-government consultation is extremely important." It later asked to be formally made a party to consultation on the project.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

97. Around the time of the draft EA, the Tribe also learned that the proponent had conducted cultural surveys at the Lake Oahe site and along the pipeline route during 2014 and 2015. Neither the proponent nor the Corps ever consulted with the Tribe about the protocols for those assessments or the area of potential affects, or had invited their participation as the Tribe had repeatedly requested. Instead, the proponent provided the Tribe with a massive quantity of its survey data, after it was complete, and provided an opportunity to comment.

98. During this same time frame, i.e., late 2015 and early 2016, the proponent stated repeatedly in public and private meetings that construction was slated to start in mid-May of 2016, regardless of any additional process requirements or needs.

99. In February of 2016, the Tribe and the commander of the Omaha District, Col. John Henderson, entered discussions about a visit to the reservation and the Lake Oahe crossing site. SRST Chairman Archambault emphasized in a letter to the Colonel that "there can be no meaningful consultation with respect to decisions that have already been made," and urged a reopening of the NEPA process to assess route alternatives.

100. The meeting with the Colonel took place on Feb. 29, 2016, at which time the Colonel and Corps archaeologists toured the site with the Chairman, THPO, and tribal archaeologists. Tribal participants in this meeting emphasized the cultural importance of the site, and demonstrated it with specific evidence.

101. In a follow up letter, the Chairman expressed hope that the visit would constitute a "turning point" in what had been to that point a flawed process, and that the Corps could pursue greater consideration of the Tribe's interests through a full EIS.

102. A follow up visit between Corps and Tribal archaeologists occurred on March 7, 2016, during which SRST staff pointed out places where moles had pushed dirt to the surface,

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

carrying prehistoric pottery shards, pieces of bone, flint, and tools. The sites shown to the Corps staff had never been previously assessed or recorded, consistent with the Tribe's repeatedly expressed belief that the site generally was rich in unassessed sites of historic and cultural significance.

103. During this visit Corps archaeologists stated that they were unaware of many of the sites that they were witnessing and agreed with Tribal staff that additional study was required.

104. On March 15, 2016 the ACHP wrote to the Corps again, noting that the agency "remained perplexed" by the Corps' difficulties in consulting with the SRST, pointing out that there was no tribal participation in identification surveys and urging the Corps to look at alternative pipeline alignments as required by ACHP regulations.

105. In later March 2016, Chairman Archambault invited Col. Henderson back to the reservation to continue the dialogue about impacts to historic properties. However, on April 22, 2016, the Corps' next action was to make a formal finding that no historic properties were affected by the Lake Oahe decision.

106. The Tribal THPO requested that the ACHP review the April 22 decision by letter on May 2, 2016.

107. On May 6, 2016, the ACHP sent another letter responding to previous correspondence between the Corps and ACHP. The letter laid out a number of significant criticisms of the Corps' compliance with § 106 and made recommendations for additional steps that Corps should take.

108. The Chairman of the SRST sent a letter to the Corps formally objecting to the "no historic properties effected" on May 18, 2015. The THPO also sent an objection letter on May

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

17, 2016. Neither the Chairman nor the THPO received any response to these formal objections besides additional general information from the Corps on their permitting process.

109. On May 19, 2016, the ACHP formally objected to the effects determinations made by the Corps for DAPL. The ACHP outlined several fundamental flaws with the Corps § 106 compliance, including a failure to properly define the undertaking and area of potential effects; inadequate Tribal consultation and incomplete identification efforts; and numerous procedural flaws.

110. The April 22, 2016 finding pertains only to the Lake Oahe crossing site. It does not apply to any the other hundreds of NWP 12 verifications along the pipeline's route.

111. Section 106 consultation is required for the Corps' verifications as well. But the Corps has not consulted with the Tribe to evaluate the impacts of PCN verifications on historic sites within its ancestral lands, including sites in South Dakota and Iowa. Instead, in issuing the verifications, it provided for tribal monitoring during construction.

VI. SPECIFIC FACTS RELATED TO NEPA COMPLIANCE FOR JULY 25, 2016 AUTHORIZATIONS

112. The Corps is evaluating different components of DAPL in multiple separate segments, each following an independent process and on its own timeline. The Corps' documents for each segment fail to acknowledge the existence or impacts of the other segments.

113. One segment is made up of two crossings of Corps-managed or Corps-owned lands in North Dakota, at Lake Sakakawea and at Lake Oahe, roughly 230 miles apart from one another. Another segment is the crossing of Corps-managed and operated land and levees towards the other end of the pipeline, on the Illinois River. Finally, the Corps issued 204 verifications in four states that DAPL can proceed under NWP 12 where they cross jurisdictional waters.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

114. In yet another NEPA process, the FWS reviewed the impacts of providing authorization to cross easements on private land intended to protect wildlife. In June of 2016, FWS released a final EA covering authorization to cross miles of grasslands and wetlands easements in North and South Dakota.

115. The Corps and FWS have pursued a NEPA process for each of these components independently of the other components. For the North Dakota crossings, the Omaha District of the Corps released a draft EA in December 2015 and a final EA and FONSI on July 25, 2016. For the Illinois River crossings, the St. Louis District of the Corps released an EA and FONSI on July 25, 2016, but without having provided a draft EA and any opportunity for public comment. For the FWS easements, an EA was issued in June of 2016. For the CWA NWP 12 verifications, the Corps has not taken any action to comply with NEPA, asserting that verifications are not federal actions subject to NEPA.

116. The North Dakota EA looks narrowly at the impacts of pipeline construction at the HDD crossing site only. It does not look at the indirect effect of facilitating pipeline construction to, from, and through the two HDD crossings. Accordingly, the EA is silent on the impacts to the environment associated with pipeline construction outside the immediate confines of the HDD crossing site, including oil spill risks to waters or lands of cultural significance to the Tribe.

117. The North Dakota EA also does not analyze the environmental impacts of the North Dakota crossings in the context of either the CWA verifications for the pipeline, the Illinois River § 408 permit, or the FWS easement crossings, all of which are integrally related to a single pipeline project.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

118. In multiple sets of legal comments, the Tribe expressed its concerns regarding these and many other issues associated with the NEPA process.

119. On January 8, 2016, the U.S. Environmental Protection Agency ("EPA") sent comments to the Corps on the draft EA saying that the document lacked "sufficient analysis of direct and indirect impacts to water resources," lacks information related to the operation of the pipeline, and that the document is "limited to small portions of the complete project and does not identify the related effects of the entire project segment."

120. EPA sent additional comments on March 11, 2016, highlighting the proximity of the Tribe's drinking water intake to the pipeline crossing. The letter highlighted multiple risks to water resources from the project, recommended additional analysis of emergency preparedness measures, and urged consideration of additional alternatives that reduced potential conflicts with drinking water supplies.

121. On March 29, 2016, the U.S. Department of the Interior sent a comment letter to the Corps urging preparation of a full Environmental Impact Statement ("EIS"). DOI highlighted the risks to the Tribe's reservation and drinking water resources. The letter also observed that the Corps' NEPA analysis should consider more of the pipeline route as a connected action under NEPA.

VII. SPECIFIC FACTS RELATED TO CWA/RHA COMPLIANCE FOR JULY 25, 2016 AUTHORIZATIONS

122. Construction of the DAPL will involve dredge and/or fill in waters of the United States in hundreds if not thousands of locations. Construction of DAPL will also involve obstructions to the capacity of navigable waters of the United States.

123. The Corps is only issuing individual permits at three locations on the entire length of the pipeline: at the two North Dakota reservoir crossings, and at the Illinois River crossing.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

Those components of the pipeline require a permit under § 408 of the Rivers and Harbors Act and real estate actions because the pipeline will cross federally owned or managed land.

124. The remainder of the pipeline's impacts on jurisdictional waters is being processed under NWP 12, which authorizes certain actions without an individual permit.

125. With respect to PCNs and verifications, the final verifications identify 2 locations in North Dakota, 10 locations in South Dakota, 61 locations in Iowa, and 45 locations in Illinois, for a total of 204 crossings in 1,168 miles of pipeline.

126. Since the purpose of the pipeline is to carry crude oil developed in western North Dakota to sites in Illinois, no component of the pipeline is useful without all of the other components of the pipeline in place

127. The Lake Oahe pipeline crossing will take place in close proximity to the Tribe's public water supply, as well as a number of private water supplies, and irrigation intakes. The crossing will also impair tribal treaty rights on the Standing Rock reservation, including reserved water rights.

CLAIMS FOR RELIEF

I. FIRST CLAIM FOR RELIEF – FAILURE TO CONSULT UNDER § 106 OF THE NHPA

128. Plaintiff reincorporates the allegations in all preceding paragraphs.

129. Issuance of an individual or general § 404 permit is an "undertaking" as defined in the NHPA. As such, § 106 consultation is required to determine the effect of such undertaking on historic properties.

130. The Corps failed to consider the impacts of NWP 12 on historic or culturally significant properties, or otherwise engage in the § 106 process, prior to issuance of NWP 12 in 2012.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

131. The Corps has never developed a programmatic agreement with the ACHP with respect to the NWP program.

132. Issuance of NWP 12 is a "final agency action" within the meaning of the APA.

133. The Corps' failure to comply with the requirements of the NHPA and its implementing regulations is arbitrary, capricious, and contrary to law in violation of the APA, 5 U.S.C. § 706.

II. SECOND CLAIM FOR RELIEF – UNLAWFUL ABDICATION OF § 106 RESPONSIBILITIES

134. Plaintiff reincorporates the allegations in all preceding paragraphs.

135. Section 106 of the NHPA directs federal agency heads to take into account the effect of any undertaking on historic properties, and provide the ACHP and affected parties a reasonable opportunity to comment on such undertaking.

136. Under ACHP regulations, "it is the statutory obligation *of the Federal agency* to fulfill the requirements of section 106 and to ensure that an agency official with jurisdiction over an undertaking takes legal and financial responsibility for section 106 compliance…." 36 C.F.R. § 800.2(a).

137. In issuing NWP 12, however, the Corps does not fulfill the requirements of § 106 or "take legal and financial responsibility" for compliance. Rather, it provided up-front CWA/RHA authorization to discharge fill into waters of the United States, effectively ending its involvement in most situations. In so doing, it improperly abdicated its § 106 responsibility, and delegated to the proponent its NHPA duty to determine whether there would be any potential impact to historic properties. If the proponent determines for itself that no historic properties are affected, the Corps is not notified of the action and provides no verification of NWP 12 authorization. In such circumstances, the Corps does not consider, and does not give the ACHP

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

or interested parties a reasonable opportunity to comment on, the potential impacts to historic sites. In so doing, the Corps abdicated its § 106 duties and/or improperly delegated them to private parties.

138. ACHP regulations direct that agencies "shall involve" consulting parties in findings and determinations made during the § 106 process. 36 C.F.R. § 800.2(a)(4). Consulting parties must include Indian Tribes "that attach religious and cultural significance to historic properties that may be affected by an undertaking." *Id*. § 800.2(c)(2). The agency "shall ensure" that the § 106 process provides such Tribe " a reasonable opportunity" to "identify its concerns about historic properties, advise on the identification and evaluation of historic properties, including those of traditional religious and cultural importance, articulate its views on the undertaking's effects on such properties, and participate in the resolution of adverse effects." *Id*. §800.2(c)(2)(ii)(A). Further, it is the "responsibility of the agency official to make a reasonable and good faith effort to identify Indian Tribes" to be consulted in the § 106 process. *Id*. § 800.2(c)(4)

139. Applicants for federal permits are "entitled to participate" as consulting parties in § 106 consultation, and the responsible official may "authorize an applicant … to initiate consultation with" consulting parties, but "remains legally responsible for all findings and determinations charged to the agency official." *Id*. Such authorization requires notice to all state and tribal historic preservation offices, and federal agencies "remain responsible for their government-to-government relationships with Indian Tribes." *Id*. Moreover "the views of the public are essential" to the § 106 process and agencies "shall seek and consider the views of the public" in carrying out its responsibilities. *Id*. § 800.2(d).

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

140. Additionally, ACHP regulations require Federal agencies to "ensure" that all actions taken by employees or contractors "shall meet professional standards under regulations developed by" the ACHP. However, in issuing NWP 12 and GC 20, the Corps did not "ensure" that any standards at all would be used by private parties delegated to make their own § 106 threshold determinations.

141. In enacting NWP 12 and GC 20, the Corps authorized discharges into waters of the United States in a way that sidesteps virtually all of the requirements of the ACHP § 106 regulations. Under NWP 12 and GC 20, private project proponents can make their own determinations as to the effects on tribally significant sites without any involvement of the Tribes. Under NWP 12 and GC 20, Tribes are not provided any opportunity, let alone a reasonable one, to identify their concerns or assist in the identification of historic sites. Under NWP 12 and GC 20, the Corps is not responsible for the findings and determinations regarding adverse effects. Under NWP 12 and GC 20, private project proponents can be made in a vacuum, with no input, no notice, no accountability, and no oversight. Moreover NWP 12 and GC 20 do not establish definitions or standards to be used by private project proponents on how to make determinations of historic impacts, leaving it up to the proponents' unfettered discretion to determine whether a PCN is required or not.

142. NWP 12 and CG 20 are being applied to DAPL to authorize discharges into waters of the United States with no verification or oversight by the Corps, and no accompanying § 106 process. Through NWP 12 and GC 20, the Corps is violating non-delegable duties: there is no consultation process, there are no standards governing determinations made by private parties, and the Corps has no mechanism to "ensure" compliance with its legal responsibilities.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

143. The Tribe is harmed by NWP 12 and GC 20 because they have led and will continue to lead to the destruction of culturally significant sites. Following NWP 12 and GC 20, DAPL proponents have conducted gravely deficient cultural surveys, with no involvement by the Tribes. DAPL proponents have not found historic properties that would be affected by pipeline construction in Corps' jurisdictional areas. Accordingly, they have not filed PCNs and sought verification at the vast majority of sites at which they will be discharging into waters of the United States.

144. The ACHP wrote to the Corps on May 6, 2016 to share the concern that Tribes like Standing Rock Sioux Tribe have not had the opportunity to share relevant information "in the vicinity of water crossings and within the project [right of way] that the applicant assumes will not require PCNs under General Conditions 20 and 31 [standards for PCNs] of the NWP protocols."

145. Issuance of NWP 12 is a "final agency action" within the meaning of the APA.

146. The Corps' delegation of its § 106 responsibilities to private parties in NWP 12 and GC 20 is arbitrary, capricious, and contrary to law in violation of the APA, 5 U.S.C. § 706.

III. THIRD CLAIM FOR RELIEF – FAILURE TO REQUIRE CONSIDERATION OF INDIRECT EFFECTS UNDER § 106

147. Plaintiff reincorporates the allegations in all preceding paragraphs.

148. Under NHPA, federal agencies must consult on the effects of "undertakings" to historic properties. An undertaking is defined by rule to mean "a project, activity, or program funded in whole or in part under the direct *or indirect jurisdiction of a Federal agency*, including those carried out by or on behalf of a federal agency, those carried out with Federal financial assistance, and those requiring a federal permit, license or approval." 36 C.F.R. § 800.16(y) (emphasis added).

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

149. The entirety of a private pipeline project that requires Corps' authorization for hundreds if not thousands of discharges into waters of the United States is an "undertaking" for purposes of § 106 because it requires federal approval in order to occur and because it is under the "indirect jurisdiction" of the Corps.

150. GC 20 directs permittees to file a PCN with the Corps if the authorized activity will have the potential to cause effects to historic properties. However, the Corps directs permittees to only consider the direct effects of activities in jurisdictional waters, and not indirect impacts such as construction impacts in uplands.

151. ACHP regulations require consideration of indirect effects of agency undertakings, including areas in uplands outside of Corps jurisdiction. With respect to DAPL, in a May 19, 2016 letter, the ACHP confirmed that the entire 1,168-mile crude oil pipeline is the "undertaking" for purposes of § 106 consultation, and accused the Corps of "not differentiating appropriately between federal action and the undertaking…." The ACHP concluded that "the Corps' effects determinations, thus far, fail to consider the potential for effects from the larger undertaking on historic properties including those of cultural and religious significance to Indian Tribes."

152. Issuance of NWP 12 is a "final agency action" within the meaning of the APA.

153. As applied to DAPL, the authorization to discharge into waters of the United States, without consideration of indirect impacts on historic sites as required by § 106, is arbitrary, capricious, and contrary to law in violation of the APA, 5 U.S.C. § 706.

IV. FOURTH CLAIM FOR RELIEF – VIOLATIONS OF NATIONAL HISTORIC PRESERVATION ACT WITH RESPECT TO JULY 25, 2016 VERIFICATIONS AND § 408 PERMITS

154. Plaintiff reincorporates the allegations in all preceding paragraphs.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

A. Incorrect Definition of "Area of Potential Effects"

155. Section 106 of the National Historic Preservation Act ("NHPA") requires that, prior to issuance of a federal permit or license, that federal agencies shall take into consideration the effects of that "undertaking" on historic properties. 54 U.S.C. § 306108. Issuance of § 408 permits and CWA/RHA verifications under NWP 12 are federal undertakings within the meaning the NHPA.

156. Early in the NHPA process, an agency, in consultation with the THPO, must determine the area of potential effects ("APE") of a federal undertaking. 36 C.F.R. § 800.4(1)(1). The APE is defined by regulation to include the area "within which an undertaking may directly or indirectly cause alterations in the character or use of historic properties…. The [APE] is influenced by the scale and nature of an undertaking and may be different for different kinds of effects caused by the undertaking." *Id*. § 800.16(d).

157. The Corps defined the APE for the Lake Oahe crossing unlawfully narrowly, and inconsistently with both the ACHP regulations and its own guidance.

158. The APE for the crossing includes only a tiny parcel immediately surrounding the HDD pits on each side of the river and a narrow strip for an access road and "stringing area" on the west side of the crossing. On the east side of the river, the APE is difficult to determine because in some of the Corps' figures, the "project workspace" includes both the access road and stringing area, while in others only the HDD pit is included.

159. The Corps unlawfully omits the actual pipeline route that will be entering and exiting the HDD borehole from the APE. Pipeline construction would involve 100-150 yard swath of industrial development—clearing, grading, excavation of a 6 to 10 foot trench, and construction work to shape and place the pipeline. Such development would destroy any historic

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

or culturally significant sites in its path. But because these sites are outside the APE, the Corps' conclusion does not consider them.

160. The pipeline path should be in the APE because, even where the Corps lacks direct permitting jurisdiction over segments in between regulatory areas, pipeline construction in such areas is an indirect effect of the HDD process. *Id*. § 800.16(d).

161. The Corps' failure to consider the impacts to historic and sacred sites outside of the immediate and narrow confines of the HDD drilling sites was arbitrary, capricious, and not in accordance with law in violation of the APA and the NHPA.

B. Inadequate § 106 Consultation

162. The Section 106 process requires consultation with Indian Tribes on federal undertakings that potentially affect sites that are sacred or culturally significant to Indian Tribes. 36 C.F.R. § 800.2(c)(2). Consultation must occur regarding sites with "religious and cultural significance" even if they occur on ancestral or ceded land. *Id*. § 800.2(c)(2)(II)(D); 54 U.S.C. § 302707.

163. Under the consultation regulations, an agency official must "ensure" that the process provides Tribes with "a reasonable opportunity to identify its concerns about historic properties, advise on the identification and evaluation of historic properties….articulate its views on the undertaking's effects on such properties, and participate in the resolution of adverse effects." *Id*. § 800.2(c)(ii)(A). This requirement imposes a "reasonable and good faith effort" by agencies to consult with Tribes in a "manner respectful of tribal sovereignty." *Id*. § 800.2(c)(2)(II)(B).

164. The Corps' final permit decision is the product of a fundamentally flawed consultation process that does not meet the requirements of the ACHP regulations.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

165. Consultation never occurred at all on the bore hole testing. The Tribe was notified and the work was done before the Tribe's serious concerns were even received by the Corps.

166. Consultation did not start at the earliest phases of the process. Consultation did not occur on the "area of potential affects." Consultation did not occur on participation in the surveys or protocols for how they should be conducted. 36 C.F.R. § 800(c)(2)(II)(A).

167. Instead, the THPO was given a brief window to "comment" on the proponents' deeply flawed and completed surveys long after the route had been selected and construction scheduled.

168. The Corps' April 22, 2016 "no effect" determination contains citations to documents, like "Landt & McCord, 2016," that have never been provided to the Tribe.

169. The Tribe acted promptly and repeatedly to draw the Corps' attention to its serious concerns. It immediately responded to all correspondence from the Corps.

170. Information was not sought from the Tribe in determining the scope of its identification efforts, as required by 36 C.F.R. § 800.4(a), nor was the Tribe given a meaningful opportunity to assist the Corps in the identification of this culturally rich but largely unassessed site. *Id*. § 800.4(b).

171. The Standing Rock THPO formally objected to the Corps' finding of no historic properties affected on May 17, 2016. Although the regulations required the Corps to either consult with the objecting party to resolve the disagreement, or request action by the ACHP, neither of those things have ever happened. 36 C.F.R. § 800.4(d)(1)(ii).

172. The ACHP formally objected to the Corps' findings of no historic properties affected on May 19, 2016. Under ACHP regulations, such an objection must be taken into

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

account by the Corps prior to reaching a final decision, and the Corps must prepare a summary of the decision and its rationale, along with evidence of consideration of the ACHP's objection. 36 C.F.R. § 800.4(d)(1)(iv).

173. There are significant unevaluated properties in and near the Lake Oahe crossing work site, as well as the broader pipeline route. Some sites deemed "ineligible" by DAPL's private surveys may in fact be eligible. Some sites deemed unevaluated have in fact been evaluated and are potentially eligible.

174. The Corps' decision on the Lake Oahe crossing was arbitrary, capricious, and not in accordance with law in violation of the APA and the NHPA.

C. No § 106 Consultation for Verifications

175. The Corps' NWP general conditions require completion of the § 106 process for NWP permit verifications and before work can begin. The proponent must present a PCN to the Corps wherever an activity "may have the potential to cause effects to any historic properties listed on, determined to be eligible for listing on, or potentially eligible for listing" on the National Register. 77 Fed. Reg. 10184, 10284 (Feb, 21, 2012).

176. The Corps has never consulted with the Tribe on issuance of verifications in its ancestral lands, which span the length of the pipeline. The Tribe is unaware of any formal § 106 findings for verifications outside of the two sites in North Dakota.

177. The Corps' decision that § 106 consultation had been completed on the 204 CWA verifications was arbitrary, capricious, and not in accordance with law in violation of the APA and the NHPA.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

V. FIFTH CLAIM FOR RELIEF – VIOLATIONS OF NEPA WITH RESPECT TO JULY 25, 2016 VERIFICATIONS AND § 408 PERMITS

178. Plaintiff hereby alleges and incorporates and restates all previous paragraphs of this complaint.

A. Failure to Consider Indirect Effects of Missouri River Crossings

179. NEPA requires consideration of indirect effects of agency decision. The Corps misapplied these legal standards in the final North Dakota EA. It looked narrowly at the impacts of the river crossings themselves, and did not disclose or consider the impacts of other components of the pipeline, either related to its construction or its operation to transport 570,000 barrels a day of crude oil over nearly 1200 miles.

180. Pipeline construction is an indirect impact of the Corps § 408 permits because it is proximately caused by the Corps' decision. Without the ability to cross the Missouri River, the pipeline could not be built. Pipeline construction is a reasonably foreseeable outcome of the Corps' decision.

181. Alternatively, pipeline construction could be considered an indirect effect of the Corps' § 408 permit because it is a future action that is reasonably certain to occur as long as DAPL receives Corps' authorization at the Missouri River crossings.

182. The Corps failure to consider and disclose the impacts of the pipeline's construction and operation is arbitrary and capricious and not in accordance with law in violation of the APA and NEPA.

B. Unlawful Segmentation of Project Components

183. NEPA requires consideration of separate components of a single project in a single NEPA review. 40 C.F.R. § 1508.25. NEPA regulations state that connected actions should be considered in a single EIS, defining them as action that "cannot or will not proceed

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

unless other actions are taken previously or simultaneously," and "are interdependent parts of a larger action and depend on the larger action for their justification." *Id*.

184. The Corps' permitting regulations also require it to reject applications that seek to segment a single project into multiple permits. 33 C.F.R. § 325.1(c)(2) ("All activities which the applicant plans to undertake which are reasonable related to the same project and for which a DA permit would be required should be included in the same permit application.").

185. The Corps has not adhered to these requirements, despite having them pointed out to them by the Tribe, multiple federal agencies, and others. Rather, it unlawfully segmented its NEPA review into separate components in North Dakota and in Illinois, each of which is proceeding independent of the other.

186. Moreover, the FWS issued its own EA and FONSI for a component of this pipeline project. That EA and FONSI did not evaluate the impacts of the FWS decision in the context of the Corps permits or the larger project which it was a part of.

187. The Illinois § 408 permit, the North Dakota § 408 permit, and the FWS grassland easements, are connected actions because they meet the criteria in 40 C.F.R. § 1508.25. NEPA requires them to be considered in a single NEPA document. They were not.

188. By unlawfully segmenting multiple components of the same pipeline project, the Corps has acted in a manner that is arbitrary, capricious, and not in accordance with law, in violation of NEPA and the APA.

C. Arbitrary Economic Analysis

189. NEPA and its implementing regulations require the Corps to produce environmental review documents that are factually accurate, well supported, and that fully discloses the impacts of an action to the public. 40 C.F.R. § 1502.

190. These standards apply equally to an agency's treatment of economic data. 40

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

C.F.R. §§ 1502.23 (cost benefit analysis), 1508.8 (EIS must evaluate economic effects). An agency's failure to include and analyze information that is important, significant, or essential renders an EA and FONSI inadequate. 40 C.F.R. § 1500.1. These fundamental NEPA principles apply to both economic and environmental analyses in an EIS. 40 C.F.R. §§ 1502.24, 1508.8 ("effects" in an EIS must evaluate include economic impacts.).

191. In reaching its decision on the North Dakota crossings, the Corps looked very narrowly at only two tiny segments of the pipeline, ignoring the environmental and economic risks and harms of the pipeline as a whole.

192. However, it balanced these narrow risks and harms against the full economic benefit of the pipeline as a whole. For example, the EA cites the full $3.78 billion investment "directly impacting the local, regional, and national labor force by creating nearly 12,000 construction jobs." Final EA, at 80. It repeats DAPL's public talking points about providing "considerable labor income and state income tax revenue – including the generation of more than $13.4 million in ad valorem taxes." *Id*.

193. The Corps' decision to balance the full economic benefits of building and operating the entire pipeline against the economic risks of constructing tiny segments of that pipeline is arbitrary and capricious and not in accordance with law, in violation of NEPA and the APA.

VI. SIXTH CLAIM FOR RELIEF: VIOLATIONS OF THE CLEAN WATER ACT AND RIVERS AND HARBORS ACT WITH RESPECT TO JULY 25, 2016 VERIFICATIONS AND § 408 PERMITS

194. Plaintiff incorporates by reference all preceding paragraphs.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

A. Arbitrary and Inadequate Public Interest Review for North Dakota Permits

195. Prior to issuance of a § 408 permit, or any other CWA/RHA permit, the Corps is required to conduct a "public interest" review consistent with its governing regulations, 33 C.F.R. § 320.4(a).

196. In conducting a public interest review, the Corps must consider the probable impacts of the proposed action, and weigh "all those factors which become relevant." *Id*. The Corps must balance the benefits "which reasonably may be expected to accrue" from the action against the "reasonably foreseeable detriments." *Id*. "All factors" which may be relevant to the proposal must be considered, including the extent of the public and private need for the proposal, and the existence of unresolved conflicts around resource use. The District Engineer is authorized to make an "independent review of the need for the project from the perspective of the overall public interest." *Id*. § 320.4(q)

197. The Corps' did not conduct a valid public interest review of the § 408 authorizations in North Dakota. To the extent it conducted any public interest review at all, it suffered from all of the same flaws as the NEPA review identified above. Specifically, the Corps conducted an arbitrary and segmented approach that ignored virtually all of the indirect effects of its decision, specifically, the construction and operation of the pipeline itself; and it conducted an arbitrary and one-sided economic balance in which the benefits of the entire $4 billion pipeline were weighed against the impacts of tiny segments of the pipeline.

198. By failing to undertake a lawful and adequate public interest review of the actions proposed in its § 408 decision, the Corps has acted in a manner that is arbitrary, capricious, and not in accordance with law, in violation of the CWA and the APA.

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

B. Unlawful Verification For Lake Oahe Crossing

199. In addition to a § 408 permit, the portion of the pipeline that crosses under Lake Oahe requires a Rivers and Harbors Act § 10 permit. 33 C.F.R. § 322.3(a)

200. On July 25, 2016, the Corps issued verification that the Lake Oahe pipeline crossing complied with the conditions of NWP 12, and hence was authorized under § 10 of the Rivers and Harbors Act.

201. In order to "qualify" for NWP authorization, proposals must meet a number of general conditions. 77 Fed. Reg. 10184, 10282 (Feb. 21, 2012).

202. The Lake Oahe crossing does not comply with these conditions and, accordingly, does not "qualify" for NWP 12. *See also* 33 C.F.R. § 330.6(a)(2) ("If the [Army Corps] decides that an activity does not comply with the terms or conditions of an NWP, he will notify the person desiring to do the work and instruct him on the procedures to seek authorization under a regional general permit or individual permit.").

203. General Condition 7 states that no activity may be authorized under a NWP that is in "proximity" to public water supplies. 77 Fed. Reg. at 10283. The Lake Oahe crossing is in close proximity to the Tribe's source of drinking water for a significant portion of the reservation community.

204. The potential impact on drinking water for the Standing Rock and many other Tribes and communities has also been emphasized by the Environmental Protection Agency and the U.S. Department of Interior, as well as the Tribal government and many of its members.

205. Further, General Condition 17 states that no activity authorized by a NWP may "impair tribal rights" including "reserved water rights." 77 Fed. Reg. at 10283. DAPL is routed just upstream of the Tribe's reservation boundary, where any oil spill would have devastating effects within the reservation. The Reservation necessarily includes the protection of adequate

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

water quality. The Lake Oahe crossing does not "qualify" for a NWP 12 because of the risks to Tribal resources protected by treaty.

206. The Corps decision to verify that the Lake Oahe crossing was consistent with NWP 12 was arbitrary, capricious and not in accordance with law, in violation of the APA.

C. Issuance of Verifications for 204 Jurisdictional Waters

207. Under the Corps' regulations, a single project can only proceed under both an NWP and an individual permit where the "portions qualifying for NWP authorization would have independent utility and are able to function or meet their purpose independent of the total project." 33 C.F.R. § 330.6(d).

208. For the reasons discussed immediately above, the Lake Oahe crossing requires an individual permit. Moreover, Section 408 authorizations are individual "permits" within the meaning of this regulation. *See id.,* § 320.2(e); § 320.4 (general policies applicable to "all" Army permits).

209. No component of DAPL has "independent utility" or the "ability to function" without the other components of the pipeline. As a result of this, the Corps cannot authorize some portions of DAPL under NWP 12, and other portions as individual permits.

210. Because the Lake Oahe crossing requires an individual permit, no other component of the pipeline can be authorized under NWP 12.

211. Issuance of a verification by the Corps constitutes a final agency action within the meaning of the APA.

212. The Corps' verification of 204 additional crossings of jurisdictional waters was arbitrary and capricious and not in accordance with law, in violation of the APA and the CWA.

PRAYER FOR RELIEF

WHEREFORE, Plaintiff respectfully requests that this Court grant the following relief:

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

1. Declare that NWP 12 is invalid as applied to DAPL because the Corps failed to comply with § 106 at the time of its issuance, in violation of the NHPA.

2. Declare that NWP 12 is invalid as applied to DAPL because the Corps unlawfully delegated its responsibility to comply with § 106 to private parties, effectively allowing discharge into waters of the United States without any consideration of impacts to historic properties, in violation of the NHPA.

3. Declare that NWP 12 is invalid as applied to DAPL because the Corps authorized discharge into waters of the United States without consideration of indirect impacts on historic sites, in violation of the NHPA.

4. Declare that the July 25, 2016 authorizations and verifications are arbitrary, capricious, and in violation of the NHPA, NEPA, CWA and RHA, and implementing regulations.

5. Vacate NWP 12 as applied to DAPL.

6. Enjoin the Corps to direct DAPL to seek either an individual permit covering all discharges along the entire pipeline route, or submit PCNs for all impacts to waters of the U.S., and fully comply with § 106 prior to finalizing such permit or verifications.

7. Vacate all authorizations and verifications related to DAPL pending full compliance with law.

8. Vacate the final EA and FONSI.

9. Retain jurisdiction over this matter to ensure that the Corps complies with the law.

10. Award Plaintiff its reasonable fees, costs, expenses, and disbursements, including attorneys' fees, associated with this litigation; and

Earthjustice
705 Second Ave., Suite 203
Seattle, WA 98104
(206) 343-7340

11. Grant Plaintiff such further and additional relief as the Court may deem just and proper.

Respectfully submitted this 27th day of July, 2016.

History

The Standing Rock Sioux Reservation was originally established as part of the Great Sioux Reservation. Article 2 of the Treaty of Fort Laramie of April 29, 1868 described the boundaries of the Great Sioux Reservation, as commencing on the 46th parallel of north latitude to the east bank of Missouri River, south along the east bank to the Nebraska line, then west to the 104th parallel of west longitude. (15 stat. 635).

The Great Sioux Reservation comprised all of present-day South Dakota west of the Missouri River, including the sacred Black Hills and the life-giving Missouri River. Under article 11 of the 1868 Fort Laramie Treaty, the Great Sioux Nation retained off-reservation hunting rights to a much larger area, south to the Republican and Platte Rivers, and east to the Big Horn Mountains. Under article 12, no cession of land would be valid unless approved by three-fourths of the adult males. Nevertheless, the Congress unilaterally passed the Act of February 28, 1877 (19 stat. 254), removing the Sacred Black Hills from the Great Sioux Reservation. The United States never obtained the consent of three-fourths of the Sioux, as required in article 12 of the 1868 Treaty. The U.S. Supreme Court concluded that "A more ripe and rank case of

dishonorable dealings will never, in all probability, be found in our history." United States v. Sioux Nation of Indians, 448 U.S. 371, 388 (1980).

The Standing Rock Agency was established at Fort Yates in 1873. The Executive Order of March 16, 1875 extended the Reservation's northern boundary to the Cannon Ball River.

In the act of March 2, 1889, however, Congress further reduced the Great Sioux Reservation, dividing it into six separate reservations, including the Standing Rock Sioux Reservation. (25 stat. 889). The Standing Rock Reservation boundaries, delineated in section 3 of the 1889 act, have remained intact since that time.

The Standing Rock Sioux Tribe operates under a constitution approved on April 24, 1959 by the Tribal Council of Standing Rock Sioux Tribe.

The Tribal Council consists of a Chairman, Vice-Chairman, a Secretary and fourteen additional Councilmen which are elected by the tribal members. The Tribal Council Chairman provides leadership and administrative direction to the tribe.

The Tribal Council Chairman and Council serve a term of four years. Six of the fourteen additional Council members shall be residents of the Reservation without regard to residence in any district or state. Each of the remaining additional council members shall be a resident of the district from which his/she is elected.

The At-large Council members are elected by the district people as whole.

Regular Tribal Council meetings are the first Tuesday, Wednesday, and Thursday of the month. Committee meetings are held the second week of the month. The last Monday of the month is for gaming and other tribal business.

The Standing Rock Sioux Tribe stands by its right to self-government as a sovereign nation, which includes taking a government-to-government stance with the states and federal government entities. Having signed treaties as equals with the United States Government in 1851 and in 1868, which established the original boundaries of the Great Sioux Nation. The tribe staunchly asserts these treaty rights to remain steadfast and just as applicable today as on the day they were made.

The Standing Rock Sioux Reservation was greatly reduced through the Act of March 2, 1889, also known as the Dawes Act and the Allotment Act. This opened up the reservations throughout the United States to settlement by non-Indian entities, thus creating checker-boarded land ownership within the Standing Rock Reservation. The tribe maintains jurisdiction on all reservation lands, including rights-of-way, waterways, and streams running through the reservation; this in turn leads to on-going jurisdictional disputes in criminal and civil court. Recent cases such as Nevada vs Hicks have contributed to the contentious issues in this iron triangle between the Federal, State, and Tribal governments.

The Standing Rock Sioux Tribe (Nation) operates under a constitution approved on April 24, 1959 by its own elected council members, under the auspices of the Indian Reorganization Act of 1934.

The Tribal Government consists of a Chairman, Vice-Chairman, a Secretary, and 14 council members, consisting of a member elected from each of the eight districts, and 6 at-large council elected by the tribe. The Administration consists of the Chair, Vice-Chair, Secretary, an Executive Director (not elected), and 6 political appointees; Administration carries out resolutions and motions made by the tribal council. Note that there is no Treasurer, as the tribe has an excellent Finance Department which handles all of its accounting for payroll, business transactions, and bank reconcilement; this provides for adequate checks and balances.

The Tribal Council passes legislation, makes budgets, approves of financial transactions, and makes major decisions affecting the tribe including:

* Managing the tribe's real property, including trust lands.

* Engaging in business ventures.

* Passing and enforcing ordinances to serve the general welfare of enrollees, the environment, and the public safety of reservation residents.

* Entering into Contracts for business and for government needs.

That is to say, the tribe operates similar to a corporation, which may make business decisions, hires employees, grants business licenses, and operates corporate subsidies to develop tribal economy.

The tribal court hears and prosecutes civil and criminal complaints, where questions of jurisdictional remedies are exhausted before going to a federal court. These three branches of tribal government are meant to provide a balance of power, which, at this point, continues to evolve as it struggles to modernize its method of governance. Law Order For the Standing Rock Sioux Tribal

The Standing Rock Sioux Reservation is situated in North and South Dakota. The people of Standing Rock, often called Sioux, are members of the Dakota and Lakota nations. "Dakota" and "Lakota" mean "friends" or "allies." The people of these nations are often called "Sioux", a term that dates back to the seventeenth century when the people were living in the Great Lakes area. The Ojibwa called the Lakota and Dakota "Nadouwesou" meaning "adders." This term, shortened and corrupted by French traders, resulted in retention of the last syllable as "Sioux." There are various Sioux divisions and each has important cultural, linguistic, territorial and political distinctions.

The Dakota people of Standing Rock include the Upper Yanktonai in their language called Ihanktonwana which translates "Little End Village" and Lower Yanktonai, called Hunkpatina in their language, "Campers at the Horn" or "End of the Camping Circle". When the Middle Sioux moved onto the prairie they had contact with the semisedentary riverine tribes such as the Mandan, Hidatsa, and Arikara. Eventually the Yanktonai displaced these tribes and forced them upstream. However, periodically the Yanktonai did engage in trade with these tribes and eventually some bands adopted the earthlodge, bullboat, and horticultural techniques of these people, though buffalo remained their primary food source. The Yanktonai also maintained aspects of their former Woodland lifestyle. Today Yanktonai people of Standing Rock live primarily in communities on the North Dakota portion of the reservation.

The Lakota, as the largest division of the Sioux, subdivided into the Ti Sakowin or Seven Tents and Lakota people of the Standing Rock Reservation included two of these subdivisions, the Hunkpapa which means "Campers at the Horn" in English and Sihasapa or "Blackfeet," not to be confused with the Algonquian Blackfeet of Montana and Canada which are an entirely different group. By the early 19th century the Lakota became a northern Plains people and practically divested themselves of most all Woodland traits. The new culture revolved around the horse and buffalo; the people were nomadic and lived in tee pees year round. The Hunkpapa and Sihasapa ranged in the area between the Cheyenne and Heart Rivers to the south and north and between the Missouri River on the east and Tongue to the west. Today the Lakota at Standing Rock live predominantly in communities located on the South Dakota portion of the reservation.

OAK LAKE WRITERS' SOCIETY

This book is a publication of the Oak Lake Writers' Society, a state-wide organization of Dakota, Lakota, and Nakota writers. The Society is an outgrowth of the summer retreats for aspiring tribal writers that have taken place at South Dakota State University's Oak Lake Field Station since 1993. The primary goal of the Society is to contribute to the strengthening and preservation of Dakota, Lakota, and Nakota cultures through the development of culture-based writings.

Where Are They?

Charmaine White Face

There is an old legend of the Titonwan of the Oceti Sakowin. In it, animals desire to kill the first human beings, the two-leggeds, because they fear that the two-leggeds will destroy them and the other relatives on Unci Maka. But the winged ones have pity and want to help the two-legged beings. A great race is held around the Black Hills, more than 500 miles, and the winner will determine the fate of the human beings. The racetrack becomes red with the blood from the hooves, feet, and paws of the animals running the grueling race. But the magpie is smart and rides on a horn of the buffalo, the fastest runner with the most endurance. As they near the end, the magpie, who has conserved his strength, flies ahead of the buffalo and wins the race. As a result, human beings are allowed to live and the buffalo nation must provide for their needs.

In any natural field, one that has not been cultivated by human beings, there might be hundreds of species of plants. Each year, the field will change as seeds grow in relation to the amount of moisture, temperature, and sunlight available the previous winter and spring. But even though this ever-changing living tapestry produces varied kinds of plant life with each new year, there will always be one dominant plant: grass, broad leaf, or perhaps cacti. The less dominant will grow among the more prolific, sometimes in small family clusters, sometimes alone, standing proudly. Perbaps a bird flying overhead has dropped one seed on its way to feed its young, and the seed, left in a favorable position, has grown into a single entity, thus adding a touch of difference to an otherwise homogenous mixture.

Were human beings allowed to co-exist with each other and the rest of creation in certain geographic areas in an environmentally sustainable manner, just such a tapestry would develop over thousands of years. Such was the North American continent when the Europeans invaded. However, such a tapestry was not conceivable for Europeans, after almost 2,000 years of conquest, pillage, and use and abuse of what were known as "natural resources."

When Lewis and Clark traveled along the Missouri River, they were a part of this mindset. They could not know that the indigenous peoples they were encountering had cultures thousands of years old, very complex societal systems, and an understanding of nature that America still does not grasp today. Nor did Lewis and Clark, like the cultures of America or Europe today, realize or understand the indigenous peoples' comprehension of the vast spiritual dimensions of this world.

Lewis and Clark were merely the starter cells of a vast, cancerous way of thinking that is rapidly killing Unci Maka. That thinking started in Europe thousands of years ago. "Natural resources," whether they be oil, minerals, timber or crops, were to be used solely for the production of "things" for the enjoyment and comfort of human beings.

In their journals, Lewis and Clark described the countless numbers and new kinds of species they encountered: the large herds of buffalo drinking at the river, the amazingly graceful antelope and deer lowering their heads to the water in the early evening, the many kinds of waterfowl everywhere. They also expressed the need for interpreters for the many indigenous languages they were encountering, but only for the purpose of trade and business, only for the purpose of conquest and use.

So where are they? Where are the buffalo? Why are they not still running free across the prairies? Where are the black bears, the brown bears, the grizzly bears? Why are they not in the Black Hills? Where are the wolves? They live in family and clan units too. They once lived all over the Midwest. Where are the moose that once traveled in these areas? Where are the mountain sheep that lived so plentifully among the spires and tables in the Badlands?

Where are the plants that were not given Latin names by scientists and botanists but disappeared under plows, or water caused by dams, or were eaten by cattle? Where are the tallgrass prairies? There is a tiny one left in North Dakota, near Fargo, completely surrounded by farms. Yet, at one time, the tallgrasses, taller than a horse, were found all over in the Midwest. How many plants and animals will die, and how many threatened and endangered species will become extinct, so a new railroad line can be built through one of the last pristine grasslands? We are supposed to nevermind that railroad lines are obsolete and only increase air, water, and land pollution. After all, we are told, the railroad cars will carry what is left of the coal in Wyoming to points east. These are parts of the legacy of Lewis and Clark.

Where are the myriad streams of clean water that once flowed in the Black Hills, in the Badlands, all over the prairies, following each spring and summer rain? Where are the flocks of waterfowl that once covered the waterways in South Dakota? A pitiful few have become full-time residents of the location across from the mouth of the Bad River where Lewis and Clark encountered the Titonwan, that place which is now the capitol of the state of South Dakota.

Where are the thousands of trees, shrubs, and bushes that once lined the Missouri River and were the homes, shelter, and food for innumerable animals and birds? Where are the fish and turtles and other small aquatic life that needed the trees and shrubs and bushes to extend their branches over the water so that their breeding places would be shaded from the hot summer sun? Where are the insects that inhabited the trees, shrubs and bushes and were food for some of the water life?

Where is the clean air of the Great Plains? Now it is filled with the noxious fumes of mining for coal and methane and oil. It contains the radioactive particles of hundreds of abandoned uranium mines, particles to be breathed in by humans and cattle, to settle on grass and crops that will be eaten by humans and cattle, and to be carried by the wind elsewhere. These also are part of the legacy of Lewis and Clark.

Where are the Black Hills places that were sacred to the Titonwan and other indigenous nations? Is there a consequence for the destruction of something sacred? How many burial sites containing the remains of the ancestors of the Oceti Sakowin and other tribes have been crushed under cultivators so crops of winter wheat can bring in the almighty dollar? How many sacred places and burial sites, areas that were left in reverence for thousands of years on the prairies, are being considered for destruction so coal can be strip-mined to increase the pollution in the air? How many petroglyphs, places of communication with those wiser than the two-leggeds, have been vandalized with the initials of plunderers, or destroyed by "educated" people to be placed in museums? These are also the legacies of Lewis and Clark.

Where are my people, the Titonwan and the rest of the Oceti Sakowin? Where are the ones of whom Thomas Jefferson said, "On that nation, we wish most particularly to make a friendly impression, because of their immense power..."

Where is the honor of a nation that made treaties with the Oceti Sakowin bnt then violated them? Where is the integrity of a nation that would go against its own Constitution in order to have access to gold? Where is the humanity of a nation that would steal children to change them from being who the Creator made them to be?

Where are my people of whom William Clark said, "These are the vilest miscreants of the savage race, and must ever remain the pirates of the Missouri, until such measures are pursued, by our government, as will make them feel a dependence on its will for their supply of merchandise?"

Where are the thousands and thousands of Titonwans who perished from starvation, bullets, smallpox and other diseases after Lewis and Clark traveled up the Big Muddy? Where are the Wahpekute, the Wahpetonwan, the Mdewakantonwan, the Sisitonwan, the Ihanktonwan, and the Ihanktonwanna, the other six nations of the Oceti Sakowin?

Where are the children buried who died in residential boarding schools generation after generation? Where are the ones who survived the physical, mental, emotional, and spiritual abuse of the boarding schools and died later of the consequences of their experiences? Where are the burial sites of their parents, the ones who were prisoners of war, who whispered secrets to their grandchildren hoping a miracle would happen and some seed would remain of the Oceti Sakowin?

Where are the ancient family practices of the Oceti Sakowin? Where is the strong societal structure that forbid a son-in-law to talk to his mother-in-law? Where are the whipbearers so that no woman or child had to fear abuse at the hands of a man? Where are the old laws that guided nations for millennia to live and thrive on Unci Maka? These absences are the greatest tragedy of the legacy of Lewis and Clark.

cheap like our land
that was sold at four pennies an acre
but no indian was there that day
as whitemen sold to whitemen
making convenient policy makers

because back then
and maybe even now
indians were never seen as being equal
to the white people
just a copper penny
next to a shiny nickel

what would you do
if someone put a price tag on your home
and sold it with no remorse?
this country became
one big wholesale store
and it never closes
because there's always something to buy
and something to sell
and pretty soon
no one will be able to tell
...what truth really is

here's a nickel for your thoughts

Reflections on Mnisose after Lewis and Clark

Kathryn Akipa, Gladys Hawk, Craig Howe, Lanniko Lee, Kim TallBear, and Lydia Whirlwind Soldier

A Dialogue between members of the Oak Lake Writers' Society held at The Birdsong Inn and Guest House, Java, South Dakota, February 12, 2005

Kim TallBear In this collection of essays, we have decided to center the river as an actor, and not simply think of it as a subject or something simply acted upon in our response to Lewis and Clark. So, we—Craig and I —want to have you all philosophize about rivers as entities or beings in themselves. It's kind of an open question where you might talk about the meaning of the river to you personally, to your family, to your tribe.

Lanniko Lee All my life I have known the river to be part of a larger expression of our relationship to everything that is—everything that exists. A good example is what Arvol Looking Horse[1] published in his wonderful "World Peace and Prayer Day." In it he describes the earth as a living organism having anatomical functions similar to that of the human body. Mnisose, the river we know, is a major artery. As a major artery it is meant to flow for the life of the world.

In fact, long before scientists began speculating about the alleged benefits of changing the river, my family, like Arvol, talked about the river as doing the work of circulation. Circulation is the vital function of the Mnisose. After all, flowing water brings necessary changes. So when I think about the man-made dams that obstruct the river's flow, I can't help but grieve over the loss of a river flowing and the loss of its life-giving and healing forces coursing through Unci Maka, Grandmother Earth, to the ocean.

Another important conversation for indigenous people regarding caring for the earth is the ability of the rain forest to continue functioning in a healthy way. So much destruction of the rain forest is occurring. Soon it will not be able to do what it was meant to do—provide the essential respiratory exchange needed to keep body Earth healthy. Arvol's message was a proposal to all humanity that we pay attention to how the relationships of the parts of the world work and how we are all responsible for Earth's health. This is good Lakota reasoning.

I remember the elders of my family asking how the clouds would be able to come if there were no trees to call in the clouds. This was after hearing John F. Kennedy's speech about the progress and the good that would come after the river was dammed and hydroelectric power would be available to improve the lives of everyone. My recollection of those times is a mixture of strong emotions interfused with memories of ceremonies and

dire prophecies; photographs were taken by those who wanted to remember a river that was destined to be changed. Strong emotions were displayed; everyone living along the river was affected by those changes.

Kim Gladys and Lydia and Kathryn have also talked a lot about the effects on the people and also what the river meant to them personally. How do each of you feel about the Missouri River project and the inherent contradiction for Native people of referring to the River as a "project"?

Lanniko When I grew up, the river was at the center of conversations about the sacred. The river helps explain our belief about the sacred permeating our lives. Images of baptismals are prominent in my memory. All of the songs that we sing when we are burying our people who have grown up along the river are always focused on the water. Gladys can probably talk about that.

Gladys Hawk My piece in this anthology is my personal experience of the river. But it was the Grand River I was talking about. It wasn't far from the Missouri, though. I am also familiar with the Missouri just traveling back and forth to Mobridge. I write about a time when all of the river was still there, but it was being planned to be flooded. I remember seeing the surveyors when they came along the hillside right above our house; they were way up there, so I rode on my horse and I went up there and I asked them, "What are you doing?" There were two guys there with their tripods and they said, "Well, some day the water level is going to be this high" [gestures]. I looked at that and I looked down towards our house and to the river and to the east. I couldn't imagine it; I just could not imagine that. But that was when I was only about ten. And it wasn't until '58, '59 and '60, when I was in my twenties, when we actually saw it happen, when they cut down all the trees along the river and it was bare.

Kim Some of us here were talking last night in the kitchen about the sense of disbelief that people had. First of all, that morally the Army Corps could do this and second, that technologically it was possible. And I wonder if, because it took so long from planning to the actual flood, the sense of disbelief was really big? Or did people gradually accept it would happen?

Gladys I think they gradually accepted it. What more could they do? Their homes were taken away. I just want to say the impact that it had. There was an old man that lived where the bay is now. His name was Ed Hawk. He was an old man with a blind eye. All he had was just two little sorrel horses that he used for his wagon. He had them in the corral and one little log cabin where they wintered. And he lived in a one-room log house. He would not sign anything that the Corps brought in. He just stood his ground. And the Corps came in and they bulldozed his little house. [One gasp of disbelief, then 30 seconds of silence.]

Lydia The damming of the river displaced a lot of people and multiple generations from the river. It destroyed a way of life that was centuries old. I remember somebody telling me that their grandparents would go to the river every Sunday and sit on the bluffs overlooking the water just to see their land disappearing under the water. They would reminisce about the old days, their gardens, their livestock and their homes. And they would feel sad over how their lives had changed since their land was flooded.

As a Sicangu, I didn't grow np along the river. But when they started building the dam near Pierre, my dad worked on it for one summer. He was really torn about that, but he had to support a family. So he just worked on it one summer and then found work elsewhere. But I remember every summer my grandparents would take us to the river by Pickstown, Fort Randall, to see how far the water had come up. We would spend the day, go to Fort Randall and have a picnic and they would sit and talk about the river. They were in disbelief that this could be done. But I was a little kid and as a little kid you don't pay too much attention. As Sicangus we lived so many hours away from the river, but we still went to the river to see what was happening every summer.

Lanniko Another arrogant, irresponsible act occurred even before politicians set in motion those changes to the river. Locals took it upon themselves to move prayer stones off the river—very large boulders that had previously been prairie altars where mortals communed with the sacred. If you go down the river road here, you will see those prayer stones with hand marks on them made during prayer—prayers that were given for that river. One such group, not American Indians, decided to construct a building in Gettysburg, South Dakota; a big prayer stone was moved in to attract tourists to the community. Now if you want to visit one of these stones, you can visit the Dakota Sunset Museum and pay a fee to see the prayer stone, but not to touch it, nor do you have the open, private prairie setting to use the stone as it had been used for bundreds, possibly thousands of years. By moving those stones off the river—it's like another group of people is shaping even our memory. Between that and the river project, maybe they were thinking we would forget our past. Those who were involved in making the decisions to change the river—they knew what they were doing culturally and economically to our lives. I don't know how they can possibly be unaware of what they were doing.

Kim Kathryn, in your essay, you talked about your mom getting a new teaching appointment in Iowa and leaving Lower Brule. Did you actually see what happened after the flooding or did you leave before it got flooded?

Kathryn We left before it got flooded. But a couple of girls who my mom taught came with us on the move. And then when we took them back we heard the stories, the horrible things that happened with the flood. At the store the people would talk around the stove and they would sit there smoking and

they just couldn't believe it. "How could they do something like this? How is this possible?" They would ask. The underlying feeling that I remember as a child when I was probably about eight was "How could man think that he is so powerful that he could change the course of the river?" And I remember that there was almost a feeling of toksta. They are going to find out the river will take its own course eventually and it will come back on them. You can't change the course of something like that—so powerful—so mighty. Somewhere you're going to pay for it. That was the feeling of disbelief that the people around the stove and the women in their sewing circles had. It just seemed like such an absurd and far-fetched plan. How could the wasicu think like this?

It reminds me of when they decided to go to the moon in the later 60s—the same kind of idea—a kind of disbelief! [laughter]. But the dam in particular worried a lot of people because a lot of them could not afford to move the graves and they worried about their relatives. Sure enough, three weeks after the flooding they saw caskets floating down the river. That flabbergasted people in the Lower Brule area. Out of respect, I didn't want to put that scene in my essay. It could hurt people to be reminded of that. Some of them, those were their relatives.[2]

I remember such disbelief from my child's point of view. I didn't fully understand the whole thing. I just knew that a flood was coming and that the village would be goue—everything that we knew there. And I think that is the reason why I wrote in my piece about the happy memories as a child, to show the tragic loss. My point was to show that this is on the continuum of what began when Lewis and Clark sailed—the so-called progress of America and how it continues to impact Native Americans in modern times. When you lose a village where you did have such good memories—yes, some of them were tragic and life goes on—but when you lose a village like that and you know that you will never be able to walk in those places again because they're under water, it's hard to imagine.

Kim You just stated clearly the importance of the dam in the legacy of American progress. Lewis and Clark were also part of that movement towards "progress." I'm also interested in what you all have to say about the need to respect the river, its power, and the possible consequences of not respecting it.

Lydia I grew up listening to old people and their philosophies. One of the phrases that they always used was "mni wiconi," which means "water is life." It also means respect for water—respect for river. As long as you have water, there is life. The old people use that phrase in their prayers and everyday conversation.

Lanniko Vine Deloria and Dan Wildcat in their book, *Power and Place*, have also talked about Indian peoples' respect for the river.[3] They talk about our nnderstanding of the changing nature of the river, our understanding

of flood plains, of the appropriate places for habitation, and what kinds of things people did to fit their own lives into the balance by understanding the river's changes. They state that witb that knowledge, people were able to take care of themselves, while non-Indians build on the flood plains with a lot of investment and insurance. They make money off tragedies that they participate in creating. A critique of capitalism comes across in their book—a conversation about non-Natives who build on the flood plains and reap benefits from loss. They say we never did that because we had a responsibility for not just ourselves, but our whole family—for those communities along the river. We had to have a sense of our responsibility as humans, an understanding of the river phenomena and its changing nature. We had to respect it so that we could share that wisdom with those around us.

Let me give a couple of specific examples of how understanding and respecting the river translated into taking care of our families and communities. We sang songs wben we were burying our family members who had grown up and died along the river. We focused on the power of the water, both the sacred power and the power expressed in the cycles of nature. Each spring—as our elders taught us—the seasonal power expressed in floods brought about the renewal of the landscape, of life.

I have another example of how we linked river knowledge and river power to the knowledge and power in our human lives. Late one summer evening when my grandmother and I were down at the river getting water, a light breeze started the cottonwood leaves chattering overhead; she told me to stop and listen. A sliver of moon hung in the sky and she motioned up to it and then to the trees: "Listen to the cottonwood women talking," she said to me. I asked her what they were saying and she said that I should always remember that I am like the river and that one day I would flow and become a woman. Like the popping trees in the spring, and later when the ice was breaking, I would live a springtime, like the river, and bring life into the world. It was then that I learned about how tbe seeds of cottonwood trees are imbedded into the soft river soil by the swift moving waters that flooding causes in the spring run-off. I learned about the gift of life, and she made clear to me the Lakota saying, "Our children are sacred," with her explanation of how young cottonwood trees were the gifts of floods. I learned then to respect those powerful changes and appreciate our connection to the river, the trees, and the land.

Our everyday lives were spent learning lessons about change and our people used those lessons to make decisions like where to build our homes and where to plant our gardens. Immigrants have not learned much from American Indians when it comes to human connectedness to the land. Our understanding of home is probably because we know Earth as our grandmother, Unci Maka. Unfortunately, our perspective and the wisdom of our

elders are never fully appreciated, especially when it comes to stewardship, or when environmental changes are contemplated.

To go back to your comment about disbelief, I think it is untrue that indigenous people had no real sense of the power of technology. On the contrary, our people were more keenly aware of the power of making choices. It wasn't that we all disbelieved that the river's course could be changed. We were in disbelief that the wasicu would do such a thing. Our choices as Lakota people were made from a different way of discerning the world.

Kathryn I just want to make a comment about the Dakota world. Although I lived along this river as a child, we Dakota don't in general live that close to the river. Of course we do have the Mississippi, the Yellow Medicine, the Great Sioux, the Minnesota. . . a lot of rivers. The water was always a very big part of our lives too. It's like you say, Lydia, mni wiconi.

My father, my step-dad, Woodrow Keeble, was born in 1917. His dad was Isaac Keeble, who was very traditional, and never learned to speak a wasicu language. My step-dad used to tell us how to get up in the morning. The old way of making your day is to go out on your own to the east. You face the sunrise and when the sun breaks, you acknowledge the creator, "Wakan Tanka Tukansina." You acknowledge the day and the gift of life that you have and the woods and everything around you on every horizon. That is one of the important things that they did iu those days when we lived in camps—we always camped by some kind of water. You would go down in that sacred moment of silence early in the morning to greet the creator, to wash your face, or to use the water in some way to bless yourself. Because it is mni wiconi.

My dad used to tell about how when he was a little boy, his dad would tell them, all six of them, all boys, "Inajin po," and they would get up. They lived on the west side of Pickerel Lake and they would all have to run down to the lake and he would make them jump in the water. They would all have to go in for a swim in the morning, until the ice formed and they couldn't get through the ice any more. And if the little ones tried to complain, he would tell them that it makes your heart strong. And it made my dad's heart strong. He was North Dakota's most decorated war hero from World War II and Korea. He was never given the medal of honor that he was recommended for three times because it was a racial issue—and that's been acknowledged now. But that's just an aside—a plug for my dad! [Laughter]. He lived when it was important to greet your day with the water and to face the sun and commune with Wakan Tanka.

Kim I grew up in Flandreau [SD] mostly, always living about a half mile from the Big Sioux River. Every time I go by a river—it doesn't matter if it's that one or another one—I always look down and think, "I wonder where that goes?" It's always struck me that rivers are roads, yet I haven't spent a lot of time on rivers, canoeing or anything. But I've always felt that they are

going somewhere, going somewhere in a good way. I've always been interested in what's at the other end. I don't know if I focused on rivers as travel routes because I always wanted to go somewhere ever since I was small, to travel and see other places, or because there is something in my cultural memory—I don't know how to describe it—in which rivers were our roads. And I think rivers are still central to the Dakota landscape today.

Lydia Rivers were important boundaries for us. In land descriptions, in maps, in designating meeting places, a river would be mentioned. We had Lakota names for all of the rivers in our territory. The Mnisose was the grandfather river. The course of the river can be changed, but how does the change affect the environment? How does that change affect the lives of the people, the animal and plant nations? These were not issues that the government thought about when it built the dams. How many of those animals and plants that Lewis and Clark saw are now extinct? And, how many more will disappear? Can man ever replace what was lost?

Lanniko Last spring I went down to St. Louis and traveled back up the river during spring break. I went along the road coming up and I made a point of going off the road and I saw those levees, big mounds directing water up away from the river, and it reminded me of a picture from when I went to parochial school. We learned all about how the great gardens of the world in the Christian belief were created, how they were all built by slave labor. The whole idea was to turn the desert into the Garden of Eden. When I came up the river from St. Louis, I was reminded of all of that human energy needed to reshape the landscape, and how the newcomers didn't call us people of the river. Yet that's where we were *always*. We were instead called people of the plains.

And it became a self-fulfilling prophecy, that label, one that reminds us of what has been taken away from us. Whether it's the Big Sioux or the Grand or the Cheyenne, we were people of the rivers. Yet now some of our own people don't have an understanding of what the river is. Especially young people have no real understanding of that history. Many of them grew up away from the river, moved off the river to Eagle Butte and live on the Cheyenne River Reservation. They have very little understanding of the cottonwood stories, the fish stories. They don't interact with the landscape—which they can hardly do when they're in the [boarding school] dormitory or with parents or relatives who are caught up in BIA employment or tribal employment or they're in the churches—when they're part of the institutions that shape them with western thinking. They don't have the same kind of connection with the landscape which in itself is the primal, sacred language of the very being of indigenous people.

When Lewis and Clark came up, I can't help but think that with all their litany of what they saw, the things they described in their journals, that they were thinking in terms similar to the Garden of Eden. And the plant

life and birds and animals were there waiting for them to catalogue as new species, to re-name. They were coming from a Christian philosophy of understanding, of what happened in another part of the world. To name and catalogue—to try to know everything—is a way that is opposite to the way we had. We didn't go about naming objects, plants and phenomenon like Western explorers; our belief back then was that the "thing" gave its power and the knowledge of its being-ness to us. We didn't have names for everything because not everything gave us its name. The landscape is loaded with mysteries.

Certain plants gave us the power to heal when we used them and they gave us their names. Such knowledge came to those who made it their work to help others through healing. Those people were taught how to work with those things; they received that knowledge through dreams and the like. Today, people who hold such knowledge have also learned that it is not valued like scientific knowledge. We don't talk about those things today. Instead, our people give up that powerful knowledge to be treated by Indian Health Service and Western medical practitioners.

Kim Your comments bring to mind one of my pet peeves. I used to do environmental program planning for tribes and I don't like when people so often say that we are inherently environmentalists—that it's in our blood. Because I think that discounts the fact that we got knowledge of our landscape by interacting with it and having a relationship with it. We—or our ancestors—learned those things and cultivated that knowledge; they weren't just born with it. It's about practice. And if you don't acknowledge that, then you don't necessarily have to practice. So you lose a lot of knowledge by not using those resources every day like in the past and then having a thoughtful spiritual relationship with them.

But I was also interested in something else you said, Lanniko. Were you relating Lewis and Clark's classification of species to cultivating a landscape or creating a certain kind of landscape?

Lanniko The Christian heritage they inherited— Jefferson, Lewis and Clark—has a certain understanding of the Middle East and how the Middle East deserts were manipulated to be habitations for large numbers of people. So when we talk about large populations of outsiders coming into this country, what better way to accommodate them than to harness ideas—with roots in Middle East history—to build the nation and to overcome the landscape that was here to accommodate the European? That was what I was referring to when I said that there was a design. And that design is still evident along that path that I drove to St. Louis and back. There are long mounds that were created to hold the water, to pull that water farther away from the channel of the river in order to create farms. But now all the cities are choked with big plumes—pollution emissions in the air and effluents in the water. They've harnessed the power of the river but that

power has another objective now. Rather than being gardens, it is trapped by industries.

I think that with the advancing technology, the vision that was there has changed. I can't help but imagine that in the abundance of what Lewis and Clark saw, they must have felt they had fallen into some wonderful magical place. Whatever they saw when they were out there with their surveyors and looking at the raw, innocent landscape, seeing what potential was there—I would be very curious to see what they saw for the future of that landscape. What did they anticipate they would achieve?

Kim Craig, do you want to talk a little about your perspectives about what the intentions of Lewis and Clark were? We've had some debate amongst ourselves—more in the pieces we've written than in spoken conversation—about what the intentions and goals of Lewis and Clark and the Corps of Discovery were. For example, in terms of Lewis and Clark's classification of species, Lanniko made an interesting point in relating the classification to the eventual taming of the landscape. It's not a direct connection perhaps in terms of their goals, but can be seen as part of an overall vision.

Craig Howe Theirs was a scientific expedition. Jefferson charged them with recording all of those things that were new to science. It was not new to humanity. It was old knowledge to all of those Indian tribes. Lewis and Clark were documenting it for scientific purposes, so it was a new "discovery" for them. At most, in terms of future settlement, they were thinking about how to get trading posts up here. The records do not seem to support that they were considering that non-Lakotas or non-Indians would be living up here in vast numbers. It is hard for us to imagine, but at that time they couldn't see the US population exploding, I don't think. They were not that visionary. Jefferson himself thought it would take hundreds of years before non-Indians would get here. So the idea was not to be negative but to be good to Indian tribes because there was no way they could alone extract the resources of the area. There were too few Americans, so they had to try to figure out a way to use the Indians to exploit the natural resources while simultaneously making Indians dependent upon the US.

In the bigger picture today, I think we put a lot more emphasis on Lewis and Clark; we make them into a bigger event than they were. Because the non-Indians are celebrating the bicentennial of Lewis and Clark we too put too much emphasis on it. Lewis and Clark didn't *cause* anything in my mind. They came and they left.

Lydia It was the beginning of the end of the Mnisose, the beginning of the end to a way of life as our people knew it.

Craig The fact is that there were non-Indians here for decades before Lewis and Clark came.

Lydia But before them it wasn't a scientific expedition to record rivers and tribes and start counting Indians. The Europeans who came before them learned to live with the Natives. Lewis and Clark had a purpose to record what would be in their way when they did finally come. They were a scouting party. They learned that the Lakotas are a fierce tribe that they'd have to deal with. They were probably the first grave robbers to enter Lakota territory.

Lanniko I don't think we can speak of Lewis and Clark without speaking of Jefferson. He was a visionary individual. Anybody can *talk* about empire-building, but he had so many projects ongoing in different aspects of his personal life. And being the public man that he was, some of those projects spilled over into the public realm and this one was one of them.

Kim I just read something about Jefferson being essentially the first American archaeologist in that he started excavating the mounds on his property. Today, we all know about that method of scientific inquiry, but at that time, trying to decipher human history through examining human bones was not something people did. It was a very weird thing to go dig up bones and study them. So it is argued that he was very much a scientist in his own right.

But this brings me back to the idea that rather than Lewis and Clark's individual intentions or even those of Jefferson, what's more important is what that journey has come to symbolize for people. That's why Kathryn's point is interesting—that they were part of another continuum, not necessarily that they directly impacted something but that they were part of a broader cultural movement that resulted in the kinds of things that you're talking about in your pieces about the taming of rivers. But that also gets back to Craig's point too: You don't have to attribute to them intention or necessarily direct responsibility for these things. But certainly I would view them as part of American westward expansionism because science is part of that. Science was very much a tool of expansionism.

Craig Yes, science also involves "discovery." Another kind of wanting to be the first . .

Lanniko Politics too. You don't want to forget that. You can't practice science without practicing politics.

Kim It was one of Jefferson's big political tools, right? Science.

Lanniko Yes. To me that's just another language for being able to be intrusive. The whole business of excavating is the story of European expansion and control.

Craig What Jefferson was trying to do was give the fledgling United States a "History." In Europe they had the castles and ruins, and so what he was trying to do when he wrote a paper about this was to show that over here there was a history. He also wanted to show how things were even bigger over here than in Europe. So he was looking for these mastodon bones. . .

Kim Yes, Jefferson and others were having fights with French naturalists who said "Oh, *nothing* has happened over there." So, if you know that he was fighting with French naturalists and trying to prove that there was history here worth talking about . . .

Craig Right! So he used American Indians to show them how much better this continent was. "Look, American Indians are taller and stronger and did more than you Europeans and your ancestors." Jefferson, on that level, was promoting the noble savage. He was promoting a sense of indigenousness here. Later, maybe he argued another side, but at that time he was trying to give the US an identity separate from Europe. And he argued, "What does the US have that Europe doesn't? It has this indigenous history, it has American Indians and it has the landscapes and the species that are unique here—that you do not have over in Europe and so that's what makes this new country strong." That is what would give this country a unique identity.

Kim I see that as an early sign of Euro-Americans trying to become indigenous here.

Craig And that's why when they dressed up at the Boston Tea Party, they didn't dress up as colonists. They dressed up as Mohawks. The whole idea was to take on the identity of the land so they became Indians in order to fight against the British.

Kim So why are Lewis and Clark so important now? Is it just because we all the feel the need to respond to the commemoration? I certainly never thought about them before the bicentennial very much. I remember knowing who they were—we probably all heard about them in school. But have others of you thought about them extensively and the repercussions of what they did?

Lanniko Not me. But I realize that the bicentennial event is an attempt to rejuvenate a sense of belonging here. People are all capitalizing on an historical event in order to have some prominence here today. There are squabbles all up and down the river about how to sell the bicentennial. Although more recently there has been more positive language. I just heard on public radio about the indigenous perspective, indigenous commemorations. But that also seems like another effort to try to bring capitalist enterprise to this part of the world. As Americans we've exhausted everything; we've wasted and exhausted so much that we're now looking at capitalizing on history to get the world to come and see and spend their money here.

Kim It sounds like you're talking not only about whites but about indigenous people too.

Lanniko Yes! Absolutely! It's cultural enterprise—cultural tourism that they're hoping to achieve, not only whites but Indians too. They're talking about the positive financial repercussions of the Lewis and Clark commemoration today as a result of people coming to this part of the world to see who we are . . .

Kim Craig was saying in an earlier meeting that the Lewis and Clark centennial in 1904 was not such a big deal, right?

Craig Right.

Kim So, Lewis and Clark have in fact been revitalized as historical figures. In 1904, most Americans didn't know who they were.

Craig Yeah, it wouldn't even be close to how it is now.

Lydia Now, they're creating American heroes for their own history books.

Kathryn I didn't really think about them before this commemoration. In school, yes, they were some more wasicu people I had to learn about. But when I was a kid, the only thing that was interesting about them—in depictions of them—they kind of looked more like us. I thought, "How come they wear clothes like that?" They weren't going around with the little powdered wigs and the fluffy blouses. They looked more like real people—the way they were dressed. But they were still wasicus. I never really gave it too much thought. My thing as a kid was trying to keep them all straight. I had to keep all these American heroes straight in my mind and I didn't really make too much effort to do that [laughs].

Lydia They also took Indians and created Indian heroes for their own history —those Indians who helped white people. When you're a little kid trying to hang on to your identity and your cultural pride and you see those Indians who helped the whites destroy our way of life, like Sacajawea, you began to wonder why people cannot accept and appreciate differences. If we don't conform, we cannot be successful in the eyes of the whites.

Gladys Who interpreted that name? I always ask that because I'm curious. Apparently in 1904 they must have had a dedication in Mobridge because my oldest sister had a picture of my grandfather and my grandmother—they were young then—standing near a monument to Sacajawea just across the river from Mobridge. There was a chain fence around it and all of our relatives were standing there. The women had on shawls, of course. I thought "that must have been an important day." They must have dedicated that monument that day. My grandparents, they said "Zintkala Winyan."

Lydia What?! Oh, I always thought "wea" in Sacajawea sounded like "woman" [referring to winyan, the L/D/Nakota the word for "woman"]. Zintkala Winyan, oh, Bird Woman.

Gladys Zintkala Winyan, that's how they talked about her and it means Bird Woman.

Lydia Now that makes sense! I always wondered about that name. In Lakota "saca" means, something brittle and hard. Some people were even pronouncing it "Sacacawea." You know what "caca" means so that couldn't be right.

Gladys I was wondering if "Sacajawea" was a spin-off of "Zintkala Winyan," that the wasicus couldn't pronounce it. I wondered if that was the best that they could do and now we know her as Sacajawea.

Kathryn Is that what it means in her language?

Craig She had two names. One is Shoshone and one is Hidatsa. And one of them, I think, means Bird Woman. But it would have been strange if she had a Lakota name because Lakotas never saw her. She was never on this stretch of the river.

Gladys But I heard them talking about her where I grew up, "Zintkala Winyan." She was known. I never heard of Lewis and Clark, but people talked about *her*.

Craig I can't remember hearing about Lewis and Clark at school.

Lydia I remember seeing pictures, the explorers standing in canoes and pointing toward the west and wearing buckskin clothing like real frontiersmen.

Kathryn This whole bicentennial has forced me to look at it. Of course, as an adult you have a different view when you know the history that has ensued.

Lanniko When I was a girl, I somehow got it fixed in my head that Sacajawea was a barren woman. "Saca, saca," which in Lakota means dry or shriveled up, like someone's hands when they have been in water a long time. And then "wea," which sounds like "winyan", and I put that together to mean *dry woman*. That's what got stuck in my head [laughter]. I was a child interpreting "Who was this woman? She couldn't have children from a man of her own people." I had this really wild imagination! I thought she could only have a child with a wasicu, a Frenchman. She had Little Pompy.[4]

Kim Do you think she is more important to non-Indians then to Indians, because we don't talk about her that much?

Craig Sacajawea makes the Voyage of Discovery a great story because then it's a multi-gender and multi-cultural story. That's why it resonates with people so strongly.

Lanniko That's the reason that we created the Unity Fest and the Sacajawea Learning Center in Mobridge [SD]. The reason why we did it there is because people from other places in the world know about Mobridge because of the brutalities that have been publicized all over the world in newspapers. So when strangers come through the door who have that knowledge, some of them do ask questions and I refer them to our efforts to try to change that history with the Unity Fest, to learn about one another and

hopefully have some better understanding of our human-ness, our frailties and also our capabilities to relate to each other in a positive way.

Craig I think again that if we look at the historical documents, none of the Winter Counts mention Lewis and Clark. So if we use that as a milestone, was this event that important? Little Big Horn is so important to non-Indians. It's the most written-about battle. And Lewis and Clark are so important to non-Indians. But again, using the Winter Counts as evidence, Lewis and Clark are not that important.

Lydia It's not that Little Big Horn was not an important event to us, but that people were afraid to talk about it because they were afraid of retaliation. It couldn't be put in a winter count because then it could be taken as evidence against those involved. Bad enough the 7th Cavalry took revenge against Big Foot and his band at Wounded Knee.

Kim Kiowa writer N. Scott Momaday has stated that "Lewis and Clark remains in my mind one of the great epic odysseys in American history." So what's your interpretation of such a perspective?

Lydia For the Americans it is [an epic odyssey] in their history, but I don't see it that way.

Craig I think in human history it is an epic odyssey. We have to go beyond "the" Indian viewpoint as if there is a single Indian viewpoint and we have to judge Lewis and Clark on where they fit in the big picture of human history. At that time and in this place they tried to do something that they thought was really, really important. It was against a lot of odds that they fulfilled their mission, although they failed in the main thing they went to look for—that [water] passage to the Pacific. And they had to realize that failure early and yet they soldiered on. In lots of ways, they brought all types of new knowledge back. They were outdated by the time they got back. To me, that's the important point—that they didn't *cause* anything. By the time they got back, they were meeting non-Indians going up the river. You can read the journals; all the way down, they were meeting non-Indians coming up the river. They weren't the first. All these peoples along this stretch of the river had seen non-Indians before.

Kim I think that's how "the" history books are portraying them, as being the first.

Craig And a lot of us buy into that. Lewis and Clark wanted to be the first—that was their whole goal. And by us perpetuating the idea that they were the first, they're winning in a sense—we're still bought into their incorrect history. They weren't the first—they weren't even close to the first. They weren't that important as individuals. But that journey, as a journey, was on this almost epic scale in terms of the importance it has had to this nation. The truthfulness of these epic journeys is a whole different issue. But

a lot of nations have these epic journeys and we can have that in the migration stories of Native tribes. This was the epic journey for this nation.

Kim So, it's more the way the story is told than perhaps what actually happened?

Craig And I think the great thing for us, the great opportunity we have, is that it's in historical time and we have the documents so that we don't have to treat it as myth. We can come back and interrogate it. And we can challenge that epic journey of this nation. And we can challenge it using the technologies and the techniques of that nation. And I think we have abundant evidence to challenge that—the truth value of that epic journey.

Kim I don't mean to pick on Momaday, because it's important to know the context in which he made his statement. But while one might truthfully make that statement, as a Native person I would never say that without also saying "and this is what it means to us—it doesn't mean the same thing to us." Liz [Elizabeth Cook-Lynn, a founding member of the Oak Lake Writers] has also pointed out that he said he was in awe of the Lewis and Clark journey.

Craig I can see it! If you sent 40 guys with the knowledge they had at that time, to do all that, it's awe-inspiring at some level. I'm awed by the fact they were able to do it. Now, that doesn't mean that I think it's an awesome thing, right? I'm awed by the fact that they decided they would do that. How it's played out I think is completely wrong. And that's part of what I'm trying to do is to show that the myth that came out of that is a myth not based on fact.

Kim And a related question is, "How is what came out of the Voyage of Discovery operative today?" What are the contemporary manifestations of it globally? This idea of expeditionary force—voyage and discovery—still resonates in foreign policy discussion today. Liz gets at that in her essay included in this collection—the discovery and the saving of people—those kinds of dialognes are still pervasive in American culture today and the fact that we are a moral nation that has God as our symbol. So you're not just colonizing for self-interested reasons, but you're colonizing because you're saving the world and you're bringing democracy to the world. She relates this still pervasive idea to the ways Lewis and Clark is celebrated today.

Craig To me, that's not what they were doing.

Kim No, not necessarily what *they* were doing, but it's the way the story is told—it's what the story means. She's saying the story means something to Americans—it's part of that overall belief system. In a way, it doesn't matter what Lewis and Clark themselves intended.

Craig Maybe we should talk about the differences between Lewis and Clark? It's kind of "the hero," singular, isn't it? Two men made into one word. To what extent do we differentiate between them?

Kim I know I didn't think about them as individuals until I read Ambrose's book that foregrounds Lewis.[5] Now I know that they were very different people and their lives had very different outcomes.

Kathryn My son, Zion, had a comment about that. He said "I think I might have committed suicide too if you had named me Meriwether. Meriwether, that's a jacked-up name!" [laughter]

Craig It is interesting, the insistence on that being basically one word when at least one side of the equation—Lewis—was a tormented being.

Lydia In the end of my piece, I wrote, "What was he thinking when he put that buffalo robe on the floor and ended up killing himself?

Kathryn I wondered that too, why did he do all of that? Almost like . . .

Lydia Like he might have had some regrets.

Kathryn Maybe that's what it was—almost like a ceremonial act. It seemed like he was trying to soothe his mind.

Craig Apparently a number of individuals from the expedition had significant difficulties. Several of them were charged with homicides after the expedition. They had problematic lives beyond the experience of the expedition. But in terms of Lewis, the Slaughter book argues that those guys had to adjust to a new way of thinking and a new way of being and basically that Clark was able to become more Indian and Lewis couldn't and that just led to his spiral downward.[6] Slaughter uses writings by Clark to show that he starts to talk like they record the Indians talked. And he wrote a speech abont their horses being stolen even before they were stolen. In his journal he wrote a speech about how he was going to talk about it even thongh it hadn't happened yet—that in a dream he heard the horses talk to him and say they'd be taken. It's jnst really interesting. Becanse Clark *could* accommodate himself to this new way of *being* out there—he lived, whereas Lewis couldn't accommodate himself. He was too "civilized" and he couldn't accommodate himself to this other mindset.

Kathryn Do you have any historical insight as to why he committed this suicide the way that he did? Did he leave any notes?

Craig He was in debt, big time. He was snpposedly mismanaging funds and he had the worst case of writer's block. He got back and he hadn't written one word. He was supposed to write np the journals because he was supposedly the best writer. And he didn't write one word from 1806-1809 despite pressure from Jefferson to publish.

Kim If you read Stephen Ambrose's *Undaunted Courage,* he makes the case that by our standards today, Lewis would probably have been considered mentally ill—bipolar disorder—although they didn't have that term then. He didn't deal as well as Clark emotionally with the trials of being immersed in other cultures and with a bunch of charges who didn't always do things the way he wanted them done.

Craig For small offenses he would go ballistic. And these are things we don't hear about. For example, a hatchet was stolen. Well, they didn't know it was stolen. A hatchet was lost and Lewis wanted to burn that Indian camp—the whole camp. The guy was almost off his rocker. I think Cruzatte tried to kill him [langhter]. I think you can make a strong argument that Cruzatte tried to kill him. The story is that Cruzatte thought Lewis was an elk and shot him, but I think he knew it was Lewis and he really *tried* to shoot him and because he only had one eye, he missed and got him in the bntt! [laughter]

But before we stop, Gladys, if you feel comfortable, I'd like to hear the rest of that story about Ed Hawk. Was this along the Grand River where he lived?

Gladys That's right. In fact, the Corps built a park there—it's called Indian Camp. And people still come there—there are RV hookups there. That was part of the plan of the Corps.

Craig So the water was backing up from the Missouri River dam up the Grand River? And so they came in and they just bulldozed his house?

Gladys Yes, but he was living along the Missouri—he was at the part where the Fool Soldiers Band commemoration was, near the place they call Mile Long Bridge.

Craig So what's the fuller story on that? Why did they just come and bulldoze him?

Gladys He wasn't the only one. But he just wouldn't sign and he was in his 80s. The water was backing up and I think they just wanted him out of there becanse they wanted to clear that bottom land as much as they could.

Kim So if they bulldozed and you didn't sign, does that mean you didn't get any compensatiou at all?

Gladys I don't know that. . . But many people were instantly displaced—were made instantly homeless.

Craig What happened to Mr. Hawk? Do you know?

Gladys I know that they finally moved him into a house in town—in Wakpala [SD]. And he lived there a very short time and then of course he died. This displacement really had an effect on a whole bunch of families because whole families lived together. And now they were displaced and they could

no longer live together as family units and so they had hard times. They had hard times finding places. And I kind of blame our tribe for this in part—I'm not putting the whole blame on them. They weren't educated enough to really have a big plan up there to meet the needs of these people who were suffering.

So, there was a white man from McLaughlin. His name was Wendell Keller. He moved a bunch of these one-room shacks into town and boy he was making lots of money off of that, charging rent. No running water, and of course no indoor bathrooms. So there were a lot of people coming in and making money off of these people. And so that's an impact of the flooding—a direct impact and I blame that on the river [project]. Even though for all the good that it did, we're back to square one. There's no water there. I mean there's a lake there, but we have water problems everywhere, on the reservation especially. So that's just what I experienced with my own eyes and my own knowledge during that time. So I couldn't tell you more than what I know.

Craig Do you know what happened to those two sorrel horses of Ed Hawk's?

Gladys When he moved into town, there was no place. The grazing land was gone. What could you do with them? People who had a lot of horses, who had a lot of chickens—there was no place to take them in town. There was no place where maybe they could put up a chicken coop and continue with that way of life. So, I don't know what happened. They probably sold them.

Craig Or people might have just taken them too. . .

Lydia People were self-sufficient then. They raised stock and they had gardens and then to be placed into town where they had no income, no water, and no lights. . .

Gladys You know, there was a cultural side to the loss too. My grandmother died when I was only about 11. But I lived with her during that time. And here's what I saw. When she had a hide she would take it down to the river and she would stake it on the side of the water that was flowing—for days, I don't know how many days. That was her way of cleansing that hide and stretching it out and drying it—using part of it for rawhide and the other part for tan hide—for the tops of the moccasins. So that cultural way was also taken from us. I don't know how they tan hides now. They even have classes on it: "How to tan hide." When I saw that, I thought "Oh, my God!" The way that I saw it certainly can't be what they're teaching. Because I saw it step by step by step, how she did it. If I were to tan hide, I would want a river close by so I could do it the particular way that my grandmother did. But if I were to do that today, I'd keel over because I am no longer the resourceful person that my grandmother was at 80. You see, the loss of that way of life is what the river [project] did to us.

The other thing that I've noticed is that we can no longer go by the weather and predict how we're going to prepare. I think that has a lot to do with the water and the trees. What little trees we had are no longer there. We could predict different things by the river, the trees, the birds, the animals—the way they acted.

Kim But if the river's changed and the birds and animals are gone, you have no way of knowing.

Gladys You have no way of knowing all of those things. We lived so close and we depended on these birds and animals, on how they acted, how they sang, the owls at night. Now we watch the TV and they tell us the weather forecast and that's what we're going by today. But the Indians had their own natural ways of interpreting a lot of that.

Lydia Cultural knowledge.

Craig Can that cultural knowledge—can those interpretive skills and abilities—can new ones develop along this type of a river?

Gladys Probably, but not as thorongh as the way I was raised.

Lanniko So much knowledge needs to be a part of the language for you to have a conversation. We need a new language and a new knowledge of that landscape—new because the landscape has changed after the river changed. And in order to articulate our ongoing experiences, to interact, to be reflective, to listen to the small voice and the great barrenness which is our river today—we need the kind of language I'm talking about, the kind of language that's been lost to a great degree and that we need to redevelop.

Lydia It will probably take generations to develop that new conversation.

Gladys It begins in the soil. The soil has changed. For example, let's say that you want to transplant ceyaka[7] along the river. Maybe it will grow. Maybe it won't. But it all depends on that soil that's underneath. It has changed from the flooding. What did it bring? We don't know. So whether or not that will be an annual plant that grows by itself—you don't know that. You can't depend on that. Whereas when the river was there, you knew where to go to pick certain things because you knew it was there.

Craig So, in a positive long-term look, we as a people can develop that new type of relationship?

Gladys I think it's possible. We can try, I guess. There are people out there who are trying that. At Sitting Bull College, Linda Bishop-Jones teaches about native plants—ethnobotany.

Lanniko Her educational foundation is in traditional western botany. The tribal aspect of it is new to her program and our elders have been helping bring her knowledge up to where we have a compatible understanding of the landscape. She is learning the plants' stories.

Kathryn I don't think it will ever get to that again—to what Mrs. Hawk is telling us about—that we'll have all of the elements around us that can tell us how the winter's going to be, how tomorrow's going to be. My grandpa used to talk about that and I never even memorized it, how he used to ask, when the beavers build their lodges in a certain part of the lake, is it close to the shore or out in the middle? He would predict the winter by that. My grandma used to say how the day would be tomorrow by the sunset. She would say, when it goes down as a red ball like that it will be a good day—a sunny and clear day tomorrow and then you can do things outside. But I think technology interrupts that too much and I think that kind of knowledge is only going to be relegated to universities, colleges, and special interest sections of bookstores. I think that we ourselves as Native people are too interrupted by technology. It's permeated our modern, daily Indian-ness. In the TV generation you can really see the loss of our language. Up on my reservation, a lot of the cultural ways are leaving us because of that technology. It's a double-edged sword. We can watch KELO-land news and see these blizzards forming way out there and coming in—these Alberta Clippers. But if we were out on our own, especially now, without that knowledge that died with our grandparents, we'd be probably caught in a blizzard and die for our lack of knowledge.

Lydia So, are we beaten down and are we quitting? Hell no! [laughter all around]

Gladys The change in environment has also affected our stories—stories associated with the river. But now, with the way the water is, say, and twenty years down the line, are there going to be stories on that same level—of, say, Inktomi—that were associated with all of these elements of the surrounding area, the land and everything? They won't be the same and so it has affected that possibility. Let me give you an example. Inktomi stories about coyote, rabbit, and others—common stories that were native to us—were associated with all of the natural elements. They came out of the natural environment that we were familiar with. But if you take away the natural world as we knew it, you can no longer create or tell the stories. You can't tell the stories anymore to younger generations because those animals are no longer there to be used to tell the stories in order to teach the values those stories were intended to teach. And the stories don't resonate with the young people because of that.

Lydia Disrupting the river disrupted a way of life and a way of transferring knowledge. It broke a link. And it was not just the river, but also the boarding schools.

Gladys There is an absence there. The whole generation is changing. The other thing is, and I know that this is probably on all the reservations, but we are really experiencing on Standing Rock a lot of young people taking their

own lives. Now we try to reason as to why. She [gesturing to Lydia] talked about that one time and she came up with some possible reasons—one of which was that children have nothing to do. Their parents are not there. We have a different way of life today where one parent is working here and the other is working over there. When the children come home from school, there is no parent there. Right away, they turn the TV on and they play these games and they see all of this drama—all of this crime. And when they have a personal problem—and everyone has problems—who are they going to turn to talk about it?

When we were growing up, we and our parents were constantly associated with the land and the river. We had something to do. We had our parents to listen to us, to tell us when to plant, how to take care of a horse. Even that by itself could be a whole class, how to take care of a horse. Now that generation today has no experience with any kind of things that make sense to them except the fact that they want to copy other kinds of generations, listen to hip-hop. They want to be noticed. There really are no black and white answers to why they take their lives. We just buried one here about two weeks ago, I think. The young man who killed himself was 16 and absolutely a nice-looking young man. Now, even his parents don't know why he did that. At his funeral—they had a huge funeral for him—they heard some younger ones saying, "Do you think that if we killed ourselves, we'd have a big funeral like this? Are they going to pay attention to us?" That's what we're hearing, because we're aggrandizing that young man through this funeral. He's actually a hero in their sight and that's a sad part of it.

Lydia The kids don't have the outlets that we had growing up. Like when we had problems, we had ceremonies. We went into a sweat to pray and talk about our problems in the sweat. And people, you know, talked to you afterwards and encouraged you. When we were kids and we went into a ceremony, everyone listened and people supported and encouraged one another, but some people don't have that anymore. The positive thing is that people are realizing what was almost lost and they are relearning and restoring what was nearly lost.

Lanniko When I was growing up, the river was not just industry to us. It gave us fuel, water, food, furniture, clothing, toys. Everything that we had came from the river—including the bullhead puppets [laughter].[8] Up the river were little dams where there were little creeks where those bullheads were. But what I was going to say was that we had not just a physical sense of who we were, but we were tired at night from the work. We would go to bed and sleep and our nights were filled with wonderful dreams of our experiences. And now we have a generation of young people who don't have such experiences—such interpretations of a world in their dreams. I wonder about that all the time. If they don't have that way of contributing to

the community, by hauling wood to the elders, such things that bring value to us as a person—are they turning their knowledge of who they are—in terms of our community—inward? Do they look to see a worthless being, a person who is in the way or who is the butt of someone else's anger? If you are a young person in today's world, this is what the aftermath of the river changing has brought. There is a world of difference between understanding through knowledge of place how the world has come about and understanding the world through what these young people have—canned knowledge.

Across from the [Sacajawea Learning] center we have in Mobridge, I have watched a whole hillside slide into the river. Every time she comes over [gesturing to Gladys], we go out and look at that hill. We're going to go over there [gesturing to the group]. We need to be on that river when we're talking about it! We need to be physically standing on the river to look out across, to see the hills; the places we once played on are now silt. Who is telling the story of this devastation? It's good that we have something to say about the bicentennial commemoration, but the more important conversation is related to the ongoing legacy of scientists trying to put their imprint on the landscape—tearing up the land. And even our Indian people feel they need to engage successfully in making money off the land in order to survive. But as Indian people, we used to know and live off the resources that were there. We knew not to alter it in such a way that those resources would then not be there for us.

Kim There's one final question that should be addressed. What are your hopes for this book—why do you think it's important that we have this conversation? Why did you want to be a part of this project in the first place?

Kathryn I feel it is important to have Native voices speaking about this whole thing. It seems that many times nationally in the United States our voices are so little and do not have impact, nor are they sought. I thought that this was a good opportunity to be able to say something. And as we have said, writing is cathartic. The loss that I experienced as a child in Lower Brule—if you write about it you don't have to go out and hatchet somebody [laughter].

Lydia I feel similar to Kathryn. This is an opportunity to express ourselves—our thoughts—what we really think about that journey and how it affected all of us.

Craig I think it's a chance to write something that's contrary. It's a chance to examine the Lewis and Clark myth using the evidence. Collectively, as Oak Lake Writers, it's a wonderful opportunity to participate with published authors who are Lakota, Nakota, or Dakota. I think it's important to promote that type of literature. In terms of the book itself, it will be evident that we don't all think the same and that is a very important educational message—that is, that there isn't "the" Indian viewpoint on this. We're going to have viewpoints on the importance of Lewis and Clark and all aspects of this bicentennial commemoration.

Gladys It's an opportunity to preserve our personal experiences as we lived along the river and for readers to try to understand and to imagine how it really was when now there is nothing there to help us go back and investigate how it was.

Lanniko I have a fourteen-year-old daughter and I want her knowledge of history to be whole—not just what's in a textbook. When we look at the standard South Dakota geography book, there's no mention of what we've been discussing here and yet that is a sanctioned part of the curriculum that has been developed for all of our public schools, including the tribal schools. And that's the reason I feel that it's important to make what little contribution I can make to bringing that history that is not in any textbook.

Also, we can't really begin a conversation about Indians' role as stewards unless we talk about participating in river management. How can we get the river flowing again or help make changes that will recover the resources that were lost? We have something that non-Native people don't have. They need to be able to digest someone else's experience of the phenomenon of Mnisose before they can have a re-direction in their thinking.

Kim My reason is much the same as Craig's. First, I was thrilled when I heard about the Oak Lake Writers because I lived on both coasts for a while and grew weary of being the only Indian among other writers. I didn't want to serve the purpose people too often wanted me to serve—to have the perspectives and demeanor they expected me to have. When Liz told me about the Oak Lake Writers, I thought "Wow, I can sit around with other Dakota, Lakota and Nakota people" and that is a unique opportunity, as is being in South Dakota with other writers. Having grown up here, I always thought the great writers were in other places, but they're here too. So, I was very inspired by that.

Second, because I focus on "cultural studies," for lack of a better term, I am really interested in the cultural politics surrounding Lewis and Clark today. I'm not so much interested in who they were as individuals. What is fascinating is the way Americans are constructing an identity and using them as symbols. And so this is a chance to think about American nationalism, particularly white American nationalism. Lewis and Clark are a good vehicle for thinking about and critiquing those ideas.

NOTES

[1] A Lakota traditional chief and the keeper of the Sacred Buffalo Calf Pipe.

[2] Editors' note: Kathryn Akipa was uncomfortable mentioning in her autobiographical piece (also published in this collection) the caskets on the river. She felt that using that image might be to capitalize in her individually written piece on particularly painful memories of the desecration of the dead.

However, she was more comfortable leaving the reference in the dialogue transcript because the image was shared in conversation among L/D/Nakota people, thereby representing an exchange or mutual remembering rather than an individual promulgation.

[7] Lakota word for "tobacco."

[8] Just prior to the taping of the dialogue, Lanniko Lee told the group a hilarious story from her childhood. Her uncles made puppets from the heads of bull head fish they caught in Mnisose. They dressed the puppets up in hats and made wigs for them and put on impromptu puppet shows at the dinner table.

Solitary

Kim TallBear

for Arlene Heminger Lamb

A chair in grass that turns to sand
and rocks at the river.
The rod, the flies bright painted or
nightcrawlers,
what was needed for
slow water.
She was a fisherwoman.
She had a granddaughter who stayed
cool in green rooms all day
not liking sun, breathed cream-coffee
turned cold in her grandmother's cup.
The fisherwoman sat
solitary, breathing rocks, wet
like earth, breathing sweet grass, the field.
'Cross the narrow water,
old, dry, cut boughs,
shade for the people,
the old dance grounds.
Perhaps she imagined bells jingle,
the hide of the drum, a deep voice
contest calling.
She must have felt her house
at her back, a mile up the road.
She'd wanted it so long.

Oceti Sakowin Oyate Territorial Sovereignty

8 FOUNDATIONS OF LAKOTA SOVEREIGNTY

Harry Charger, Ione V. Quigley, and Ulrike Wiethaus

INTRODUCTION

In March of 2007, the South Dakota state legislature voted for Lakota language and culture to be taught in all public schools.[1] This is a decision of great significance, given the history of federal and state orchestrated efforts to assimilate and/or annihilate Lakota culture, language, economic, and spiritual practices.[2] As several of this volume's essays have described in some detail, full sovereignty depends on a thriving culture and language, practiced across generations. Legal solutions alone are not enough. In responding to a study by Thomas Biolsi on legal dimensions of Lakota-Euro-American interactions on the Rosebud reservation, Vine Deloria Jr. asserted that "history has nearly vanished from law, culture is being torn apart by law, religion stands outside law for the most part. Without a context in which law can function, it is a farce and resolves issues by brute force."[3]

The present chapter features two conversations with Lakota elders on the traditional foundations of Lakota sovereignty. We chose the interview format to acknowledge the importance and culturally appropriate protocol of oral communication in traditional contexts to assert truth, teach values, and share view points. This choice, an evocation of intellectual sovereignty in dialogue with Euro-American scholarship, is one of several models to work against discursive displacement strategies. As the discipline of the humanities transforms itself to become multi-perspectival and inclusive, academic discourse by necessity is broadened to include a wealth of meta-academic discursive styles.[4] Both Lakota contributors to this chapter grew up as fluent Lakota speakers, learned English as a second language while removed from their families, and have taught Lakota language classes.[5] Harry Charger (Sans Arc Lakota) works as a ceremonial leader, cultural educator, and wisdom keeper in Eagle Butte, South Dakota. Ione V. Quigley (Sicangu Lakota) is the chair person of the Department of Lakota Studies at Sinte Gleska University in Mission, South Dakota. Trained as an anthropologist, she teaches numerous courses on Lakota history, geography, biology, and culture, and is actively involved in revitalizing Lakota governmental structures through her participation in the process of rewriting the Sicangu Oyate (Sicangu Nation) constitution and by-laws. Both elders stress the meaning of sovereignty not as an abstract concept, but as a lived reality expressed through distinct values, spirituality, and behaviors. It is manifest in an education for personal independence and a sense of communal responsibility capable of supporting the well-being of the Lakota nation. The participants underscore the contributions of Lakota women in the struggle for sovereignty, and address contemporary themes such as the historic role of AIM

(American Indian Movement), efforts to move towards a model of restorative justice, and spiritual and environmental revitalization.[6]

SOVEREIGNTY IS OUR THOUGHTS, OUR WORDS, OUR CEREMONIES: A CONVERSATION WITH HARRY CHARGER

UW: How would you like to begin?

HC: This is about sovereignty. You know, to a lot of Lakota, it is something that is kind of strange to us because we are already sovereign. If you want to use the word sovereign... it is god given: it is our thoughts, our words, our ceremonies. Everything is free. We did not feel that we had to satisfy anybody when we were sovereign. We were just a very strong, balanced, harmonized people. Then of course with the coming of the people that did not belong on this continent, or came to this continent from other countries, they brought something with them that was not sovereign in this sense, it wasn't even— they were tied to their religion, you know. So that wasn't sovereign in our understanding. They were tied to their language, which wasn't our definition of being sovereign. They were tied to their culture. That was not an expression of sovereignty either in that they did not recognize everybody as brother and sister. They did not recognize kinship obligations—they called each other John, Bill, Joe, and Bob, but they did not call each other Little Brother, Older Brother, Little Sister, Big Sister and Uncle, Grandfather, Grandmother, something like that, you know. There was a big gap we noticed right away—how they did away with their relationships, even in their families. They called their boys Joe, Bob, Bill, or sometimes they would call them son, but it seemed like it had a hollow ring to it, instead of recognizing a real son or a real grandson. The deeper meaning was not there. Oh, that's my grandson over there, or that's my son. As if he was just a piece of property or a thing, not very important. Our relationships to each other were very important. They were one of the bases of our culture, our freedom.

The same contrast holds true for religion. Although the newcomers talked about the Great Spirit, which they called God, it did not sound real. They only went to church one day, one hour a week. That is how they tried to do everything, cram it all in at once. But when they got out of church, they were the same old people again, you know, showing the same old greed—how to cheat your neighbor, how to nibble at your neighbor so you can get some money or some material gain out of it. Well, we were not like that. When we came out of a ceremony, we were at peace. We felt deeply, deeply conscious of our re-

lationship to one another, but also to the Great Spirit. And we had to do that and be that way, because we knew, too, that we were not anything, we were nothing.

Without spirituality, there is no sovereignty. To us, sovereignty exists in spirituality. And spirituality is an expression of sovereignty, a god-given innate freedom, that feeling that you have that hey, I am a part of things, I am a part of something – but still a part of something, instead of wanting to be all of it. We pray as we do, being part of something. We were satisfied with that, you know.

So sovereignty to us is not a form of government, but yet it expresses itself in a form of government. When you are free, you can freely interact with your neighbors, freely, for real, instead of having to reenact shallow rules. For example, I know that this is an expression of respect, but people will see the governor or the president, and they fall all over themselves. It is truly happening, but it is not real. These men and women do not know that governor, that president that much. I don't. I have heard of him, but I don't know him that much. Whereas all of my relatives, my uncle, my dad, my relatives, my brothers, my cousins—I take time to talk to them. You know that we are genuinely—I don't know if you can see that or not, but we are genuinely glad to see one another. If we weren't cowboys, we'd probably cry [chuckles]. So anyway, I am just touching very briefly, very lightly on what sovereignty means to me.

And sovereignty is something you have to not just talk about, or read about, or write about, but you have to live it. And that is one of the big aspects of it, you have to live it. And if you don't, then you have got something else. You have another kind of control, or government, and it is not good.

UW: What needs to be said to the next generation of Lakota?

HC: It would be a message of different meanings, or different points, because all of those things that we just talked about have to be strengthened and in some cases rediscovered. Take our ceremonies as an example. Whatever ceremony it is, it has to be rediscovered and it's a little bit difficult when you don't speak the language. So that brings up the point of language, which is all important. And before we get into that, we have to practice compassion. I mean full compassion, not just good acts or good deeds, and that kind of thing, but full god-given compassion—love, unrequited love for your fellow man and woman and all things god-given or god-created.

And then there is the respect for these things, these people, these relatives, and everything created. And related to it are responsibility and account-

ability. We have to be responsible for our self. This is me; I have to be responsible for my words, my actions, as they have to as well. This is what relationship, kinship, responsible interaction means. And accountability refers to my person as well. And if I am trying to hold myself to be responsible and accountable, then of course the other fellow should be expected to do the same. When they do that, we are all at the same level, we feel good, we do not feel fear of one another, we do not feel resentment. Rather, we feel comfortable in each other's presence, and we feel we are real; he is real; she is real. And I know that he or she is real, as real as we can get.

And it is no longer that way. We are just a little bit leery of one another, even relatives. So there is not much of that original sovereignty there. I do not know if it is really even the same word anymore, if we can apply it to that or not, but sovereignty to me is god-given freedom of equality. That is very important, equality, because I am equal to everybody, but no better and no worse. I feel that. And that is the message that I have to give to our young people, because we not only have to give it to them, we have to show them how.

We must show them how to be free, or it would be just that much more talk. So somehow we have to get up groups, maybe in school. Maybe the American Indian classes that they have in the schools nowadays could pick up on that, or American Indian Studies groups at universities. Instead of just teaching a block system type of Indian Studies, they should really get into it and do these things, if they really want to get the concept of sovereignty across. Otherwise it's just a stuffy old class.

Of course, young people were all important [in traditional Lakota society]. *Wakanheja,* children, means that 'sacred they, too, are', or, 'mysterious they, too, are' because of their innocence and inexperience. So everything belongs to them, or must belong to them. And as far as political maneuvering goes, it existed not in the western sense, if you will, or in the European sense of politics. Politics did exist, but only in kind of a fun way. My brother-in-law's a chief, so you know that I will make a play of getting away with mischief. In actuality, I am still just as subject to any of the rules and regulations. The mischief is a way to tease him and for him to tease me.

Governance is based on respect. Respect people, do not turn them one way or another, because that is disrespectful. You can tell them about some things, but let them make up their own mind. And I think that was where we differed in our definition of sovereignty: we had a choice. We had a choice to make our own decisions, good or bad, and we made them. And we were given

that respect, you know. And so I think that we did not practice "politics." We learned that when organized government came on the scene. And they divided our people to gain power. To be in power. To gain a vote. There was no voting back in those days when we were free. There was mutual consent as to who was going to be the thinker of thinkers, the *naca*, the chief, for example. And he was chosen because of his compassion, respect, responsibility, and accountability. He had to live those values, you see. And he was chosen on those merits.

And then of course there are derivatives. Compassion means to be able to share things, and never expect anything in return. And the people depended on him so much that when they made him a *naca,* then for four days there was grieving because they had done him a terrible injustice. He was no longer his own man. He belonged to the people, everything that he is, and owned, and knew belonged to the people, forever. It was not just a four-year term, a five year term, but forever. And they were men who could make these decisions for the people. But it goes back further than that even. From the time that he was born until the time that he died, there were rules to follow in each corner of his life as in the four different directions. Each corner had 111 rules of behavior. So in all there were 444 rules of behavior for how the individual ought to behave toward god's creations. And if that person lives accordingly, he is then noticed by the elders and by the people, who say, hey this guy might be worthy of being a *naca*. And so if that's politics, we knew it was superior to what was brought over here.

UW: I am interested in women's roles.

HC: The women, let me see now, who are they? [laughs] No, the women are very important. They were not possessions, certainly; they were partners; they were a part of everything; they were equal. Yet they did not have the masculine kind of voice, but they had the feminine voice. Because the Lakota were very aware of that—the male and female energy, and that one cannot do without the other. They have to complement one another, in a family circle, in decisions as a camp, decisions that affect teaching, many decisions. Although there are some decisions that are made by men only, for example, when to go to war or when to go on a raiding party, or on the hunt. But the women accompanied them on these journeys for other purposes, to tend to them or to do the butchery. Yet they did not do it alone, but the men helped. In the hunt the men killed a buffalo, and they helped with the butchery, but the women did the refined work, if you will. They decided who would get what—if a hunter killed four buffalo, for example, each woman would think of the wel-

fare cases back home, the elderly, the young, the orphan, and they would set aside, this one here, and this and this, for those in need. In other words, it was kind of a welfare system, to take care of those people. And the women would decide this hide here will make a teepee for old stick-in-the-mud, or whoever he is, you know, an old guy who is not able to hunt anymore. And he might even be a relative. So we would put these hides aside and prepare them for him and make him a teepee, so he can take care of his grandchildren or himself or even other villagers. It took a whole camp to raise youngsters. It was not just one family, although you knew which family you belonged to. If you happened to be at a certain family's camp during the night, then you slept there, but everyone knew it was normal. It took the whole camp to raise youngsters. And this was how our sense of extended family responsibility came about. Everybody cared for everybody else.

And all of these kids listened, and they learned from this uncle, that uncle, and all of the relatives. What was happening then was that each youngster would have several doctors, several masters, several professors, teachers, and so on. They did not have a degree and did not want one. They passed on what they knew to this child. And then as they got older, these young people got older, the old ones passed away, and they in turn passed it on. There was a continuance of knowledge that was shared, which was very good. There was no need for books. They did not have to put their knowledge in books. They taught everything in tellings, in words, and in songs. The women played a big part in this; they passed on many of the finer points of camp life, of personal life, interactive knowledge, stories, all that was the women's job to do in addition to keeping and holding the family together. So they were very important; they were partners; they were not possessions, like in some societies, but they were equal partners. And then of course like everyplace else, there were abusers. But they were dealt with by the laws of the Lakota. They were banished.

UW: Or killed.

HC: Or killed. If somebody mistreated my sister badly, or even struck her or cut her, it was my right to stand up for her and to kill the abuser. The camp was not going to say anything. It happened on occasion, but rarely, because of our belief in compassion. You first went to talk to him and ask him to leave; if he resisted, then you took other measures.

Of course, compassion, respect, responsibility, and accountability are just human characteristics or attributes. They govern any human being, or should, but some human beings choose not to. The reason lies in their upbringing, ge-

ography maybe, culture, religion, government maybe, and education. All of these might have steered them away, and were replaced by negative things. The most important are greed, anger, and guilt. Why do you think in some parts of the world, especially here in South Dakota, do white men hate us? Now why is that? Is that because of guilt? Is that because of greed? That hatred, that stupidity, that ire against the Lakota still exists among these people. And I often wonder is that because they feel guilty? Because this land for which they have a piece of paper saying it's theirs is not theirs? Do they know that intuitively? The land that was given to the white people on our reservation has been declared "surplus" by a foreign government, the United States government, and given to their citizens.[7] That is a crime against humanity, against the treaties that were written. Is this what European Americans feel? What is it? We are the only nation in the world where a foreign government says, hey, your land is surplus. We will give it to our own people—in our own country. It is for the Lakota to determine what constitutes "surplus land" because it is our land. European Americans came into our land uninvited. The language of the treaty stipulates only three white people on any reservation, especially on the Cheyenne River Reservation. This includes a superintendent, the chief clerk, and a member of the clergy. And a clergy member is to only teach the English language. The treaty did not say to educate the Lakota, it did not say to convert the Lakota. We already had our educational and religious resources in place, and we already had our Black Hills, which is rich in mineral resources. You name it, and it was there. Our land was our storehouse and they stole it. And it's still stolen. The Black Hills are still stolen now.[8] No matter how long, no matter who has title to it, the title belongs by law to the Lakota.

UW: Can there be sovereignty without the land?

HC: Can you grow without your mother? It would be very hard. But with land *and* spirituality, not either one or the other, it takes those two main ingredients, big ingredients. I should say, spirituality and *unci maka,* Mother Earth. Land, like you use the word, is a possession type of thing, but we look at it as Mother Earth, *unci maka.* And the great essence, you know, is spirituality. And without those two, it would be pretty hard, almost impossible. Without those two it would be hard, hard to have sovereignty because I think people would be suffering for a lack of those two. In fact, we are lost when we kick spirituality aside and only take it up one hour a week. It would be awfully hard. When we tear up Mother Earth, that's like hurting your mother, you take knives and tear her open. It's what we're doing today to Mother Earth. You do that too many times to your Mother and she will die. This is what Mother Earth is beginning

to feel—the destructiveness that we are imposing upon her. The air is getting bad, the water is not very good any more. The land is not very good anymore. The animals are not very good anymore. The people are not very good anymore. The plants are not very good anymore. The fliers, the crawlers, the borers are not very good anymore. They are losing their strength. And when you come to that point, it brings you up against a whole new chapter of history which, if you are without spirituality, you are not going to believe.

UW: Today, over sixty-five percent of American Indians live in cities and not in the countryside.[9]

HC: Well, when they live in cities, they went perhaps out of necessity, or perhaps to get a job and make a living for their families. So necessity might be a part of being in a city. The other part is perhaps due to some kind of attraction that city life might hold for them. Some might be there because of a loss of identity, but some made a free choice to go there, to live there. And of course the sovereignty is not taken away from them, the innate sovereignty, the god-given sovereignty that they have within them. Collectively, if they try to form something, perhaps they can arrive at some peace. But it is hard in the city. I have had a brother in a city—I have even lived in big cities myself for a while. I have lived in Cleveland, Ohio, I have lived in Indianapolis, Terre Haute, Indiana, Portland, Oregon. I lived in Austin, Texas, different places. When you get in that hectic mainstream, it is hard to maintain any sort of spirituality, because you are going for a fast ride. And it is just almost impossible for spirituality to emerge out of that. You got to slow down and there is no time for that in the big city. I have heard people say that so many times when they come to South Dakota. All of a sudden, an old guy says, "[sighs] I feel so good, what is it about this place here?" I respond, "nothing." It is slower, a slower place. The clock is not king anymore. It is, but not controlling every second of your life, you know. So if the Indians in the big cities, those urbans, if they would slow down ... I think that's why a lot of them come back to the rez for a few days to catch their breath [chuckles], but then they go right back into that. Because there is something there that attracts them, I don't know what it is, but a lifestyle that they see or live there attracts them. They have to go back to it. But they come back every now and then to strengthen themselves.

UW: AIM activism began in the city. What is your view of its legacy in support of sovereignty?

HC: Of course, Wounded Knee number two in the 70s did one thing. It drew attention to the plight. It showed the world that all was not a bed of roses for the

American Indian here in America. We were forgotten, we were abused, we were all of these things. There again, because of guilt, I don't know what it is, but there was hatred for us. So then the movement started to retaliate, maybe avenge. And of course the beginning of it was perhaps to come back to the rez and learn whatever you need to know, perhaps. And I think maybe most of all spirituality, because they did not know anything about spirituality. But like their Caucasian brothers, they just wanted it in a lump sum. They did not care to be patient, there was not much respect there because they did not take the time to learn the language. So then they cut across a lot of these things I spoke of earlier. And then when you realize that this quick fix is not the real thing, you are going to get angry. You are getting mad at somebody, at yourself perhaps, at your brothers, for not knowing. And you know that what you are pursuing was real for a while to you, but then you found out that it was not all that real after all. The reason is that now, you are doing ceremonies, or whatever you will call it, in English.[10] It was not intended that way. This caused a lot of confusion back in those days and still does to this day. Pipes are a good example. People are saying that [ceremonial] pipes are for Indians only, Sun Dances are for Indians only. At one time, when there were only Indians on this continent, that might have been true. But now we got relatives who are half this and half that, and yet we are still blood relatives, you see. What does that indicate to me? It indicates that we are all relatives and that all things are intended to be shared. But it must be grounded in the Lakota language, in the Lakota life ways.

LAKOTA STUDIES AS SOVEREIGNTY STUDIES: A CONVERSATION WITH IONE V. QUIGLEY

The vision of Lakota Studies at Sinte Gleska University embraces seven areas vital to the strengthening of Lakota sovereignty, thus following the definition of sovereignty as developed by the United Nations.[11] Of premier importance is an intimate knowledge of the homeland, *otiwota*, both as the place of birth and the home to which a human spirit returns after death. Language revitalization and preservation programs include the development of online courses, immersion language camps, and regular classes ranging from the introductory level to Lakota oratory. The Lakota Studies Department sponsors several major ceremonies throughout the year, including the "Welcoming Back the Thunders" ceremony at every spring equinox at Harney Peak in the Black Hills. Meals, meetings, and other gatherings are begun with a Lakota prayer. Leadership training across the university analyzes and encourages the practice of the traditional four Lakota values of bravery, *woohitika*, generosity, *wacantognaka*,

wisdom, *woksape,* and fortitude, *wowacintanka*. Lakota Studies classes are offered on the topic of tribal social systems with particular instruction in Lakota educational and family support systems, past and present. Sinte Gleska University has also become a leader in the economic development of tribal resources by offering courses and research in traditional tribal economic systems, economic values, and their relationship to the environment. A consistent effort is being made to apply traditional practices, principles, and insights to contemporary problems.[12]

Finally, Lakota Studies supports the development of tribal self-governance and self-determination by offering courses on traditional forms of Lakota government and the history of the IRA government, especially as it relates to the *Sicangu Oyate*, the Sicangu Nation. Lakota citizens are thus empowered to work toward positive changes in tribal self-governance. Non-Lakota students benefit from Lakota Studies by learning holistically about regional and national history in the midst of a vibrant Lakota educational environment that offers cultural and spiritual windows into the Lakota past, present, and future. In the following conversation, Ione Quigley presents her view of the relationship between the seven Lakota Studies themes and the issue of Lakota sovereignty for the *Sicangu Oyate*.

UW: How would you like to begin addressing the issue of sovereignty in the context of Lakota Studies at Sinte Gleska University?

IQ: I gave the issue of sovereignty a lot of thought. I have been looking at it from every angle that I could think of. Sovereignty is an issue that every one of us faces, no matter who we are or where we come from, no matter what background and history we have. We all face this. Even as we speak, the United States faces the issue of sovereignty. Are we a true sovereign nation? I have my own thoughts on that issue. But for now, I would like to focus on Lakota sovereignty and how we view it.

To understand sovereignty, we must start at the individual level. As individuals, we should ask, are we truly sovereign? Can we answer that question on an individual level and ask ourselves, am I happy? Do I have enough? Am I completely responsible for my own self, for my emotions, for my mental well-being, and for my physical well-being? Am I comfortable with my life, which is truly the time that I am to live on the land that I was born on? Am I truly living a sovereign life where I am my sole sovereign, and am I able to let others be sovereign in the same sense?

At one time, over one hundred years ago, we were a strong and sovereign nation. Each individual, each social unit, each band or nuclear family unit was

actually given the choices implicit in the questions posed above. So we look at sovereignty as actually having the freedom of choice.

I have also given thought to the counter or opposite of sovereignty. What is that? I have begun to think of the different ways in which you are not free to choose. On the opposite side of your right to choose we find oppression, which takes away the right to make choices.

UW: The Lakota Studies Program at Sinte Gleska University is rooted in a long struggle to regain sovereignty.

IQ: We actually started with a movement of our own right here. We started trying to find out what land and resources we actually have. Before we began our own search, all of that information was kept from us. All of that information was kept within United States government agencies. The government declared itself a guardian of us, the Lakota, a sovereign nation. Considering themselves a guardian of our land as well, they also took it upon themselves to have the land measured and surveyed and explored for its resources. The government decided who could have access to our land and who could come in and choose to do what they pleased. What is our land worth? Where are the borders of our land base? What resources do we really have here? This information has been made publicly available more and more. And there are certain Sinte Gleska programs and departments that are increasingly addressing these questions.

The United States guardianship took away a lot of our power as a sovereign nation. For the United States government, oppression of our nation and the sovereignty of the United States go hand in hand. It is important to understand that oppression takes away power as well as responsibilities. For example, consider our society and our culture. We had to think twice whether we should speak our language. Should we allow our children to speak the language or allow them to get beaten?[13] Today, these and other destructive aspects of United States government policies are coming out into the open.

The greatest of oppression we faced, however, was the destruction of gaining our livelihood and the food, when they took that away. The threat of starvation puts people into a vise. You have them where you want them. That was only the starting point, however. The people were suffering, and then they were given this medicine that was going to make them feel better. That's when they introduced *mni wakan,* the sacred water. It is said that in the beginning, only the men of our people drank. Yet like any kind of disease that spreads, drinking spread to everybody. This particular tool, alcohol, was probably the strongest weapon that the government had.[14]

Another tool that it used against us was education. The United States imposed a completely new language upon us. It imposed a completely new system of education upon us. Yet we already had a fully functioning system of education. Our mothers, grandmothers and grandfathers, they were our educators. All of a sudden, a completely different system was forced on us. Instead of family members, strangers educate us. The Western system is impersonal and hierarchical. You get children into a classroom and tell them that this is the way it is. Our family-based system of education was different. We were taught lessons through life experiences, and then we were given the choice to interpret, explore, and apply our lessons. In the rigid education system that we have now, we are learning abstractly. We are given only one version of the way things are, even when it comes to history. This is what happened, and we were never really given any other option.

UW: The Lakota encountered Western education first in religious schools.

IQ: The education that was imposed on us was rigid and impersonal. From there we move on to the question of spirituality. We have had the Catholic Church and the Episcopal Church, but the major church coming in was the Catholic Church.[15] Personally speaking, I have always thought that Catholicism is not a system of teaching about the good things in life. And these are the important matters. Life is to be loved and appreciated. Life is to be lived. You know, these are the rules to live by. That was always my ideal. Lakota spirituality teaches that through living life fully, you will have many experiences. All of these experiences are your own immersion into the process of creation. In contrast, in Catholicism you look for external attributes and symbols that everybody recognizes. We still look for those attributes and confuse them with spiritual values. For example, consider the belief that you are not a good person until you have a good job, a nice home, beautiful children—the ideal family, the ideal Mr. and Mrs. Jones if you like. The Lakota people say no to this view. Enjoy life, live life—even if society is concerned with materialism.

Our social systems at one time worked in harmony with our spirituality. We lived in a kinship system in which relatives were never addressed by their name. When you address a person through our kinship terms, the person knows her responsibilities and how she will be taken care of by her relatives. I never quit using kinship terms. I still say to my children, "tell your grandfather, go visit your grandmother." In the past, we lived our lives with each other in camps where we were able to take care of each other. Now we have to cope with another culture's social system. I am forced to drive across town

to where my mother lives, and she has to live by herself. We have been living with this foreign system for the past one hundred years, adjusting to a program of education and values that the United States government has forced on us. What does that do to the spirit, what does that do to the family?

When you have relatives, you will always have care, you will always have that. Our social systems are still intact in that we care for each other. So we do have a course on the kinship system here at Sinte Gleska's Lakota Studies. It's called *LS 221: Lakota Social Systems*. The instructors have done a wonderful job of having everybody learn and appreciate what behaviors are appropriate for each kinship role and how to fully participate in the family unit and beyond. This knowledge allows our children to feel that they belong and that they are an important part of the family. It is one of several cultural projects we have created. It is exciting to be a part of it all, because it is going to be a good thing for the people. Kinship ways were so natural and they are still meaningful today.

When the *canupa* (sacred pipe) was brought to us by White Buffalo Calf Woman, the pipe came with responsibilities. The goal was to live in peace with all people.[16] You know there are always stories within the families, within the kinship that you know and belong to. Where language is concerned, at one time, our language was such that it carried the larger cultural, social, and spiritual meaning in all these specific kinship terms. At the time of the worst oppression of our culture, our language came to almost a standstill. And because of that we have had to work hard on not only teaching the language, but on the meaning behind the words. This affects all that we face in trying to revitalize our culture. So we actually have multiple bumps.

In the Lakota system, kinship relations are deeply connected to economic survival and well-being as well.[17] The United States government tried to destroy this link as well. If you are allowed welfare benefits, for example, it amounts to yet another form of oppression. We have a lot of lost people out there because of state welfare. If you are on welfare, it can quickly happen that a social worker looks into whether a child needs to be placed outside of her biological family. The child grows up without learning who she is in the larger kinship system and what it means to be Lakota.

Take another example, the Native American Graves Repatriation Act.[18] It allows us to bring home our relatives, our ancestors. The flip side of that is that it is only applied to federal travel, and not regionally. That restriction actually helps keep us oppressed. True sovereignty will not come about until we can educate and unite the Lakota who live here.

UW: To accomplish all of this takes a strong group effort.

IQ: We actually have a group of women who have begun all of this, one of the best things that could have happened to us.[19] It was a group of women that finally stood up and said, "we want positive change for ourselves and for our children." The women actually went about to start the change by gathering information. They started a movement within the tribe. They are also one of several groups that I have been working with in writing our constitution. During our work on the constitution, we have accepted several proposed amendments. With all of the decisions we make, we have to remember that we are not making them for ourselves. For example, we are working to set up our own judicial system. You know, having the understanding that "this is wrong, let's fix it," not, "this is wrong, let's put him away for two years and let him think about it." Rather, "this is wrong, let's fix it, right here." At the university, Marlise Whitehat leads a movement called "Restorative Justice."[20] We had a judge who made all the decisions without allowing us to apply our own justice system. He said, in top-down fashion and without knowing the community, "ok you're wrong and you're not and you're the one that needs to go sit in jail." It is another form of oppression to not be allowed to fully deal with legal issues through our own justice system. I think we need to work with a model to allow everybody involved to resolve the crime and to give everybody a sense that this is what needs to be done. This is where the government courts fail. It has brought a lot of grief, a lot of anger. And it is just another example of denying sovereignty to the Lakota.

I truly believe that we can be economically sovereign. When people do not have something they need, it constitutes an imbalance. It is in the nature of things that are unbalanced that they attract that which will bring back balance. That is possible for economic sovereignty as well. What we need to do is take an inventory of what we have here on the reservation and say, "okay, this is what we each have. Now what do the tribes in Montana have, what do the tribes in Arizona have?" We practiced a bartering system in the past that worked. Many archaeologists have said that our area was a trade center. A bartering system can be brought back today. It is happening for our language, our justice system, and our kinship system.

CONCLUSION

In her study of the origins of the Lakota Nation, Ione Quigley writes that Lakota oral traditions point to the emergence of the Lakota during the Pleistocene Period about

20,000 to 40,000 years ago. An ice age bison kill in Colorado from about 13,000 years ago suggests strong similarities with a Lakota buffalo hunt/kill site in the 1600s, thus suggesting ancestral links.[21] At the other end of the historical spectrum, efforts are being made to heal the trauma of boarding schools,[22] relocation, and other forms of colonial oppression through culturally appropriate means that center on the reappearance of *Pte Oyate,* the buffalo nation, traditional ceremonies, and other cultural and economic activities.[23]

Both Lakota elders affirm the viability of their traditions in shaping the necessary conditions for a full exercise of sovereignty now and in the future. Both work with the knowledge that the process will not be a "quick fix," that it will take the patient labor of many to heal and revitalize legal systems in tandem with cultural, economic, and spiritual systems. The fact that the State of South Dakota has made one significant step toward supporting the efforts of tribal colleges such as Sinte Gleska University and the teachings and ceremonial work of elders such as Harry Charger render their conversations timely and relevant to their students, their communities, and other tribal nations.

NOTES

The notes are intended to guide the reader to further information on the subjects discussed in the chapter.

1 "Public schools in South Dakota to include American Indian education" posted March 19, 2007 by David Melmer, *Indian Country Today* Web site. "PIERRE, S.D.—Students in South Dakota will hear different approaches to the state's history in the next school year: [T]hey will be exposed to American Indian culture and the language of the Lakota. Much like Montana, which has implemented an Indian Education for All program, South Dakota will attempt to bridge educational achievement gaps between American Indian and non-Indian students, lower dropout rates, and bring about a better understanding of the cultures. Gov. Mike Rounds has signed a bill into law that will include curriculum changes that will teach about American Indian culture and language, and require teachers to upgrade their skills with American Indian studies courses. The new law also officially creates the office of American Indian Education."

Excerpt from Roxanne Dunbar-Ortiz, *An Indigenous Peoples History of the United States,* pp. 185-191

The first international relationship between the Sioux Nation and the US government was established in 1805[1] with a treaty of peace and friendship two years after the United States acquired the Louisiana Territory, which included the Sioux Nation among many other Indigenous nations. Other such treaties followed in 1815 and 1825. These peace treaties had no immediate effect on Sioux political autonomy or territory. By 1834, competition in the fur trade, with the market dominated by the Rocky Mountain Fur Company, led the Oglala Sioux to move away from the Upper Missouri to the Upper Platte near Fort Laramie. By 1846, seven thousand Sioux had moved south. Thomas Fitzpatrick, the Indian agent in 1846, recommended that the United States purchase land to establish a fort, which became Fort Laramie. "My opinion," Fitzpatrick wrote, "is that a post at, or in the vicinity of Laramie is much wanted, it would be nearly in the center of the buffalo range, where all the formidable Indian tribes are fast approaching, and near where there will eventually be a struggle for the ascendancy [in the fur trade]."[2] Fitzpatrick believed that a garrison of at least three hundred soldiers would be necessary to keep the Indians under control.

Although the Sioux and the United States redefined their relationship in the Fort Laramie Treaty of 1851, this was followed by a decade of war between the two parties, ending with the Peace Treaty of Fort Laramie in 1868. Both of these treaties, though not reducing Sioux political sovereignty ceded large parts of Sioux territory by establishing mutually recognized boundaries, and the Sioux granted concessions to the United States that gave legal color to the Sioux's increasing economic dependency on the United States and its economy. During the half century before the 1851 treaty, the Sioux had been gradually enveloped in the fur trade and had become dependent on horses and European-manufactured guns, ammunition, iron cookware, tools, textiles, and other items of trade that replaced their traditional crafts. On the plains the Sioux gradually abandoned farming and turned entirely to bison hunting for their subsistence and for trade. This increased dependency on the buffalo in turn brought deeper dependency on guns and ammunition that had to be purchased with more hides, creating the vicious circle that characterized modern colonialism. With the balance of power tipped by mid-century, US traders and the military exerted pressure on the Sioux for land cessions and rights of way as the buffalo population decreased. The hardships for the Sioux caused by constant attacks on their villages, forced movement, and resultant disease and starvation took a toll on their strength to resist domination. They entered into the 1868 treaty with the United States on strong terms from a guerrilla fighting force through the 1880s, never defeated by the US army—but

their dependency on buffalo and on trade allowed for escalated federal control when buffalo were purposely exterminated by the army between 1870 and 1876. After that the Sioux were fighting for survival.

Economic dependency on buffalo and trade was replaced with survival dependency on the US government for rations and commodities guaranteed in the 1868 treaty. The agreement stipulated that "no treaty for the cession of any portion or part of the reservation herein described which may be held in common shall be of any validation or force against the said Indians, unless executed and signed by at least three fourths of all the adult male Indians." Nevertheless, in 1876, with no such validation, and with the discovery of gold by Custer's Seventh Cavalry, the US government seized the Black Hills—Paha Sapa—a large, resource-rich portion of the treaty-guaranteed Sioux territory, the center of the great Sioux Nation, a religious shrine and sanctuary. When the Sioux surrendered after the wars of 1876–77, they lost not only the Black Hills but also the Powder River country. The next US move was to change the western boundary of the Sioux Nation, whose territory, though atrophied from its original, was a contiguous block. By 1877, after the army drove the Sioux out of Nebraska, all that was left was a block between the 103rd meridian and the Missouri, thirty-five thousand square miles of land the United States had designated as Dakota Territory (the next step toward statehood, in this case the states of North and South Dakota). The first of several waves of northern European immigrants now poured into eastern Dakota Territory, pressing against the Missouri River boundary of the Sioux. At the Anglo-American settlement of Bismarck on the Missouri, the westward-pushing Northern Pacific Railroad was blocked by the reservation. Settlers bound for Montana and the Pacific Northwest called for trails to be blazed and defended across the reservation. Promoters who wanted cheap land to sell at high prices to immigrants schemed to break up the reservation. Except for the Sioux units that continued to fight, the Sioux people were unarmed, had no horses, and were unable even to feed and clothe themselves, dependent upon government rations.

Next came allotment. Before the Dawes Act was even implemented, a government commission arrived in Sioux territory from Washington, DC, in 1888 with a proposal to reduce the Sioux Nation to six small reservations, a scheme that would leave nine million acres open for Euro-American settlement. The commission found it impossible to obtain signatures of the required three-fourths of the nation as required under the 1868 treaty, and so returned to Washington with a recommendation that the government ignore the treaty and take the land without Sioux consent. The only means to accomplish that goal was legislation, Congress having relieved the government of the obligation to negotiate a treaty. Congress com- missioned General George Crook to head a delegation to try again, this time with an offer of $1.50 per acre. In a series of manipulations and dealings with leaders whose people were now starving, the commission garnered the needed

signatures. The great Sioux Nation was broken into small islands soon surrounded on all sides by European immigrants, with much of the reservation land a checkerboard with settlers on allotments or leased land.[3] Creating these isolated reservations broke the historical relationships between clans and communities of the Sioux Nation and opened areas where Europeans settled. It also allowed the Bureau of Indian Affairs to exercise tighter control, buttressed by the bureau's boarding school system. The Sun Dance, the annual ceremony that had brought Sioux together and reinforced national unity, was outlawed, along with other religious ceremonies. Despite the Sioux people's weak position under late-nineteenth-century colonial domination, they managed to begin building a modest cattle-ranching business to replace their former bison-hunting economy. In 1903, the US Supreme Court ruled, in *Lone Wolf v. Hitchcock*, that a March 3, 1871, appropriations rider was constitutional and that Congress had "plenary" power to manage Indian property. The Office of Indian Affairs could thus dispose of Indian lands and resources regardless of the terms of previous treaty provisions. Legislation followed that opened the reservations to settlement through leasing and even sale of allotments taken out of trust. Nearly all prime grazing lands came to be occupied by non-Indian ranchers by the 1920s.

Indian land allotment under the Indian Reorganization Act, non-Indians outnumbered Indians on the Sioux reservations three to one. However, the drought of the mid- to late-1930s drove many settler ranchers off Sioux land, and the Sioux purchased some of that land, which had been theirs. However, "tribal governments" imposed in the wake of the Indian Reorganization Act proved particularly harmful and divisive for the Sioux.[4] Concerning this measure, the late Mathew King, elder traditional historian of the Oglala Sioux (Pine Ridge), observed: "The Bureau of Indian Affairs drew up the constitution and by-laws of this organization with the Indian Reorganization Act of 1934. This was the introduction of home rule. . . . The traditional people still hang on to their Treaty, for we are a sovereign nation. We have our own government."[5] "Home rule," or neocolonialism, proved a short-lived policy, however, for in the early 1950s the United States developed its termination policy, with legislation ordering gradual eradication of every reservation and even the tribal governments.[6] At the time of termination and relocation, per capita annual income on the Sioux reservations stood at $355, while that in nearby South Dakota towns was $2,500. Despite these circumstances, in pursuing its termination policy, the Bureau of Indian Affairs advocated the reduction of services and introduced its program to relocate Indians to urban industrial centers, with a high percentage of Sioux moving to San Francisco and Denver in search of jobs.[7]

Mathew King has described the United States throughout its his- tory as alternating between a "peace" policy and a "war" policy in its relations with Indigenous nations and communities, saying that these pendulum swings

coincided with the strength and weak- ness of Native resistance. Between the alternatives of extermination and termination (war policies) and preservation (peace policy), King argued, were interim periods characterized by benign neglect and assimilation. With organized Indigenous resistance to war pro- grams and policies, concessions are granted. When pressure lightens, new schemes are developed to separate Indians from their land, resources, and cultures. Scholars, politicians, policymakers, and the media rarely term US policy toward Indigenous peoples as colonialism. King, however, believed that his people's country had been a colony of the United States since 1890.

The logical progression of modern colonialism begins with economic penetration and graduates to a sphere of influence, then to protectorate status or indirect control, military occupation, and finally annexation. This corresponds to the process experienced by the Sioux people in relation to the United States. The economic penetration of fur traders brought the Sioux within the US sphere of influence. The transformation of Fort Laramie from a trading post, the center of Sioux trade, to a US Army outpost in the mid-nineteenth century indicates the integral relationship between trade and colonial control. Growing protectorate status established through treaties culminated in the 1868 Sioux treaty, followed by military occupation achieved by extreme exemplary violence, such as at Wounded Knee in 1890, and finally dependency. Annexation by the United States is marked symbolically by the imposition of US citizenship on the Sioux (and most other Indians) in 1924. Mathew King and other traditional Sioux saw the siege of Wounded Knee in 1973 as a turning point, although the violent backlash that followed was harsh.

Two decades of collective Indigenous resistance culminating at Wounded Knee in 1973 defeated the 1950s federal termination policy. Yet proponents of the disappearance of Indigenous nations seem never to tire of trying. Another move toward termination developed in 1977 with dozens of congressional bills to abrogate all Indian treaties and terminate all Indian governments and trust territories. Indigenous resistance defeated those initiatives as well, with another caravan across the country. Like colonized peoples elsewhere in the world, the Sioux have been involved in decolonization efforts since the mid-twentieth century. Wounded Knee in 1973 was part of this struggle, as was their involvement in UN committees and international forums.[81] However, in the early twenty-first century, free-market fundamentalist economists and politicians identified the communally owned Indigenous reservation lands as an asset to be exploited and, under the guise of helping to end Indigenous poverty on those reservations, call for doing away with them—a new extermination and termination initiative.

The Great Sioux Nation and the Resistance to Colonial Land Grabbing

Beacon Broadside, September 12, 2016

By Roxanne Dunbar-Ortiz

Dakota Access Pipeline Protest. Photo credit: UnicornRiot.Ninja

Members of the Standing Rock Sioux Tribe have been protesting the construction of the Dakota Access pipeline since April. Slated to direct crude oil from North Dakota to Illinois, the multibillion-dollar project threatens to contaminate the Missouri River and likely destroy Native burial sites and sacred places. The protesters have received support and solidarity from representatives of other Indigenous nations from all over North America, Alaska, Hawaii, and the Andes, along with climate activists and the Black Lives Matter movement.

The history of the Sioux peoples' fight for their homeland runs deep. To understand the background of the protest, we turn to Roxanne Dunbar-Ortiz's An Indigenous Peoples' History of the United States. *In this excerpt, Dunbar-Ortiz unpacks the origin of the nineteenth-century treaties and colonial land-grabbing that have repeatedly denied the Sioux the right to their land.*

***

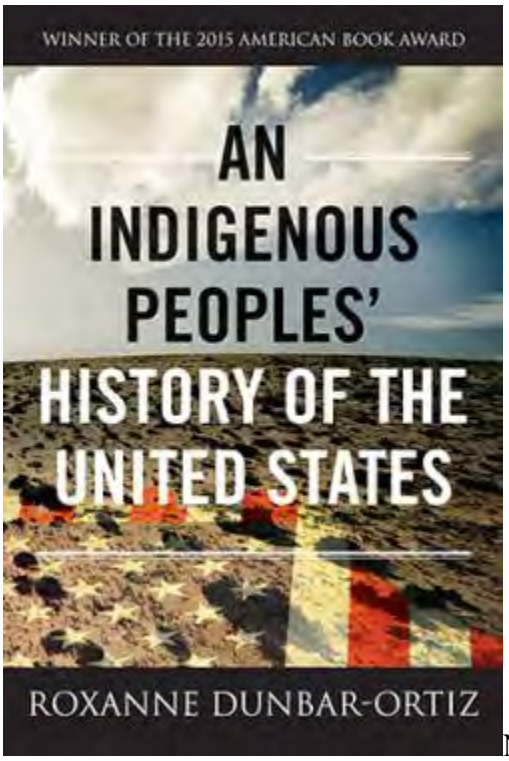
The first international relationship between the Sioux Nation and the US government was established in 1805[i] with a treaty of peace and friendship two years after the United States

acquired the Louisiana Territory, which included the Sioux Nation among many other Indigenous nations. Other such treaties followed in 1815 and 1825. These peace treaties had no immediate effect on Sioux political autonomy or territory. By 1834, competition in the fur trade, with the market dominated by the Rocky Mountain Fur Company, led the Oglala Sioux to move away from the Upper Missouri to the Upper Platte near Fort Laramie. By 1846, seven thousand Sioux had moved south. Thomas Fitzpatrick, the Indian agent in 1846, recommended that the United States purchase land to establish a fort, which became Fort Laramie. "My opinion," Fitzpatrick wrote, "is that a post at, or in the vicinity of Laramie is much wanted, it would be nearly in the center of the buffalo range, where all the formidable Indian tribes are fast approaching, and near where there will eventually be a struggle for the ascendancy [in the fur trade]."[ii] Fitzpatrick believed that a garrison of at least three hundred soldiers would be necessary to keep the Indians under control.

Although the Sioux and the United States redefined their relationship in the Fort Laramie Treaty of 1851, this was followed by a decade of war between the two parties, ending with the Peace Treaty of Fort Laramie in 1868. Both of these treaties, though not reducing Sioux political sovereignty ceded large parts of Sioux territory by establishing mutually recognized boundaries, and the Sioux granted concessions to the United States that gave legal color to the Sioux's increasing economic dependency on the United States and its economy. During the half century before the 1851 treaty, the Sioux had been gradually enveloped in the fur trade and had become dependent on horses and European-manufactured guns, ammunition, iron cookware, tools, textiles, and other items of trade that replaced their traditional crafts. On the plains the Sioux gradually abandoned farming and turned entirely to bison hunting for their subsistence and for trade. This increased dependency on the buffalo in turn brought deeper dependency on guns and ammunition that had to be purchased with more hides, creating the vicious circle that characterized modern colonialism. With the balance of power tipped by mid-century, US traders and the military exerted pressure on the Sioux for land cessions and rights of way as the buffalo population decreased. The hardships for the Sioux caused by constant attacks on their villages, forced movement, and resultant disease and starvation took a toll on their strength to resist domination. They entered into the 1868 treaty with the United States on strong terms from a guerrilla fighting force through the 1880s, never defeated by the US army—but their dependency on buffalo and on trade allowed for escalated federal control when buffalo were purposely exterminated by the army between 1870 and 1876. After that the Sioux were fighting for survival.

Economic dependency on buffalo and trade was replaced with survival dependency on the US government for rations and commodities guaranteed in the 1868 treaty. The agreement stipulated that "no treaty for the cession of any portion or part of the reservation herein described which may be held in common shall be of any validation or force against the said Indians, unless executed and signed by at least three fourths of all the adult male Indians." Nevertheless, in 1876, with no such validation, and with the discovery of gold by Custer's Seventh Cavalry, the US government seized the Black Hills—Paha Sapa—a large, resource-rich portion of the treaty-guaranteed Sioux territory, the center of the great Sioux Nation, a religious shrine and sanctuary. When the Sioux surrendered after the wars of 1876–77, they lost not only the Black Hills but also the Powder River country. The next US move was to change the western boundary of the Sioux Nation, whose territory, though atrophied from its original, was a contiguous block. By

1877, after the army drove the Sioux out of Nebraska, all that was left was a block between the 103rd meridian and the Missouri, thirty-five thousand square miles of land the United States had designated as Dakota Territory (the next step toward statehood, in this case the states of North and South Dakota). The first of several waves of northern European immigrants now poured into eastern Dakota Terri- tory, pressing against the Missouri River boundary of the Sioux. At the Anglo-American settlement of Bismarck on the Missouri, the westward-pushing Northern Pacific Railroad was blocked by the reservation. Settlers bound for Montana and the Pacific Northwest called for trails to be blazed and defended across the reservation. Promoters who wanted cheap land to sell at high prices to immigrants schemed to break up the reservation. Except for the Sioux units that continued to fight, the Sioux people were unarmed, had no horses, and were unable even to feed and clothe themselves, dependent upon government rations.



Next came allotment. Before the Dawes Act was even implemented, a government commission arrived in Sioux territory from Washington, DC, in 1888 with a proposal to reduce the Sioux Nation to six small reservations, a scheme that would leave nine million acres open for Euro-American settlement. The commission found it impossible to obtain signatures of the required three-fourths of the nation as required under the 1868 treaty, and so returned to Washington with a recommendation that the government ignore the treaty and take the land without Sioux consent. The only means to accomplish that goal was legislation, Congress having relieved the government of the obligation to negotiate a treaty. Congress commissioned General George Crook to head a delegation to try again, this time with an offer of $1.50 per acre. In a series of manipulations and dealings with leaders whose people were now starving, the commission garnered the needed signatures. The great Sioux Nation was broken into small islands soon surrounded on all sides by European immigrants, with much of the reservation land a checkerboard with settlers on allotments or leased land.[iii] Creating these isolated reservations broke the historical relationships between clans and communities of the Sioux Nation and opened areas where Europeans settled. It also allowed the Bureau of Indian

Affairs to exercise tighter control, buttressed by the bureau's boarding school system. The Sun Dance, the annual ceremony that had brought Sioux together and reinforced national unity, was outlawed, along with other religious ceremonies. Despite the Sioux people's weak position under late-nineteenth-century colonial domination, they managed to begin building a modest cattle-ranching business to replace their former bison-hunting economy. In 1903, the US Supreme Court ruled, in *Lone Wolf v. Hitchcock*, that a March 3, 1871, appropriations rider was constitutional and that Congress had "plenary" power to manage Indian property. The Office of Indian Affairs could thus dispose of Indian lands and resources regardless of the terms of previous treaty provisions. Legislation followed that opened the reservations to settlement through leasing and even sale of allotments taken out of trust. Nearly all prime grazing lands came to be occupied by non-Indian ranchers by the 1920s.

Indian land allotment under the Indian Reorganization Act, non-Indians outnumbered Indians on the Sioux reservations three to one. However, the drought of the mid- to late-1930s drove many settler ranchers off Sioux land, and the Sioux purchased some of that land, which had been theirs. However, "tribal governments" imposed in the wake of the Indian Reorganization Act proved particularly harmful and divisive for the Sioux.[iv] Concerning this measure, the late Mathew King, elder traditional historian of the Oglala Sioux (Pine Ridge), observed: "The Bureau of Indian Affairs drew up the constitution and by-laws of this organization with the Indian Reorganization Act of 1934. This was the introduction of home rule. . . . The traditional people still hang on to their Treaty, for we are a sovereign nation. We have our own government."[v] "Home rule," or neocolonialism, proved a short-lived policy, however, for in the early 1950s the United States developed its termination policy, with legislation ordering gradual eradication of every reservation and even the tribal governments.[vi] At the time of termination and relocation, per capita annual income on the Sioux reservations stood at $355, while that in nearby South Dakota towns was $2,500. Despite these circumstances, in pursuing its termination policy, the Bureau of Indian Affairs advocated the reduction of services and introduced its program to relocate Indians to urban industrial centers, with a high percentage of Sioux moving to San Francisco and Denver in search of jobs.[vii]

Mathew King has described the United States throughout its history as alternating between a "peace" policy and a "war" policy in its relations with Indigenous nations and communities, saying that these pendulum swings coincided with the strength and weakness of Native resistance. Between the alternatives of extermination and termination (war policies) and preservation (peace policy), King argued, were interim periods characterized by benign neglect and assimilation. With organized Indigenous resistance to war programs and policies, concessions are granted. When pressure lightens, new schemes are developed to separate Indians from their land, resources, and cultures. Scholars, politicians, policymakers, and the media rarely term US policy toward Indigenous peoples as colonialism. King, however, believed that his people's country had been a colony of the United States since 1890.

The logical progression of modern colonialism begins with economic penetration and graduates to a sphere of influence, then to protectorate status or indirect control, military occupation, and finally annexation. About the Author

Roxanne Dunbar-Ortiz grew up in rural Oklahoma, the daughter of a tenant farmer and part-Indian mother. She has been active in the international Indigenous movement for more than four decades and is known for her lifelong commitment to national and international social justice issues. After receiving her PhD in history at the University of California at Los Angeles, she taught in the newly established Native American Studies Program at California State University, Hayward, and helped found the Departments of Ethnic Studies and Women's Studies. Her 1977 book *The Great Sioux Nation* was the fundamental document at the first international conference on Indigenous peoples of the Americas, held at the United Nations' headquarters in Geneva. Dunbar-Ortiz is the author or editor of seven other books, including *Roots of Resistance: A History of Land Tenure in New Mexico*. She lives in San Francisco. Follow her on Twitter at **@rdunbaro**.

La gran nación sioux y su resistencia al continuado despojo territorial

Publicado el 12 de septiembre de 2015

Por Roxanne Dunbar-Ortiz

Traducido por Nancy Viviana Piñeiro

(Versión preliminar susceptible de corrección, que forma parte de la traducción del libro.)

Manifestación contra el oleoducto Dakota Access. Foto: UnicornRiot.Ninja

Desde el mes de abril, los miembros de la nación sioux de Standing Rock han estado manifestándose contra la construcción del oleoducto Dakota Access. El proyecto multimillonario tiene previsto llevar el crudo desde Dakota del Norte hasta Illinois y amenaza con contaminar el río Misuri, además de la posible destrucción de cementerios y otros lugares sagrados. Los manifestantes recibieron el apoyo y la solidaridad de representantes de otras naciones indígenas de Norteamérica, Alaska, Hawái y los Andes, y también de activistas ambientales y del movimiento Black Lives Matter.

La historia de lucha del pueblo sioux por su territorio es profunda. El libro de Roxanne Dunbar-Ortiz, An Indigenous People's History of the United States, *nos ayuda a comprender el contexto de la actual protesta. En este extracto la autora rastrea el origen de los tratados del siglo XIX y de la apropiación colonial de la tierra, fenómenos que han despojado a los sioux del derecho a su territorio una y otra vez.*

***

La primera relación internacional entre la nación sioux y el Gobierno de los Estados Unidos se estableció en 1805[i] mediante un tratado de paz y amistad firmado dos años después de que ese país adquiriera el Territorio de Luisiana, que incluía a la nación indígena, entre muchas otras. Se firmaron acuerdos similares entre 1815 y 1825. Ninguno de esos tratados de paz tuvo consecuencias inmediatas en la autonomía política ni el territorio de los sioux. Hacia 1834, la competencia en el comercio de pieles y un mercado dominado por la Rocky Mountain Fur Company obligaron a los oglala sioux a alejarse del Alto Misuri y dirigirse hacia el curso alto del río Platte, cerca del Fuerte Laramie. Para el año 1846, siete mil sioux ya se habían desplazado hacia el sur. Thomas Fitzpatrick, el agente resposable de asuntos indígenas durante ese año,

recomendó a los Estados Unidos que compraran tierras para establecer un fuerte, que sería el llamado Fuerte Laramie. Fitzpatrick escribió: “Opino que es muy deseable un puesto en Laramie o sus cercanías; estaría casi en el centro del área de búfalos, hacia donde se acercan con rapidez todas las formidables tribus indias, y cerca del lugar donde tarde o temprano habrá una lucha por la supremacía [en el comercio de pieles]”. [ii] Fitzpatrick creía que sería necesaria una guarnición de al menos trescientos soldados para controlar a los indígenas.

A pesar de que los sioux y los Estados Unidos redefinieron su relación en el Tratado del Fuerte Laramie de 1851, a este le siguieron unos diez años de guerra entre ambas partes, que culminarían con el Tratado de Paz del Fuerte Laramie en 1868. Ambos tratados, si bien no redujeron la soberanía política de los sioux, cedieron porciones extensas de territorio indígena mediante el establecimiento de fronteras reconocidas por las dos partes; además, la nación indígena otorgó concesiones a los Estados Unidos que dieron carácter legal a una dependencia económica que iba en aumento. Durante el medio siglo previo al tratado de 1851, los sioux se habían visto cada vez más envueltos en el comercio de pieles y pasaron a depender de los caballos y las armas de fabricación europea, las municiones, los artículos de cocina de hierro, las herramientas, los textiles y otros productos de comercio que reemplazaron a sus objetos tradicionales. Esta creciente dependencia del búfalo significó, a su vez, una mayor dependencia de las armas y municiones que había que comprar con más pieles: un círculo vicioso que caracterizó al colonialismo moderno. Con una balanza de poder inclinada a su favor, los comerciantes y el ejército estadounidenses presionaron a los sioux para que estos cedieran tierras y derechos de vía a medida que disminuía la población de búfalos. Las dificultades que padecieron los sioux como consecuencia de ataques constantes a sus comunidades, desplazamientos forzados, y de las enfermedades y hambrunas resultantes, hicieron mella en su capacidad de resistir la dominación. Para 1868, año de la firma del tratado con el gobierno estadounidense, eran fuertes desde el punto de vista militar ¾siguieron siendo una fuerza de combate guerrillero efectiva a lo largo de la década de 1880, sin haber perdido nunca ante el ejército de los Estados Unidos¾, pero su dependencia del búfalo y el comercio permitió el aumento del control federal cuando el búfalo fue exterminado deliberadamente por el ejército entre 1870 y 1876. De allí en adelante, la lucha de los sioux fue por la supervivencia.

Pasaron de la dependencia económica de la caza y el comercio del búfalo a la dependencia del gobierno estadounidense, que les daba raciones y productos, según se garantizaba en el tratado de 1868. El acuerdo estipulaba que “ningún tratado de cesión de cualquier porción o parte de la reservación que aquí se referencia y pueda ser de uso común tendrá validez o fuerza alguna contra los mencionados indios, a menos que sea formalizado y firmado por al menos tres cuartas partes de todos los indios adultos de sexo masculino”. Sin embargo, en 1876, sin ningún tipo de validación y tras el descubrimiento de oro por parte de la Séptima Caballería de John Armstrong Custer, el gobierno estadounidense tomó las Colinas Negras (Paha Sapa), una gran extensión del territorio sioux garantizada por el tratado, rica en recursos, y que conformaba el centro de la gran nación sioux, además de ser un sitio sagrado. Cuando los sioux se rindieron, después de las guerras de 1876 y 1877, perdieron no solo las Colinas Negras, sino también el territorio del río Powder. La siguiente movida de los Estados Unidos fue modificar la frontera oeste de la nación sioux, cuyo territorio, aunque atrofiado respecto del original, constituía un bloque continuo. Para 1877, luego de que el ejército los expulsara de Nebraska, solo quedó un bloque entre el meridiano 103 y el río Misuri: 90 649 km^2 de tierra que los Estados Unidos habían designado

como Territorio Dakota (el siguiente paso hacia la estatalidad, en este caso, los estados de Dakota del Norte y Dakota del Sur). La primera de varias olas migratorias del norte europeo ahora ingresaba en el Territorio Dakota del este, presionando contra la frontera sioux del río Misuri. En el poblado angloamericano de Bismark sobre el Misuri, la reservación bloqueaba el avance hacia el oeste del Ferrocarril del Pacífico Norte. Los colonos que se dirigían a Montana y al Pacífico Noroeste exigían que se abrieran vías a lo largo de la reservación y se las defendiera. Los promotores que querían tierra barata para venderla a precios altos a los inmigrantes planeaban dividir la reservación. Salvo por las unidades de sioux que aún luchaban, el pueblo indígena estaba desarmado, sin caballos, y era incapaz siquiera de alimentarse y vestirse; dependían del gobierno para recibir raciones.

Luego llegó la parcelación de tierras. Incluso antes de que se implementara la Ley Dawes (o Ley General de Parcelación), una comisión del gobierno estadounidense llegó a territorio sioux desde Washington D. C. en 1888, con una propuesta para reducir la nación sioux a seis pequeñas reservaciones: un esquema que liberaría unas 3 600 000 hectáreas a la colonización euroamericana. Fue imposible para la comisión reunir las firmas de tres cuartas partes de la nación sioux, como se exigía en el tratado de 1868, y entonces regresó a Washington con la recomendación de que el gobierno ignorara el tratado y se apropiara de las tierras sin el consentimiento indígena. El único medio para lograr ese fin era la legislación, ya que el Congreso había liberado al gobierno del requisito de negociar un acuerdo. Así fue que el Congreso le encargó al general George Crook que encabezara una delegación para volver a intentarlo, esta vez con una oferta de 3 dólares por hectárea. Tras una serie de manipulaciones, y tratos con líderes de un pueblo que se moría de hambre, la comisión reunió las firmas necesarias. La gran nación sioux fue fragmentada en pequeñas islas, que pronto quedarían rodeadas de inmigrantes europeos por todos los flancos, y la mayor parte de la reservación terminaría siendo un tablero con colonos establecidos en parcelas o tierras arrendadas. [iii] La creación de estas reservaciones aisladas quebró las relaciones históricas entre clanes y comunidades de la nación sioux y abrió áreas en las que se asentaron los europeos. También le permitió a la Oficina de Asuntos Indígenas ejercer un control mayor, apuntalado por su sistema de colegios pupilos. Se prohibió, junto con otras ceremonias religiosas, La “Danza del sol”, que todos los años congregaba a los sioux y fortalecía su unidad nacional. A pesar de la débil posición de este pueblo en el contexto de la dominación colonial de fines del siglo XIX, lograron establecer una modesta actividad ganadera para reemplazar su economía previa basada en la caza del búfalo. En 1903, la Corte Suprema de los Estados Unidos dictaminó, en el caso *Lone Wolf vs. Hitchcock*, que una cláusula de apropiación del 3 de marzo de 1871 era constitucional y que el Congreso tenía “pleno” poder para administrar propiedad indígena. Así es que la Oficina de Asuntos Indígenas pudo disponer de tierras y recursos haciendo caso omiso de las disposiciones de los tratados anteriores. A esto le siguió legislación que dispuso de las reservaciones para el establecimiento de colonos mediante arrendamiento e incluso se vendieron parcelas que se eliminaron de los fideicomisos.

Para la época de la era del “Nuevo trato”, también conocida como la era Collier, y la anulación de la parcelación que supuso la Ley de Reorganización, los no indígenas superaban en número a los indígenas en las reservaciones sioux por tres a uno. Sin embargo, la sequía que se extendió de mediados a fines de la década de 1930 expulsó a muchos ganaderos de las tierras sioux, y los indígenas compraron parte de esas parcelas, que habían sido de su propiedad. Sin embargo,

resultó que los “gobiernos tribales” impuestos después de la Ley de Reorganización fueron especialmente perjudiciales y divisivos. [iv] Respecto de esa medida, el difunto Mathew King, viejo historiador tradicional de los sioux oglala (Pine Ridge), comentó: “La Oficina de Asuntos Indígenas redactó la constitución y los estatutos de esta organización con la Ley de Reorganización de 1934. Fue la introducción del autogobierno [...]. El pueblo tradicional todavía se aferra a su Tratado, puesto que somos una nación soberana. Tenemos nuestro propio gobierno”. [v] Sin embargo, el “autogobierno”, o neocolonialismo, demostró ser una política de corta vida, dado que a principios de los años 50 los Estados Unidos desarrollaron su política de “terminación”: nuevas leyes ordenaron la erradicación gradual de cada reservación e incluso de los gobiernos tribales. [vi] Al momento de la terminación y relocalización, el ingreso per cápita anual de las reservaciones sioux era de 355 dólares, mientras que en los pueblos cercanos de Dakota del Sur era de 2 500 dólares. A pesar de estas circunstancias, y para ejecutar su política de terminación, la Oficina de Asuntos Indígenas promovió la reducción de servicios e introdujo un programa para relocalizar a los indígenas en centros urbanos industriales; un alto porcentaje de sioux se fueron a San Francisco y Denver en búsqueda de trabajo. [vii]

Mathew King ha descrito a los Estados Unidos como un país que a lo largo de su historia fue alternando entre una política de “paz” y una de “guerra” en sus relaciones con las naciones y comunidades indígenas, y dijo que estos movimientos pendulares coincidieron con la fortaleza o debilidad de la resistencia de los nativos. King sostuvo que entre las alternativas de exterminio y terminación (políticas de guerra) y la preservación (política de paz), había periodos intermedios de abandono benévolo y asimilación. Ante la resistencia indígena organizada contra los programas y políticas de guerra, se otorgan concesiones. Cuando la presión disminuye, se diseñan nuevos esquemas para apartar a los indígenas de sus tierras, recursos y culturas. Estudiosos, políticos, formuladores de política y los medios rara vez describen la política estadounidense hacia los pueblos indígenas como colonialismo. King, sin embargo, creía que su nación había sido colonia de los Estados Unidos desde 1890.

La progresión lógica del colonialismo moderno comienza con la penetración económica y avanza gradualmente hacia una esfera de influencia, luego a un estatus de protectorado o control indirecto, ocupación militar y, por último, anexión. Esto se corresponde con el proceso que experimentó el pueblo sioux en su relación con los Estados Unidos. La penetración económica de los comerciantes de pieles hizo que los sioux ingresaran a la esfera de influencia de los Estados Unidos. La trasformación del Fuerte Laramie de puesto comercial, centro del comercio con los sioux, a puesto militar estadounidense a mediados del siglo XIX demuestra la relación esencial que existe entre el comercio y el control colonial. Un estatus de protectorado cada vez mayor, establecido mediante tratados, culminó en tratado de 1868; a este le siguió la ocupación militar, obtenida por medio de la violencia aleccionadora, como la que se vio en la masacre de Wounded Knee en 1890, y por último, la dependencia. La anexión por parte de los Estados Unidos quedó marcada simbólicamente en 1924 mediante la imposición de ciudadanía a los sioux (y a la mayoría de los pueblos indígenas). Mathew King y otros sioux tradicionales consideraron la toma de Wounded Knee en 1973 como un punto de inflexión, aunque la violenta reacción que le siguió fue severa.

Dos décadas de resistencia indígena colectiva, que culminó con Wounded Knee en 1973, derrotaron la política federal de terminación de los años 50. Aun así, los defensores de la

desaparición de naciones indígenas parecen no rendirse nunca. En 1977 se tomó otra medida hacia la "terminación": decenas de proyectos legislativos intentaron derogar todos los tratados indígenas y terminar con sus gobiernos y territorios protegidos por fideicomisos. La resistencia indígena también derrotó esas iniciativas con otra caravana a lo largo del país. Al igual que otros pueblos colonizados del mundo, los sioux han llevado adelante esfuerzos descolonizadores desde mediados del siglo XX. Wounded Knee en 1973 fue parte de esa lucha, como también lo fue la participación en comités de las Naciones Unidas y en foros internacionales. [viii] Sin embargo, a principios del siglo XXI, los economistas y políticos fundamentalistas del libre mercado identificaron a las reservaciones indígenas de propiedad comunitaria como un bien que debe ser explotado y, con el pretexto de ayudar a poner fin a la pobreza de los indígenas en esos territorios, instan a deshacerse de ellos: una nueva iniciativa de "terminación" y exterminio.

Sobre la autora

Roxanne Dunbar-Ortiz es hija de un peón de campo y de una madre con ascendencia indígena y creció en la Oklahoma rural. Ha participado activamente en el movimiento indígena internacional por más de cuatro décadas, y es conocida por su incansable compromiso con la justicia social en su país y en el mundo. Después de terminar su posdoctorado en historia en la Universidad de California en Los Ángeles, dio clases en los nuevos programas de Estudios sobre los Indígenas Norteamericanos en la universidad estatal de California, Hayward, y ayudó a crear el Departamento de Estudios Étnicos y Estudios de la mujer, como se denominaban en ese momento. Su libro de 1977, *The Great Sioux Nation* (La gran nación sioux) fue el documento fundamental en la primera conferencia internacional sobre pueblos indígenas de las Américas, celebrada en la sede las Naciones Unidas en Ginebra. Dunbar-Ortiz es autora y editora de otros siete libros, entre ellos, *Roots of Resistance: A History of Land Tenure in New Mexico* (Raíces de la resistencia: Historia de la tenencia de la tierra en Nuevo México) y uno disponible en español: *La cuestión miskita en la revolución nicaragüense.* Vive en San Francisco y la pueden seguir en su cuenta de Twitter **@rdunbaro**.

[vi] Puede encontrarse un análisis lúcido del neocolonialismo referido a los indígenas norteamericanos y el sistema de reservaciones en Joseph Jorgensen, *Sun Dance Religion: Power for the Powerless,* Chicago, University of Chicago Press, 1977, pp. 89–146.

[vii] Existe una migración continua desde las reservaciones hacia las ciudades y pueblos aledaños, y de vuelta a las reservaciones, de manera que la mitad de la población indígena en cualquier periodo de tiempo se encuentra fuera de las reservaciones. Sin embargo, por lo general, la relocalización no es permanente y se asemeja más a la mano de obra migrante que a la relocalización definitiva. Esta conclusión se basa en mis observaciones personales y en estudios no publicados sobre las poblaciones indígenas en el Área de la Bahía de San Francisco y Los Ángeles.

[viii] El Movimiento Indígena Estadounidense convocó a una reunión en junio de 1974 en la que se fundó el Consejo Internacional de Tratados Indios (IITC, por su sigla en inglés), y adquirió estado consultivo ante el Consejo Económico y Social de las Naciones Unidas (ECOSOC) en febrero de 1977. El IITC participó en la Conferencia de las Naciones Unidas sobre Desertificación celebrada en Buenos Aires en marzo de 1977, e hizo presentaciones ante la Comisión de Derechos Humanos de la ONU en agosto de 1977 y en febrero y agosto de 1978. También encabezó los preparativos para la Conferencia Internacional de ONG sobre los Pueblos Indígenas de las Américas, que se celebró en la sede de la ONU en Ginebra, Suiza, en septiembre de 1977; participó en la Conferencia Mundial contra el Racismo en Basilea, Suiza, en mayo de 1978; y en el establecimiento del Grupo de Trabajo de Naciones Unidas sobre Poblaciones Indígenas, el Foro Permanente para las Cuestiones Indígenas de la ONU y la Declaración de las Naciones Unidas sobre los derechos de los pueblos indígenas, de 2007. FORT LARAMIE TREATY OF 1868

This is the actual text of the treaty. The Maps are provided for visualization purposes.

TREATY WITH THE SIOUX - BRULÉ, OGLALA, MINICONJOU, YANKTONAI, HUNKPAPA, BLACKFEET, CUTHEAD, TWO KETTLE, SANS ARCS, AND SANTEE - AND ARAPAHO, 1868.

ARTICLE 1. From this day forward all war between the parties to this agreement shall forever cease. The Government of the United States desires peace, and its honor is hereby pledged to keep it. The Indians desire peace, and they now pledge their honor to maintain it.
If bad men among the whites, or among other people subject to the authority of the United States, shall commit any wrong upon the person or property of the Indians, the United States will, upon proof made to the agent and forwarded to the Commissioner of Indian Affairs at Washington City, proceed at once to cause the offender to be arrested and punished according to the laws of the United States, and also re-imburse the injured person for the loss sustained.
If bad men among the Indians shall commit a wrong or depredation upon the person or property of any one, white, black, or Indian, subject to the authority of the United States, and at peace therewith, the Indians herein named solemnly agree that they will, upon proof made to their agent and notice by him, deliver up the wrong-doer to the United States, to be tried and punished according to its laws; and in case they wilfully refuse so to do, the person injured shall be re-imbursed for his loss from the annuities or other moneys due or to become due to them under this or other treaties made with the United States. And the President, on advising with the Commissioner of Indian Affairs, shall prescribe such rules and regulations for ascertaining damages under the provisions of this article as in his judgment may be proper. But no one sustaining loss while violating the provisions of this treaty or the laws of the United States shall be re-imbursed therefor.

ARTICLE 2. The United States agrees that the following district of country, to wit, viz: commencing on the east bank of the Missouri river where the forty-sixth parallel of north latitude crosses the same, thence along low-water mark down said east bank to a point opposite where the northern line of the State of Nebraska strikes the river, thence west across said river, and along the northern line of Nebraska to the one hundred and fourth degree of longitude west from Greenwich, thence north on said meridian to a point where the forty-sixth parallel of north latitude intercepts the same, thence due east along said parallel to the place of beginning; and in addition thereto, all existing reservations on the east bank of said river shall be, and the

same is, set apart for the absolute and undisturbed use and occupation of the Indians herein named, and for such other friendly tribes or individual Indians as from time to time they may be willing, with the consent of the United States, to admit amongst them; and the United Sates now solemnly agrees that no persons except those herein designated and authorized so to do, and except such officers, agents, and employes of the government as may be authorized to enter upon Indian reservations in discharge of duties enjoined by law, shall ever be permitted to pass over, settle upon, or reside in the territory described in this article, or in such territory as may be added to this reservation for the use of said Indians, and henceforth they will and do hereby relinquish all claims or right in and to any portion of the United States or Territories, except such as is embraced within the limits aforesaid, and except as hereinafter provided.

ARTICLE 3. If it should appear from actual survey or other satisfactory examination of said tract of land that it contains less than one hundred and sixty acres of tillable land for each person who, at the time, may be authorized to reside on it under the provisions of this treaty, and a very considerable number of such persons shall be disposed to commence cultivating the soil as farmers, the United States agrees to set apart, for the use of said Indians, as herein provided, such additional quantity of arable land, adjoining to said reservation, or as near to the same as it can be obtained, as may be required to provide the necessary amount.

ARTICLE 4. The United States agrees, at its own proper expense, to construct at some place on the Missouri River, near the center of said reservation, where timber and water may be convenient, the following buildings, to wit: a warehouse, a store-room for the use of the agent in storing goods belonging to the Indians, to cost not less than twenty-five hundred dollars; an agency-building for the residence of the agent, to cost not exceeding three thousand dollars; a residence for the physician, to cost not more than three thousand dollars; and five other buildings, for a carpenter, farmer, blacksmith, miller, and engineer, each to cost not exceeding two thousand dollars; also a school-house or mission-building, so soon as a sufficient number of children can be induced by the agent to attend school, which shall not cost exceeding five thousand dollars.

The United States agrees further to cause to be erected on said reservation, near the other buildings herein authorized, a good steam circular-saw mill, with a grist-mill and shingle-machine attached to the same, to cost not exceeding eight thousand dollars.

ARTICLE 5. The United States agrees that the agent for said Indians shall in the future make his home at the agency-building; that he shall reside among them, and keep an office open at all times for the purpose of prompt and diligent inquiry into such matters of complaint by and against the Indians as may be presented for investigation under the provisions of their treaty stipulations, as also for the faithful discharge of other duties enjoined on him by law. In all cases of depredation on person or property he shall cause the evidence to be taken in writing and forwarded, together with his findings, to the Commissioner of Indian Affairs, whose decision, subject to the revision of the Secretary of the Interior, shall be binding on the parties to this treaty.

ARTICLE 6. If any individual belonging to said tribes of Indians, or legally incorporated with them, being the head of a family, shall desire to commence farming, he shall have the privilege to select, in the presence and with the assistance of the agent then in charge, a tract of land within said reservation, not exceeding three hundred and twenty acres in extent, which tract, when so selected, certified, and recorded in the "land-book," as herein directed, shall cease to be held in common, but the same may be occupied and held in the exclusive possession of the person selecting it, and of his family, so long as he or they may continue to cultivate it.

Any person over eighteen years of age, not being the head of a family, may in like manner select and cause to be certified to him or her, for purposes of cultivation, a quantity of land not exceeding eighty acres in extent, and thereupon be entitled to the exclusive possession of the same as above directed.

For each tract of land so selected a certificate, containing a description thereof and the name of the person selecting it, with a certificate endorsed thereon that the same has been recorded, shall be delivered to the party entitled to it, by the agent, after the same shall have been recorded by him in a book to be kept in his office, subject to inspection, which said book shall be known as the "Sioux Land-Book."

The President may, at any time, order a survey of the reservation, and, when so surveyed, Congress shall

provide for protecting the rights of said settlers in their improvements, and may fit the character of the title held by each. The United States may pass such laws on the subject of alienation and descent of property between the Indians and their descendants as may be thought proper. And it is further stipulated that any male Indians, over eighteen years of age, of any band or tribe that is or shall hereafter become a party to this treaty, who now is or who shall hereafter become a resident or occupant of any reservation or Territory not included in the tract of country designated and described in this treaty for the permanent home of the Indians, which is not mineral land, nor reserved by the United States for special purposes other than Indian occupation, and who shall have made improvements thereon of the value of two hundred dollars or more, and continuously occupied the same as a homestead for the term of three years, shall be entitled to receive from the United States a patent for one hundred and sixty acres of land including his said improvements, the same to be in the form of the legal subdivisions of the surveys of the public lands. Upon application in writing, sustained by the proof of two disinterested witnesses, made to the register of the local land-office when the land sought to be entered is within a land district, and when the tract sought to be entered is not in any land district, then upon said application and proof being made to the Commissioner of the General Land-Office, and the right of such Indian or Indians to enter such tract or tracts of land shall accrue and be perfect from the date of his first improvements thereon, and shall continue as long as he continues his residence and improvements, and no longer. And any Indian or Indians receiving a patent for land under the foregoing provisions, shall thereby and from thenceforth become and be a citizen of the United States, and be entitled to all the privileges and immunities of such citizens, and shall, at the same time, retain all his rights to benefits accruing to Indians under this treaty.

ARTICLE 7. In order to insure the civilization of the Indians entering into this treaty, the necessity of education is admitted, especially of such of them as are or may be settled on said agricultural reservations, and they therefore pledge themselves to compel their children, male and female, between the ages of six and sixteen years, to attend school; and it is hereby made the duty of the agent for said Indians to see that this stipulation is strictly complied with; and the United States agrees that for every thirty children between said ages who can be induced or compelled to attend school, a house shall be provided and a teacher competent to teach the elementary branches of an English education shall be furnished, who will reside among said Indians, and faithfully discharge his or her duties as a teacher. The provisions of this article to continue for not less than twenty years.

ARTICLE 8. When the head of a family or lodge shall have selected lands and received his certificate as above directed, and the agent shall be satisfied that he intends in good faith to commence cultivating the soil for a living, he shall be entitled to receive seeds and agricultural implements for the first year, not exceeding in value one hundred dollars, and for each succeeding year he shall continue to farm, for a period of three years more, he shall be entitled to receive seeds and implements as aforesaid, not exceeding in value twenty-five dollars.
And it is further stipulated that such persons as commence farming shall receive instruction from the farmer herein provided for, and whenever more than one hundred persons shall enter upon the cultivation of the soil, a second blacksmith shall be provided, with such iron, steel, and other material as may be needed.

ARTICLE 9. At any time after ten years from the making of this treaty, the United States shall have the privilege of withdrawing the physician, farmer, blacksmith, carpenter, engineer, and miller herein provided for, but in case of such withdrawal, an additional sum thereafter of ten thousand dollars per annum shall be devoted to the education of said Indians, and the Commissioner of Indian Affairs shall, upon careful inquiry into their condition, make such rules and regulations for the expenditure of said sum as will best promote the educational and moral improvement of said tribes.

ARTICLE 10. In lieu of all sums of money or other annuities provided to be paid to the Indians herein named, under any treaty or treaties heretofore made, the United States agrees to deliver at the agency-house on the reservation herein named, on or before the first day of August of each year, for thirty years, the following articles, to wit:
For each male person over fourteen years of age, a suit of good substantial woolen clothing, consisting of

coat, pantaloons, flannel shirt, hat, and a pair of home-made socks.
For each female over twelve years of age, a flannel skirt, or the goods necessary to make it, a pair of woolen hose, twelve yards of calico, and twelve yards of cotton domestics.
For the boys and girls under the ages named, such flannel and cotton goods as may be needed to make each a suit as aforesaid, together with a pair of woolen hose for each.
And in order that the Commissioner of Indian Affairs may be able to estimate properly for the articles herein named, it shall be the duty of the agent each year to forward to him a full and exact census of the Indians, on which the estimate from year to year can be based.
And in addition to the clothing herein named, the sum of ten dollars for each person entitled to the beneficial effects of this treaty shall be annually appropriated for a period of thirty years, while such persons roam and hunt, and twenty dollars for each person who engages in farming, to be used by the Secretary of the Interior in the purchase of such articles as from time to time the condition and necessities of the Indians may indicate to be proper. And if within the thirty years, at any time, it shall appear that the amount of money needed for clothing under this article can be appropriated to better uses for the Indians named herein, Congress may, by law, change the appropriation to other purposes; but in no event shall the amount of this appropriation be withdrawn or discontinued for the period named. And the President shall annually detail an officer of the Army to be present and attest the delivery of all the goods herein named to the Indians, and he shall inspect and report on the quantity and quality of the goods and the manner of their delivery. And it is hereby expressly stipulated that each Indian over the age of four years, who shall have removed to and settled permanently upon said reservation and complied with the stipulations of this treaty, shall be entitled to receive from the United States, for the period of four years after he shall have settled upon said reservation, one pound of meat and one pound of flour per day, provided the Indians cannot furnish their own subsistence at an earlier date. And it is further stipulated that the United States will furnish and deliver to each lodge of Indians or family of persons legally incorporated with them, who shall remove to the reservation herein described and commence farming, one good American cow, and one good well-broken pair of American oxen within sixty days after such lodge or family shall have so settled upon said reservation.

ARTICLE 11. In consideration of the advantages and benefits conferred by this treaty, and the many pledges of friendship by the United States, the tribes who are parties to this agreement hereby stipulate that they will relinquish all right to occupy permanently the territory outside their reservation as herein defined, but yet reserve the right to hunt on any lands north of North Platte, and on the Republican Fork of the Smoky Hill River, so long as the buffalo may range thereon in such numbers as to justify the chase. And they, the said Indians, further expressly agree:
1st. That they will withdraw all opposition to the construction of the railroads now being built on the plains.
2d. That they will permit the peaceful construction of any railroad not passing over their reservation as herein defined.
3d. That they will not attack any persons at home, or travelling, nor molest or disturb any wagon-trains, coaches, mules, or cattle belonging to the people of the United States, or to persons friendly therewith.
4th. They will never capture, or carry off from the settlements, white women or children.
5th. They will never kill or scalp white men, nor attempt to do them harm.
6th. They withdraw all pretence of opposition to the construction of the railroad now being built along the Platte River and westward to the Pacific Ocean, and they will not in future object to the construction of railroads, wagon-roads, mail-stations, or other works of utility or necessity, which may be ordered or permitted by the laws of the United States. But should such roads or other works be constructed on the lands of their reservation, the Government will pay the tribe whatever amount of damage may be assessed by three disinterested commissioners to be appointed by the President for that purpose, one of said commissioners to be a chief or head-man of the tribe.
7th. They agree to withdraw all opposition to the military posts or roads now established south of the North Plate River, or that may be established, not in violation of treaties heretofore made or hereafter to be made with any of the Indian tribes.

ARTICLE 12. No treaty for the cession of any portion or part of the reservation herein described which may be held in common shall be of any validity or force as against the said Indians, unless executed and signed by at least three-fourths of all the adult male Indians, occupying or interested in the same; and no cession by the tribe shall be understood or construed in such manner as to deprive, without his consent, any individual member of the tribe of his rights to any tract of land selected by him, as provided in article 6 of this treaty.

ARTICLE 13. The United States hereby agrees to furnish annually to the Indians the physician, teachers, carpenter, miller, engineer, farmer, and blacksmiths as herein contemplated, and that such appropriations shall be made from time to time, on the estimates of the Secretary of the Interior, as will be sufficient to employ such persons.

ARTICLE 14. It is agreed that the sum of five hundred dollars annually, for three years from date, shall be expended in presents to the ten persons of said tribe who in the judgment of the agent may grow the most valuable crops for the respective year.

ARTICLE 15. The Indians herein named agree that when the agency-house or other buildings shall be constructed on the reservation named, they will regard said reservation their permanent home, and they will make no permanent settlement elsewhere; but they shall have the right, subject to the conditions and modifications of this treaty, to hunt, as stipulated in Article 11 hereof.

ARTICLE 16. The United States hereby agrees and stipulates that the country north of the North Platte River and east of the summits of the Big Horn Mountains shall be held and considered to be unceded Indian territory, and also stipulates and agrees that no white person or persons shall be permitted to settle upon or occupy any portion of the same; or without the consent of the Indians first had and obtained, to pass through the same; and it is further agreed by the United States that within ninety days after the conclusion of peace with all the bands of the Sioux Nation, the military posts now established in the territory in this article named shall be abandoned, and that the road leading to them and by them to the settlements in the Territory of Montana shall be closed.

ARTICLE 17. It is hereby expressly understood and agreed by and between the respective parties to this treaty that the execution of this treaty and its ratification by the United States Senate shall have the effect, and shall be construed as abrogating and annulling all treaties and agreements heretofore entered into between the respective parties hereto, so far as such treaties and agreements obligate the United States to furnish and provide money, clothing, or other articles of property to such Indians and bands of Indians as become parties to this treaty, but no further.

In testimony of all which, we, the said commissioners, and we, the chiefs and headmen of the Brulé band of the Sioux nation, have hereunto set our hands and seals at Fort Laramie, Dakota Territory, this twenty-ninth day of April, in the year one thousand eight hundred and sixty-eight.

11 Tribal Sovereignty Movements Compared

The Plains Region

Loretta Fowler

Plains tribes are among the "energy tribes" of the Western states. In 1938 they gained more control over energy development, but in the 1980s, even with a favorable Supreme Court decision in 1982, control over income from minerals remained problematic (table 2, 1938; table 5, 1982; table 6, 1985, 1989). Today, isolated from markets, they are impoverished despite their mineral wealth. In Western states, oil and gas, coal, and uranium are important to both state and tribal economies. Tribal leaders struggle to protect and develop resources and ward off state efforts to siphon off income from mineral development. There are pressures for tribes to negotiate with states over shared taxation.[1] Fowler's chapter discusses how tribal control over management, distribution of income, and environmental impact affects relations between grassroots community groups and elected officials, and she addresses the social repercussions of negotiation for tribes attempting to exercise sovereignty.

The tribal sovereignty movement has taken hold in all High Plains communities. Yet sovereignty is implemented in different ways, aspects of sovereignty are given different degrees of emphasis, and sovereignty agendas may be based on community consensus or subject to contention between officials

Figure 8. An American Indian Movement rally in South Dakota to oppose the reinstatement of a local sheriff accused by the community of discriminatory behavior toward Native Americans. David Bartecchi and Kathleen Pickering © 2004. Used with permission.

and grassroots groups. Through a comparison of twelve communities in South Dakota, Montana, Wyoming, and Oklahoma during the 1990s, I situate sovereignty movements within regional and local contexts to examine how different political views and choices about economic and cultural rights emerge.[2] A focus on the local exercise of sovereignty complements a large literature that deals almost exclusively with federal policy and legal cases in the sovereignty movement in the United States.[3]

State by state, I discuss how state–tribe relations influence commitment to the exercise of tribal sovereignty. I also describe the political organization of each tribe in the state and examine how that organization affects the local expression of sovereignty. What the comparisons show is that, first, for a tribe to attempt to exercise sovereignty fully, grassroots commitment is necessary and grassroots commitment to sovereignty issues is influenced by state actions, especially by the perception of state violence against Indians

(figure 8). The greater the fear of violence, the greater the support for a sovereignty agenda. Second, where defense of a homeland (maintaining control over a sizable land base or recovering land through a treaty-based claim) is possible, grassroots groups can be more easily mobilized to support the exercise of tribal sovereignty. Third and finally, the more that political authority is diffused in a community, the more likely that broad-based consensus exists between grassroots groups and officials. In fact, grassroots groups have been working toward greater participation in self-determination by supporting constitutional revisions that decentralize tribal government.

South Dakota.

Earl Bordeaux, one of the Rosebud councilmen, remarked: "Look what the State of South Dakota is doing to her Indians, you know. They show in a glowing picture. Those of us who live within the State of South Dakota really know the spirit of the South Dakota non-Indian world. It's not a true reconciliation. They won't recognize our Treaty Rights. They won't recognize our jurisdiction." Suspicion and hostility appear to be mutual. The four Sioux reservations in the western part of the state are large: Pine Ridge is 3.1 million acres; Rosebud, 3.2 million acres; Cheyenne River, 2.8 million acres; and Standing Rock, 2.7 million acres. In the 1990s all these reservations were in conflict with the state over several issues, one of which was juvenile justice. Sioux people argued that the state judicial system was biased against the Sioux. In fact, South Dakota's incarceration rate was the highest for a state with an Indian population. Sixty percent of youths in South Dakota's prison system were Indian; yet Indians made up only 10 percent of the population in the state. In contrast, in Montana, youths composed 25 percent of the prison population, and the state's Indian population was 6.5 percent; in Oklahoma, youths were 18 percent of the prison population, and Indians, 8.1 percent of the state population. Sioux advocates referred to Indians as a "cash crop" in the state, where Indians were discriminated against in terms of fines. Child custody was another point of contention. South Dakota had the highest rate of termination of Indian parents' rights in the nation; 60 percent of cases were Indian. The state and the tribes battled over highway jurisdiction, game and fish regulations, and taxation in Indian Country. Also, the tribes took special umbrage at the state's opposition to the return of tribal land not used by the Oahe Dam project.[4]

The Oglala Sioux Nation of the Pine Ridge Reservation has a history of conflict between "hostiles" and "friendlies" that pre- and postdates reservation settlement. The American Indian Movement precipitated an "Indian Renaissance," to use Herbert Hoover's terminology, and, from the 1970s

on, the sovereignty movement grew. The number of participants increased significantly as the years passed, and, in the aftermath of the civil war during the Wounded Knee takeover, there was a reconciliation of sorts between the hostiles and the friendlies (who were both Full and Mixed Bloods, sociologically and culturally defined). By the 1990s the sovereignty agenda had extensive and passionate grassroots support, nourished by the State of South Dakota's intransigence over sovereignty questions and its general pattern of state violence toward Indians.[5]

On Pine Ridge (settled by Lakota Sioux of the Oglala division) during the 1990s, Oglala political organization was based on the principles of diffusion and circumscription of leadership. The elected tribal council consisted of eighteen representatives from districts in which they resided. The districts had councils of representatives from smaller "communities" within each district. The districts effectively exerted pressure on their representatives. Much of the tribal council's work was done by committees and boards made up of people from all the districts, as well as tribal council members. Districts also administered tribal and private funds, as did political advocacy groups that crosscut districts. During the 1990s the tribal council was committed to mitigating tensions between the council and the people in districts and advocacy groups (such as treaty committees, women's rights organizations, and the tribal college movement).[6]

These advocacy groups pursued an aggressive sovereignty agenda. Petitions from grassroots groups dissuaded the tribal council from waiving sovereignty to get a bank loan, and petitions helped persuade the tribal council to file a court case against South Dakota for trespass by law enforcement agencies. The constitution (accepted along with the Indian Reorganization Act) was revised in 1985, and voters eliminated provisions that the secretary of the interior had to review tribal council decisions. After the successful claim filed against the federal government for the violation of the Treaty of 1868 (described by one leader, Harold Salway, as "divine intervention from the spirit world"), the grassroots community in the 1990s consistently rejected a monetary settlement (see table 5). "The Black Hills is not for sale" has been central to the ideology of the sovereignty movement and used by communities to reject the establishment of dumps or the building of pipelines on community land. The tribal law and order code was revised in response to grassroots pressure. In 1996 the tribal court adopted a position of leniency in sentencing, stressing rehabilitation instead. Counseling and supervision by groups of elders became mandatory in domestic abuse cases. Court decisions could be reviewed by a board of elders, and officers of the court did not have to have law degrees. Even though the reservation community was very poor and the tribal government had to rely on taxes

(of business activity on tribal land, usually non-Indian businesses) and federal programs, public sentiment favored precedence of treaty and cultural rights over economic development projects or per capita payments. As one leader at Oglala Lakota College explained, they were "beginning an intellectual revolution" in order to reverse the damage done to them by "alien concepts."[7]

The other three Sioux reservations also participated in the Indian Renaissance. Passionate support for a sovereignty agenda existed at Rosebud, and considerable grassroots commitment to it, at Cheyenne River and Standing Rock in the 1990s. All three reservation communities rejected a monetary settlement for the Black Hills. Charles Murphy, a Standing Rock leader, remarked, "We cannot forget the sufferings our people endured by signing these treaties—that is our driving force [that their suffering will not be in vain]." At Rosebud (settled largely by Lakota Sioux of the Brule division), the tribal council officers were elected at-large, and eight districts elected community residents as representatives to the tribal council. Each district also elected a council that chose officers, held meetings, met with the tribal council, and owned enterprises. A recent amendment to the IRA constitution eliminated provisions that required review of tribal council actions by the secretary of the interior. Only 27.2 percent of the reservation land is Indian owned (compared with 55 percent at Pine Ridge), which feeds the conflict between Indian and white residents. Descendents of four Lakota Sioux tribes settled on the Cheyenne River Reservation, 49.5 percent of which is Indian owned. An IRA constitution provided for a tribal council with officers elected at-large and councilmen elected from thirteen districts. Districts also had councils with elected officers. Standing Rock (which straddles North and South Dakota) was settled by people from two divisions of the Lakota Sioux and from Yanktonais bands, whom the United States regarded as hostile factions resisting the surrender of the Black Hills. Sitting Bull was a symbol of resistance and, after he was murdered on the reservation, a martyr to the cause. Like the residents of Cheyenne River, these Sioux were particularly damaged by the Oahe Dam. Only 32.1 percent of reservation land is Indian owned. Land recovery has been a major issue here, and the constitution requires that sale, exchange, or leasing of tribal lands be approved by a vote of the membership. Standing Rock rejected the IRA but adopted a constitutional government: the tribal council officers are elected at-large, six members of the council are elected at-large, and eight are elected from eight districts. Tribal council members are required to attend district council meetings. In the 1990s multiple committees took responsibility for programs and other activities on the reservation, including defending treaty rights.[8]

Montana.

Montana is less overtly hostile than South Dakota, although not really supportive of Indian communities. Backlash usually follows state legislature efforts to support Indian issues, but Indians have some leverage with the Democratic Party and moderate Republicans because the Indian vote can determine the outcome of close elections in some parts of the state. Whereas the Sioux in western South Dakota were regarded as "hostile," only two tribes in Montana had this kind of reputation. Despite the seemingly greater tolerance in Montana than in South Dakota, state officials have opposed even changing place names that are offensive to Indians (for example, Custer Battlefield and geographical features named Squaw). Indian leaders have complained of state violence and discrimination against Indians in judicial, child custody, and welfare matters. Compared with the Sioux tribes in South Dakota, the Blackfeet, Crow, Fort Peck Assiniboine and Sioux, Northern Cheyenne, and Fort Belknap Assiniboine and Gros Ventre have less grassroots involvement in the sovereignty movement generally, although people from all these communities once participated in a mass demonstration to protest "anti-Indian" legislation. In Montana, grassroots passion usually focused on local, land-related issues in the 1990s. Most of these tribes were better off economically than the tribes in South Dakota. In fact, almost 48 percent of Indian families in South Dakota had incomes below the poverty level; at Pine Ridge and Rosebud, a higher percentage. In Montana, the percentage for impoverished Indians in the state was 39 percent. At Fort Peck, it was 46 percent; Northern Cheyenne, 43 percent; Fort Belknap, 37 percent; Crow, 32 percent; and Blackfeet, 31 percent. Subsistence hunting and fishing were important, to some degree, on all these large reservations.[9]

The Blackfeet have a 1.5 million-acre reservation and were relatively wealthy in oil and gas in the 1990s. Together, the tribe and individual Blackfeet owned 63 percent of the reservation. Some of that land was in fee status, owned by nonmembers who were descendants of Blackfeet; this land was in jeopardy of passing out of Indian ownership. Despite the mineral resources, 64 percent were unemployed. The tribe used most of its income from oil and gas for social programs, attorneys, and land purchase, but, at public insistence, a portion went to make one or two small per capita payments a year.[10]

Most authority was concentrated in the business council, which had nine members elected at-large from four districts. To run as a district representative, an individual had to reside in the district but did not have to win a majority of votes in that district. The business council appointed committees that included people from the districts (but did not always respond to

their concerns). An honorary council of elderly men, all Blackfeet speakers, who had lifetime appointments and were selected by the business council, was the most important mitigating influence on the business council, although the former was not mentioned in the constitution.[11]

The constituency had less input than was the case on the Sioux reservations, and the grassroots support for a sovereignty agenda was less pervasive or wide ranging. Leadership for sovereignty implementation primarily came from the business council, except for protection of wilderness areas, in which several grassroots groups took passionate interest. Speaking in opposition to proposals to drill for oil in a wilderness area, Leland Ground linked religious duty to prevention of drilling: "In the name of Creator, don't do this." The business committee focused on negotiating with Montana on legal jurisdiction, water, and taxation issues. On one hand, their constituents expressed concern that these efforts would undermine Blackfeet sovereignty, frequently charging that the council would not properly manage tribal assets. On the other hand, constitutents supported land purchase and lobbied the business council to file suit against the United States for fraudulent land sales. The Blackfeet constitution (accepted under the auspices of the Indian Reorganization Act) was revised to allow the business council to buy fee land. In fact, part of the tribe's income was used annually to buy land.

In an 1895 agreement between the Blackfeet and the United States, the land that is now Glacier Park was transferred to the United States. The Blackfeet people believe that they did not cede the rights to hunt, fish, gather wood and other plants there, and visit and protect sacred sites in the park. Michael Desrosier put it this way: "Ever since we live in the country, we camp, hunt, gather from the mountains, and, since horses, graze them there. We have lived and died, we have played and dreamed and roamed those mountains and hills for more than a thousand years.... It belongs to us and we belong to it." During the 1990s grassroots organizations demonstrated and sought international support for Blackfeet rights there, and the honorary council pressured the business council to sue to establish Blackfeet rights in the park. The business council cooperated with grassroots organizations, such as traditionalist groups, and with individuals whose rights to operate businesses in the park were challenged by park officials. Many Blackfeet supported a traditionalized tribal fish-and-game program—for example, with no hunting seasons for people in need and designated hunters for the elderly.[12]

The Crow, who have a history of alliance with Americans in the nineteenth century, have a 2.2 million-acre reservation, with large deposits of coal and oil in their home territory. In the 1990s the Crow was the wealthiest tribe in Montana. The tribe and Crow individuals owned 65 percent of the land, but some of it was in fee status. The Crow used tribal income for

some land purchase, small per capita payments, and job creation to supplement federal programs. Unemployment was high—57 percent.[13]

The Crow's 1948 (non-IRA) constitution provided that every two years the Crow elect four officers. These officers managed the tribe's programs and represented the tribe to the state and federal governments. The constitution also provided that major decisions and budget ratification were the responsibility of the "tribal council," a meeting open to all adult Crows. By tradition, decisions have been made by voice vote or "walking through the line" (standing with representatives of a position). Both practices subjected participants to peer pressure. Thus, clan leaders and/or tribal officials often have had the opportunity to influence tribal members to support a particular position. Also, a committee of district representatives—two elected officials from each of the six districts and two from off the reservation (Billings)—were supposed to offer advice to the four tribal officials. Frequently, the district elections were by acclamation; in practice, these representatives have had little influence. In 2001 the Crow amended the constitution, most significantly, to provide for separation of executive, legislative, and judicial powers—a checks and balances system. Representatives from six districts thereafter constituted a "legislative branch," which could adopt ordinances and codes and approve executive (the four officers') decisions. The executive branch could veto legislation, and tribal members elected judges.[14]

In the 1990s grassroots people and tribal officials alike viewed the United States' disregard of the Crow Act of 1920 as a serious betrayal in light of the support the Crow gave the United States during the Indian wars. This act, which provided for allotment, precluded non-Indians from owning more than 3,200 acres of reservation land. In fact, non-Indians acquired much more, and many Crows were unilaterally given fee patents on their land; therefore, less than half the reservation is in trust status. The land issue and associated water rights were the driving force of a grassroots-supported sovereignty agenda, largely because ranching is important to Crow identity. The Crow Tribe pursued legal action in the Crow Act case, despite the expense. Tribal officers also have obtained tribal council consent to buy land and to pay taxes on fee land owned by Crows so that the land would not be sold to non-Indians. Crow officials retained consistent public support through the 1990s by using a large portion of tribal income for job creation. Unemployment dropped by half, and the tribal employees increased from 450 in 1989 to 1,300 in 2000. In 2000 most of the tribe's $12 million budget was spent on wages. Some income from leasing tribally owned land and minerals was used for moderately-sized per capita payments. Income from court settlements against corporations was programmed, for example, to help the Little Big Horn College and the tribal court (whose judges are

fluent in Crow). But the tribal college, established in 1980, was not as central to the sovereignty agenda as on Sioux reservations. In 1990 the college president, commenting on the college's recent accreditation noted, "People will start to believe that we are a real school now."[15]

At Fort Peck are Assiniboines, historically allies of the United States, and Sioux, who agreed to peace when they settled there. The Fort Peck Reservation is 2 million acres, only 43 percent of which is Indian owned. More than 56 percent is in fee status, creating a reduced land base for development and conflict over jurisdiction with the state (for example, over hunting and fishing on fee land within the reservation). Half the residents are non-Indians, and they have controlled the school system on the reservation. Unemployment was about 53 percent in the 1990s, even though the tribes had the largest income from oil in the state. Tribal income was used to purchase land, purchase and support tribally owned businesses, and supplement federal programs. The tribes made a small, annual per capita payment from the mineral leases and tax income.[16]

The Tribal Executive Board (TEB)—twelve representatives, a chair, vice chair, and sergeant-at-arms, all elected at-large every two years—managed the tribal businesses, programs, and income. This body was very stable throughout the 1990s, with most incumbents achieving re-election. The 1960 non-IRA constitution (amended in 1971) provided for the possibility of a "general council" to initiate a decision or reject enactments by the TEB, but meetings of the general council of adult enrolled members have been rare (only one in the 1990s). Authority and resources were broadly diffused (as was the case on Sioux reservations in South Dakota). In addition to the TEB, there were several "community organizations," the largest and most important of which were Poplar (a Sioux community) and Wolf Point (an Assiniboine community). These organizations elected officers, had sizable budgets (from treaty claim settlements), owned their own businesses in the community, gave assistance to individuals, and had control over some programs. They obtained loans and funds from the TEB. There also were two tribal organizations with elected officers that managed funds from treaty claim settlements. They made per capita payments, operated businesses, and bought land. In addition, the TEB appointed community members to all the boards that directed tribal businesses, the tribal college, and certain programs and to the oversight committees and commissions (for example, the fish and wildlife commission).[17]

Some grassroots groups pursued particular sovereignty issues and, toward that end, effectively put pressure on the TEB. People in the communities were outraged at the state's attempt to interfere with the traditional ways they had handled hunting and fishing on the reservation. The reservation has had a

tradition of restricting hunting and fishing to Indians even though half the residents are non-Indians. Tribal fish and wildlife officers enforced tribal code. Through public pressure, grassroots communities prevented the TEB from negotiating an agreement to share authority with the state. The communities also spearheaded an effort to tribalize the educational system on the reservation, by working to elect Fort Peck Assiniboine and Sioux individuals to school boards and by supporting Native language and culture curriculum. However, the constitution still required that the secretary of the interior review TEB actions with regard to non-Indians on the reservation, the tribal court system, and loans and contracts to which the tribal government was party. And the Sioux at Fort Peck expressed willingness to accept money for the Black Hills treaty claim.[18]

After the Northern Cheyenne ended their war with the United States and settled on their reservation in 1884, they embarked on a strategy of isolation, determined to maintain their traditions. In fact, the tribe waives a one-half blood requirement for membership for individuals who reside in the reservation community. At 445,000 acres, their reservation is one of the smallest, but the tribe and Cheyenne individuals own 99 percent of the land. In the 1990s they did not exploit potential mineral wealth but rather concentrated on negotiating for jobs in local, energy-related industries and the Tongue River Dam project. Unemployment was about 50 percent. Leases on grazing land and timber and taxes were the main sources of tribal income; much of it has been used for small per capita payments. Tribal income in the 1990s was very low compared with that of the Blackfeet, Crow, and Fort Peck, but tribal leaders in prior decades had made a policy of buying back all the land alienated after allotment and had obtained federal assistance to do that.[19]

In 1935 the Cheyenne accepted the Indian Reorganization Act and a constitutional government, largely to enable the older, traditionally oriented men to gain more political influence during a time when the tribal government was dominated by younger, "progressive" men. The constitution was revised in 1960. It provided for a president elected at-large and a tribal council elected by the districts in which they lived (ten individuals from five districts). The districts have had frequent meetings. The 1960 constitution required that the secretary of the interior review most of the tribal council's actions. In 1996 the constitution was amended again: Cheyennes approved a "separation of powers" provision so that some tribal judges attained office by election and some (appellate judges) by appointment by the tribal president. In the 1990s there was great turnover in the positions of president and council member, producing instability in leadership and policy. This pattern developed, in large part, because of disagreement over coal leases.[20]

The issue that generated the most grassroots passion in the 1990s was the plan for the creation of a reservationwide school district so that Cheyennes could control the education of their children, who were bused off the reservation. Cheyenne communities worked on this project for thirty years and finally succeeded in 1994, overcoming strenuous opposition from the local, non-Indian-controlled school districts. They obtained money from Congress to build the school. "Traditionalists" have been very influential in grassroots politics. They have resisted coal mining on the reservation, because it would bring outsiders to their community and would damage the environment: these objections were presented as tradition or religion based. Conflict erupted over this decision because many Cheyennes wanted the per capita payments that coal mining would bring. Cheyenne leaders, working with environmental groups, focused on negotiating air quality agreements with companies near the reservation. Traditionalist interest groups also put pressure on the tribal council to create a leadership sphere for themselves in response to repatriation issues following NAGPRA and issues associated with the Sand Creek Massacre (see table 6). The tribal court has used a traditional model of social control relatively more than the other Montana reservations.[21]

The Gros Ventre and Assiniboine, historical allies of the United States, share Fort Belknap Reservation. The cession of the southern portion of the reservation in 1895 removed from their control the major mineral resources on the 650,000-acre reservation. The reservation land is 95 percent Indian owned, but the tribes (which own about 28 percent of the land) received little income from leasing tribal land. With no mineral resources on the reservation, the Fort Belknap community government was largely dependent on federal programs and contracts, and the reservation had an unemployment rate of 52 percent. Fort Belknap leaders attempted to sue in order to force the state to negotiate a gaming compact, but their suit was unsuccessful, as was an attempt to stop mining companies from polluting the water on the reservation. Elected leaders negotiated agreements with the state concerning taxes and water; Fort Belknap tried unsuccessfully to secure the right to market water.[22]

In 1935 Fort Belknap accepted a constitution under the auspices of the Indian Reorganization Act and instituted a twelve-member community council consisting of six Gros Ventres and six Assiniboines elected at-large. The constitution required that the secretary of the interior review most of the council's actions. In 1993 the constitution was amended; thereafter, the community council consisted of two Gros Ventres and two Assiniboines elected by their respective districts and a president and vice president elected at-large. The president–vice president team consisted of one Assiniboine and

one Gros Ventre tribal member. The 1993 constitution also provided for the recall of these officials. There is a Gros Ventre treaty committee and an Assiniboine treaty committee, each with its own funds.[23]

In the 1990s grassroots efforts at Fort Belknap centered on amending the constitution to allow for more community participation and for acknowledgment of tribal identity, as well as on revising the law code. In the new 1999 code, the judges of the tribal court are appointed by the community council; judges must have a high school diploma. Laws regarding fish and wildlife conservation and child welfare received the most attention. Regarding fish and wildlife conservation, the Fort Belknap community assumed exclusive jurisdiction over non-Indians on trust land and established a committee of community members to oversee the tribes' Fish and Wildlife Department. The code authorized cooperative agreements with the state, county, and federal governments. It was to be enforced by tribal officers or federal officers; state conservation officers would need an agreement in place before they could enforce the code, and they would have to institute proceedings in tribal court.[24]

Wyoming.

In Wyoming, there is only one reservation, shared by the Eastern Shoshone and the Northern Arapaho. The Indian population in Wyoming is only 3 percent of the total and has less clout than the Indians in Montana, even though the oil and gas resources on the Wind River Reservation make it the wealthiest of all the reservations considered here. The state has shown great intransigence toward Wind River sovereignty, forcing the tribes there to go through expensive court proceedings over water rights and other matters of jurisdiction. Even when the water rights case was decided in Wind River's favor in 1989, the state refused to cooperate in the administration of those rights.[25]

Eighty-five percent of the oil and gas income is distributed in monthly per capita payments (from 40 to 325 dollars a month). The tribal governments rely on the remaining 15 percent, plus money from taxation, to hire legal assistance and create jobs by establishing tribally owned businesses. During the 1990s unemployment was about 51 percent, and 39 percent of the families lived below the poverty line. The establishment of fisheries and businesses that take advantage of the huge 118,000-acre wilderness area on the reservation has been thwarted by the state's opposition to the tribes' exercising their water rights.[26]

Each tribe has its own six-member business council, elected at-large every two years, and each has a general council (a meeting of voters) that can overrule the business council, initiate policy, and even disband the busi-

ness council and hold a new election. A combined Shoshone-Arapaho business council has responsibility for managing the tribally owned trust lands. Neither tribe adopted a constitution, and both rejected the Indian Reorganization Act. The lack of a constitution is regarded as the perpetuation of "tradition." This means that the business councils must have the general councils' support for the sovereignty agenda.

The large 2.3 million-acre reservation is 90 percent Indian owned, but water rights are an issue. Arapahos boycotted merchants in neighboring towns for several weeks to protest lack of support for the tribes' "treaty-based water rights," a matter of "dignity" and "respect," and fairness, one council member insisted. Shoshone councilman Wes Martel explained that, in the matter of water rights, the "Creator and Creation" guided them. Both general councils have supported the pursuit of water rights. In the 1990s the Arapaho general council approved the separation of joint Shoshone and Arapaho federal programs into tribally controlled ones. With general council approval, Arapaho elders initiated a Native language program with tribal funding, and Shoshones, a cultural center. In the late 1960s the Arapaho led the successful effort to tribalize the school system on the reservation. During the 1990s, even with considerable turnover on the business councils, there was consistency in sovereignty goals. Also, in an effort to diffuse authority, the general councils created boards of tribal members to oversee tribal businesses, economic development, and water resources.[27]

Oklahoma.

In western Oklahoma, the non-Indian and the Cheyenne, Arapaho, Kiowa, Comanche, and Plains Apache populations live in small towns, where their children attend the public schools. In the 1990s Indians made up about 8 percent of the state population, but less in western Oklahoma. Nineteen percent of Indian families in the state had incomes below the poverty level; among the Cheyenne and Arapaho, 23 percent, and among Comanche, 27 percent on average—significantly lower than on Northern Plains reservations. Western Oklahoma Indians have access to urban centers, where they obtain employment, and these areas are close enough to allow them to return to western Oklahoma for tribal meetings and celebrations. State violence against Indians is less an issue here than on the Northern Plains. The majority population in Oklahoma employs romantic Indian imagery mostly to promote tourism. In eastern Oklahoma, where there has been extensive intermarriage with non-Indians, state officials often promote projects that recognize Indian heritage. Yet in western Oklahoma the treatment of Indians has come under fire by the civil liberties organizations. As I have argued

elsewhere, the majority population has promoted an Indian imagery that works to marginalize and trivialize the Indian way of life, as well as undermine Indian confidence in their own political institutions.

The Cheyenne and Arapaho settled on a reservation in western Oklahoma in 1869. After the reservation was allotted in 1892, the federal government permitted the ownership of the remaining "surplus lands" to pass into the hands of non-Natives. About 10,000 acres were assigned to the federal government and have since been recovered and put in trust status, owned by the tribes. The tribes' oil and gas income is derived from these lands. Most of the allotments eventually were sold.

During the 1990s the elected Cheyenne-Arapaho business committee initiated efforts to implement sovereign rights over trust land, primarily so that they could generate income on these lands. The business committee has eight members, four from two Arapaho districts and four from four Cheyenne districts. There is no residency requirement for candidates or voters. The Arapaho and Cheyenne pre–World War II rural communities have largely been replaced by housing projects in small, multiethnic towns. The constitution written under the auspices of the Oklahoma Indian Welfare Act (and amended in 1975 and 1993) provided for an annual meeting of the general council, as well as a business committee (see table 2). Although the meeting is open to all enrolled tribal members, about 75–130 people attend, and here they vote on a budget presented by the business committee. All the tribes' income from oil and gas is budgeted for a small, annual per capita payment. In the 1990s the business committee operated as independently of the general council as possible.

The Cheyenne-Arapaho business committee drove the sovereignty agenda. Its constituents supported the committee in the unsuccessful struggle to prevent the state from taking income from cigarette and fuel businesses on trust land, but the general council voted down land-buying proposals and there was no grassroots sentiment for such an effort. Cheyennes and Arapahos celebrated Native traditions in powwows, but no grassroots pressure for a tribal college emerged. Most Cheyenne and Arapaho people favored the per capita distribution of all tribal income (although not all tribal income can be distributed per capita, because of federal constraints). The business committee implemented a program to tax non-Indian and tribal businesses, despite objections from constituents, and this income largely supplemented federal programs. There was no grassroots pressure to traditionalize the tribal court, although, in sentencing, the code provided for banishment, which reflects Cheyenne legal tradition. Cheyennes and Arapahos generally did not view their tribes or the combined tribes as a corporate entity within which individuals are subsumed. Rather, the "tribe" was viewed as a collection of individual

members, each with an equal share in whatever resources the tribe has. The sovereignty movement was kept alive and pursued by a small group of elected officials either descended from the chiefs who fought and eventually won payment for the United States' violation of the 1851 treaty or from individuals who were exposed to American Indian Movement ideology in the 1970s while living in cities away from western Oklahoma.[28]

The Comanche Nation lost most of its reservation land at the time of allotment but in the 1990s had some income from oil on the remaining trust land. The Comanche refused to organize their government under the Oklahoma Indian Welfare Act but eventually adopted a constitution. The Comanche constitution provides for a tribal council, which meets at least once a year and has authority to approve budgets and leases and contracts on tribal property. Comanche voters also elect a seven-member (including three officers) business committee at-large. As among the Cheyenne and Arapaho in the 1990s, grassroots political activity focused on revising the constitution to restrict the business committee's powers. In the revised constitution, voters did not strike a provision that required the secretary of the interior to review tribal council actions. They did change enrollment requirements so that descendants of allottees need one-eighth Comanche ancestry (instead of one-fourth) to be members of the Comanche Nation. Opposition to business committee actions interfered with the development of several projects, but the business committee contracted programs, issued licenses, and operated small businesses.[29]

Comparisons and Conclusions

Tribal officials in all the Plains communities saw the exercise of sovereignty as entwined with control over tribal land and resources. Where they could generate income from energy resources and businesses established on tribal land, they tried to commit at least some of that income to strengthening the tribe as a corporate entity, for example, by buying land and putting it in tribal ownership. Grassroots commitment to a sovereignty agenda, however, was an equally important component of sovereignty movements. Tribal officials' success largely depended on the extent to which grassroots groups supported their goals. With strong grassroots support, there also were aggressive efforts to protect and extend cultural rights, for example, to indigenize the educational system. The extent to which the exercise of sovereignty had grassroots support depended on several factors: tribal–state relations, a "sustainable homeland," and a tribal government that allowed for diffusion of authority.

The degree to which grassroots people believed that they had a problem

with state-supported violence against Indians varied among the four states considered here. Indians were visible minorities in Plains states and owned significant amounts of land in trust status—more so in some states than in others. Presumably, states with larger Native populations acted in response to a perceived threat. In any case, during the 1990s grassroots commitment to tribal sovereignty was greatest where Native people most feared state violence.

Plains communities were established as the result of treaties, but some land bases offer more potentially sustainable homelands than others do. A sustainable homeland has adequate economic resources to enable its residents to have real control over economic development, education, health care, and other aspects of life. Where the grassroots community was committed to the defense of a sustainable homeland, tribal members viewed the "tribe" as a corporate entity and supported investing tribal income to augment and protect the land base rather than distribute all tribal income per capita. Defense of homeland was rooted in collective memories about the treaty era in which these homelands were established in South Dakota, Montana, Wyoming, and Oklahoma. Treaty symbolism propelled modern sovereignty agendas and was linked to ideas about the connection between contemporary and ancestral peoples and among the natural, social, and sacred realms of life. During the 1990s tribes with sustainable homelands (Blackfeet, Crow, Northern Cheyenne, Northern Arapaho, Sioux, and Assiniboine) or potentially sustainable homelands (Sioux of South Dakota), which included wilderness areas and mineral resources, had some grassroots commitment to a broad sovereignty agenda and to resistance to compromises with states. The Gros Ventre and Assiniboines and the tribes of western Oklahoma have homelands that currently lack substantial economic resources.[30]

The exercise of sovereignty by tribal governments created conditions for alienation of constituents from elected leaders. A constitutional revision movement emerged on many Plains reservations. These movements worked for greater diffusion of authority. Where authority was widely diffused, grassroots support for sovereignty goals developed, and the idea of tribal corporateness was strengthened. Where there was little effort to diffuse authority, an individualized notion of "tribe" prevailed, and public pressure developed to distribute all tribal resources per capita.

In the 1990s grassroots commitment was greatest among the Sioux of South Dakota, who exhibited the most fear of state violence. Among these Sioux was passionate support for multiple spheres of a sovereignty movement: recovery of the Black Hills, protection of the homeland environment, protection of legal jurisdiction on reservation land, and cultural rights (especially an indigenized tribal court and educational system). The Sioux

had a strong sense of "tribe" as a corporate entity, and they had the most developed system for the diffusion of authority positions.

At the other extreme, in western Oklahoma, Native people lived in counties where non-Indians outnumbered them ten to one. The tribes' land base is very small. The fear of state violence was less than on the Northern Plains. There was little grassroots commitment for and considerable controversy over a sovereignty agenda, and that agenda, which was pursued by elected officials, was narrowly defined (collection of taxes and establishment of businesses to generate income for distribution). In western Oklahoma, an individualized notion of "tribe" prevailed, and sporadic efforts to diffuse authority positions throughout the Native community have not succeeded.

Federal policy changes in the 1970s and 1980s opened the door for aggressive pursuit of sovereignty agendas. But the growth and direction of sovereignty movements on the Plains also was influenced by local circumstances and local views—and by Indian people taking the initiative and developing localized versions of sovereignty and sovereignty goals.

THE CASE OF THE AMERICAN INDIAN AGAINST THE FEDERAL GOVERNMENT OF THE UNITED STATES –

AS DOCUMENTED IN TREATIES, SPEECHES, JUDICIAL RULINGS, CONGRESSIONAL BILLS AND HEARINGS FROM 1830 TO THE PRESENT.

OF UTMOST GOOD FAITH

EDITED BY
VINE DELORIA, JR., AUTHOR OF
CUSTER DIED FOR YOUR SINS

Shoshone-Bannock Agreement of 1888

The following excerpt indicates that the phrase, "in common with other citizens," was used with reference to an agreement with the Shoshone and Bannock Indians of Fort Hall in order to settle whites on the Indian lands. It thus gives the whites equal rights to water with the Indians even though federal doctrines have affirmed that the Indians are entitled to water rising on or flowing through the reservation.

It remains to be seen whether or not there will be an equitable settlement of the fishing rights problem in Washington. The Indians would certainly win if the court interpreted the phrase consistently with its meaning in this agreement since the whites have certainly had their right to water upheld.

An Act to accept and ratify an agreement made with the Shoshone and Bannock Indians, for the surrender and relinquishment . . . of a portion of the Fort Hall Reservation . . . , for the purposes of a town-site, and for the grant of a right of way through said reservation to the Utah and Northern Railway Company.

SECTION 10. That the citizens of the town hereinbefore provided for shall have the free and undisturbed use in common with the said Indians of the waters of any river, creek, stream, or spring flowing through the Fort Hall Reservation in the vicinity of said town, with right of access at all times thereto, and the right to construct, operate, and maintain all such ditches, canals, works, or other aqueducts, drain, and sewerage pipes, and other appliances on the reservation, as may be necessary to provide said town with proper water and sewerage facilities.

(September 1, 1888)

Great Sioux Agreement
25 Stat. 888 (1889)

Some years after the great plains wars, pressure grew to allot the Great Sioux reservation which extended over almost all of western South Dakota. Thousands of hungry whites, demanded that the vast reservation be allotted and the surplus lands be opened to white settlement. Thus, it was that General Crook, "Three Stars," was sent out to negotiate the Great Sioux Agreement of 1889. With Crook sitting at the table the Sioux were reminded that if they didn't agree to cede their lands the Army would come in and exterminate them. In spite of such pressures by the United States government less than ten per cent of the adult males signed the paper agreeing to the cession.

Claiming total accord, the negotiators rushed to Washington and pushed the agreement through Congress as a statute. The huge territory was broken into a number of smaller reservations with separate agencies, each declared as executive order reservations thus depriving them of treaty-reservation status which holds a superior right to self-government. For whereas treaty-right reservations have all rights inherent in the original Indian tribe, executive order reservations only have rights implied in their establishment by the executive branch.

The agreement of 1889 must be regarded as a basic document of the Sioux Nation and it may have within it the seeds of Sioux revival. It amends the treaty of 1868 only slightly. Yet, as the next selection will show, it can be regarded as a major step, as yet unrecognized, in the continuing process of treaty negotiations between the Sioux Nation and the United States.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That

degree of latitude; thence on said forty-fourth degree of latitude to western boundary of township number seventy-two; thence south on said township western line to an intersecting line running due west from Fort Lookout; thence eastwardly on said line to the center of the main channel of the Missouri River at Fort Lookout; thence north in the center of the main channel of the said river to the original starting point.

SECTION 6. That the following tract of land, being a part of the Great Reservation of the Sioux Nation, in the Territory of Dakota, is hereby set apart for a permanent reservation for the Indians receiving rations and annuities at the Crow Creek Agency, in said Territory of Dakota, namely: The whole of township one hundred and six, range seventy; township one hundred and seven, range seventy-one; township one hundred and eight, range seventy-one; township one hundred and eight, range seventy-two; township one hundred and nine, range seventy-two, and the south half of township one hundred and nine, range seventy-one, and all except sections one, two, three, four, nine, ten, eleven, and twelve of township one hundred and seven, range seventy, and such parts as lie on the east or left bank of the Missouri River, of the following townships, namely: Township one hundred and six, range seventy-one; township one hundred and seven, range seventy-two; township one hundred and eight, range seventy-three; township one hundred and eight, range seventy-four; township one hundred and eight, range seventy-five; township one hundred and eight, range seventy-six; township one hundred and nine, range seventy-three; township one hundred and nine, range seventy-four; south half of township one hundred and nine, range seventy-five, and township one hundred and seven, range seventy-three; also the west half of township one hundred and six, range sixty-nine, and sections sixteen, seventeen, eighteen, nineteen, twenty, twenty-one, twenty-eight, twenty-nine, thirty, thirty-one, thirty-two, and thirty-three, of township one hundred and seven, range sixty-nine.

SECTION 7. That each member of the Santee Sioux tribe of Indians now occupying a reservation in the State of Nebraska not having already taken allotments shall be entitled to allotments upon said reserve in Nebraska as follows: To each head of a family, one-quarter of a section; to each single person over eighteen years, one-eighth of a section; to each orphan child under eighteen years, one-eighth of a section; to each other person under eighteen years of age now living, one-sixteenth of a section; with title thereto in accordance with the provisions of article six of the treaty concluded April twenty-ninth, eighteen hundred and sixty-eight, and the agreement with said Santee Sioux approved February twenty-eighth, eighteen hundred and seventy-seven, and rights under the same in all other respects conforming to this act. And said Santee Sioux shall be entitled to all other benefits under this act in the same manner and with the same conditions as if they were residents upon said Sioux Reservation, receiving rations at one of the agencies herein named: *Provided*, That all allotments heretofore made to said Santee Sioux in Nebraska are hereby ratified and confirmed; and each member of the Flandreau band of Sioux Indians is hereby authorized to take allotments on the Great Sioux Reservation, or in lieu therefor shall be paid at the rate of one dollar per acre for the land to which they would be entitled, to be paid out of the proceeds of lands relinquished under this act, which shall be used under the direction of the Secretary of the Interior; and said Flandreau band of Sioux Indians is in all other respects entitled to the benefits of this act the same as if receiving rations and annuities at any of the agencies aforesaid.

SECTION 8. That the President is hereby authorized and required, whenever in his opinion any reservation of such Indians, or any part thereof, is advantageous for agricultural or grazing purposes, and the progress in civilization of the Indians receiving rations on either or any of said reservations shall be such as to encourage the belief that an allotment in severalty to such Indians, or any of them, would be for the best interest of said Indians, to cause said reservation, or so much thereof as is necessary, to be surveyed, or re-surveyed, and to allot the lands in said reservation in severalty to the Indians located thereon as aforesaid, in quantities as follows: To each head of a family, three hundred and twenty acres; to each single person over eighteen years of age, one-fourth of a section; to each orphan child under eighteen years of age, one-fourth of a section; and to each other person under eighteen years now living, or who may be born prior to the date of the order of the President directing an allotment of the lands embraced in any reservation, one-eighth of a section. In case there is not sufficient land in either of said reservations to allot lands to each individual of the classes above named in quantities as above provided, the lands embraced in such reservation or reservations shall be alloted to each individual of each of said classes *pro rata* in accordance with the provisions of this act: *Provided*, That where the lands on any

reservation are mainly valuable for grazing purposes, an additional allotment of such grazing lands, in quantities as above provided, shall be made to each individual; or in case any two or more Indians who may be entitled to allotments shall so agree, the President may assign the grazing lands to which they may be entitled to them in one tract, and to be held and used in common.

SECTION 9. That all allotments set apart under the provisions of this act shall be selected by the Indians, heads of families selecting for their minor children, and the agents shall select for each orphan child, and in such manner as to embrace the improvements of the Indians making the selection. Where the improvements of two or more Indians have been made on the same legal subdivision of land, unless they shall otherwise agree, a provisional line may be run dividing said lands between them, and the amount to which each is entitled shall be equalized in the assignment of the remainder of the land to which they are entitled under this act: *Provided*, That if anyone entitled to an allotment shall fail to make a selection within five years after the President shall direct that allotments may be made on a particular reservation, the Secretary of the Interior may direct the agent of such tribe or band, if such there be, and if there be no agent, then a special agent appointed for that purpose, to make a selection for such Indian, which selection shall be alloted as in cases where selections are made by the Indians, and patents shall issue in like manner: *Provided*, That these sections as to the allotments shall not be compulsory without the consent of the majority of the adult members of the tribe, except that the allotments shall be made as provided for the orphans.

SECTION 10. That the allotments provided for in this act shall be made by special agents appointed by the President for such purpose, and the agents in charge of the respective reservations on which the allotments are directed to be made, under such rules and regulations as the Secretary of the Interior may from time to time prescribe, and shall be certified by such agents to the Commissioner of Indian Affairs, in duplicate, one copy to be retained in the Indian Office and the other to be transmitted to the Secretary of the Interior for his action, and to be deposited in the General Land Office.

SECTION 11. That upon approval of the allotments provided for in this act by the Secretary of the Interior, he shall cause patents to issue therefor in the name of the allottee, which patents shall be of the legal effect, and declare that the United States does and will hold the lands thus allotted

for the period of twenty-five years, in trust for the sole use and benefit of the Indian to whom such allotment shall have been made, or, in case of his decease, of his heirs according to the laws of the State or Territory where such land is located, and that at the expiration of said period the United States will convey the same by patent to said Indian, or his heirs, as aforesaid, in fee, discharged of said trust and free of all charge or incumbrance whatsoever, and patents shall issue accordingly. And each and every allottee under this act shall be entitled to all rights and privileges and be subject to all the provisions of section six of the act approved February eighth, eighteen hundred and eighty-seven, entitled "An act to provide for the allotment of lands in severalty to Indians on the various reservations, and to extend the protection of the laws of the United States and the Territories over the Indians and for other purposes." *Provided*, That the President of the United States may in any case, in his discretion, extend the period by a term not exceeding ten years; and if any lease or conveyance shall be made of the lands set apart and allotted as herein provided, or any contract made touching the same, before the expiration of the time above mentioned, such lease or conveyance or contract shall be absolutely null and void: *Provided further*, That the law of descent and partition in force in the State or Territory where the lands may be situated shall apply thereto after patents therefor have been executed and delivered. Each of the patents aforesaid shall be recorded in the General Land Office, and afterward delivered, free of charge, to the allottee entitled thereto.

SECTION 12. That any time after lands have been allotted to all the Indians of any tribe as herein provided, or sooner, if in the opinion of the President it shall be for the best interests of said tribe, it shall be lawful for the Secretary of the Interior to negotiate with such Indian tribe for the purchase and release by said tribe, in conformity with the treaty or statute under which said reservation is held of such portions of its reservation not allotted as such tribe shall, from time to time, consent to sell, on such terms and conditions as shall be considered just and equitable between the United States and said tribe of Indians, which purchase shall not be complete until ratified by Congress: *Provided, however*, That all lands adapted to agriculture, with or without irrigation, so sold or released to the United States by any Indian tribe shall be held by the United States for the sole purpose of securing homes to actual settlers, and shall be disposed of by the United States to actual and bona-fide settlers only in tracts

not exceeding one hundred and sixty acres to any one person, on such terms as Congress shall provide, subject to grants which Congress may make in aid of education: *And provided further*, That no patents shall issue therefor except to the person so taking the same as and for a homestead, or his heirs, and after the expiration of five years' occupancy thereof as such homestead; and any conveyance of said lands so taken as a homestead, or any contract touching the same, or lein thereon, created prior to the date of such patent shall be null and void. And the sums agreed to be paid by the United States as purchase money for any portion of any such reservation shall be held in the Treasury of the United States for the sole use of the tribe or tribes of Indians to whom such reservation belonged; and the same, with interest thereon at five per centum per annum, shall be at all times subject to appropriation by Congress for the education and civilization of such tribe or tribes of Indians, or the members thereof. The patents aforesaid shall be recorded in the General Land Office, and afterward, delivered, free of charge, to the allottee entitled thereto.

SECTION 13. That any Indian receiving and entitled to rations and annuities at either of the agencies mentioned in this act at the time the same shall take effect, but residing upon any portion of said Great Reservation not included in either of the separate reservations herein established, may, at his option, within one year from the time when this act shall take effect, and within one year after he had been notified of his said right of option in such manner as the Secretary of the Interior shall by recording his election with the proper agent at the agency to which he belongs, have the allotment to which he would be otherwise entitled on one of said separate reservations upon the land where such Indian may then reside, such allotment in all other respects to conform to the allotments herein before provided. Each member of the Ponca tribe of Indians now occupying a part of the old Ponca Reservation, within the limits of the said Great Sioux Reservation, shall be entitled to allotments upon said old Ponca Reservation as follows: To each head of a family, three hundred and twenty acres; to each single person over eighteen years of age, one-fourth of a section; to each orphan child under eighteen years of age, one-fourth of a section; and to each other person under eighteen years of age now living, one-eighth of a section, with title thereto and rights under the same in all other respects conforming to this act. And said Poncas shall be entitled to all other benefits under this

act in the same manner and with the same conditions as if they were a part of the Sioux Nation receiving rations at one of the agencies herein named. When allotments to the Ponca tribe of Indians and to such other Indians as allotments are provided for by this act shall have been made upon that portion of said reservation which is described in the act entitled "An act to extend the northern boundary of the State of Nebraska" approved March twenty-eighth, eighteen hundred and eighty-two, the President shall, in pursuance of said act, declare that the Indian title is extinguished to all lands described in said act not so allotted hereunder and thereupon all of said land not so allotted and included in said act of March twenty-eighth, eighteen hundred and eighty-two, shall be open to settlements as provided in this act: *Provided*, That the allotments to Ponca and other Indians authorized by this act to be made upon the land described in the said act entitled "An act to extend the northern boundary of the State of Nebraska," shall be made within six months from the time this act shall take effect.

SECTION 14. That in cases where the use of water for irrigation is necessary to render the lands within any Indian reservation created by this act available for agricultural purposes, the Secretary of the Interior be, and he is hereby, authorized to prescribe such rules and regulations as he may deem necessary to secure a just and equal distribution thereof among the Indians residing upon any such Indian reservation created by this act; and no other appropriation or grant of water by any riparian proprietor shall be authorized or permitted to the damage of any other riparian proprietor.

SECTION 15. That if any Indian has, under and in conformity with the provisions of the treaty with the Great Sioux Nation concluded April twenty-ninth, eighteen hundred and sixty-eight, and proclaimed by the President February twenty-fourth, eighteen hundred and sixty-nine, or any existing law, taken allotments of land within or without the limits of any of the separate reservations established by this act, such allotments are hereby ratified and made valid, and such Indian is entitled to a patent therefor in conformity with the provisions of said treaty and existing law and of the provisions of this act in relation to patents for individual allotments.

SECTION 16. That the acceptance of this act by the Indians in manner and form as required by the said treaty concluded between the different bands of the Sioux Nation of Indians and the United States, April twenty-ninth, eighteen hundred and sixty-eight, and proclaimed by the President

February twenty-fourth, eighteen hundred and sixty-nine, as hereinafter provided, shall be taken and held to be a release of all title on the part of the Indians receiving rations and annuities on each of the said separate reservations, to the lands described in each of the other separate reservations so created, and shall be held to confirm in the Indians entitled to receive rations at each of said separate reservations, respectively, to their separate and exclusive use and benefit, all the title and interest of every name and nature secured therein to the different bands of the Sioux Nation by said treaty of April twenty-ninth, eighteen hundred and sixty-eight. This release shall not affect the title of any individual Indian to his separate allotment on land not included in any of said separate reservations provided for in this act, which title is hereby confirmed, nor any agreement heretofore made with the Chicago, Milwaukee and Saint Paul Railroad Company or the Dakota Central Railroad Company for a right of way through said reservation; and for any lands acquired by any such agreement to be used in connection therewith, except as hereinafter provided; but the Chicago, Milwaukee and Saint Paul Railroad Company and the Dakota Central Railroad Company shall, respectively, have the right to take and use, prior to any white person, and to any corporation, the right of way provided for in said agreements, with not to exceed twenty acres of land in addition to the right of way, for stations for every ten miles of road; and said companies shall also, respectively, have the right to take and use for right of way, side-track, depot and station privileges, machine-shop, freight-house, round house, and yard facilities, prior to any white person, and to any corporation or association, so much of the two separate sections of land embraced in said agreements; also, the former company so much of the one hundred and eighty-eight acres, and the latter company so much of the seventy-five acres, on the east side of the Missouri River, likewise embraced in said agreements, as the Secretary of the Interior shall decide to have been agreed upon and paid for by said railroad, and to be reasonably necessary upon each side of said river for approaches to the bridge of each said companies to be constructed across the river, for right of way, side-track, depot and station privileges, machine-shop, freight-house, round house, and yard facilities, and no more: *Provided*, That the said railway companies shall have made the payments according to the terms of said agreements for each mile of right of way and each acre of land for railway purposes, which said companies take and use under the

provisions of this act, and shall satisfy the Secretary of the Interior to that effect: *Provided further*, That no part of the lands herein authorized to be taken shall be sold or conveyed by way of sale of, or mortgage of the railway itself. Nor shall any of said lands be used directly or indirectly for town site purposes, it being the intention hereof that said lands shall be held for general railway uses and purposes only, including stock yards, warehouses, elevators, terminal and other facilities of and for said railways: but nothing herein contained shall be construed to prevent any such railroad company from building upon such lands houses for the accommodation or residence of their employees, or leasing grounds contiguous to its tracks for warehouse or elevator purposes connected with said railways: *And further provided*, That said payments shall be made and said conditions performed within six months after this act shall take effect: *And provided further*, That said railway companies and each of them shall, within nine months after this act takes effect, definitely locate their respective lines of road, including all station grounds and terminals across and upon the lands of said reservation designated in said agreements, and shall also, within the said period of nine months, file with the Secretary of the Interior a map of such definite location, specifying clearly the line of the road the several station grounds and the amount of land required for railway purposes, as herein specified, of the said separate sections of land and said tracts of one hundred and eighty-eight acres and seventy-five acres, and the Secretary of the Interior shall, within three months after the filing of such map, designate the particular portions of said sections and of said tracts of land which the said railway companies respectively may take and hold under the provisions of this act for railway purposes. And the said railway companies, and each of them, shall, within three years after this act takes effect, construct, complete, and put in operation their said lines of road; and in case the said lines of road are not definitely located and maps of location filed within the periods hereinbefore provided, or in case the said lines of road are not constructed, completed, and put in operation within the time herein provided, then, and in either case, the lands granted for right of way, station grounds, or other railway purposes, as in this act provided, shall, without any further act or ceremony, be declared by proclamation of the President forfeited, and shall, without entry or further action on the part of the United States, revert to the United States and be subject to entry under the other provisions of this act;

and whenever such forfeiture occurs the Secretary of the Interior shall ascertain the fact and give due notice thereof to the local land officers, and thereupon the lands so forfeited shall be open to homestead entry under the provisions of this act.

SECTION 17. That it is hereby enacted that the seventh article of the said treaty of April twenty-ninth, eighteen hundred and sixty-eight, securing to said Indians the benefits of education, subject to such modifications as Congress shall deem most effective to secure to said Indians equivalent benefits of such education, shall continue in force for twenty years from and after the time this act shall take effect; and the Secretary of the Interior is hereby authorized and directed to purchase from time to time, for the use of said Indians, such and so many American breeding cows of good quality, not exceeding twenty-five thousand in number, as in his judgment can be under regulations furnished by him, cared for and preserved, with their increase, by said Indians: *Provided,* That each head of family or single person over the age of eighteen years, who shall have or may hereafter take his or her allotment of land in severalty, shall be provided with two milch cows, one pair of oxens, with yoke and chain, or two mares and one set of harness in lieu of said oxen, yoke and chain, as the Secretary of the Interior may deem advisable, and they shall also receive one plow, one wagon, one harrow, one hoe, one axe, and one pitchfork, all suitable to the work they may have to do, and also fifty dollars in cash; to be expended under the direction of the Secretary of the Interior in aiding such Indians to erect a house and other buildings suitable for residence or the improvement of his allotment; no sales, barters, or bargains shall be made by any person other than said Indians with each other, of any of the personal property hereinbefore provided for, and any violation of this provision shall be deemed a misdemeanor and punished by fine not exceeding one hundred dollars, or imprisonment not exceeding one year or both in the discretion of the court; That for two years the necessary seeds shall be provided to plant five acres of ground into different crops, if so much can be used, and provided that in the purchase of such seed preference shall be given to Indians who may have raised the same for sale, and so much money as shall be necessary for this purpose is hereby appropriated out of any money in the Treasury not otherwise appropriated; and in addition thereto there shall be set apart, out of any money in the Treasury not otherwise appropriated, the sum of three

millions of dollars, which said sum shall be deposited in the Treasury of the United States to the credit of the Sioux Nation of Indians as a permanent fund, the interest of which, at five per centum per annum, shall be appropriated, under the direction of the Secretary of the Interior, to the use of the Indians receiving rations and annuities upon the reservations created by this act, in proportion to the numbers that shall so receive rations and annuities at the time this act takes effect as follows: One-half of said interest shall be so expended for the promotion of industrial and other suitable education among said Indians, and the other half thereof in such manner and for such purposes, including reasonable cash payments per capita as, in the judgment of said Secretary, shall, from time to time, most contribute to the advancement of said Indians in civilization and self-support; and the Santee Sioux, the Flandreau Sioux, and the Ponca Indians shall be included in the benefits of said permanent fund, as provided in sections seven and thirteen of this act: *Provided,* That after the Government has been reimbursed for the money expended for said Indians under the provisions of this act, the Secretary of the Interior may, in his discretion, expend, in addition to the interest of the permanent fund, not to exceed ten per centum per annum of the principal of said fund in the employment of farmers and in the purchase of agricultural pursuits, and he shall report to Congress in detail each year his doings hereunder. And at the end of fifty years from the passage of this act, said fund shall be expended for the purpose of promoting education, civilization, and self-support among said Indians or otherwise distributed among them as Congress shall from time to time thereafter determine.

SECTION 18. That if any land in said Great Sioux Reservation is now occupied and used by any religious society for the purpose of missionary or educational work among Indians, whether situated outside of or within the lines of any reservation constituted by this act, or if any such land is now occupied upon the Santee Sioux Reservation, in Nebraska, the exclusive occupation and use of said land, not exceeding one hundred and sixty acres in any one tract, is hereby, with the approval of the Secretary of the Interior, granted to any such society so long as the same shall be occupied and used by such society for educational and missionary work among said Indians; and the Secretary of the Interior is hereby authorized and directed to give to such religious society patent of such tract of land to the legal effect aforesaid; and for the purpose of such educational or missionary work any

such society may purchase, upon any of the reservations herein created, any land not exceeding in any one tract one hundred and sixty acres, not interfering with the title in severalty of any Indian, and with the approval of and upon such terms, not exceeding one dollar and twenty-five cents an acre, as shall be prescribed by the Secretary of the Interior. And the Santee Normal Training School may, in like manner, purchase for such educational or missionary work on the Santee Reservation, in addition to the foregoing, in such location and quantity, not exceeding three hundred and twenty acres, as shall be approved by the Secretary of the Interior.

SECTION 19. That all the provisions of the said treaty with the different bands of the Sioux Nation of Indians concluded April twenty-ninth, eighteen hundred and sixty-eight, and the agreement with the same approved February twenty-eighth, eighteen hundred and seventy-seven, not in conflict with the provisions and requirements of this act, are hereby continued in force according to their tenor and limitation, anything in this act notwithstanding.

SECTION 20. That the Secretary of the Interior shall cause to be erected not less than thirty school-houses, and more, if found necessary, on the different reservations, at such points as he shall think for the best interests of the Indians, but at such distance only as will enable as many as possible attending schools to return home nights, as white children do attending district schools: *And provided*, That any white children residing in the neighborhood are entitled to attend the said school on such terms as the Secretary of the Interior may prescribe.

SECTION 21. That all lands in the Great Sioux Reservation outside of the separate reservations herein described are hereby restored to the public domain, except American Island, Farm Island, and Niobrara Island, and shall be disposed of by the United States to actual settlers only, under the provisions of the homestead law (except section two thousand three hundred and one thereof) and under the law relating to town-sites; *Provided*, That each settler, under and in accordance with the provisions of said homestead acts, shall pay to the United States, for the land so taken by him, in addition to the fees provided by law, the sum of one dollar and twenty-five cents per acre for all lands disposed of within the first three years after the taking effect of this act, and the sum of seventy-five cents per acre for all lands disposed of within the next two years following thereafter, and fifty cents per acre for the residue of the lands then undisposed of, and

shall be entitled to a patent therefor according to said homestead laws, and after the full payment of said sums: but the rights of honorably discharged Union soldiers and sailors in the late civil war as defined and described in sections twenty-three hundred and four and twenty-three hundred and five of the Revised Statutes of the United States, shall not be abridged, except as to said sums; *Provided*, That all lands herein opened to settlement under this act remaining undisposed of at the end of ten years from the taking effect of this act shall be taken and accepted by the United States and paid for by said United States at fifty cents per acre, which amount shall be added and credited to said Indians as part of their permanent fund, and said lands shall thereafter be a part of the public domain of the United States to be disposed of under the homestead laws of the United States, and the provisions of this act; and any conveyance of said lands so taken as a homestead, or any contract touching the same, or lien thereon, created prior to the date of final entry, shall be null and void: *Provided*, That there shall be reserved public highways four rods wide around every section of land allotted, or opened to settlement by this act, the section lines being the center of said highways; but no deduction shall be made in the amount to be paid for each quarter-section of land by reason of such reservation. But if the said highway shall be vacated by any competent authority the title to the respective strips shall inure to the then owner of the tract of which it formed a part of the original survey. *And provided further*, That nothing in this act contained shall be so construed as to affect the right of Congress or of the government of Dakota to establish public highways, or to grant to railroad companies the right of way through said lands, or to exclude the said lands, or any thereof, from the operation of the general laws of the United States now in force granting to railway companies the right of way and depot grounds over and upon the public lands, American Island, an island in the Missouri River, near Chamberlain, in the Territory of Dakota, and now a part of the Sioux Reservation, is hereby donated to the said city of Chamberlain: *Provided further*, That said city of Chamberlain shall formally accept the same within one year from the passage of this act, upon the express condition that the same shall be preserved and used for all time entire as a public park, and for no other purpose, to which all persons shall have free access; and said city shall have authority to adopt all proper rules and regulations for the improvement and care of said park; and upon the failure of any said con-

ditions the said island shall revert to the United States, to be disposed of by future legislation only. Farm Island, an island in the Missouri River near Pierre, in the Territory of Dakota, and now a part of the Sioux Reservation, is hereby donated to the said city of Pierre: *Provided further*, That said city of Pierre shall formally accept the same within one year from the passage of this act, upon the express condition that the same shall be preserved and used for all time entire as a public park, and for no other purpose, to which all persons shall have free access; and said city shall have authority to adopt all proper rules and regulations for the improvement and care of said park; and upon the failure of any of said conditions the said island shall revert to the United States, to be disposed of by future legislation only. Niobrara Island, an island in the Niobrara River, near Niobrara, and now a part of the Sioux Reservation, is hereby donated to the said city of Niobrara: *Provided further*, That the said city of Niobrara, shall formally accept the same within one year from the passage of this act, upon the express condition that the same shall be preserved and used for all time entire as a public park, and for no other purpose, to which all persons shall have free access; and said city shall have authority to adopt all proper rules and regulations for the improvement and care of said park; and upon failure of any of the said conditions the said island shall revert to the United States, to be disposed of by future legislation only; *And provided further*, That if any full or mixed blood Indian of the Sioux Nation shall have located upon Farm Island, American Island, or Niobrara Island before the date of the passage of this act, it shall be the duty of the Secretary of the Interior, within three months from the time this act shall have taken effect, to cause all improvements made by any such Indian so located upon either of said islands, and all damage that may accrue to him by a removal therefrom, to be appraised, and upon the payment of the sum so determined, within six months after notice thereof by the city to which the island is herein donated to such Indian, said Indian shall be required to remove from said island, and shall be entitled to select instead of such location his allotment according to the provisions of this act upon any of the reservations herein established, or upon any land opened to settlement by this act not already located upon.

SECTION 22. That all money accruing from the disposal of lands in conformity with this act shall be paid into the Treasury of the United States and be applied solely as follows: First, to the reimbursement of the United States for all

necessary actual expenditures contemplated and provided for under the provisions of this act, and the creation of the permanent fund hereinbefore provided; and after such reimbursement to the increase of said permanent fund for the purposes hereinbefore provided.

SECTION 23. That all persons who, between the twenty-seventh day of February, eighteen hundred and eighty-five, and the seventeenth day of April, eighteen hundred and eighty-five, in good faith, entered upon or made settlements with intent to enter the same under the homestead or pre-emption laws of the United States upon any part of the Great Sioux Reservation lying east of the Missouri River, and known as the Crow Creek and Winnebago Reservation, which, by the President's proclamation of date February twenty-seventh, eighteen hundred and eighty-five, was declared to be open to settlement, and not included in the new reservation established by section six of this act, and who, being otherwise legally entitled to make such entries, located or attempted to locate thereon homestead, pre-emption, or town site claims, by actual settlement and improvement of any portion of such lands, shall, for a period of ninety days after the proclamation of the President required to be made by this act, have a right to re-enter upon said claims and procure title thereto under the homestead or pre-emption laws of the United States, and complete the same as required therein, and their said claims shall, for such time, have a preference over later entries; and when they shall have in other respects shown themselves entitled and shall have complied with the law regulating such entries, and, as to homesteads, with the special provisions of this act, they shall be entitled to have said lands, and patents therefor shall be issued as in like cases: *Provided*, That pre-emption claimants shall reside on their lands the same length of time before procuring title as homestead claimants under this act. The price to be paid for town-site entries shall be such as is required by law in other cases, and shall be paid into the general fund provided for by this act.

SECTION 24. That sections sixteen and thirty-six of each township of the lands open to settlement under the provisions of this act, whether surveyed or unsurveyed, are hereby reserved for the use and benefit of the public schools, as provided by the act organizing the Territory of Dakota; and whether surveyed or unsurveyed said sections shall not be subject to claim, settlement, or entry under the provision of this act or any of the land laws of the United States: *Provided, however*, That the United States shall pay to said

Indians, out of any moneys in the Treasury not otherwise appropriated, the sum of one dollar and twenty-five cents per acre for all lands reserved under the provisions of this section.

SECTION 25. That there is hereby appropriated the sum of one hundred thousand dollars, out of money in the Treasury not otherwise appropriated, or so much thereof as may be necessary, to be applied and used toward surveying the lands herein described as being opened for settlement, said sum to be immediately available; which sum shall not be deducted from the proceeds of lands disposed of under this act.

SECTION 26. That all expenses for the surveying, platting, and disposal of the lands opened to settlement under this act shall be borne by the United States, and not deducted from the proceeds of said lands.

SECTION 27. That the sum of twenty-eight thousand two hundred dollars, or so much thereof as may be necessary, be, and hereby is, appropriated out of any money in the Treasury not otherwise appropriated, to enable the Secretary of the Interior to pay to such individual Indians of the Red Cloud and Red Leaf bands of Sioux as he shall ascertain to have been deprived by the authority of the United States of ponies in the year eighteen hundred and seventy-six, at the rate of forty dollars for each pony; and he is hereby authorized to employ such agent or agents as he may deem necessary in ascertaining such facts as will enable him to carry out this provision, and to pay them therefor such sums as shall be deemed by him fair and just compensation: *Provided*, That the sum paid to each individual Indian under this provision shall be taken and accepted by such Indian in full compensation for all loss sustained by such Indian in consequence of the taking from him of ponies as aforesaid: *And provided further*, That if any Indian entitled to such compensation shall have deceased, the sum to which such Indian would be entitled shall be paid to his heirs-at-law, according to the laws of the Territory of Dakota.

SECTION 28. That this act shall take effect, only, upon the acceptance thereof and consent thereto by the different bands of the Sioux Nation of Indians, in manner and form prescribed by the twelfth article of the treaty between the United States and said Sioux Indians concluded April twenty-ninth, eighteen hundred and sixty-eight, which said acceptance and consent, shall be made known by proclamation by the President of the United States, upon satisfactory proof presented to him, that the same has been obtained in the manner and

form required, by said twelfth article of said treaty; which proof shall be presented to him within one year from the passage of this act; and upon failure of such proof and proclamation this act becomes no effect and null and void.

SECTION 29. That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of twenty-five thousand dollars, or so much thereof as may be necessary which sum shall be expended, under the direction of the Secretary of the Interior, for procuring assent of the Sioux Indians to this act provided in section twenty-seven.

SECTION 30. That all acts and parts of acts inconsistent with the provisions of this act are hereby repealed.

Approved, March 2, 1889.

Waldron v. United States
143 Fed. Repts. 413 (1905)

Some years after the Great Sioux Agreement in 1889 a case was brought in federal court attempting to define exactly what rights were given under that agreement. While the agreement had been passed as a statute by the United States Congress and the days of the treaty-making powers with all Indian tribes had long since vanished, the court came up with a remarkable conclusion—[illegible] of March 3, 1889 was in fact a TREATY.

This obscure case may someday reach out of the past to haunt the United States. For if statutes can be interpreted at will by the United States as treaties may not the Indians also do the same? If so would it not appear that, as in any treaty-making situation, the tribes have the right to reject the overtures of the United States? Would it not also follow that regardless of the intention of the United States Congress in passing statutes none can be effective with respect to Indian tribes unless they are consented to by Indian tribes since they are in the nature of a treaty and not a statute?

What then about the myriads of laws passed since 1871? Are they valid when passed without the consent of the tribe? Is not a law passed which has the nature of a treaty a violation of the tribe's constitutional rights? What now, *Lone Wolf v. Hitchcock?*

Through commissioners appointed by the United States the provisions of the act of March 2, 1889, were accepted by the Sioux Nations of Indians and the President of the United States by proclamation fixed February 10, 1890 as the date on which said act should take effect. From the decisions of the General Land Office it appears that the right of complainant to have the land allotted to her was denied solely for the reason that complainant was not an Indian, within the meaning of that term as used in section 13 of the act of Congress of March 2, 1889. As the court finds in this case that complainant is an Indian, within the meaning of said act, it is proper that the law affecting this question be referred to in connection with the facts in the case. In the first place, it is necessary to keep in mind that the act of Congress of March 2, 1889, does not stand, for the purposes of construction and interpretation, as ordinary laws of Congress, so far as the Indians are concerned, for while it appears in form as an independent legislative act of the government, it was and is a treaty or contract made by the United States and the Sioux Nation of Indians. The act was to have no force or effect unless the provisions thereof were accepted by the Sioux Nations of Indians in the manner provided by Article 12 of the treaty of 1868.

The Indians were an ignorant and uncivilized race. They knew little or nothing of the terms of the law which they were to accept except what they were told by the commissioners who negotiated its acceptance. A man who can read cannot be heard to say that he understood a contract to mean something different than its terms imply; but a man who cannot read, and signs a contract on the faith of what the other party to the contract tells him, stands in a very different position. The commissioners of the United States stated to the Indians before obtaining their signatures that the law included mixed-bloods as well as full-bloods. It must be presumed that Congress knew when the law was submitted for acceptance that there were numerous mixed-bloods living upon the reservation about to be divided and drawing rations

at the different agencies, and it cannot be presumed that these mixed-bloods were intended to be deprived of their rights to tribal property by a law that, without their signature, would not have become effective for any purpose. These observations are made for the purpose of showing that the law must be looked at as a contract and construed with reference to the understanding the Indians had of the law at the time they accepted its provisions. Mixed-bloods were accepted as going to make up the number of Indians necessary to accept the law . . .

When this very case was before the Secretary of the Interior the advice of the then Attorney General of the United States, Mr. Olney, was asked as to the status of complainant as an Indian. Under date of February 9, 1894, in a letter addressed to the Secretary of the Interior, Mr. Olney used the following language:

> It will be noticed that the act under consideration was dependent for its validity upon the consent of the Indians. In other words, it was substantially a treaty with the Sioux Nation; acts of this form having taken the place of the ancient Indian treaty since the latter was prohibited by the act of Congress in 1871. By the agreement confirmed in this act the Sioux Nation gave up a large amount of territory, and the rights conferred on the nation or on individuals were in consideration thereof.

The Indian Reorganization Act (Wheeler-Howard Act) 48 Stat. 984 (1934)

One of the most progressive eras in Indian history was the New Deal of Franklin D. Roosevelt. Under his Commissioner of Indian Affairs, John Collier (an anthropologist incidentally), recognition of the basic strength of the tribal structure was made official government policy. Early in the Roosevelt years the Congress passed the Wheeler-Howard Act allowing the tribes self-government for the first time since they had settled on the reservations.

Because this act is the foundation for the modern tribal

U.S. Citizenship: The American Policy to Extinguish the Principle of Lakota Political Consent

U.S. Citizenship: The American Policy to Extinguish the Principle of Lakota Political Consent

by Edward C. Valandra

Introduction: Lakota Political Consent

In the formative years of the Lakota-American relationship, it was the expected norm of the Lakota that the United States must secure their consent prior to any U.S. policy decision which would effect the Lakota. Thus the formative years of Lakota-American interactions are replete with examples of treaties and agreements which recognized this norm of obtaining Lakota political consent.

However, in the contemporary Lakota-American relationship, the historically established norm of Lakota consent is no longer a viable part of this relationship. U.S. policy decisions, which impact Lakota society, are unilaterally implemented without Lakota consent. For example, Lakota males who are eighteen must register for the U.S. military draft as a condition to receiving federal aid for education.

If applying the norm of the formative years today, the United States would have to secure the consent of the Lakota that, registering for the draft is a condition that Lakota males must meet in order to receive federal aid for their education.

The use of this example is important because the Lakota and the United States have already agreed on the question of federal aid for education with respect to the Lakota people. Specific provisions in a previous agreement have already committed the United States to financing the education of the Lakota people. The United States, as a condition for a peace settlement with the Lakota, agreed to the Lakota demand that the United States would provide educational facilities, personnel, and scholarships for Lakota education.[1] Thus, the draft registration represents an additional condition to what the Lakota had initially agreed.

The question of why Lakota consent is missing in the contemporary Lakota-American relationship is the subject of this paper. For the Lakota, political consent is an important principle in their exercise of self-determination, especially when U.S. policy decisions such as the draft registration condition for federal aid discards Lakota consent. Hence, my thesis is that the Federal policy of granting U.S. citizenship to Lakota people is, in effect, a policy to extinguish the principle of Lakota political consent by "politically incorporating" the Lakota into the body politic of the United States.

One of the objectives of this thesis is to disclose how the political incorporation of the Lakota people into the American political system is inconsistent with the political realities of the world today. Thus this paper will discuss three topics, the history of political incorporation through U.S. citizenship, U.S. citizenship and its application to extinguish Lakota political consent, and Lakota political coexistence in the United States.

The Process of Political Incorporation from 1868 to 1924

The historical process of the political incorporation of the Lakota people into the U.S. body politic has its origins in a bilateral agreement commonly referred to as the Fort Laramie Treaty of 1868. This document was the culminating event which ended fifteen years of military hostilities between the Lakota and the United States. The first article prefaces the nature of this agreement, "...all war between the parties shall forever

cease." In suing for peace, the United States acknowledged that there shall be a political relationship which shall govern the interactions between the Lakota people and the people of the United States. The premise of this political relationship between the two peoples was that Lakota consent would necessarily be required to amend or affect any of the provisions of the bilateral agreement or any U.S. action which would affect the Lakota.

In the Ft. Laramie Treaty of 1868, Article Six provided a process by which a Lakota individual could acquire U.S. citizenship. Under this provision, the acquisition of U.S. citizenship was tied to having an allotment of land. Briefly, if a Lakota individual wanted an allotment of land, said allotment had to be within the exterior boundaries of the Lakota nation. Once an allotment was selected, a certificate was issued containing a description of the land and the name of the person to whom the allotment belongs; after said certificate was endorsed, it was recorded in a book entitled "Sioux Land-Book," and upon the issuing of a patent for the allotment a Lakota automatically became a U.S. citizen. This provision of article six was voluntary. That is, it required that a Lakota individual would, at the very least, consent to invoking this provision in the first place.

Because the allotments were to be within the exterior boundaries of the Lakota nation, and the fact the Lakota asserted its geo-political sovereignty over any person residing within its territory, it was apparent that U.S. citizenship would not alter any fundamental change for a Lakota individual other than the fact that he or she would have dual citizenship.

The next agreement between the Lakota and the United States that had some bearing on the U.S. citizenship question was the Great Sioux Agreement Act of 1889. With the exception of one important provision, the Great Sioux Agreement incorporated various sections of the General Allotment Act of 1887 verbatim.

Section Nine of the Great Sioux Agreement Act proved to be the discriminating provision because the General Allotment Act of 1887, as a matter of federal policy, mandated that allotments be issued to indigenous people whether they requested them or not. U.S. citizenship was part and parcel of the allotment process, and the mandating of allotments forced U.S. citizenship upon those indigenous people who were subjected to the application of the General Allotment Act. However, Section Nine of the Great Sioux Agreement Act included language stating that allotments, and hence U.S. citizenship, were not compulsory without the consent of the majority of the adult Lakota.

There were two other acts by the U.S. legislature regarding U.S. citizenship that had general applicability to Lakota people. One U.S. law, which was enacted in 1888, extended U.S. citizenship, to Lakota women by virtue of their marriage to a white American male. The other U.S. law, enacted in 1919, concerned Lakota men (and women) who served in a U.S. military establishment during WWI and who had been honorably discharged. These veterans would be granted U.S. citizenship if they formally requested it. These two U.S. laws marked an anomaly because U.S. citizenship was usually predicated upon a Lakota having an allotment of land first and then U.S. citizenship second.

During the first twenty-five years of the twentieth century, the United States began the forced political incorporation of the Lakota people, first through its general allotment policy and then with the enactment of a 1924 statute.

In the late 1890s, the United States took the initiative and began the process of allotting Lakota homelands to the Lakota without any regard to the two previous documents--the 1868 and 1889 agreements -- which required Lakota consent prior to any allotment of Lakota homelands. Generally, under the allotment law of 1887, the United States would issue a (trust) patent to the holder of an allotment and said holder would automatically have his or her U.S. citizenship.

However, in 1906, the U.S. legislature amended its allotment law in two ways.[2] The first amendment was that U.S. citizenship would be granted after the trust patent expired, which was a standard twenty-five period. Prior to this amendment U.S. citizenship was granted at the initial issuing of the trust patent. The second amendment was that the Secretary of the Interior, at his discretion, could terminate the status of a trust patent at any point and issue a fee patent to a holder of an allotment. In effect, then, this would constitute a grant of U.S. citizenship for indigenous people.

Eleven years after the 1906 amendments to the general allotment law of 1887, the United States initiated a policy which resulted in the issuing of fee patents to most Lakota people. The issuing of fee patents was based upon a blood quantum. That is, fee patents would be issued to all Lakota who were "less than one-half Indian blood." This policy decision was within the purview of the Secretary of the Interior's discretion, but it was a policy that unilaterally forced U.S. citizenship upon those Lakota people who were subjected to this

forced fee patent policy.

Roughly seven years after the forced fee patent policy, the U.S. legislature enacted the Indian Citizenship Act of 1924 which read, in part, "Non-U.S. citizen Indians are declared to be citizens of the United States." This U.S. law was all encompassing and thus completed the political incorporation of the Lakota people into the body politic of the United States.

Hence, within a span of sixty years the process of political incorporation of the Lakota people was completed. From this point forward, the American political system would engage in a political policy to distort and erode at least one fundamental reality of the Lakota-American relationship--the principle of Lakota political consent.

U.S. Citizenship: Political Participation to Extinguish Lakota Political Consent

During the seventy years after the Indian Citizenship Act, the American political system has been engaged in an overall policy in which the principle of Lakota consent is in a political equilibrium. As it is today, the tension within this political equilibrium is to shift toward the extinguishment of Lakota consent.

Why the American policy is shifting toward the extinguishment of Lakota consent can be found in a policy which originated in 1950s. Today the basic ideology underlying the policies of the American political system can summarized in House Concurrent Resolution 108 (1953):

> it is the policy...to make the Indians within the territorial limits of the United States subject to the same laws and entitled to the same privileges and responsibilities as are applicable to other citizens of the United States.

In the 1950s this policy became known as the Termination policy, and one of the major sponsors was Senator Watkins of Utah. The Senator wrote an article concerning what the fundamental concept of the Termination policy was to entail for the Lakota people. Within the Senator's article were five statements which are excerpted below:

> he or she can stand with us in the enjoyment and responsibilities of our national citizenship
>
> would possess all the attributes of complete citizenship a fellow American
>
> we...should grant them all the rights and prerogatives pertaining to American citizenship
>
> the realization of their national citizenship with other Americans.

The analysis of these five excerpts and HCR 108 meant that the Lakota would have the same relationship to the United States as other non-Lakota U.S. citizens. Thus, the outcome of the Termination policy discarded the principle of Lakota consent to that of politically participating in the American political system. This shift to participating within the American body politic undermined the historical and political relationship of the Lakota people enjoyed with the United States.

For the Lakota, one of the first experiences with the transition from political consent to political participation was with the U.S. law, P.L. 280. P.L. 280 was to be a direct transfer of political sovereignty from the United States to its political subdivisions (i.e., states) even though indigenous peoples, including the Lakota, petitioned against its enactment. The main reason the Lakota petitioned against its enactment was because there was no provision for indigenous peoples' consent to such a transfer of authority. However, the position of the United States was expressed in a letter concerning the matter of indigenous consent:

> Now let me say a few words about the principle of Indian "consent"... [W]e must start, I believe, with the fact... that Indians are citizens and now have the privilege of the ballot in 48 states. This means that they are represented in Congress just as other citizens are and that they have the same rights... of petitioning the Congress and stating their views before Congressional committees considering legislation. What you are proposing--and let us be quite clear about this--is that, over and above these normal rights of citizenship, the Indians should also have a special veto power over legislation which might affect them. No other element in our population...now has such a power and ever has had in the history of our country. In short, it seems to me that the principle of Indian "consent"... has most serious Constitutional implications. With full respect for the rights an needs of the Indian people, I believe it would be extremely dangerous to pick out any segment of the population and arm its members with authority to frustrate the will of Congress which the whole people has elected. (Douglas McKay, Secretary of the Interior, November 3, 1955)

The HCR 108, the excerpts from Senator Watkin's article, and the Secretary of the Interior's letter all point out that political incorporation of the Lakota would have an extinguishing effect on the principle of Lakota political consent today.

One other U.S. law, the "Indian Civil Rights Act" (P.L. 90-284), passed in 1968, was "to ensure that the American Indian is afforded the broad Constitutional rights secured to other Americans." Briefly, P.L. 90-284 imposed a statutory--not constitutional--bill of rights upon the Lakota peoples' governments. Although having U.S. citizenship, the Lakota were already subject to the constitutional provisions under state and federal sovereignty, but not under Lakota sovereignty.

The Lakota, along with other indigenous peoples, petitioned against its application to their respective governments. The U.S. law contained many acculturation features as well as infringing into the internal political affairs of the Lakota. More importantly, much like the P.L. 280, Lakota political participation in the American political system did little to prevent P.L. 90-284 from being passed.

These two U.S. laws, P.L. 280 and 90-284, are only two of many samples which show how the Lakota, as U.S. citizens, fare as participants in the political affairs of the United States. Since Lakota political consent has been either disregarded or discarded, the American political system is literally unlimited in what it can, and has, forced upon the Lakota people.

Although the U.S. legislature is furthering the policy to extinguish the principle of Lakota political consent, the U.S. judiciary has, in all probability, done as much or more political damage to this principle than its sister branch, the U.S. legislature. The primarily reason for this political damage is that most issues before the U.S. judiciary often involve indigenous self-determination cases which have general applicability to all indigenous peoples. For example, the U.S. Supreme Court can hold, as it did in 1978, that a particular indigenous government had no criminal jurisdiction over non-indigenous people who are physically within their territory.

The impact of this Supreme Court also stripped the Lakota of any criminal jurisdiction over non-Lakota people who are physically within the exterior boundaries of Lakota homelands. After approximately thirteen years after this ruling, there continues to be no attempt within the American political system to address how this ruling requires the political consent issue of the Lakota. Part of the justification of this ruling is based upon the political incorporation of indigenous people as the court stated:[3]

> Indian reservations "are a part of the territory of the United States. [I]ndian tribes hold and occupy [the reservations] with the assent of the United States, and under their authority." [Upon] *incorporation* into the territory of the United States, the Indian tribes and the exercise of separate power is constrained so as not to conflict with the interests of this overriding sovereignty (emphasis added).

This statement by the U.S. judicial system reveals that incorporation is enough to extinguish political consent of the Lakota people if the exercise of that consent is in conflict with the overriding interest of the U.S. political system. A following case study will illustrate how the American political system interprets political incorporation of the Lakota and Lakota political consent as being in conflict with the overriding interest of the United States.

In the early 1970s, the administrative component of the American political system engaged in a dialogue with indigenous peoples who presented, to the United States, twenty points on the state of indigenous affairs within the United States. The twenty points were chosen because they do serve to explain how the American political system justifies it policy or policies toward Lakota people.

Of all twenty points, seven of the points involve the re-establishment of Lakota political consent through a treaty relationship with the United States. Only the first point is analyzed because it best represents the argument of my thesis.

The first of the twenty points stated that a provision of the 1871 Indian Appropriation Act should be repealed because said provision within the 1871 act terminated the exercise of negotiating political documents (i.e., treaties) between the Lakota and the United States. By repealing the provision, the first point was calling for the restoration of the constitutional treaty-making authority of the United States with respect to the Lakota-American relationship.

Excerpts taken from the book *Behind the Trail of Broken Treaties* exposes the full intent of U.S. policy on the issue of Lakota consent. The excerpt below is the United States' response to the first point.

> Over one hundred years ago the Congress decided that it was no longer appropriate for the United States to make treaties with Indian tribes. By 1924, all Indians were citizens of the United States

and of the states in which they resided. The citizenship relationship with one's government and the treaty relationship are mutually exclusive; a government makes treaties with foreign nations, not with its own citizens.

The following comments are Vine Deloria Jr.'s reply to the United States. Note how Mr. Deloria's reply gets to the basis of the American policy to extinguish Lakota consent.

> The treaty points were most strenuously rejected by members of the administration task force on the vague grounds that the Indian Citizenship Act of 1924 had precluded the United States from dealing with Indian tribes by treaty because the individual members thereof happened to be United States citizens.
>
> This response generally characterizes the approach of the administration and seems to mean that the subject has been rejected without much consideration of the value of the proposal for contemporary times and in the context of the world situation today.

Thus the re-establishment of the treaty making process with the Lakota is paramount to having Lakota political consent restored as well.

Lakota Political Co-existence

Almost thirty years prior to Vine Deloria's commentary on the U.S. response against point one of the twenty points, global movements for self-determination were emerging after the second world war. This movement was primarily led by the people of the "third world" who successfully challenged European colonialism within their homelands. Although initially the self-determination movement was in terms of decolonialization, now the concept of self-determination has evolved into an international principle, if not a right, which now applies to peoples who have been "politically incorporated" into an external political system without their consent.

Self-determination, at its most fundamental level, is also about peoplehood. The international community, in the era of self-determination, has articulated some basic criteria regarding what constitutes a people. In 1951, for instance, the International Commission of Jurist outlined what it considered to be such criteria:

> A people having a common history, racial or ethic ties, cultural or linguistic ties, religious or ideological ties, common territory or geographical area, common economic base, and sufficient number of people.

Almost twenty years after the International Commission of Jurist criteria, the International Court of Justice, in 1970, stated similar criteria:

> A group of persons living in a given country or locality having a race, religion, language, and traditions of their own and united by the identity...of race, religion, and tradition in sentiment of solidarity, with a view of preserving their traditions, maintaining their form of worship, insuring the instruction of upbringing of their children in accordance with the spirit and tradition of their faith and rendering mutual assistance to each other.

Of course, incorporation into the body politic of an external political system is often at the expense of those characteristics which define the fundamental nature of peoplehood. The common fate of peoples who have been subject to involuntary incorporation is their assimilation or acculturation into the social, religious, economic, and political norms of the external political system.

The concept of peoplehood and the principle that self-determination embraces a peoples' right to "freely determine their political status and freely pursue their economic, social, and cultural development" exposes U.S. indigenous policy as inconsistent, if not hostile, to the principle of Lakota political consent,[4] especially when U.S. policy decisions adversely effect the Lakota people socially, economically, and politically. And because of U.S. political hostility toward the Lakota, there are numerous laws, court decisions, and executive decrees emanating from the American political system which all have a least common denominator: to extinguish Lakota political consent by terminating the Lakota peoples' sense of being a "distinct society." And one method, as the thesis of this paper argues, has been to grant U.S. citizenship to the Lakota people.

Today, nearly two decades after the twenty points were first articulated, global trends are demonstrating that the American policy to extinguish Lakota political consent is truly "inconsistent within the context of the

self-determination movements of today" (Deloria, 1974, xii). The Solidarity movement of the Polish people, the fall of the Berlin Wall, and the independence of Lithuania, Estonia, and Latvia are examples of peoples who were politically incorporated or annexed into an external political system without their consent. It is the political incorporation into an external political system that the Lakota people share with these people.

As the Lakota people continue to assert the principle of political consent in the contemporary Lakota-American relationship, the self-determination movement of the Lakota people is challenging the American policy of extinguishing political consent. The issue of political consent is being framed as a political incorporation problem for the Lakota people. In a recent editorial, "Should U.S. Citizenship be a Question Raised?" (*Sicangu Sun Times*, March 19, 1992, p. 6), the point of the editorial focused on Lakota sovereignty and how U.S. citizenship of Lakota people, especially the leadership, has distorted the one fundamental nature of Lakota political consent--peoplehood. The editorial put the question in the following manner:

> The root of the problem lies in what we think of ourselves as being--citizens of a sovereign tribal nation or citizens of the United States? Can we be both? Is that working and can it work? Or should we become one or the other?

The whole process of politically incorporating the Lakota into the American political system, the global events which have transpired before, and since, the twenty points were articulated twenty years ago, and the development of Lakota self-determination within the context of the pre-1900 Lakota-American relationship is raising the point of Lakota political co-existence within the United States today.

The basis for Lakota political co-existence is already established by an historical Lakota-American relationship. The American people and the Lakota people entered into a political relation with each another, and this political relationship was expressed and defined in bilateral agreements that required the mutual consent of both peoples.

However, the incorporation of the Lakota people into the American body politic has been eroding the principle of Lakota political consent to its current state of affairs today: it has no meaningful application. Unilateral U.S. political action is now the norm, and this norm adversely affects the political integrity, economic security, and the health and welfare of the Lakota people.

The global self-determination trends are recognizing that the right of political consent must be taken into account by the world community, including the United States. The International Treaty Council, a non-governmental organization of the United Nations, submitted a document to the United Nations Working Group on Indigenous Populations (7129183). Part Five on jurisdiction, which upholds the essence of Lakota political consent, states in part:

> No state shall assert or claim to exercise any right of jurisdiction over any indigenous nation or people or the territory of such indigenous population *unless pursuant to a valid treaty or other agreement freely made* with the lawful representatives of the indigenous nation or people concerned (emphasis added).

However for treaties or agreements to be freely made by the Lakota people--referring to the editorial in the *Sicangu Sun Times*--it asks its Lakota readership a pertinent question which would be a first step to Lakota political consent as well as political co-existence:

> If you were given a choice of whether to be a tribal citizen or a U.S. citizen, which would you choose and why?

It is a question the Lakota should have been asked over seventy years ago by the United States.

He served one term on the governing body of the Rosebud Sioux tribe and taught part-time at Oglala Lakota (Kyle) and Sinte Gleska universities. This paper was prepared for the Conference on Western Social Science at Denver, April 1992.

Policing Nations:

Settler Colonialism, Police, and State Violence

CHAPTER 13

BUFFALO GENOCIDE IN NINETEENTH-CENTURY NORTH AMERICA

"Kill, Skin, and Sell"

Tasha Hubbard

> *The Buffalo are very numerous on the ne side the Red Deers river & near . . . the ground is entirely covered by them & appears quite black. I never saw such amazing numbers together before. I am sure there was some millions in sight as no ground could be seen for them in that complete semicircle & extending at least 10 miles.*
>
> —Peter Fidler (1792), quoted in Brink, *Imagining Head-Smashed-In*

Peter Fidler and other eighteenth- and early nineteenth-century Euro-Western observers could not help but be overwhelmed by the numbers of buffalo on the Great Plains. Scholars debate the exact number of buffalo that ranged from what is now central Saskatchewan and Alberta down to Mexico, but a generally accepted number falls between 30 and 60 million. Their sheer numbers made them a keystone species, influencing almost every other living being that inhabited the Plains, humans included. Winona Laduke (1999: 143) explains their impact in the following way: "Buffalo determine landscape. By their sheer numbers, weight, and behavior, they cultivated the prairie, which is the single largest ecosystem in North America."

When Euro-Westerners began to eye the Great Plains as part of the imperialist project, they identified two major obstacles to claiming the land: Indigenous peoples and the buffalo. Through philosophers and thinkers of the day the foundation was laid for colonial genocide, couched in the language of progress. Charles Lyell, one of Darwin's mentors, said the following in *Principles of Geology*: "We human beings . . . have no reason to feel guilty

because our progress exterminates animals and plants. In our defense, we can state that when we conquer the earth and defend our occupations by force, we are only doing what all species in nature do" (quoted in Lindqvist 1992: 117). By positioning extermination of entire species as a "natural" process, Lyell and his followers were able to mitigate their guilt. After all, why say one does not have to feel guilty, unless one is guilty?

Following Lyell, Herbert Spencer, in his 1850 treatise, *Social Statistics*, says that imperialism is "the great scheme of perfect happiness" and the Indigenous peoples were obstacles to achieving said happiness. Thus "be he human or be he brute—the hindrance must be got rid of" (quoted in Lindqvist 1992: 8). Spencer is equating Indigenous peoples with animals in an attempt to relegate them to the status of "savage" in the colonial mind, thereby absolving the perpetrators of the colonial project. For Spencer, "savagery itself was often, by definition, a sufficient explanation for the extinction of some, if not all, savage races" (Brantlinger 2003: 18). The explanation is easily transformed into justification of action toward that end.

In the language of imperialism, Indigenous peoples and buffalo became conflated, both categorized as brutes that needed to be erased. Colonel Nelson A. Miles wrote the following of the buffalo slaughter: "This might seem like cruelty and wasteful extravagance but the buffalo, like the Indian, stood in the way of civilization and in the path of progress" (quoted in Smits 1994: 333). Savagery, represented by the Indian and the buffalo, must give way to civilization, represented by the Euro-Western man and his agrarian ideal. Daniel Heath Justice (2010: 66) posits that erasure "provides the philosophical and legal justification for land and resource theft, cultural and spiritual appropriation, subversion of social and political sovereignty, degradation, dehumanization, abuse, misrecognition, and slaughter." A few of the authors in this collection have outlined the physical genocide of Indigenous peoples in the Americas, but it is the specific act of slaughter that I grapple with in this chapter. I wish to make the argument that the slaughter of the buffalo constitutes an act of genocide.

Obviously the loss of the buffalo was catastrophic for Plains Indigenous peoples and, alongside actual massacres of Indigenous peoples, is often characterized as part of the colonial genocide of Indigenous people: "Starvation tactics, the destruction of homes and shelters during the freezing winter, and the killing of horses and buffalo herds ensured the submission or deportation of the survivors of the various tribes" (Travis 2010: 129). By removing the means of survival, the perpetrators of genocide succeed in removing Indigenous peoples. Raphael Lemkin agreed, including Indigenous experience in the Americas as part of his writings on genocide, arguing, "Colonial

genocide involved the destruction of the foundations of the collective life of hunter-gatherers and their subsequent extermination" (quoted in Breen 2011: 73). In other words, destroy the buffalo, and one destroys the foundation of Plains Indigenous collectivity and their very lives.

I do not disagree with this idea. My traditional teachers describe the loss of the buffalo as the second major wave of trauma for Plains Indigenous peoples (epidemic disease is the first). Many people starved to death after the herds were extinguished. However, I endeavor to apply the concept of genocide to the buffalo slaughter of the late nineteenth century within an Indigenous epistemological framework, while not excluding the impact of the near-extinction of the buffalo on the Indigenous peoples and the land itself.

Solidifying a definition of genocide is the subject of numerous scholarly and ideological positions. Christopher Powell (2007: 530) reminds us of the following: "Different definitions of 'genocide,' different conceptions of what 'genos' could refer to, presume different theories about the nature of social life." An Indigenous paradigm expands the conception of *people* to include other-than-human animals. George Tinker (1996: 165), an Osage theologian, explains this: "In one of the polyvalent layers of meaning, those four directions hold together in the same egalitarian balance the four nations of two-leggeds, four-leggeds, wingeds, and living-moving things. In this rendition human beings lose their status of 'primacy' and 'dominion.' Implicitly and explicitly American Indians are driven by their culture and spirituality to recognize the personhood of all 'things' in creation." In other words, being "a people" is not a domain exclusive to humans. Animals-as-people is found throughout Indigenous epistemologies. Linda Hogan (1998: 12), in her essay "First People," echoes Tinker's statement: "For us, the animals are understood to be our equals. They are still our teachers. They are our helpers and healers. They have been our guardians and we have been theirs."

For some Plains Indigenous peoples, buffalo are known as the first people. Arvol Looking Horse, keeper of the Sacred White Buffalo Calf pipe, explains this to Laduke (1999: 162): "With the teaching of our way of life from the time of being, the First People were the Buffalo people, our ancestors which came from the sacred Black Hills, the heart of everything that is." My own teachings tell me that the buffalo people take care of us and teach us how to live, much like a benevolent grandparent.

Many Euro-Western viewpoints disregard this knowledge or relegate it to the category of folk tales. However, Griffan Huggan and Helen Tiffin (2010: 11), in their *Postcolonial Ecocriticism: Literature, Animals, Environment*, remind us that colonial domination over Indigenous peoples "was effected over the ensuing centuries through environmental—and hence

cultural—derangement on a vast scale, such destructive changes were premised on *ontological* and *epistemological* differences between European and Indian ideas of human and animal being-in-the-world." According to Indigenous ways of knowing, humans do not hold exclusive title to personhood, and therefore neither to genocide.[1]

Specific genocidal practices and their theoretical underpinnings can be applied to the buffalo slaughter. As Andrew Woolford reminds us in this volume, "Study of colonial genocide should help decolonize genocide studies by challenging Eurocentric biases within the field." I maintain that this entails, among other things, challenging human-centric and territorially shallow conceptualizations of group life. It is specifically the "human-centric" bias that I wish to dispute by arguing that Euro-Western governments and their representatives undertook buffalo genocide in order to consolidate political power in the Great Plains.

Recent research on the late nineteenth-century western United States draws a firmer line between the army and the slaughter of the buffalo. Sarah Carter (1999: 96) explains this recent development in scholarship, which suggests that the army's involvement in the buffalo extermination was part "of a well-calculated policy to subdue Native Americans and drive them onto reserves . . . by employing and providing assistance to non-Aboriginal buffalo hunters, by routinely sponsoring and outfitting civilian hunting expeditions that slaughtered on a massive scale, and by encouraging troops to kill large numbers of buffalo using artillery and cannon." The army, representing the colonial U.S. interest in erasing buffalo in order to clear Indigenous peoples from the land, engaged in the genocidal process through policy and action, and at the same time "allowed," according to Israel Charny's (1994) definition, genocide to happen by encouraging civilian sport hunters and hide hunters to indiscriminately slaughter the buffalo.

David Smits (1994: 333), in his article "The Frontier Army and the Destruction of the Buffalo: 1865–1883," not only outlines the details of the slaughter but posits that the slaughter was unwritten official army policy, whereby "the decree had gone forth that they must both give way," referring to Indigenous peoples and the buffalo. This includes orders from General Phillip Sheridan, appointed in 1867 to lead the U.S. military during the Indian Wars, the campaign to pacify Indigenous Nations in the west. Because of Sheridan's past practice of issuing kill orders without written documentation, Smits says, "it is probable that Sheridan deliberately refused to issue the relevant written orders knowing that orally conveyed orders could be more easily concealed or more plausibly denied. . . . Why subject himself and the army to avoidable Indian enmity and humanitarian disapproval?" (333).

Sheridan can be understood as one of the engineers of buffalo genocide. His biographer refers to his "pragmatism and elastic ethics," which made him "the perfect frontier soldier" (Hutton 2009: 180). Thus, willing to undertake gruesome tasks in order to fulfill his frontier goals, "Sheridan authorized an conscious extermination of the remaining bison (and, where appropriate, horses too) to starve intractable tribes into submission" (Levene 2005: 96). Sheridan and other military leaders fostered an atmosphere in which killing buffalo was a patriotic practice. When one officer admitted that he had indiscriminately killed buffalo while out on a hunting party, his superior responded, "Kill every buffalo you can! Every buffalo dead is an Indian gone" (quoted in Smits 1994: 328). The infamous 7th Cavalry general George Armstrong Custer is known to have used buffalo as target practice for his new recruits.

Much has been written about the period in U.S. history known as the Indian Wars and its inclusion within the category of genocide. However, there were periods when the army was hampered in its efforts for various reasons. Smits (1994: 318) elaborates:

> Frustrated bluecoats, unable to deliver a punishing blow to the so-called "Hostiles," unless they were immobilized in their winter camps, could, however, strike at a more accessible target, namely, the buffalo. That tactic also made curious sense, for in soldiers' minds the buffalo and the Plains Indian were virtually inseparable. When Captain Robert G. Carter of the Fourth Cavalry referred to the "nomadic red Indian and his migratory companion, the bison," he linked the two together in a manner typical of military men. Soldiers who associated the buffalo with the Indian so inseparably could even occasionally pretend that slaughtering buffalo was actually killing Indians.

Again Custer provides the best example of this, as he is known to have described the tactics of a buffalo hunt in the same terms as a military action against Indigenous peoples.

There was also collusion between official U.S. government representatives and the army to decimate buffalo in order to decimate Indigenous peoples. In the Fort Laramie Treaty the "government agreed to abandon the Bozeman Trail and its guardian forts and to look upon the Powder River country as 'unceded Indian territory' in which the Sioux might continue to roam" (Utley and Washburn 2002: 233). However, wording was included in the treaty to ensure the right to this territory existed only "so long as the buffalo may range thereon in such numbers as to justify the chase" (Rinella 2008: 81). As soon as the treaty was concluded, the military looked the other way as the hide hunters went in and began slaughtering buffalo. With their food sources

depleted, the Lakota were forced to ask for provisions, suggesting the buffalo numbers no longer justified the chase. "That effectively undid the treaty and opened the door for more hide hunters to go down there with military protection and kill whatever buffalo were left" (81).

Collusion between the army and the government had a third party with which to enact buffalo genocide: hide hunters themselves. Records exist of a speech Sheridan delivered before the Texas legislature, which was contemplating a bill to protect the buffalo in 1875: "[The buffalo hunters] have done in the last two years and will do more in the next year to settle the vexed Indian question, than the entire regular army has done in the last thirty years. They are destroying the Indian's commissary, and it is a well-known fact that an army losing its base of supplies is placed at a great disadvantage. Send them powder and lead, if you will; for the sake of a lasting peace, let them kill, skin, and sell until the buffaloes are exterminated" (quoted in Dary 1989: 129). The words "kill, skin, and sell" are an appropriate mantra for the hide hunters, whose efforts had begun in earnest in 1871. According to William Hornaday (2002: 494), a former hunter turned conservationist, "The buffalo country fairly swarmed with hunters, each party putting forth its utmost efforts to destroy more buffaloes than its rivals." While buffalo had been hunted in significant numbers prior to 1871, what focused the efforts was the development of an industrial tanning process in that year. "Buffalo leather suddenly became part of the world economy, prized for machinery belts and army boots. The United States government realized it could subdue the Plains tribes by letting freelance hunters (many of whom were Civil War veterans) kill off their food supply" (Wright 2008: 164). Ironically the genocide of the buffalo and the subsequent use of their hides became fuel for the overall genocidal project of colonizing the entire western territory.

The numbers are stunning: "Colonel Dodge once counted one hundred and twelve carcasses of buffalo 'inside a semicircle of 200 yards radius, all of which were killed by the one man from the same spot, and in less than three-quarters of an hour'" (Hornaday 2002: 469–70). Dodge went on to describe the slaughter: "Where there were myriads of buffalo the year before, there were now myriads of carcasses. The air was foul with a sickening stench, and the vast plain, which only a short twelvemonth before teemed with animal life, was a dead, solitary, putrid desert" (quoted in Smits 1994: 327). By 1883 the buffalo were effectively removed from the Great Plains, relegated to remnant herds of orphan calves, a few animals in captivity, and a refugee herd in Yellowstone. Estimates put their numbers as low as a few hundred animals by 1889.

Patrick Wolfe's (2006: 387) discussion about the "logic of elimination"

and the ways "settler colonialism destroys to replace" is especially relevant for this period. The buffalo were now essentially destroyed, facilitated in part by their replacement with cattle: "Only the smaller northern herd [of buffalo] remained by 1879. Its destruction by 1883 resulted from a combination of hide-market (and 'sport') hunting, drought, and the arrival of nearly a half million head of cattle in Wyoming alone, whose appetite for grass and water competed with that of the diminishing bison" (Magoc 2006: 92). In fact, as Andrew Isenberg (2000: 130) observes, "the belief that domestic livestock were destined to replace the bison sustained the hide hunter's destructive harvest." Remove the existing species and replace it with one of European origins in order to solidify ownership of the land.

I should pause here to note that there is considerable dissent about the primary cause of the buffalo's near extinction. There are those, including Shepherd Krech (1999), Dan Flores (2001), and even Andrew Isenberg (2000), who posit that Indigenous peoples share equal (or more) responsibility for the destruction of the buffalo herds, thereby minimizing the actions of the government, the army, and hide hunters. The most commonly cited example is Indigenous overhunting by the use of buffalo pounds or Indigenous participation in the hide trade. There is some good Indigenous (and non-Indigenous) scholarship about the breakdown of the intricate relationship between the buffalo and Indigenous people due to colonization and some accounts of over-hunting as part of participation in the hide trade.[2] However, the evidence of Euro-Western culpability is overwhelming: "Still, even with some profligate hunting, estimates are that all Indian tribes on the Great Plains killed no more than half a million bison annually" (Magoc 2006: 90).

Furthermore Krech, Flores, and Isenberg rely on such evidence as comparing cattle's impact on the land in 1910 to buffalo's use of the land over millennium, manipulate numbers of the buffalo to minimize the destruction, and conflate European and Indigenous peoples' actions, such as in the following passage from Isenberg (2000: 197): "From the perspective of the bison, there were striking similarities between the nomads and the Euroamericans. Both were newcomers to the plains in the eighteenth century. Both employed new technologies and adopted new modes of production to hunt the bison. Both sacrificed bison to meet social demands of integration, prestige, or conquest. Both increasingly adapted to capitalism in the eighteenth and nineteenth centuries. In the end, that adaptation was fatal to millions of bison." This statement not only fails to take into account the oral history of Indigenous existence and interrelatedness with other inhabitants of the land over thousands of years but also completely disregards the uneven power dynamics

that were occurring during the time of the buffalo slaughter. Sebastian Braun (2007: 195) explains Isenberg's reasoning this way: "Following his own agenda . . . he in turn does not contextualize relations between Indians and Euro-Americans, which makes him ignore any notions of distribution of power, and ultimately any notion of cultural difference."

Genocide and denial of genocide work in conjunction, and the buffalo genocide is no exception. After all, "the battle is not only about history and the authenticity of the records of past events in our civilization, it is about the extent to which we today hold our governments responsible for their actions" (Charny 1994: 74). Isenberg and the others attempt to render the government, army, and hide hunters inculpable by reinforcing notions of Indigenous culpability in their own destruction.

Returning now to the Indigenous epistemology that applies "peoplehood" to the buffalo, the actions of the trinity of destruction (government, army, and hide hunters) can be viewed through the lens of genocide. For example, it has been established, in this volume and elsewhere, that colonial genocide includes the removal of children, which is destructive to the future of a people. "The sportsmen adventurer John Mortimer Murphy claimed to have seen a troop of cavalry lasso one hundred buffalo calves and bring them to a corral near the post barracks. Although the little ones had sufficient room to run about and an abundance of hay and grass, 'few of them lived more than a week'" (Smits 1994: 320). Other accounts abound of the removal of calves from the herds for both sport and curiosity. In exploring the parameters of the concept of genocide, Powell (2007: 538) writes, "Given that a genos is a network of practical social relationships, destruction of a genos means the forcible breaking down of those relationships." The army in effect broke down the family relationships of the buffalo by removing the calves, contributing to the genocidal project. The destruction of the buffalo's social relationships did not stop with the removal of calves from the herd. Even Isenberg (2000: 136) discusses the impact on the buffalo's ability to reproduce, which depended on the ability to gather together: "Reproductive success likely declined with group size in the 1870s, as unceasing predation (by hide hunters) prevented the congregation of the herds in the rutting season, upsetting the bison's patterns of migration and reproduction and thus inhibiting a recovery of the bison's population."

. . . the impact of the geno-

> When Charlie and Jimmie drove out the next morning to get the hides, there was a young calf standing by one of the carcasses, its mother being one of the victims of yesterday's work. It still had the reddish color that all buffalo calves have in their infancy, not obtaining their regular blackish brown until in the fall of the year, when they are very fat, plump and stocky, and take on a glossy look. I have watched buffaloes many times during my three years' hunt, not with a covetous eye at the time, but to study the characteristics of the animal, and I do not remember ever seeing buffalo calves frisky, gambolling, and cavorting around in playful glee like domestic calves. Perhaps their doom has been transmitted to them! Yes, this was the pathetic side of the question. And thousands of these little creatures literally starved to death, their mothers being killed from the time they were a day old on up to the time they could rustle their own living on the range.

Buffalo feel grief for their dead, according to both my traditional teachers and the longtime buffalo warden at the Grasslands National Park, Wes Olsen. He has observed the behavior of the wild herd and their reaction to a death. Rather than abandon the body, buffalo will stay with the deceased, attempt to revive their family member, and make audible sounds of grief. The hide hunters' practice of shooting from a hidden location with a high-powered rifle did not give warning to the buffalo of the coming danger. Hide hunter accounts of what happened after they shot their first victims intersect with Olsen's observations: "When one of their number was killed the rest of the herd, smelling the blood, would become excited, but instead of stampeding would gather around the dead buffalo, pawing, bellowing and hooking it viciously. Taking advantage of this well-known habit of the creature, the hunter would kill one animal and then wipe out almost the entire herd" (quoted in Magoc 2006: 95). Hornaday's (2002: 469) accounts also support the buffalo's expression of grief: "They cluster around the fallen ones, sniff at the warm blood, bawl aloud in wonderment, and do everything but run away."

In the latter days of the buffalo slaughter, many of the buffalo's social relationships broke down. Cook describes the hunters' practice of surrounding available waterways, forcing the buffalo to approach anyway, and gunning them down. Those buffalo who managed to find a water source that was free from hunters "would rush and crowd in pell-mell, crowding, jamming, and trampling down both the weak and the strong, to quench a burning thirst. Many of them were rendered insane from their intolerable, unbearable thirst" (Cook 1938: 198). Instead of living cooperatively in their herd society, the buffalo were tortured prior to their death at the hands of the hide hunters.

It is not surprising that Indigenous accounts describe buffalo genocide as a war on buffalo. Note the account told by Old Lady Horse (1968: 170) in "The Last Buffalo Herd":

> There was a war between the buffalo and the white men. The white men built forts in the Kiowa country, and the wooly-headed buffalo soldiers [the 10th Calvary, made up of Negro troops] shot the buffalo as fast as they could, but the buffalo kept coming on, coming on, even into the post cemetery at Fort Sill. Soldiers were not enough to hold them back. . . . But then the whites came and built the railroad, cutting the people's land in half. The buffalo fought for the people, tearing up the tracks and chasing away the whites' cattle. So the army was sent to kill the buffalo. The army brought in hunters, who killed until the bones of the buffalo covered the land and the buffalo saw they could no longer fight.

Indigenous peoples saw the buffalo as their protector, who took a position on the front line in the genocidal war against Indigenous peoples. Laduke (1999: 154), in her exploration of buffalo genocide, discovered that "many native people view the historic buffalo slaughter as the time when the buffalo relatives, the older brothers, stood up and took the killing intended for the younger brothers, the Native peoples." Laduke contextualizes buffalo genocide as an example of a colonial war on nature, "a war on the psyche, a war on the soul" (149). Others have characterized the destruction of nature with similar terminology. The Indigenous psychologist Eduardo Duran (2006) describes it as a "soul wound." He remarks that elders understand such circumstances as the erasure of the buffalo from the land as an earth wounding: "When the earth is wounded, the people who are caretakers of the earth are also wounded at a very deep soul level" (16).

Pretty Shield describes her reaction to witnessing the aftermath of buffalo genocide: "Ahh, my heart fell down when I began to see dead buffalo scattered all over our beautiful country, killed and skinned, and left to rot by white men, many, many hundreds of buffalo. The first I saw of this was in the Judith basin. The whole country there smelled of rotting meat. Even the flowers could not put down the bad smell. Our hearts were like stones. And yet nobody believed, even then, that the white man could kill *all* the buffalo. Since the beginning of things there had always been so many!" (quoted in Calloway 1996: 131). Her being as an Indigenous person was profoundly impacted by the loss. Crow Plenty-Coups describes his grief in the same terms: "But when the buffalo went away the hearts of my people fell to the ground, and they could not lift them up again. After this nothing happened. There was little singing anywhere" (quoted in Lindemann 1930: 169). Both Indigenous

individuals are expressing what Justice (2010: 63) categorizes as "an understanding of nationhood that's fully rooted in broadly ecosystemic concepts of Indigenous kinship" with the buffalo, which intertwines their respective and interrelated genocides. The buffalo gone from the land meant the Plains Indigenous peoples who had been holding out to negotiate better treaties and claims to their land were forced to submit and relocate to small reservations scattered across the newly forming states and provinces. The destruction of the interrelated bond between buffalo, Indigenous people, and the land reminds me of Waldau's claim that cultural imperialism affects both human and nonhuman animals (2006: 636). The stories of genocide need to be told and accepted as truth in order to clear space for Indigenous stories, many of which lay out ways to live on the land in healthy and non-destructive ways.

In her work outlining what she terms the "pillars of white supremacy," the Cherokee scholar Andrea Smith (2006: 68) lists the logic of genocide as the second pillar: "This logic holds that indigenous peoples must disappear. In fact, they must *always* be disappearing, in order to allow non-indigenous peoples rightful claim over this land." Through a complex and interrelated policy of buffalo genocide, enacted by the state, military, and hide hunters, the buffalo disappeared from the land, forcing the disappearance of Indigenous people at the same time. Both Indigenous peoples and buffalo were the subjects of colonial elegies, which lamented their loss with a pen held in one hand and a gun in the other. "Extinction discourse often takes the form of proleptic elegy, sentimentally or mournfully expressing, even in its most humane versions, the confidence of self-fulfilling prophecy, according to which new, white colonies and nations arise as savagery and wilderness recede" (Brantlinger 2003: 3).

These tropes remain with us still. As we examine the current realities facing the Great Plains, including widespread drought, continued animal genocides (wolves come to mind), and the relentless extraction of what is termed "resources," it would be wise to revisit the historic buffalo genocide in order to consider the repercussions of applying a Euro-Western ideology to the land, propped up by the continued hierarchy in which humans occupy an exalted place at the top.[3] Huggan and Tiffin (2010: 6) put it this way: "In assuming a natural prioritization of humans and human interests over those of other species on earth, we are both generating and repeating the racist ideologies of imperialism on a planetary scale." How can the past lessons of buffalo genocide speak to us now?

I wish to conclude by returning to my own teachings as a Nehiyaw human person. I am reminded that the buffalo remains with us. I am reminded that everything comes back to our spiritual understandings. Their bodies were

destroyed; their spirits were not. Our stories, still told and still understood, tell us the buffalo will return one day.

Notes

1. These kinds of discussions are also happening in recent animal studies scholarship. David Sztybel (2008: 252) discusses the limitations in both language and understanding: "'Person' is interchangeable with humans in most dictionaries but we need to update our lexicon in order to overcome speciesist thinking."
2. The Blackfoot scholar Betty Bastien (2004) is the best example.
3. Buffalo genocide continues into the present time, with the systemic slaughter of buffalo that leave the confines of Yellowstone National Park, a genocide sanctioned by the state government of Montana until a Montana Supreme Court ruling in March 2014. For the first time in centuries, buffalo in Yellowstone are free from genocidal practices.

3. Law, Colonialism and Space

> Canadian law is largely devoid of our views. It most often acts as if we are not even here—through the doctrines of discovery, Crown sovereignty and constitutional law. We need to at least find ways to attenuate that force. (Borrows 2010b, 142)

> All the oppression of Aboriginal Peoples in Canada has operated with the assistance and the formal sanction of the law. The Canadian legal system is at the heart of what we must reject as Aboriginal nations and as Aboriginal individuals. (Monture-Angus 1995, 250)

Embedded in this research are questions about the limitations inherent in seeking recognition of Indigenous people as subjects of Canadian law. As Christie (2007) states, arguments for recognition "begin with the assumption that the state (or dominant society) is there, a given, and then imagine Indigenous peoples coming to the centre of power to try to argue (somehow) that they should have a place within the larger system. This approach begins with the notion that in some way the power structure of Canada is legitimate" (16). This analysis has been applied to efforts by Indigenous peoples' land use rights, treaty negotiations and other broad discussion of rights, but has not yet been applied to the scale of bodily violence.

Categories of 'Indians' (and the contemporary equivalent, 'Aboriginal') and 'Indian space' have become naturalized in Canadian society and in much scholarship on Indigenous-government relations, and they continue to be enforced through a set of state-determined power relations, and histories of both physical and epistemic violence. This system of categorization is foundationally gendered, as the rights and socio-legal standing of 'Indians' have always been delineated along gender lines, resulting in distinct experiences of violence for 'Indian' men, women and two-spirit people. I argue the perpetuation of this categorization serves to affirm the closure of settlement, and reinforce Indigenous peoples' status as colonized subjects: dependent, victimized and

incapable of progress, a product of spaces which are inherently violent, impoverished and marginalized. We see these categories at work when we talk about native people 'migrating' from reserves (Indian space) to cities (non-Indian space). This framing undermines claims of Indigenous people in BC to anything more than those "points of attachment" (Harris 2008, 5) within their traditional territories that together cover all of BC.

This section is intended to provide a foundation from which to understand the role of law in shaping day-to-day reality in Indigenous communities and the potential to address violence through legal means. I hope to show how law structures the categories in which Indigenous people are situated in relation to socio-legal norms and in the criminal justice system. I situate my exploration of violence within the colonial history of BC's legal geographies in order to argue that the issue of interpersonal violence should be addressed as an integral part of asserting Indigenous self-determination. To do so, we must begin with understanding the primary spatial and embodied categories of colonialism: 'Indians' and reserves. Together with other categories embedded within foundational discourses of colonialism, such as categories of gender, these form the basis on which Indigenous-government relations are negotiated and shape the possibilities for recognition of Indigenous people as legal subjects. I hope to show how colonial categories and their spatialization entail the erasure of Indigenous subjectivities and territories, making it difficult for Indigenous people to be seen as anything other than colonial subjects within their subjectivity as 'Indians'. I will argue that this erasure might be understood as the spatialization of the violence of law itself.

In this section, I first discuss the creation of Indian reserves within the settlement process of BC, and the legal measures through which Indigenous peoples became 'Indians' across this settler geography. Second, I trace the ways that western legal thought was used to create 'Indians' as colonial subjects who were void of their own legal order, which preceded the creation of reserves. This history is useful in understanding how settlers imagined themselves and justified the violent acts which settlement entailed. It also illustrates how the violent erasure of Indigenous self-determination and Indigenous geographies was naturalized. Third, I suggest that in the ideological shift from *terra nullius* geography to the settler society 'Indians' became imagined as subjects of the reserve, a mobile status that travels with Indigenous people

across diverse spaces within Canada. I suggest the logics of *terra nullius,* the frontier and the reserve are activated within Canada's colonialscape, a concept which is helpful in understanding the spatial rationales through which colonial relations are continually remade. Finally I discuss the manifestation of colonialscape logics in the treatment of violence toward Indigenous people across reserve and non-reserve spaces. This history provides an important foundation for understanding the colonial logics embedded in everyday socio-legal relations in Canada which make it difficult to recognize Indigenous legal orders as a possible venue for addressing violence and for reasserting Indigenous peoples' agency.

3.1 Creating reserves: material reality

> Colonialism in a place like British Columbia is not so much a set of tactics that others employed at some time in the past as an ongoing set of relationships based on the fact that newcomers established themselves here, and refashioned a strange place, making it their own. (Harris 1997, xvii)

As Cole Harris (2002) has shown, Canadian Indian reserves can be understood as a manifestation of colonial ideologies, produced in order to realize the ongoing dispossession of Indigenous peoples of their territories and to establish the sovereignty of the Canadian state. Yet the creation of BC entailed not only the mental work of imagining 'Indians' as without legal tenure, but also the practical work of individuals mapping out and dividing up land, confining 'Indians' onto reserves through force: "violence was not only an *outcome* of law, but its *realization*" (Blomley 2003, 129, emphasis in original). Reserves in BC came into being through a land policy with a mandate "to grant miniscule reserves and ignore title" (Harris 2008, 437). Through this process, native people became trespassers in their own territories, at the same time as

becoming subjects of the federal *Indian Act* as status Indians[8]. As Doug Harris (2008) notes in his account of reserves and fisheries in BC, reserves became points of attachment within native people's traditional territories, but little more. Reserves were, and are, part of territorial strategies to empty space of Indigenous tenure, yet in BC the lack of consensus around the legal issue of title is evident in the lengthy and messy treaty process that is still ongoing. "The arbitrary boundaries created by the Indian Act cookie cutter, which divided aboriginal peoples into bands, cut across the aboriginal legal orders" (Napoleon 2009, 384). Although the reserve geography of BC is often taken as fixed or natural spaces of Indigenous occupation, the history of reserve development in the province reveals that their construction and realization was anything but neutral.

In the mid-nineteenth century, British interest in what is now known as British Columbia changed from trading country to settlement frontier, marking the beginnings of a fundamental transition in relations with Native peoples (Harris 2008). Beginning with the creation of the Colony of Vancouver Island in 1849, processes of dividing land into reserves and that for settlers, continued in tandem for 75 years. In 1924, the Dominion and provincial government agreed on what they regarded as the final reserve geography of BC (Harris 2008). With few exceptions the need to seek agreement with Native peoples over the shared use of space was ignored. Instead, during this time of early settlement, "a carefully choreographed display of violence" (Harris 2002, 22) was used to keep Indigenous people in their place – that is, out of the places that white settlers had deemed to be desirable for themselves. The BC government was the only provincial government in Canada that would not acknowledge Indigenous peoples' right to negotiate the use of land, thus the lack of treaties and late creation of reserves in the province. Here, the Crown did not negotiate transfer of rights to land or governance, but "merely asserted such rights, and acted as if their unilateral declarations have (sic) legal

[8] Not all Indigenous people were granted Indian status, as status was determined by a set of state-imposed regulations based on gender, marital status, education level and other factors. Additionally, Métis people and Inuit people were categorized differently than other Indigenous groups or First Nations in Canada. For more on Indian status in Canada, see Bonita Lawrence, 2003, Gender, Race, and the Regulation of Native Identity in Canada and the United States: an overview*, Hypatia* 18(2), 3-31 and Royal Commission on Aboriginal Peoples. 1996. *Part Two: False Assumptions and a Failed Relationship.* Ottawa: Government of Canada.

meaning" (Borrows 2002, 113). BC reserves were created only when white settlers were increasingly encroaching on the land and had interest in capitalizing on the land and natural resources (Miller 2009). Thus, the Fraser Valley and Vancouver Island reserves were established first and other areas were plotted out later.

Reserves were seen as a temporary measure, meant to be self-sustained through access to fisheries while Indigenous people became part of the wage economy, thus, "the land policy was built around access to the fisheries" (Harris 2008, 39). The power dynamics which shaped the creation of reserves in BC centered around the tension between provincial and federal fights for control, and the shared desire of both governments to establish a prosperous, powerful settler society (Harris 2002). The rights of 'Indians' were formed within these overlapping and often competing jurisdictions related to federal and provincial governance, as well as the administration of reserves themselves within a federally defined band system.

The settlement of BC, as with colonialism the world over, was premised on, and facilitated through, a process of creating spaces which were orderly, easily commodified and clearly defined through the imposition of Western socio-legal property regimes. These regimes were enacted through tools of the western geographic imaginary, including the frontier, the survey and the grid (Blomley 2003), which served to neutralize the violence inherent in property's realization. As stated by Mitchell (2002) in his account of colonial Egypt, "The colonial presentation of law as a conceptual structure brought from abroad performs the silencing of the actuality out of which property is made. But it is not just the colonial legal texts that produce this difference. The very act of colonial occupation produces it" (77). In BC, reserves became compartments to which Indigenous people could easily be relegated in order to clear up the rest of the land for settlers to develop (Harris 2002). This process depended upon well-established traditions of positioning the category of 'Indian' or savage opposite that of English settler subject. Settlers acting on behalf of the Crown or the colony "took European civilization, Native savagery, the superiority of colonial power, and the sovereign rights of colonizers to colonial land completely for granted" (Harris 2002, 6). Through this process, new geopolitical spaces—those of firmly demarcated reserves, towns, and spaces of resource extraction and production—were superimposed onto the former territories of Indigenous peoples, and their boundaries closely monitored and policed. Colonial power

operated in favor of settlers and the expansion of capitalist ideologies of empire, and law was used to construct, enforce and normalize power relations literally on the ground through separating 'Indian' spaces from settler spaces. Thus as materializations of the violent power of law, arbitrary boundaries became legal realities (Harris 2002, 271).

Indeed, the establishment of lawful spaces, and unlawful spaces, were central to the frontier landscape in which reserves emerged. In Blomley's (2003) analysis of the role the western geographic imaginary played in colonial violence, the frontier, the survey and the grid are exposed as central to processes of settlement. Blomley explains that the boundaries created around that which is deemed law vs. the violent world of nonlaw entails the inscription of "a *frontier*—which may be figurative, temporal and spatial" (124, emphasis in original). An imagined frontier was integral to implementing a regime of private property within the sovereign territory of Canada, and the simultaneous implementation of a regime of Indian reserves. This imagined frontier is also temporally bound, as Indigenous land tenure exists prior to its establishment, consisting of nomadic, temporary or otherwise uncertain claims to the land. Thus, the imagined frontier which brought delineated reserves for 'Indians' and western property regimes for settlers is made possible by imagining its spatio-temporal edges against which Indigenous claims exist. The frontier makes property and reserves necessary to bring order and lawfulness to the land, rendering violence to the space beyond the space and time of the frontier, or under the control of the frontier's logics. "Western notions of property are deeply invested in a colonial geography, a white mythology in which the racialized figure of the savage plays a central role" (Blomley 2003, 124).

However, despite the obvious racism underpinning the settler view through which reserves came to be formed, the history of BC is told in a particular way in order to minimize the violence and lawlessness inherent in its creation. Harris (1997) argues that smallpox is downplayed in historical accounts of BC's creation because this history threatens the narrative that European contact meant progress and improvement for the savages. The logics underpinning the reception of law in Canada can be traced to its roots in *terra nullius* and the doctrine of discovery, which naturalizes the categorization of Indigenous people as 'Indians' incapable of formulating their own law, thus hiding the violence inherent in their displacement.

The *Indian Act* of 1876 was another strategy to facilitate colonial expansion, providing a national legal foundation based on the assumption that Indigenous people were inferior to Europeans. A report of the Department of the Interior of the same year expressed this paternalistic and assimilationist philosophy that 'Indians' were to be treated as "children of the state" (Comack 2012, 70). This legal framework was established during a time when the goal was to assimilate 'Indians', to 'civilize' them, in order to eventually rid Canada of 'Indians' altogether. The dehumanizing inscription of 'Indians' as colonial subjects of Canada is evident in the lasting ways 'Indians' were given restricted legal rights and status. The *Indian Act* created categorizations and sub-categorizations of 'Indians', in a highly gendered system of stratification determined by the federal government. Replacing Indigenous peoples' existing systems of diverse identifications emerging within place-specific cultural worldviews, the *Indian Act* established one unitary way of defining who was and who was not an 'Indian' male and female within the cultural worldview of European settlers. Indigenous nations each had systems of gender and cultural identity enacted within their distinct worldviews – including non-binary gender roles that are now called 'Two-Spirit'. All 'Indians' were made to ascribe to this imposed system in order to count as legal subjects. The price of not counting was not having access to the rights and resources provided through the *Indian Act*, such as on-reserve housing, dental and health care, and education (minimal as these provisions might be).

Within this gendered system, Indian status was granted to 'Indian' men, women married to 'Indian' men and children of those men, thereby instituting a patrilineal definition of Indian status. Until 1985, non-Indigenous women gained status when they married status Indian men while Indian women lost status when marrying non-status men. My mother, who married my father in the mid-1970's has Indian status to this day despite the fact that she is not Indigenous and she divorced my dad over 30 years ago. The establishment of a patriarchal system of power and leadership was also introduced and enforced through the *Indian Act*, as only men could run for chief and council and only men could vote in band elections until 1951. Additionally, 'Indians' were denied the right to vote in provincial or federal elections until 1949 in British Columbia provincial elections, and 1960 in federal elections.

The *Canadian Criminal Code* was also used to create laws which were specific to 'Indians'. For example, a number of status offences applied only to Indigenous people, including the 1884 ban of the *potlatch* and the *tamanawas* (a healing ceremony), as well as the 1885 ban of the sundance (Comack 2012). In these examples, the laws of colonial Canada can be seen as rooted in Christian doctrine, as Indigenous spiritual and cultural practices that were seen as preventing conversion were simply made illegal.

The establishment of a new stratified system of colonial power relations required the actions of individuals to make these laws real through bringing meaning to emergent categorizations of 'Indians' and reserves. Indian agents and the North West Mounted Police (NWMP) were responsible for enforcing the word of colonial law, including the *Criminal Code* and *Indian Act*. Indian agents could in fact conduct trials anywhere in Canada (including off reserve) for *Indian Act* violations and some *Criminal Code* violations. Thus, Indian agents could ask police to prosecute Indians and then the agents themselves sat in judgment of those cases (Comack 2012). These legal technicians were integral to the civilizing mission of Canadian law, ensuring Indigenous peoples' submission to colonial rule (Comack 2012, 74). Armed with the violent technologies of law enforcement – a gun and a badge to go with it – police and Indian agents served to keep 'Indians', as colonial subjects, in line with settler priorities. The legal systems of Indigenous people themselves were effectively mapped over, although they remained (and continue to remain) alive and active through diverse strategies of resistance. One such strategy of cultural survival was to go underground and be unrecognizable to agents of colonial law. In one well known example from my own community, potlatches continued to be practiced out of sight, such as by wrapping gifts in Christmas paper in order to mask their real purpose.

In summary, the province of British Columbia and the country of Canada used both ideologies of European superiority and the actions of individual legal technicians on the ground to cement the new colonial vision of BC. Creating social relations in which these power relations were naturalized and seen as necessary for progress, law itself carries the mythical power to enforce its own vision as truth. Canadian law bulldozed over pre-existing Indigenous geographies, yet Indigenous jurisdiction was never ceded. Rather, Canadian legal representations of space came to be given certain performative power through the violence of law, where Indigenous spatial representations continued

to be lived upon the land but were not successfully performative. In other words, while Indigenous people's socio-legal practices of living their obligations and relations within their traditional territories continues to this day, the spatial relations they produce remain unrecognized within dominant operations of power.

Thus, as I have outlined, law was not only used to empower and enforce colonial worldviews but was in fact constitutive of colonial ideologies, categories, and spatial imaginings. The existence and nature of law itself, as a civilizing system, was at the heart of colonial subjectivities which set colonists apart from Indigenous people and turned them into 'Indian' men and 'Indian' women, gendered and racialized subjects of colonial rule. Indigenous people were constructed as a racial group incapable of having systems of law, because Indigenous legal systems were not recognizable as law to settlers. As I will explore in the next section, conceiving of 'law' in terms which did not include Indigenous law allowed for the lands of Canada to be conceived as empty in the doctrine of *terra nullius.* Indigenous people essentially disappeared in the process, as their lands were envisioned as void of legitimate legal subjects. As 'Indians', Indigenous people became residents of spaces which were legally delineated as reserves, though any place where they lived within Canada were subject to federally defined categories, and could thus be imagined as 'Indian' or 'reserved' space to justify government intervention. Further, this imaginary served to render invisible Indigenous territorialities and to neutralize their threat to Canadian sovereignty. As I will show, this fundamental differentiation between Indigenous law (or lack thereof) and Western law, and the subsequent categorization of Indigenous people as 'Indians' under Canadian rule, is still foundational to socio-legal relations in BC today.

3.2 Empty land and the doctrine of discovery

> Simply put, the law creates reality that is real because it has been created by the law. (Culhane 1998, 65)

As I have discussed, reserves and 'Indians' are legal and social categories which are ontologically linked, and inherently co-constitutive in their definition and regulation

through the federal *Indian Act* and their everyday use by Canadians. Embedded in these concepts are racist ideologies which justified and legitimated colonialism in the first place, positioning Indigenous people as inferior to Europeans. The myth of European discovery of Canada embedded in Canadian law perpetuates the myth of inferiority of Indigenous peoples (Borrows 2010), categorizing 'Indians' as incapable of governing themselves and incapable of formulating law. This categorization of 'Indians' as the racialized subjects of European settlers was integral to the formation of reserves. As Cole Harris (2008) writes, "Had Natives been treated as people, rather than as Indians, there would not have been reserves" (157).

Indigenous peoples' relationships to the Canadian state have been shaped by the imposition of a Canadian legal system which has rendered Indigenous legal practices all but invisible. "In Canada, the law has often layered itself over pre-existing Indigenous legal landscapes, concealing this previous existence" (Borrows 2010, 68). The Canadian legal system has been used to entrench colonial power relations between Indigenous peoples and the Canadian government, and has shaped all aspects of Indigenous peoples lives. So while Canadians largely take for granted the neutrality of Canadian law and governance, Indigenous people's experiences reflect the culturally-specific, power-laden nature of law. Discourses about 'Indians' embedded in Western legal discourse can be understood as legitimizing, energizing and constraining roles of power in the violent conquest of 'The New World' (Williams 1990). In order to imagine the lands of Turtle Island, and other parts of the world, as available for settlement, they needed to first be cleared of any legal 'owners'. Religious and racial ideologies were utilized in creating ideas of European Christians as fundamentally different from Indigenous peoples, who were imagined as unable to formulate their own legal orders. Through this racial categorization of non-Europeans, meaningful legal status was denied to Indigenous people because 'heathens' and 'pagans' were seen as lacking the rational capacity to exercise equal rights under the West's medievally derived law. In this way, the category of Indian 'other' was formulated in opposition to that of civilized, Christian European settlers. Conquest of their lands was constructed as morally just because it was done in the name of God. It was also seen as being carried out for the 'heathens' own good, because they were in need of being converted to Christianity.

The legal codification of these racial categorizations can be traced back to the decrees of Popes that allowed Christians to use "a vanquishing violence" (Frichner 2010, 9) to claim lands belonging to non-Christians in perpetuity within a framework of dominance. The 15th century law of Christendom stated that discovery gave title to assume sovereignty over, and to govern, lands of Africa, Asia, and North and South America. This principle, now known as the doctrine of discovery, has been recognized as a part of international law for nearly four centuries and is integrated into political and judicial texts the world over.

Empire's rule of law thus begins with the doctrine of discovery and its discourse of conquest, which naturalizes the concept of *terra nullius,* or empty lands, while denying fundamental human rights and self-determination to Indigenous peoples (Williams 1990, 325). Together, these ideas created the mythology around which the Canadian legal order was founded:

> Within this ideology, human beings can be considered, legally, not to exist, and can be treated accordingly. At this most fundamental, common sense level, a study of British and Canadian law in relation to Aboriginal title and rights therefore begins not 'on the ground,' in concrete observations about different peoples' diverse ways of life, but rather 'in the air,' in abstract, imagined theory. Hovering, like the sovereign, who embodies this abstraction, over the land. (Culhane 1998, 49)

The racially based doctrine of discovery is not only at the heart of justifications for the theft of Indigenous territories, but fundamentally denying Indigenous peoples' humanity. Institutionalization and depoliticization of the doctrine of discovery lies at the root of violations of Indigenous peoples' human rights, both individual and collective (Frichner 2010). The United Nations Permanent Forum on Indigenous Issues calls this holistic structure the Framework of Dominance (Frichner 2010), claiming it is responsible for centuries of dispossession and impoverishment of Indigenous peoples.

Originating in legal rationales of the middle ages, this mythology has been encoded in Canadian law as well as nationalist stories about Canada's legal foundations. In colonial societies, law is presented as "the opposite of violence, exception, arbitrariness, and injustice, yet somehow these features [are] all incorporated within it" (Mitchell 2002, 77-8). This presentation of law and legal actors as non-violent

arbiters of justice is evident in the narratives told in history books, in which the NWMP are portrayed as aiding natives, bringing law and order to the West (Comack 2012). These stories comprise the foundational Canadian national mythologies, which are naturalized in the concept of *terra nullius* in which the lands of Canada were empty of civilization before settlers arrived here and brought the rule of law with them.

Yet, as Indigenous peoples, legal scholars and others have argued, by imposing a system of governance within the European tradition, Canada has subjugated Indigenous rights to Canadian values, imposing a culturally-specific form of governance on Indigenous peoples (Alfred 2001). Consequently, material realities of colonialism are extensions of a racist discourse of conquest that at its core regards Indigenous peoples as normatively deficient and culturally, politically, and morally inferior (Williams 1990, 326). Moreover, legal categorization of 'Indians' has underpinned Canadian policies which seek to assimilate Indigenous people in to Canadian society 'for their own good' while stripping them of their political and individual agency. As Williams (1990) writes, "Animated by a central orienting vision of its own universalized, hierarchical, position among all other discourses, the West's archaic, medievally derived legal discourse respecting the American Indian is ultimately genocidal in both its practice and its intent" (326). Principles generated by this discourse of conquest continue to be used to deny Indigenous nations the ability to govern themselves according to their own vision. By categorizing Indigenous legal practices as 'cultural beliefs' and Canadian law as 'truth', Indigenous peoples continue to be legally constituted within these foundational ideologies emerging from the doctrine of discovery (Monture-Angus 1999, Culhane 1998).

Through tracing this history of legal rationale and its integration into policies governing the lives of status Indians, it becomes abundantly clear that law is not neutral but is itself violent in a multitude of ways. And law is violent in specific ways in colonial relations. The violence of law is concealed through ideological and material processes of naturalizing unequal rights for 'Indian' men and 'Indian women, and reinforcing the categorization of 'Indians' as 'other'. Williams (1990) argues that "law, regarded by the West as its most respected and cherished instrument of civilization, was also the West's most vital and effective instrument of empire during its genocidal conquest and colonization of the non-Western peoples of the New World, the American Indians" (6).

3.3 Emergence of the colonialscape

Having traced the history and ideological work of *terra nullius* and its codification in Canadian law, as well as the materialization of colonial legal geographies in the creation of Indian reserves in BC, it is useful to now ask what ideological shifts happened in the movement from imagining Canada as *terra nullius* to materializing reserve and non-reserve spaces. 'Indians' went from being constructed as heathens in an empty, lawless land to subjects of federal law in a settler society which relegated 'Indians' to Indian reserves. What kind of ideological work was accomplished in this move from imagined empty land to imagined reserve and settler spaces? How did the categorization of 'Indians' shift? How did the gendered nature of these colonial categorizations impact Indigenous men and women differently? I argue below that 'Indians' are now imagined as subjects of the reserve, carrying this mobile spatial status with them regardless of where they travel within Canadian borders. This is accomplished within the federal reach of the *Indian Act* and *Criminal Code*, as well as the acceptance of Canadian law itself as the supreme law of the land, as 'Indians' are continually at risk of being transported to the reserve through justice wormholes (Osofsky 2008) in which their rights can be denied. I draw on the concept of landscape here, and its recent adaptation to describe 'securityscapes', in developing the concept of 'colonialscape' through which we might understand the interrelated spatial rationales of *terra nullius*, the frontier and reserves.

There are several approaches one might take to make sense of the relationship between imagined Indian space and its materialization in the everyday lives of Indigenous people as subjects of these spaces. Building on Harris's (2008) argument that Indian reserves would not have existed had 'Indians' been seen as human, I would argue that Indian reserve geographies have since produced a different kind of imagined 'Indian' subject emerging through the realization of the reserve itself. As such, there are multiple imaginaries at work, capable of producing 'Indians' as colonial subjects within nested legal rationales which underpin BC's geopolitical relations. Reserve geographies are produced within the rationale of *terra nullius*, and in relation to the imagined frontier, which are all at work under the spatialization of contemporary socio-legal relations. I find this examination of imagined and material geographies useful in understanding the

normalization of violence, as we can see how reserves are produced as spaces of assumed violence, while 'Indians', inherently 'of the reserve', are produced as subjects of this naturalized violence. 'Indians' can thus be understood as 'reserved subjects', as their spatio-legal subjectivity travels with them anywhere within the boundaries of Canada. The reserve, in essence, can be imagined and produced anywhere within national borders – anywhere naturalized as 'Canada' through the doctrine of discovery. This argument rests on the assumption that 'Indian' is not a static legal category, but is constantly made and remade through spatially and temporally specific socio-legal relations. Thus, a spatial analysis helps us to see how 'Indians' are not merely subjects of the federal *Indian Act*, but are produced within the realization and naturalization of reserves as both material and imagined "Indian space' to which 'Indians' can be transported throughout all of Canada.

In understanding how reserves function within the colonial imagination, I find the concept of landscape to be useful. A central theme of cultural geography, landscape has been taken up and defined in various ways over the past several decades. Exploring the productive tensions within studies of landscape, Wylie (2007) recounts that the cultural turn in human geography in the mid 1980s-1990s saw landscape being defined "less as an external, physical object, or as a mixture of 'natural' and 'cultural' elements, and more as a particular, culturally specific way of seeing or representing the world" (13). Representations of landscape—of a particular physical space and its cultural overlay — may be understood as expressions of cultural, political and economic power which are central to local and national identities.

In *Lie of the Land,* Mitchell (1996) explores the connection between the material production of the California landscape and the production of landscape representations, through tracing the reproduction of industrialized agricultural workers' labor. Mitchell explains that the connection between their work and the imaginary through which this work and its products become knowable comprise the making of the California landscape. Mitchell goes on to describe the ways in which 'landscape', like 'culture', 'nature' and 'nation', become integral to naturalized discourses which underwrite the legitimacy of dominant relations of power: "the more the word landscape is used, the greater its ambiguity. And the greater its ambiguity, the better it functions to naturalize power" (2). I would like to suggest here that in the context of settler societies like Canada

and the USA, these relations of power being naturalized are explicitly colonial in nature. Mitchell examines landscape as both a material thing and a representation of that thing to understand relations of labor in California in which the marginalization and resistance of agricultural workers is rendered invisible. Here, I similarly examine colonialscapes as both the embodied, material conditions of violence in Indigenous peoples lives and the representations through which this violence becomes knowable, and thus naturalized as integral to the maintenance of the nation.

Colonialscapes, then, might be understood as representations of the space now called 'Canada', which perpetuate and manifest particular (colonial) expressions of power. Such representations take not only visual forms (such as maps, paintings or photographs of 'Indians') but also textual (legal) forms within which western ontologies of space, race, gender and power are embedded. Just as landscapes appear to create a complete view of a particular space, colonialscapes create the appearance that a colonial spatio-legal perspective of 'Canada' is somehow 'true'. Colonialscapes thus cover over other spatial relations and representations, as the colonial view blankets over these prior and deeper spatial orders. The concepts of *terra nullius,* the frontier and Indian reserves (and their outside, non-reserve spaces, cities, and so on) are culturally rooted ideas which together form a colonial way of seeing the Canadian landscape. As representations of the colonialscape, Indian reserves reinforce the underlying power relations which naturalize settlement, and hide Indigenous ways of living in relation to the land in ontologically distinct understandings of space. Further, the spatial representations which make up the colonialscape have been given material significance through legal and social enforcement. In this research, then, when I talk about colonialscape logics, I am speaking of the underlying categorizations and representations of *terra nullius*, 'Indians', Indian reserves, the frontier and so on, which together form a coherent logic which naturalizes colonial power relations. Importantly, I am also speaking of the spaces of settlement which form their outside: the city, civility, spaces of progress and resource extraction are all naturalized through the colonialscape as that which is not Indigenous.

In the colonialscape, reserves become the natural space of 'Indians', as Indigenous territorialities are rendered an impossibility in order to facilitate the reception of Canadian sovereignty. Indian reserves were first imagined as a space in which to

contain ‘Indians’ and to neutralize their potential claims to the lands of North America by enfolding them as subjects defined through the jurisdiction of the Canadian state. The category ‘Indian’ is spatialized in the form of Indian reserves, which were first imagined and then materialized by technicians of Canadian law, expressed in legal text, and realized in the form of physical force and control. However, today, Indigenous people are no longer contained, by force or by choice, to Indian reserves. I contend here that the ‘problem’ of Indigenous territorialities continues to be erased or neutralized within the colonialscape by imagining ‘Indians’ as residents of reserve spaces no matter where they travel. In the discussion that follows, I will show how ‘Indians’ are transported “to a different spatio-temporal configuration” (Osofsky 2008, 118) through justice wormholes to spaces where violence is expected and naturalized, in situations of interpersonal violence. The violence of law is spatialized through colonialscape logics to transport ‘Indians’ to a space in which justice is hard to come by.

As this research will show, Indigenous people are turned into ‘Indians’ and residents of ‘Indian space’ not only through the *Indian Act* or *Canadian Constitution*, but through the everyday actions and logics of networks of Canadian legal technicians. These spatial logics are not only racialized but are also gendered, as ideas about the proper place of ‘Indian’ women underpin the type of targeted sexualized violence experienced by Indigenous girls and women, as well as responses to this violence by officials of Canadian law. These actions are further normalized through socio-legal discourses which emerge from, and sustain, the colonialscape. In her study of the role of ‘Indianness’ in the transit of US imperial history, Chickasaw scholar Jodi A. Byrd (2011) argues that “Indianness can be felt and intuited as a presence, and yet apprehending it as a process is difficult, if not impossible, precisely because Indianness has served as the field through which structures have always already been produced” (xviii). It is not the reserve that is ubiquitous, then, but the colonial imaginary, which is based on Indigenous erasure.

The processes and logics underpinning colonial socio-legal relations are depoliticized through dominant ways of seeing the nation of Canada. The realization of the grid, explicitly a regime of property (Blomley 2003, Delaney 1997), entailed the violent displacement of Indigenous peoples in order to physically empty the land upon which the grid could be materialized. Not only were Indigenous people themselves

displaced in the process, but by imagining the lands through the grid, Indigenous peoples cultural, political and legal systems of meaning were rendered invisible or inconsequential. Rather than speaking of a bend in the river as connected to a particular ancestor or story, that place where land meets water became merely one part of the larger whole of Canadian lands opened up for ownership, exploration and settlement. However, within the a-historical, depoliticized colonialscape, the fractured geography of Indian reserves is neutralized, and their historical socio-legal construction within processes of colonialism is rendered invisible. This spatial imaginary can be put to work at any given time in order to produce colonial relations in which settler society can prosper. Various kinds of violence are naturalized and rendered invisible through this colonial ordering of space. Resting on a naturalized imaginary in which 'Indians' are subjects of reserves, and on a legal framework through which 'Indians' are subject to the *Indian Act* anywhere in Canada's borders, the reserve is always an emergent possibility. Anywhere and everywhere is *terra nullius*, as the empty lands imaginary can be seen as underpinning natural resource acquisition throughout northern BC, as pipeline routes, fracking, and other extraction are shown to be occurring on unused or uninhabited lands. Indigenous resistance to this development has made visible the ways that the lands are actually in use and are inhabited by Indigenous nations, although it may fail to 'matter' within legal processes.

Within colonialscape logics, as the violence of displacement is rendered invisible, violence against Indigenous women is also made to be invisible in their gendered and racial construction as reserved subjects. Together the colonialscape works dynamically to produce 'Indians' as subjects of spaces which they fail to fully occupy, claim, or govern: their lands, their homes, and their bodies. For example, the violence of tearing children from their families and homes is seen as necessary, as 'Indians' themselves are constructed as incapable of caring for their own children. The violence of taking children to residential school is justified in this same way, through a rhetoric of care within an imagined colonial view.

As scholars have argued of the Downtown Eastside of Vancouver, the logics of the reserve and the frontier are used to naturalize widespread neglect, as well as processes of gentrification. Colonial BC was described in the same ways the Downtown Eastside is today, as empty and ready for development: "the characterization of life in

the Downtown Eastside as 'degenerate' and as 'waste' is an old frontier trick remade for a contemporary moment (Dean 2010, 123). Gentrification might be understood as a new word for conquest, as it uses a similar discourse to claim jurisdiction over Indigenous territories in the name of progress. In representing the Downtown Eastside as the frontier, Indigenous people, sex workers and other residents fail to adequately claim or occupy this space.

On the other hand, law can be used to create spaces where violence by Indigenous people is made hyper-visible, as "law constructs boundaries between legitimate and illegitimate violence and produces sociospatial zones in which violence is tolerated" (Sanchez 1997, 547). Blomley (2003) explains "Gendered violence is also understood legally in relation to the grid, with the law differentiating violence against women to the extent that it is coded public or private" (132). Lisa Sanchez's (1997) analysis of spaces of the sex trade recognizes that violence needs a space and the law provides for it by creating spaces where violence has no witness. Reserves are also such spaces. And yet colonial law can be used within any space – urban, rural, reserve, non-reserve – to create a space where violence against Indigenous people has no witness. I suggest this is not only because reserves are physically and socially isolated from mainstream Canadian society, but also because Canadian legal actors are unable to 'witness' this violence due to the inability to recognize violence against Indigenous people, given their primary socio-legal construction as 'Indians'.

Thus, although I agree with many aspects of Razack's (2000) analysis of how the murder of Pamela George was handled in the courts, my analysis differs in significant ways. Razack claims that as an Indigenous sex worker, Pamela George was "considered to belong to a space to which violence routinely occurs, and to have a body that is routinely violated" (93). Although Razack calls for Pamela George's location in this space to be connected to colonial dispossessions, I would argue that Pamela George's murder would have been naturalized in any space within Canada, not only the inner city spaces of prostitution. If Pamela was murdered in her home, would she have a better chance of justice? If she was found on the side of a remote highway or on a college campus, would she, as an Indigenous woman, have found 'justice' within Canadian law? I would argue, no. Given the prevalence of violence against Indigenous women – children, adults, students, elders, sex workers, homeless, transient, and

professionals—there are no spaces within Canada where violence against us is rendered problematic. Yet it is useful to understand the specific spatial and legal mechanisms through which this violence is naturalized through transporting 'Indians' through justice wormholes, as various jurisdictional mechanisms and individual legal technicians work together to continually constitute Indigenous people as unworthy of justice across diverse settings. Such are the manifestations of colonialscape logics in ongoing settler colonialism. Although 'spaces of prostitution' are indeed constructed as zones in which violence against women is justified through the stigma against sex work, the whole of Canada is rendered as a zone in which violence against Indigenous people is justified, and indeed, necessary. It is not enough to see these as connected, but we must see these spatialized legal relations as interrelated such that the violence against sex workers and the violence against all Indigenous people stems from the same socio-legal relations: simply, our dehumanization.

Thus, being made a subject of 'the reserve', emerging within the logics of the frontier, means that you are produced as a specific kind of legal subject – an 'Indian', against whom violence is naturalized. These logics can be mobilized to justify violence in the Downtown Eastside as easily as in a remote highway or logging road in northern BC. Reserved subjects are of a time and place in which police negligence or excessive force is routine. 'Indians' do not have the capacity to make decisions for themselves, and, as failed legal subjects, are not reliable witnesses. Investigations into violence against Indigenous women can be seen as produced through the spatial relations of the reserve. Any space, not only the Downtown Eastside, can become a space of exception. Reserves are spaces of exception and anywhere can become the reserve. In court cases, this can be seen at work when the validity of testimony made by young women is called in to question. Indeed, this is a reason why many cases fail to get to court in the first place. It is up to police to gather evidence, and then Crown Counsel decides whether or not there is enough evidence to press charges. In my work on violence over the years, I repeatedly heard that cases did not get to court because young women or boys were said to be unreliable witnesses that would not stand up to cross examination. Maybe they were drinking or they have a history of sexual abuse which will be triggered and cause them to cry under questioning. Maybe their mother is a drug addict and none of the family can be seen as credible. Maybe that young woman is known to police for

working on the streets herself or has been in trouble with the law. Or maybe they are just plain 'Indian', and 'Indians' cannot be trusted.

In logics of the colonialscape, the naturalization of violence on reserves entails a certain kind of temporal warping, as reserves are always stuck in the past, beyond the realm of progress. Their inherent violence and neglect remains unchanged. As subjects of the reserve, 'Indians' are also stuck in the past, forever at risk of being transported to these spaces in which justice cannot be achieved. As Linda Tuhiwai Smith (1999) discusses, Western concepts of space and time are encoded in language, philosophy and science – and, socio-legal scholars would argue, in law. Western conceptions of space "have meant that not only has the indigenous world been represented in particular ways back to the West, but the indigenous world view, the land and the people, have been radically transformed in the spatial image of the West" (51). While the rest of BC was opened up for 'development' or settlement, moving forward through time, reserves remained outside these zones of 'progress'. Some efforts to move reserve economies in to the future, such as through selling land, can be seen as attempts to reimagine reserve spaces as enfolded in to the time and place of modern Canadian socio-political relations

The colonialscape covers up the ways in which reserve economies and politics are produced through policies and programs of neglect. They were never set up to thrive, but to make themselves obsolete by getting rid of 'Indians' altogether. Byrd's (2011) analysis of U.S. empire is useful here, as she contends that "ideas of Indians and Indianness have served as the ontological grounds through which U.S. settler colonialism enacts itself as settler imperialism" (xix). Here, I aim to provide a geographically based analysis of the way Indianness leaves indigenous people "everywhere and nowhere" (Byrd 2011, xix) in the Canadian colonialscape, contending that justice wormholes can be configured through various spatio-legal mechanisms to reproduce reserves and perpetuate the erasure of Indigenous territorialities.

Geographic boundaries around reserves themselves are also materially significant for Indigenous people in BC. An examination of the daily life of reserve residents reveals the impact of their fractured social and geographic isolation. There are a number of small reserves in the area around Williams Lake, where I travelled as a consultant working with Victim Services to support a project to assist in the development

of programs for local youth. None of the surrounding reserve communities had high school available, so young people had to travel to Williams Lake for school. Many of these students lived in Williams Lake, apart from their families, reminiscent of residential school days. Isolated from familial supports, I heard that some of the youth had become involved in gang activity, and many dropped out of school. Driving to one of the nearby reserves, I was struck by the lack of buildings of any kind along the small roads, and the total isolation of these communities. We approached a cluster of buildings and a cross road that indicated we had arrived 'somewhere'. But for young people living there, it was obvious how the lack of educational opportunities and lack of jobs emerged directly from the isolation and lack of resources within the reserve itself. The only jobs available seemed to be at the band office, which was a new building of only a few rooms. While isolation may be desired or beneficial for some Indigenous people as a way to maintain traditional land use and connections to territory, we know that reserve geographies in BC often do not match up with Indigenous territorialities.

These realities of isolation are out of sight, out of mind for most Canadians, including the government officials making decisions about services for reserve residents. Rather than seeing that low employment, high suicide rates, high alcoholism, and high drop out rates emerge within a set of constrained opportunities for young people, 'Indians' are just seen as lazy welfare bums, trouble makers and violent offenders. Thus, more government intervention is justified because of 'Indians' failure to succeed, and the negligence of the reserve geography itself is rendered invisible.

The embodied realities that are erased through the naturalization of the colonialscape are illustrative of the underlying Indigenous socio-legal relations which cross over reserve boundaries. Although tethered to reserves through the *Indian Act*, Indigenous people are indeed mobile, and more and more natives in BC now live off reserve. Indigenous people often move between reserve and non-reserve spaces in their daily life both in order to access services and to maintain family relations. In tension with their legal subjectivity as 'Indians', Indigenous people have maintained and sustained their own legal subjectivity through activations of cultural, legal and political systems that were here prior to settlement. Although these legal relations may not be visible within the terms of Canadian law, they are productive of categories of knowledge and identity which are lived in tension with those of the colonialscape under Canadian law.

Some have argued that the very representational tools used to naturalize colonialscape logics—such as gridded maps—can be used as tools of resistance which express active Indigenous spatialities. Sparke (1998) writes that maps can be used to "dim the violence of displacement" (485) yet can also provide sites in which surviving and continuing Indigenous territorialities can be represented simultaneously with those of colonialism. In a study of Indigenous politics in urban Australia, Jane Jacobs (1996) draws on Said in stating that anti-imperialism efforts are geographical because the imperial project entails acts of geographical violence. "For the colonized, insurgency is in part a search for and restoration of place lost" (150). Maps, as expressions of the cartographic vision of the world, can be reclaimed by Indigenous peoples in representing places in a hybrid vision using a spatial narrative that can be widely read, yet "unsettles the comprehensive hold of colonial constructs" (Jacobs 1996, 151). Sparke (1998) calls this remapping an example of "contrapuntal cartographies" (467), bringing together the dominant colonial discourse and other, older histories against which the dominant discourse acts. In the terms of this research, I understand this dual mapping as a spatial representation of legal pluralism.

Indigenous geographies are productive of another imaginary and diverse legal relations which produce legal subjects spatially rooted in Indigenous worldviews. These subjectivities are not temporally or spatially determined by the *Indian Act* nor the jurisdictional reach of the Canadian state, but emerge within relations which reach back prior to Canada's formation. If we understand the colonialscape to cover up the violence of Canadian law, and to naturalize bodily violence against Indigenous people by constructing them as reserved subjects, making interventions into the colonialscape is one possibility for shifting norms around violence. What spatial imaginary is put to work under the inherently plural vision of Indigenous law?

The texture, shape and potential of pluralistic law in BC, particularly its anti-violence strategies, are explored in the chapters that follow. In particular, how might our definition of violence change if we do not separate the violence of erasure central to 'Indians' and 'Indian space', and the embodied violence naturalized within these categories? Although the land was imagined as empty, and made to be legally empty, we know through Indigenous peoples lived experiences, oral histories and legal

relations, that the land was not empty. It was, indeed, rich with life. Life that goes back to time immemorial, not back to the date of Canada's formation as a state.

Despite the ways in which the violence of Canadian law reproduces Indigenous peoples' dehumanization, we continue to turn to the criminal justice system and changes in legislation, in situations of crisis. Although the utility of Canadian law and recognition within normative legal categories have been examined in relation to land claims, cultural knowledge and other issues of collective and personal rights, I now turn to examining its utility in cases of interpersonal violence. In the next chapter, I discuss several cases in BC in which violence against Indigenous women and girls, men and children has become visible within Canadian social and legal discourse, resulting in court cases, inquiries and the creation of new governmental monitoring tools. I describe how this recognition is achieved and how legal actors and systems respond in light of this recognition. In doing so, I aim to highlight the interpersonal level at which colonialscape logics are manifested in the everyday lives of Indigenous people, as they seek justice within systems that continue to transform them into subjects of reserved spaces in which violence is expected. In these examples, it becomes clear that colonialscape logics serve to naturalize violence in urban streets, remote highways, and private homes, indeed, anywhere an 'Indian' body might turn up.

The Colonialism of Incarceration

Robert Nichols

Abstract: This essay attends to the specificity of indigenous peoples' political critique of state power and territorialized sovereignty in the North American context as an indispensible resource for realizing the decolonizing potential latent within the field of critical prison studies. I argue that although the incarceration of indigenous peoples is closely related to the experience of other racialized populations with regard to its causes, it is importantly distinct with respect to the normative foundation of its critique. Indigenous sovereignty calls forth an alternative normativity that challenges the very existence of the carceral system, let alone its racialized organization and operation.

Despite common perception to the contrary, the Canadian prison population is disproportionately large relative to other comparable societies—with the seventeenth highest incarceration rate of thirty-four OECD nations, higher than most European nations—driven in part by a dramatic increase in Canada's prison population in the last twenty-five years.[1] In the 1990s alone, federal prison populations increased by 25 percent and provincial prison populations by a further 15 percent. The number of young people in the country's correctional institutions has increased by nearly 30 percent since 1986.[2] A large omnibus crime bill recently passed into law by

the Conservative government, which promotes further ideologically driven, yet demonstrably dysfunctional "tough on crime" policies, ensures that these trends will only expand and compound over time.[3]

This reality has been somewhat obscured by the hyperbolic violence of prison expansion and carceral power in the United States. Nevertheless, just as is true of the U.S. case, prison expansion north of the border has been highly racialized, especially targeting indigenous peoples. In 2010/11, Aboriginal peoples comprised 27 percent of the total adult population in provincial or territorial custody and 20 percent in federal custody in Canada. Since Aboriginal peoples account for only 3–4 percent of the total Canadian population, this incarceration rate is 7 to 8 times higher than the general average. This discrepancy is particularly striking when considered in conjunction with a gendered analysis: Aboriginal women make up the single fastest growing imprisoned population, and now account for 33.6 percent of all federally sentenced women in Canada.[4] Additionally, Aboriginal inmates are subject to what the head Federal Correctional Investigator refers to, rather euphemistically, as "routine over-classification." This means that indigenous peoples are commonly classified as higher risk and more likely to reoffend; thus, they are released later in their sentences and are more often subjected to highly intense forms of incarceration, such as maximum security prisons and "administrative segregation" (otherwise known as solitary confinement). Partially as a result of this intensification, Aboriginal peoples are more likely to be involved in incidents involving harm to self or others while in custody, including 45 percent of all documented cases of self-injury.[5] Significant discrepancies between indigenous and non-indigenous incarceration rates can be found consistently across all provincial and territorial jurisdictions in Canada, but the degree of disproportion

increases significantly in the West (e.g., Alberta, Manitoba and Saskatchewan) and in the Territories of the North. Moreover, just as with the U.S. case, racial disproportionally is increasing over time. As the Office of the Correctional Investigator recently put the matter: "Aboriginal over-representation has grown in recent years: between 1998 and 2008, the federal Aboriginal population increased by 19.7 percent. Moreover, the number of federally sentenced Aboriginal women increased by a staggering 131 percent over this period."[6]

Critical prison studies—and the various forms of radical, grounded praxis out of which it has emerged, been transformed and subsequently reinvigorated with conceptual and practical tools—has insufficiently attended to the centrality of colonialism to the origins, scope, scale, and legitimation techniques of carceral power in North America and, as a result, it has by and large deprived itself of the energy and force of indigenous critique. With the aim of contributing to a positive interjection and reinvigoration of the *decolonizing* possibilities latent within this field then, this essay seeks to expand and refocus this framework. I argue that although the incarceration of indigenous peoples is closely related to the experience of other racialized populations in North America (especially African Americans) with regard to its *causes*, it is importantly distinct with respect to the *normative foundation* of its critique. Indigenous critique is (1) first and foremost a political critique, related but not reducible to causal explanations rooted in economic and sociological developments. It is a form of critique that (2) challenges the prevailing paradigm of "over-representation" in critical prison studies by calling into question the biopolitical category of "racialized population" itself; (3) challenges the ideological distinction between the logic of war and the logic of social pacification upon which carceral expansion depends; (4) situates critical prison studies within the broader horizon of settler colonialism and territorialized sovereignty, and; (5) offers alternative normative grounds from which to launch a general critique of these processes.

I.

The single most important set of tools available to any contemporary critical prison analysis in North America comes to us from decades of work in African-American and women of color feminism, broadly defined. Academic/activists such as Angela Davis and Ruth Gilmore are central to this debate, but so are organizations such as *Incite! Women of Colour Against Violence*, *Critical Resistance*, and the *Sylvia Rivera Law Project*.[7] Since these thinkers and organizations are building their analysis and critical praxis out of the U.S. experience, they have been particularly focused on the centrality of anti-Black racism to understanding prison expansion in that country.[8] This has taken the form of drawing a line of continuity between the contemporary prison system and the long history of slavery, either by way of a causal link, or via argument by analogy. The former attempts to demonstrate how the proliferation of Black Codes in the wake of formal abolition was directly and causally responsible for the turn to incarceration as a primary mechanism of social control over racialized populations (but especially African Americans). Such causal explanations have been difficult to establish with sufficient certainty, however, and can tend towards reductive, "single variable" forms of analysis that may improperly bracket out alternative explanations. Of late then, critical prison studies in the United States has tended towards a looser analogizing structure of argumentation, making the case that contemporary forms of imprisonment are *functionally equivalent* to Antebellum slavery or Jim Crow legislation in the post-Reconstruction era, even if not causally determined by these antecedents.[9]

Any critique of indigenous incarceration will have to grapple with a similar ambiguity whenever linking imprisonment to colonialism, and in this we can no doubt learn from Critical Race Theory, women of color feminism, and their related domains. However, we will as fundamentally require some departure from them. For just as any properly grounded critical praxis would be, these other fields are rooted in a historical experience that, while intersecting with settler colonialism and indigenous struggles, also diverges

7. Two of the most frequently cited works in contemporary critical prison studies include Angela Davis, *Are Prisons Obsolete?* (New York: Seven Stories Press, 2003), and Ruth Wilson Gilmore, *Golden Gulag: Prisons, Surplus, Crisis, and Opposition in Globalizing California* (Berkeley: University of California Press, 2007).
8. In the section that follows, I will be speaking frequently of "racism" and "racialization." My specific understanding of these terms is highly indebted to Ruth Gilmore's definition of racism as "state-sanctioned or extralegal production and exploitation of group-differentiated vulnerability to premature death" (Gilmore, *Golden Gulag*, 28).
9. E.g., Michelle Alexander, *The New Jim Crow: Mass Incarceration in the Age of Colorblindness* (New York: The New Press, 2012).

from them in relevant ways. Although some important literature exists that focuses on the specificity of indigenous incarceration—most notably, work by Patricia Monture and Luana Ross—to date this dimension of the field remains relatively occluded from view.[10]

One feature of prevailing discourses on prisons that serves to propagate a certain occlusion of its colonial dimension is the persistent language of "over-representation" and "racial disproportion," an idiom one can find even in the most critical camps. In this framework, empirical evidence is presented just as has been given here (above). The standard narrative structure begins with a recitation of statistical evidence pertaining to demographics, specifically comparing the racial organization of society at large versus that of the incarceration population. Any incongruity or discrepancy between the two is noted, commonly named as over-representation, and then employed to offer tacit or overt condemnation of the system. This rhetorical strategy is, not surprisingly, most evident in mainstream organizations and academic research, but it is also startlingly widespread in more critical or radical literature as well. To offer but one influential example of the former, in April of 2011 the NAACP released a major report titled *Misplaced Priorities: Over Incarceration, Under Education*.[11] This meticulously detailed report documents the rapid growth of racialized incarceration in the United States with a particular focus on its impacts on African-American communities, and the detrimental effects this is having on state capacities in other areas of investment and service delivery (especially education). Nevertheless, the primary critical thrust of this work rests with the idea of *disproportionality*, or the *over-representation* of racialized populations. As the title attests, it is primarily about *over* incarceration, not imprisonment per se.

Over-representation is a highly ambiguous and malleable idiom, susceptible to multiple interpretations and easily rendered into diverse programs for action. For instance, disproportion may be construed as the result of economic or social pathologies exogenous to the criminal justice system itself. In this formulation, the over-representation of racialized populations in prisons merely *makes visible* broader social pathologies, albeit in a highly dramatic way. For instance, criminality is correlated to poverty, which in turn is correlated to racialization and marginalization. Thus, the over-representation of certain populations in penal institutions may be thought a function of racism, but only in a highly mediated manner. On a different reading, however, we also know that the judicial system *itself* is rife with racialized violence and injustice. Such relatively unmediated mechanisms of racism operate endogenous to the system and have also been found to directly contribute to over-representation, for instance, in the manner in which racial bias operates at various stages of interaction with criminal justice officials, from being stopped for routine infractions (especially "stop and frisk" policies), through to sentencing and treatment by prison officers. Returning to the Canadian context then, both of these (external and internal) factors have been central to understanding the expansion of indigenous incarceration. To cite but one example, a 2004 study found that Aboriginal women in maximum security were involved in security incidences at a rate (28.6 percent) comparable to female inmates in minimum and medium security institutions (26.8 percent), and the correlation between the Security Risk Score (based on previous criminal history) and involvement in such incidences was found to be practically zero: 0.01 for violent incidences and 0.05 for non-violent incidences. The report drew the following conclusion from this evidence: "Aboriginal women are thus more routinely placed into tighter security settings despite the fact that their *criminal history has no predictive value* for whether they are genuinely a risk to other inmates or staff."[12] In other words, racial bias is demonstrably impacting internal prison operations, a key factor in understanding divergence between Aboriginal and non-Aboriginal experiences of incarceration (in terms of scope, scale and intensity).

Analysis of the racism both exogenous and endogenous to the criminal justice system is clearly indispensible to a comprehensive analysis of imprisonment. It remains therefore the focus of much critical prison studies, as analysts seek to provide causal explanations for recent carceral expansion. However, this focus has its limits. While discriminatory implementation is undoubtedly important to the overall operation of penal power in

12. David Milward, "Sweating It Out: Facilitating Corrections and Parole in Canada Through Aboriginal Spiritual Healing" in *Windsor Yearbook of Access to Justice* 29.1 (2011): 43.

North America, it is limited as an explanatory device in relation to prison expansion. For racial discrimination to serve this explanatory function, one would need to demonstrate not merely its contemporary extent and operation, but its dramatic *increase* since the 1970s. However racist the operation of the criminal justice system today may be (and no credible position can deny this generally), it another thing altogether to suggest that the system prior to the 1970s was significantly *less* so.[13]

As numerous works have documented then, understanding the expansion of prisons in North America requires not merely a *social* analysis—that is, one rooted in the sociology of criminal justice officials in their interactions with targeted populations—but a *political* one. This is to say that carceral mutation and expansion is explainable principally as a political strategy, one that links up with a variety of social and economic transformations taking place over the last few decades (especially neoliberal economic "adjustments," and deregulation and dissolution of social welfare networks) without being entirely reducible to these other factors.[14] In other words, while these social and economic forces produced the relevant context, multiple responses to these transformations were nevertheless possible. Carceral expansion was not so much then the necessary, automated effect of these various causes: it was (and is) a political choice adopted from within a range of possible responses. This point is punctuated by the fact, made repeatedly in the literature, that carceral expansion is not a function of increased crime. In fact, as volumes of work attest, there is little connection between crime and punishment in North America: technologies of punishment (and their ideological justifications) grow and morph quite independently of changes in crime trends.[15] Nor are such punitive transformations a function of economic demands in any simple, straightforward manner. Despite a continued emphasis in activist literature on privatization, for-profit motives, prisoners-as-surplus-labour, or even the somewhat misleading "prison industrial complex" neologism, prisons remain overwhelmingly public

13. As Loïc Wacquant puts this point, "True, discrimination in sentencing remains a reality at the final stage of the criminal justice process . . . but discrimination clearly has not *increased* since the mid-1970s and so it cannot account for the spectacular worsening of 'racial disproportionality' in prison administration in the recent period." Wacquant, *Prisons of Poverty*, expanded edition (Minneapolis: University of Minnesota Press, 2009), 156.
14. Cf. Joe Soss, Richard Fording, and Sanford Schram, *Disciplining the Poor: Neoliberal Paternalism and the Persistent Power of Race* (Chicago: University of Chicago Press, 2011).
15. E.g., in the same year that the Conservative government of Canada announced sweeping new "tough on crime" laws, Statistics Canada reported that the crime rate was the lowest in decades. See http://www.cbc.ca/news/canada/canada-s-crime-rate-lowest-since-1972-1.1334090 (accessed December 11, 2013).

institutions and carceral expansion a function of state imperatives. So the growth of prisons is not straightforwardly a function of either an increase in crime, nor unmediated profit motives. This isn't to say that privatization has not increased, or that it is not a central component of many contemporary prison systems in the western world. However, sSuch phenomena are more properly understood as the effects of prison expansion, rather than its causes.[16] This indicates then that prison expansion is a distinctly *political* phenomenon.

Ruth Gilmore theorizes the politics of carceral expansion in terms of "surplus state capacity," which she defines as a "quality that can emerge over time as a result of the difference between what states can do *technically* and what they can do *politically*."[17] Thus, while the surplus state capacity mobilized towards carceral expansion is about technical power, it equally pertains to and has its roots in discourses of legitimation, namely social pacification and managerial democracy. Political elites push "law and order" ideologies and carceral expansion because they recognize that these work to solidify hierarchical chains of authority and control over of the state apparatus, and this functions primarily because large swaths of middle class white people, driven by fear and racist fantasies, support such policies even in the face of overwhelming evidence that they do not operate to reduce crime. By bringing forward this political circuit of violence and legitimation, we can thus break from the kind of social critique proffered by the prototypical exasperated criminologist who throws up her hands in frustration that governments continue to pursue legal reforms that are not only ineffective but actively counter-productive (i.e., they fail to reduce crime rates and may actual increase them). For, unlike this naïve approach, we can see that such policies may not be designed to reduce crime in the first place. They can only be viewed as failures if one adopts the view that they are primarily enacted in order to make communities safer. Once we see that this is not the case—once we realize that such policies are first and foremost devised to maintain a system of state violence, racialized hierarchy, and, as I will argue, continuous colonial reterritorialization—then we must confront how effective and successful they truly are.

Thus, carceral expansion as a *political formation* has been increasingly grasped as a function of the emergence and consolidation of a new "penal ethos" in North America over the last twenty to thirty years.[18] This entails

16. For criticism of the "new slavery" arguments and the idea that capitalist labour exploitation is the primary driver of prison expansion, see Gilmore, *Golden Gulag*, 21; James Kilgore, "The Myth of Slave Labor Camps in the U.S.," *Counterpunch* (August 11–13, 2013).
17. Gilmore, *Golden Gulag*, 113.
18. Loïc Wacquant has meticulously documented how this new "penal common sense" has been actively exported by the United States to Western Europe (and

the deliberate dismantling of the social welfare state (however inadequate and uneven its institutions were), a corresponding growth and glorification of the penal state, and a internal transcription of the very terms of the penal state towards an increasingly moralized, punitive approach that prioritizes the isolation, segregation, and politically symbolic (though functionally ineffective) performance of castigating criminals (overwhelmingly the racialized poor). In other words, it is not merely that the state punishes *more*, it does so *differently*, with a new penology that emphasizes highly intense sociospatial isolation.[19] As Loïc Wacquant reminds us, "The expansive and expensive penal system is not just a consequence of neoliberalism . . . but an *integral component of the neoliberal state itself*."[20] The ritualized morality of punishment has ensured that even those remnants of the social welfare state that persevere have been effectively integrated into and subordinated to carceral rhetoric and imperatives, for instance in so-called "workfare" programs.[21] The horizontal spread of carceral governmentality thus exceeds its limited institutional manifestation in the prison itself, confirming yet exceeding one of Foucault's central insights from *Discipline and Punish*.

II.

Much of the survey above is known. Although the general trajectory of critical prison studies has been driving towards the kind of distinctly *political* critique of carceral expansion outlined above, the field nevertheless still remains fixated primary upon causal explanations. To be clear, I am not suggesting that explicating the sociological causes of prison growth over the last thirty years or so is unworthy of time and attention. However, no causal explanation, however complex and nuanced, can satisfy our need for a normative critique. And in this regard, historically and in the present, the indigenous peoples of North America provided indispensible tools since their critical praxis (decolonization) has always *primarily* focused on a robust normative critique of state sovereignty *as such*, and only secondarily upon its racist implementations. The focus of indigenous peoples' struggles has always been the imposition of the Euro-American state apparatus itself. This critique imports a broader perspective, one that activists from various other traditions (indigenous and non) can learn from and must contend with.

---

beyond) through neoliberal think tanks, policy experts, and lobby groups. It is reasonable to expect that the appearance of many of the same trends in Canada can be attributed to the adoption of this new kind of "Washington Consenus." See Wacquant, *Prisons of Poverty*, especially p. 54.

19. For a powerful political-phenomenological critique of solitary confinement, see Lisa Guenther, *Solitary Confinement* (Minneapolis: University of Minnesota Press, 2013).

21. See Soss, Fording, and Schram, *Disciplining the Poor*, passim.

In light of this perspective, sociological and demographic analysis of racialized incarcerated populations is inadequate when thinking about the political form of carceral power in North America. The colonial violence of carceral power in North America is not exclusively, or even predominately, a function of the *number* or *proportion* of racialized bodies within institutions. Moreover, framing the matter in this way may exacerbate the problem. When the critique of incarceration rests upon the over-representation of racialized bodies within penal institutions, this tacitly renders carcerality as a *dehistoricized* tool of state power—even if distorted by the pathological effects of a racist society—displacing an account of the continuity and linkages between carcerality, state formation and territorialized sovereignty.

As indigenous scholars such as Taiaiake Alfred, Joanne Barker, Glen Coulthard, and Audra Simpson (*inter alia*) have consistently argued, unlike other racialized populations in North America, indigenous peoples constituted self-governing political communities prior to the imposition of European state and market forms.[22] Their *continued* sovereign presence on the North American continent attests then not only to the failure of a series of projects of racial population management, but also fundamentally calls into question the very legitimacy of Euro-American states themselves. The central role of policing, prisons and the criminal justice system in the maintenance and reproduction of the state form is therefore challenged in a manner that exceeds the paradigm of over-representation. Moving beyond the over-representation model means then asking after the political function of the carceral system as a whole beyond that of racialized bodies within. In so doing, we confront a series of new questions: How can we analyze carceral power in the context of an ongoing denial of indigenous peoples not merely as individuals, nor even as "populations," but as self-organizing, self-governing political collectivities? How are we to apprehend the cataloguing and deploying of statistical evidence itself in this situation, especially when the evidentiary record is itself so indebted to a state apparatus of monitoring, tracking, and documenting indigenous bodies?[23] How do we draw upon such statistical evidence while recognizing that these numbers constitute

22. See Taiaiake Alfred, *Wasáse: Indigenous Pathways of Action and Freedom* (Peterbourgh, ON: Broadview Press, 2005); Taiaiake Alfred, *Peace, Power, Righteousness: An Indigenous Manifesto* (Oxford: Oxford University Press, 1999); Joanne Barker, ed., *Sovereignty Matters* (Lincoln: University of Nebraska Press, 2005); Glen Coulthard, *Red Skin, White Masks* (Minneapolis: University of Minnesota Press, 2014); Audra Simpson, *Mohawk Interruptus* (Durham, NC: Duke University Press, 2014).
23. For instance, consider the role of *Juristat* in the Canadian context. Discussed above in footnote 2.

bodies as "populations" in a context of a depoliticizing biopolitics of surplus humanity and human management?[24]

Returning once more to the Canadian case then, indigenous peoples do not merely represent racialized bodies produced by a biopolitics of population management. Rather—and this is the radical actuality that must always be held at bay by the state—they constitute alternative political, economic, ecological and spiritual systems of ordering, governing, and relating. In the context of ongoing occupation, usurpation, dispossession and ecological devastation, *no* level of representation in one of the central apparatuses of state control and formalized violence would be proportionate. Instead, indigenous sovereignty itself calls forth an alternative normativity that challenges the very *existence* of the carceral system, let alone its internal organization and operation.

III.

Before turning more centrally to the question of alternative normativities, consider how indigenous critique recasts another, related theme currently circulating in activist-academic literature, namely, the contemporary concern over a collapse between military and police operations. We are repeatedly reminded that, at present, foreign policy objectives described explicitly in terms of "war" are advanced not through the traditional confrontation of armed combatants, but through police-like operations over a globe envisioned as one large domestic space of surveillance and pacification. As we repeatedly hear from critics and defenders alike, U.S.-led empire functions as a "global policeman." The corollary development is the increased militarization of traditional, domestic policing. Policing is thought to be militarized either when (1) it begins to employ certain technologies of intense violence normally not deployed against civilian citizenry (e.g., the use of armed personal carriers, drones, aerial surveillance, etc.) or (2) when it

24. Statistical evidence of over-representation is not irrelevant or useless as a tool of argumentation. However, due to the inherent ambiguities of "over-representation," it has never been sufficient for a robust normative critique of carceral power itself. Consider that between 1967 and 1991 there were thirty major studies commissioned on Aboriginal peoples and justice in Canada that, on some accounts, have resulted in some 1800 recommendations for reforming the Canadian justice system. In 1996, the Report of the Royal Commission on Aboriginal Peoples (RCAP) included a separate volume on Indigenous peoples and criminal justice, *Bridging the Cultural Divide: A Report on Aboriginal People and Criminal Justice in Canada* (Ottawa: Minister of Supply and Services, 1996), which provided fifteen major new findings on the matter and seventeen additional recommendations. Almost none of these have been implemented and, in the time since RCAP was released, the problem has only compounded. Monture, "The Need for Radical Change," 239.

begins to serve overtly political aims, exceeding its traditional mandate to "serve and protect" the citizenry.[25] In such situations, the police risks being viewed as a force imposed externally by a government that the subjugated population does not recognize, authorize and/or does not have effect participation within.[26] Criminal control bleeds into war.

Assertions that the logic of war and that of social pacification can still be effectively disentangled are belied by our reality. In the current climate no attempt to fully insulate these two logics from one another can succeed. Yet, while recent commentators have expressed great dismay at the nakedly fluid boundary between military and policing operations today, viewed from the vantage point of settler colonialism and indigenous critique, there is nothing new about this permeability. In the history of Anglo-American settler colonialism, for instance, the extension of criminal jurisdiction has long been central to the subjugation and displacement of indigenous polities.[27] Existing in the "third space of sovereignty," indigenous nations have always subverted foreign/domestic distinctions, as well as attempts to distinguish war decisively from crime management.[28] The largest and most important domestic policing organization in Canada, the Royal Canadian Mounted Police (RCMP), emerged from its predecessor organization, the North-West Mounted Police (NWMP). The latter was modelled upon the Royal Irish Constabulary (RIC) and was expressly intended to function as a paramilitary organization, meant simultaneously to defeat indigenous resistance politically and pacify it criminally.[29] In the United States as well, although the Office of Indian Affairs, created in 1824, was very symbolically

relocated from the War Department to the Department of the Interior in 1849, from this point forward, including Wounded Knee and the complex and tense relationship between American Indians and the F.B.I., indigenous peoples have always doubled subjected to these two logics of violence and control.[30] As a result, they are well positioned to observe that these are not, and never have been, fixed and parallel logics, but have always intersected one another. Indigenous critique thereby discloses the oscillation of these forms of state violence as *constitutive* of territorialized sovereignty in a colonial context, rather than extraneous and novel.

The deep challenge posed by indigenous peoples does not merely consist in their doubly-subjected position here, however. Rather, it resides in the delegitimizing of the war/crime dichotomy in the first place, for indigenous peoples in North America are in precisely the position mentioned above: experiencing policing itself as a force imposed externally by a government that the subjugated population does not recognize, authorize and/or does not have effect participation within.[31] In short, the *state itself* is apprehended as the primary vehicle for the collective organization of violence upon indigenous peoples, historically and in the present. Indigenous politics is founded upon this existential challenge. As indigenous (Mohawk) scholar, Patricia Monture-Angus points out, in the Canadian context, study after study has demonstrated that, "Aboriginal people do not view the criminal justice system as a system that represents or respects them," and, as a result, "the perceptions of Aboriginal peoples (while keeping in mind their diversity) thus

30. The FBI shares jurisdiction with the Bureau of Indian Affairs, Office of Justice Services (BIA-OJS) and has primary law enforcement responsibility on nearly 200 Indian reservations. The Department of Justice traces its authority over law enforcement to treaty responsibilities established in *Cherokee Nation v. Georgia*, 30 U.S. (5 Pet.) 1, 17 (1831), which set out the United States government's duty to "protect" Indian tribes as "domestic dependent nations." See http://www.fbi.gov/about-us/investigate/vc_majorthefts/indian/indian_country_crime and http://www.justice.gov/otj (accessed June 2014). Perhaps the locale most symbolically associated with the overlap of military and policing powers as they relate to American Indians is Alcatraz, which initially functioned as a military prison where indigenous political opposition was routinely incarcerated, and, as a result, was later the target of indigenous (re)occupation from 1969 to 1971 by the United Indians of All Tribes. See Paul Chaat Smith and Robert Warrior, *Like a Hurricane: The American Indian Movement from Alcatraz to Wounded Knee* (New York: New Press, 1997).

31. This article does not attempt to extend the comparison beyond Canada and the United States to include other Anglo-settler polities, such as Australia and New Zealand. No doubt, however, such comparative work is possible and needed. For an example of such analysis, see Lisa Ford, *Settler Sovereignty: Jurisdiction and Indigenous Peoples in America and Australia, 1788–1836* (Cambridge, MA: Harvard University Press, 2010).

thoroughly challenge the perspective of those who regard Canada to be a free and democratic state."[32] In this context, reforming the penal system to produce less "disproportionality" in racial demographics (between inside and outside the prison walls) will continue to fail to take into account Aboriginal justice traditions themselves, which are "a clear component of the inherent right to self-government."[33] While indigeneity consistently avoids reduction to any fixed or determinate content, the condition of possibility for continued creative reinvention and reproduction of culture, tradition, spirituality, and life itself *as* indigenous peoples has meant a persistent refusal to acknowledge the dehistoricized naturalization of domestic/foreign distinctions meant to legitimize state violence.

Although this has a centuries-long history, what has changed is that, unlike pervious eras (unlike even the 1970s, e.g., Pine Ridge) the incarceration of indigenous peoples is increasingly dehistoricized—and thus depolitized—through its representation as the general extension of racialized criminality. Even though far more indigenous peoples are incarcerated today than, say, when Lenard Pelltier was convicted in 1977, today this is more effectively and smoothly enacted because it has been routinized, bureaucratized, and detached from the longer colonial history of the state itself. By attending to the colonial function of carceral expansion today, we are cautioned then against too hastily accepting the supposed radical novelty of the present, not to mention the story of neoliberalism's hollowed out states, or Empire's virtuality. Indeed, we are even cautioned against too hastily accepting one of indigenous studies' prevailing narratives today, namely, that North American settler states have moved from openly coercive and violent relations with indigenous communities towards a more flexible, docile, politics of recognition and assimilation—a move away from the "hard infrastructure" of military operations and residential schools to the "soft infrastructure" of public apologies and cultural accommodation. While this transition to soft tactics has certainly occurred in some fields of governance, it is coeval with the growth of a whole shadow system of hard infrastructure that is every bit as material, physical and coercive as ever. The settler colonial state has not gone away at all, or even become less of a physical, material presence—it has merely shifted its site of operation, perhaps most symbolically from the residential school to the prison. Read against this larger backdrop then, we can begin to read the vast network of prisons in North America in terms of its ideological function relative to settler colonialism: that is, the manner in which it functions strenuously to depoliticize this ongoing material violence and erect a strict separation between *criminal control* and *conquest* despite indigenous societies' continued insistence that externally imposed coercive

control over their members (for whatever reason) is an affront to the inherent right to self-government.

IV.

Ruth Gilmore has persuasively argued that if we are to understand and properly subject carceral power to an effective critique then we must not only "develop complex understandings of how prisoners became so massively available as carceral objects"—a matter surely deeply rooted in processes of racialization—but we must also "figure out how the ground the prisons stand on becomes available for such a purpose."[34] In thinking about how this ground becomes available, Gilmore has in mind the manner in which a permanent crisis in the workfare-welfare state has been literally displaced onto the landscape of relatively low-density, rural communities, which has produced new opportunities and demands for land grabbing. However, highlighting the colonialism of incarceration further draws our attention to the territorial foundation of prison expansion in a deeper and longer history. It forces consideration of the politics of territoriality in North America in a variety of forms, including the ways in which territorialized sovereignty aspires to impose an exclusivity and singularity of command and control that obliterates alternative normative orders beneath and beyond its aegis.

At the most immediate level, criminalized capture by the state is about management of "disorderly populations" through isolation. As Allen Feldman famously put it: "Arrest is the political art of individualizing disorder."[35] Of course, isolation and sequester are always already geospatial and are thus implicated in territoriality in a general sense. Prisons are a spatial and territorialized matrix of punishment and control inasmuch as they attempt to provide geographical solutions to socio-economic and political contradictions (in the form of cages, walls and other technologies of isolation and segregation). As Gilmore forcefully put this point,

> Incapacitation doesn't pretend to change anything about people except where they are. It is in a simple-minded way, then, a geographical solution that purports to solve social problems by extensively and repeatedly removing people from disordered, deindustrialized milieus and depositing them somewhere else.[36]

Prisons certainly operate through geospatial media in this general sense, sharing a certain continuity with other technologies of spatial control such as "ghettoization." As a result, there is overlap here with other important experiences of, for instance, African American subjugation and control.

35. Allen Feldman, *Formations of Violence* (Chicago: University of Chicago Press, 1991); cited in Gilmore, *Golden Gulag*, 235.
36. Gilmore, *Golden Gulag*, 14.

Prisons, ghettos, and other tools of capture and separation exhibit a revealing morphological continuity.[37] Attending to the historical experience of indigenous peoples, however, these general geospatial formations are refocused through another lens of territoriality—settler colonialism and land acquisition—reframing Gilmore's considerations on the territorial foundation of the prison apparatus.

Indigenous (Dene) political theorist Glen Coulthard provides a succinct and precise definition from which we may begin to bring the colonial-territorial politics to the fore here. He designates a "colonial relationship" in terms of the distinct form of domination it engenders. Colonialism is:

> A relationship where power—in this case, interrelated discursive and non-discursive facets of economic, gendered, racial, and state power—has been structured into a relatively secure or sedimented set of hierarchical social relations that continue to facilitate the *dispossession* of Indigenous peoples of our lands and self-determining authority. In this respect, Canada is no different than any other settler-colonial power: in the Canadian context, colonial domination continues to be structurally oriented around the state's longstanding commitment to maintain—through force, fraud, and more recently, so-called "negotiations"—ongoing access to the land that contradictorily provides the material and spiritual sustenance of Indigenous societies on the one hand, and the foundation of colonial state-formation, settlement and capitalist development on the other.[38]

Coupling Coulthard's work with the emergent field of settler colonial studies brings into focus the extent to which state and market formation in North America has always been intimately bound up with *land acquisition* and *resettlement*, and that these have called forth distinct ideologies rooted in notions of agrarianism, territorial possession and improvement. The defining feature of this particular political formation is not the appropriation of labour, nor the subjugation of indigenous self-governing powers (although these are both also present). Rather, as James Tully reminds us, "the ground of the relation is the appropriation of the land, resources, and jurisdiction of indigenous peoples, not only for the sake of resettlement and exploitation . . . , but *for the territorial foundations of the dominant society itself*."[39]

Or as Patrick Wolfe states rather more bluntly: "Territoriality is settler colonialism's specific, irreducible element."[40]

Contemporary critical theory has largely evaded an analysis of territoriality and its relationship to classical colonial formations, oftentimes staking much on a supposed movement towards a decentred, deterritorialized, virtual or "postmodern" Empire thought to have succeeded the older, land-based form of colonial power that held sway over an era now imagined as distant to us.[41] However, viewed from the vantage point of indigenous struggles, settler colonialism and—our focus here—carceral power as it is subtended by colonialism, predictions of a neoliberal hollowed-out state and/or a deterritorialized Empire appear not merely premature but inattentive to the dialectical inversion of these tendencies, that is, to the processes of concretization and the persistence of *fixity*, *rigidity* and *territoriality*. Thinking through carceral power and indigenous incarceration, we can here instead ask after the continuation of classical state building practices, including its hard infrastructure, as well as classical colonial relationships to land acquisition and dispossession that have provided the literal terrain upon which biopolitical population management techniques as segregation and sequester rest, observing not only that these remain central to the global organization of capital and biopower, but that such forces are in fact advancing rather than melting away.

Work by political theorist Wendy Brown stands as an exception to this general occlusion in as much as she has attended to the paradoxes of the territoriality of contemporary sovereignty by highlighting the continued importance of walls, fences, borders, and barriers to the organization of political space. Brown notes that what we have come to call "globalization" in fact

> harbors fundamental tensions between opening and barricading, fusion and partition, erasure and reinscription. These tensions materialize as increasingly liberalized borders, on the one hand, and the devotion of unprecendented funds, energies, and technologies to border fortification, on the other.[42]

In other words, while capital and military technology is increasingly deterritorialized and fluid, it is so only through the reassertion of rigidity, fixity and territorial segmentation for certain populations. And, quite rightly,

40. Patrick Wolfe, "Settler Colonialism and the Elimination of the Native," *Journal of Genocide Research* 8.4: 387–409, at 388.
41. Important exceptions to this rule include Michel Foucault, *Security, Territory, Population* (New York: Palgrave Macmillan, 2007), and the work of Stuart Elden, especially *The Birth of Territory* (Chicago: University of Chicago Press, 2013).
42. Wendy Brown, *Walled States, Waning Sovereignty* (New York: Zone Books, 2010), 7–8.

Brown draws a line of continuity between the contemporary resurgence of concrete barriers and the historical lineage of settler colonialism and land appropriations. In this way, she provides tools for understanding how the regulation of political space is not merely about the construction (or removal) of any specific walls, fences, or cages, but more properly "a technology of separation and domination in a complex context of settler colonialism and occupation."[43]

In so-called "Indian Country," there is nothing new about this paradoxical relationship of segregation and fluidity. Indigenous peoples are well acquainted with what Ann Laura Stoler has termed (following and building upon Foucault) the carceral archipelago of empire, which has always combined spatial isolation and confinement with linkages and connectivity—in this particular case, highlighted most dramatically by the circuit many indigenous peoples traverse today between the reserve or reservation and the prison, two sites of physical and spatial containment that are intertwined in one another.[44] In settler colonial societies today, however, this reality is obscured not only by the ideological depoliticization of carceral expansion in general, but also by the delinking of prison abolitionism from decolonialism and the "land question" specifically. To speak of the colonial violence of carceral power in North America is precisely to focus attention to how incarceration facilitates dispossession, in this time, in this place.

In the final analysis then, indigenous critique launches its evaluation of carceral power by attending to the ways in which this apparatus of capture operates as one armature of territorialized colonial sovereignty, a continuous process of dispossession that (always imperfectly) undermines indigenous practices of self-government by severing peoples from their historical relationship to the land. This critique speaks then already of alternative normative relationships of governance, sociality, and ecology.

With regard to this latter question, consider again the work of Patricia Monture-Angus. Drawing upon extensive work with Aboriginal women's associations across Canada, Monture-Angus points us directly to the ultimate

43. Ibid., 30.

44. Ann Laura Stoler, *Along the Archival Grain: Epistemic Anxieties and Colonial Common Sense* (Princeton, NJ: Princeton University Press, 2009). Stoler is building upon, while critically provincializing and decentring Foucault's classic genealogy of carceral power in *Discipline and Punish*, but especially the symbolic function of the Mettray institution. While Foucault employs the opening of the Mettray penal colony in January of 1840 to "fix the date of the completion of the carceral system," Stoler rightly points out that the institution was in fact part of a global, imperial formation that "connected strategies of confinement from metropole to colony and across the imperial world" (Stoler, 131). See also Foucault, *Discipline and Punish*, 2nd ed. (New York: Vintage, 1995).

normative foundation of the critique proffered here. In 1989, the Aboriginal Women's Caucus submitted a brief to the Solicitor General of Canada, making clear the status of indigenous women as both (1) multiply subjected by sexist, racist and colonial forms of governance, and yet (2) firmly rooted in an alternative ethic that precludes their legitimate incorporation into the criminal justice system, whatever their "level of representation" therein. They wrote:

> All Aboriginal, First Nations citizens are in conflict with the law. We are First Peoples with an inherent right to exercise our own systems of justice and the values these systems represent. The issue of Aboriginal women and the criminal justice system is merely the most blatant example of the oppression of First Nations People under a system of laws to which we have never consented.[45]

Reflecting on this and other examples, the conclusion Monture-Angus draws is that, "the foundational ideas of current correctional philosophy"—namely, punitive power and risk management—are "incompatible with Aboriginal cultures, law and tradition."[46] This presents a unique and important challenge then to the new penal ethos, since it cannot be easily resolved even through a "de-racialization" process, or the reorganization of demographics. Even attempts to incorporate the alternative ethical systems of indigenous peoples will fall short under such conditions. The inclusion of Healing Lodges and other Aboriginal-centred correctional facilities cannot conceal the fact that these institutions remain "within the legal and bureaucratic structure of the Canadian prison system . . . no matter how much Aboriginal culture and tradition inspires their contour, shape and form."[47] Whereas "racialization" approaches tend to focus on the racist operation of correctional institutions then, indigenous critique focuses attention on the normative

The Aboriginal Women's Caucus was a group of Aboriginal Women working in the Canadian criminal justice system.
46. She goes on to elaborate: "People (or any 'thing' with a spirit) were not intended to be managed but rather respected. The conclusion is that one of the foundational ideas of current correctional philosophy is, in my opinion, incompatible with Aboriginal cultures, law and tradition." Monture-Angus, "Aboriginal Women and Correctional Practice," 56.
47. Ibid., 53. This principled, deep normative critique of prisons as institutions of violence displaces and eclipses work whose primary aim is to diagnose the manner in which carceral expansion is "antagonistic to democratic participation" and "inspires negative orientations toward government." Vesla M. Weaver and Amy E. Lerman, "Political Consequences of the Carceral State," *American Political Science Review* (November 2010): 1–17.

critique of carceral power within a broader horizon, but especially insofar as it functions as a principle apparatus of colonial-state power. This deep, territorially grounded normative vision is not reducible to the more prevalent anti-racist analysis of critical prison studies (however indispensible the latter remains) and cannot be overlooked or ignored.

V.

Theorizing and interrupting indigenous incarceration means attending to more than the over-representation of racialized bodies.[48] It calls instead for an analysis of the colonial function of the carceral form in the here and now. To recapitulate: the concern here is not with a general notion that all imprisonment, regardless of time and place, is inherently colonial merely due to its form or mode of operation. It is rather with the fact that, in *this* context carceral power takes on a colonial function as a result of its central role in manifesting and managing the territorialized violence of *these* states.[49] If sovereignty can be said to comprise the continual practice of asserting the singularity of political control in a given territorial space—thus combining exclusion and absolute decision—colonialism is the practical mediation of the external/internal boundaries of this process. It is the means by which sovereignty extends outward and is then reterritorialized through continual internal reorganization. Hence the association of colonization as an outward expansive force and an internal reorganization through containment, capture and divisive social organization. In the contemporary Anglo-American world, this colonization is predicated by its *settler* form, as so many important interventions in Native American studies have demonstrated.

Settler colonialism is a distinctive ideological and material formation, and it should be clear here that the prison industrial complex in North America is one technique in its operation today. Set alongside that other archipelago of spatial containment—the Indian reservation and reserve system—the contemporary carceral system colonizes and re-colonizes in a classical sense: by providing a solution to that which exceeds and destabilizes sovereignty via a spatial reorganization of populations and a depoliticization of that process. While this apparatus is currently situated within empire and manifests itself in fully racialized terms of articulation today, it cannot be reduced to these other formations. For settler colonialism

48. For work that carefully avoids the generalized "racialization" framework in favour of a rich historical analysis of the intertwining of anti-Black racism and settler colonialism, see Shona Jackson, *Creole Indigeneity: Between Myth and Nation in the Caribbean* (Minneapolis: University of Minnesota Press, 2012).
49. This leaves open the question of how to relate the specificity of the carceral-colonial linkage in North America to other Anglo-settler colonies or other occupied lands (which is beyond the scope of this particular article).

aims not primarily at exogenous domination or the extraction of surplus value from an enslaved and subjugated population but, first and foremost, at the acquisition and maintenance of territorialized sovereignty through continual spatial containment, reorganization and pacification—a process that both undermines, and is continually challenged by, the plurality of indigenous normative worlds. Thus, the rise of carceral power in the Anglo-American world cannot be told without attending to the history of settler colonialism, and it is only on the basis of this reframing that prison abolition can properly announce itself as decolonization.[50] — • —

INVENTING THE SAVAGE

THE SOCIAL CONSTRUCTION OF NATIVE AMERICAN CRIMINALITY

PART I *Colonization and the Social Construction of Deviance*

The United States may not have written the book on ethnic cleansing, but it certainly provided several of its most stunning chapters—particularly in its treatment of the American Indian. . . . Americans, as de Tocqueville long ago recognized, are a future-oriented people with a short historical memory. And the accepted, widely taught versions of history are written by the victors, presented in schools as sanitized costume pageantry. This is especially true when the victory is as total as that of America's forefathers over the American Indians, who were nearly "cleansed" from an entire continent—an outcome the likes of which Bosnia's Serbs can only dream.

KENNETH DAVIS
"Ethnic Cleansing Didn't Start in Bosnia"

One WORLDS COLLIDE

NEW WORLD, NEW INDIANS

> *The more [Indians] we can kill this year the less will have to be killed the next war, for the more I see of these Indians, the more convinced I am that they all have to be killed or be maintained as a species of paupers.*
>
> GENERAL WILLIAM T. SHERMAN, *1867*
> *(quoted in Sharon O'Brien,* American Indian Tribal Governments*)*

Once, all Native American tribes were largely free of the impositions of external social forces. These indigenous people did not live in isolation, although each nation had separately constructed a unique world. But their meetings, even when conflictual, never followed the notion of absolute dominance by means of total war that justified European and Euro-American invasion and occupation (Jaimes and Halsey 1992).

When Europeans first came to this country, there were approximately ten to twelve million indigenous people living on the land that became the United States (Dobyns 1983). These indigenous people were divided into numerous autonomous nations, each with its own highly developed culture and history. Politically, the indigenous people were not weak, dependent groups of people but rather powerful equals whom the early colonists had to deal with as independent nations.

Over the years, Native people have been stripped of most of their resources by the aggressive "settlers" who subjected them to unilateral political and economic exploitation and cultural suppression (Talbot 1981; Weyler 1982). Although Native nations are still politically distinct from the United States, under the definition of colonial theory today's Native nations are colonies. One of the main motives of colonialism is economic exploitation, and cultural suppression almost invariably ac-

companies colonialism (Blauner 1972; Talbot 1981). Cultural suppression is a legal process that involves deculturation—eradication of the indigenous people's original traditions—followed by indoctrination in the ideas of the dominators so the colonized may themselves assist the colonial project (Talbot 1981). The process, in which the colonized are removed from their cultural context through enslavement or transplantation, involves the abandonment of culture and the adoption of new ways of speaking, behaving, and reasoning.

The destruction of indigenous cultures includes the eradication of their judicial systems. Law has repeatedly been used in this country to coerce racial/ethnic group deference to Euro-American power. Understanding this history of colonization is essential because Native criminality/deviancy must be seen within the context of societal race/ethnic relations; otherwise, any account of crime is liable to be misleading. Any explanation of Native criminality that sees individual behavior as significant overlooks the social and historical origins of the behavior. A thorough analysis of Native criminality must include the full context of the criminal behavior—that is, their victimization and the criminalization of Native rights by the United States government.

NATIVE WORLDS

As with other social worlds, Native societies are the result of the world-building activities of their members. This unending pursuit contains a variety of aspects, some of which are included in a social phenomenon known as social control. This area, which includes the concept of deviance and the manner and appearance of its construction, is my concern.

There is a widely held belief that the Americas' indigenous people were completely lawless. Nothing could be further from the truth. Although the standards of right and wrong varied widely, as did the procedures for punishing transgressors, Native groups all exercised legal systems founded upon their own traditional philosophies.[1] The law was a part of their larger worldview (Barsh and Henderson 1980; Deloria and Lytle 1983, 1984; Yazzie 1994). According to Rennard Strickland, "law" is more than statutes and balanced scales:

> Law is also a Cherokee priest listening to the spirit world while holding the sacred wampums in hand and the Cheyenne soldier-society warrior draped in the skin of a wolf. In fact, a command from the spirit world can have greater force as law than the most elaborate code devised by the most learned of men. For law is organic. Law is part of a time and a place, the product of a specific time and an actual place. (1975, xiv)

As Deloria and Lytle write,

> Indian tribes, as we shall see, were once primarily judicial in the sense that the council, whether it was that of a village, a league of tribes, or a simple hunting band, looked to custom and precedent in resolving novel and difficult social questions that arose. . . . The task of the council, when it had a difficult question to resolve, was to appeal to that larger sense of reality shared by the people of the community and reach a decision that the people would see as consonant with the tradition. Few new laws or customs were needed and when these occasions presented themselves the homogeneity of the community made the adoption of the innovation simple. (1983, xi)

We are reminded that Indian Country[2] had no prisons:

> . . . as Native people, we believe in truth, and not the facts. That is why we never had to sign a receipt, because we knew we were dealing with each other in an honest way. . . . We never had locks on our tipis . . . go ahead and dig all you want to search for the history of the Americas, and you will never find evidence of prisons. (Deere 1980; quoted in Weyler 1982, 98)

Native people continue to survive and reach forth, extending, building Native worlds as best they are able. Part of these efforts concerns the recuperation of Natives whose path takes them outside the natural order or across Euro-American legal lines. It is these Natives and the manner of their contact with other Natives and Euro-Americans, especially the "official" ones, that is now our concern. The United States has the distinction of incarcerating more of its people than any other

country. Natives are now locked up in great numbers, jailed in buildings constructed in line with the system of legislated law, which the United States proudly and forcefully imposes on Natives.

Prior to the coming of this law and its jails, Natives were free to follow laws seen as coming from a natural, external place instead of flowing from the pens of men. On occasion, Natives did not follow Native ways. How much this happened is difficult to ascertain, but it surely was little compared to the deviance apparent in today's society. Natives involved in these situations knew what was amiss and met together to search out a remedy. These meetings, authorized by the wise—whose age, gifts, and spirit were acknowledged—looked for a path that would compensate for the injured and recuperate the offender.

> The primary goal was simply to mediate the care to everyone's satisfaction. It was not to ascertain guilt and then bestow punishment upon the offender. Under Anglo-American notions of criminal jurisprudence, the objectives are to establish fault or guilt, and then to punish. . . . Under the traditional Indian system the major objective was more to ensure restitution and compensation than retribution. (Deloria and Lytle 1983, 111)

Precontact Native criminal justice was primarily a system of restitution—a system of mediation between families, of compensation, of recuperation. But this system of justice was changed into a shadow of itself. Attempts were made to make Natives like white people, first by means of war and, when the gunsmoke cleared, by means of laws—Native people instead became "criminals." *Criminal* meant to be other than Euro-American. We will see that Euro-Americans sought to delegitimize Native worlds and attacked their constructs, including Native justice systems, which were systematically torn down, eroded, and replaced.

One damaging effect of colonization has been its influence on the structure of Native governments. The expansion of Euro-American legality contributed greatly to the further decline of tribal systems, already rocked by foreign invasion. For instance, except in a few early treaties, in regulating Native-white relations, Euro-Americans insisted that disagreements and crimes be disposed of in Euro-American fashion.[3] Consequently, political discretion, generally handled in Native societies by a council of elders and the clans, came to be assumed by Euro-Americans, greatly weakening the traditional councils.

FENCING INDIAN COUNTRY: DISRUPTIVE POLICY AND LEGISLATION

By the end of the eighteenth century the newly independent United States had cleared the eastern seaboard of most of its original inhabitants (Josephy 1984). At the turn of the century, the most intense wave of westward migration began in earnest, driven by land speculation. Speculators, often backed by New England and European banks, cheaply purchased large tracts of land from the federal government, who had procured it (often forcibly) from Native nations. The land was sold in smaller tracts, at considerable profit, to white settlers (Johansen and Maestas 1979).

Colonialism, thus, did not end with the Declaration of Independence. The United States continued colonizing after its revolutionary war. All the characteristics of colonialism—unilateral political control, economic exploitation, and cultural oppression—were present in Euro-American expansionism in the nineteenth century. Colonialism remained, albeit manifested more subtly.

Racialized oppression, then as now, was not a discrete phenomenon independent of larger political and economic tendencies. Nineteenth-century laws and their enforcement can readily be seen as instruments for maintaining social and economic stratification created in the centuries before. In a greedy, expanding young nation building law and custom on the ownership of property, crime control was part of the maintenance of that sacred foundation. Law-enforcement officials were not simply bystanders in this history; they participated in and encouraged lawlessness in the interests of suppressing minorities. As remaining Native lands were seized and resisting tribes massacred, federal officials often looked the other way or were actively involved (Brown 1970). Genocide against Native people was never seen as murder. Indeed, in the Old West the murder of Natives was not even a crime (Heizer 1974; Hurtado 1988; Schwartz and Disch 1970). Native men and women, their humanity cast aside, were commonly referred to as "bucks" and "squaws." Those not exterminated faced dire circumstances. For instance, the state of California enacted "The Act for the Government and Protection of Indians" in 1850, amended in 1860. Despite the title of the act, it allowed white people to simply take Native children, those orphaned or supposedly with parental consent, as indentured slaves (Hurtado 1988). The law also "virtually compelled

Indians to work because any Indian found 'loitering or strolling about' was subject to arrest on the complaint of any white citizen, whereupon the court was required within twenty-four hours to hire out arrestees to the highest bidder for up to four months" (Hurtado 1988, 130).

During early contact with Europeans, tribes retained exclusive jurisdiction over such issues as law and order. This right followed the assumption that tribes possessed complete sovereign powers over their members and lands. Tribal sovereignty, as defined by Euro-American law, was upheld in two early major U.S. Supreme Court cases: *The Cherokee Nation v. Georgia* (1831) and *Worcester v. Georgia* (1832). Tribes did not intend to give up their culture, social organization, or self-government; therefore, according to treaties, tribes were to retain their system of criminal justice (Ortiz 1977).

Native legal and political status changed, however. One factor in this transformation was the view Europeans and Euro-Americans historically had, and continue to have, of Natives. Indigenous people's land and other resources were desired by ethnocentric Europeans and later Euro-Americans, who expressed their cultural superiority as the justification for the expropriation of Native lands. Natives were regarded as "savages," legitimizing the removal of Natives from the westward path of civilization's progress (Berkhofer 1978). The ideology of Native inferiority was used to justify both genocide and attempts to supposedly assimilate Natives into the dominant society. Whatever the intent, the common denominator was the assertion that Native societies were lower on the evolutionary scale. Accordingly, the stereotype of the "savage, inferior" Native was carefully developed, and Natives were seen and treated as deviant. In this manner, the ground was prepared for the entry of "modern, rational" Euro-American law into Indian Country.

One product of colonialism is, thus, the controlling of indigenous people through law. The values that ordered Native worlds were naturally in conflict with Euro-American legal codes. Many traditional tribal codes instantly became criminal when the United States imposed their laws and culture on Native people. New laws were created that defined many usual, everyday behaviors of Natives as "offenses." The continuous clashing of worlds over the power to control Native land and resources constantly brought Native people in conflict with the legal and judicial system of the United States, which demonstrates the political intent and utility of Euro-American laws.

Crucial to understanding Native criminality is knowledge of the disruptive events brought about by assimilationist, racist policy and prohibitive legislation mandated by federal, state, and municipal governments. These policies and accompanying criminal statutes were concerned with cultural genocide and control as the tenacious Euro-Americans, seeking to replace tribal law and order with their own definitions of criminality and due process, increasingly restricted the power of Native nations.

The Euro-American surge to gain legal and judicial control over tribes included the creation of the Bureau of Indian Affairs (BIA). To relieve the military while retaining control of tribes, the federal government created the BIA within the War Department in 1824. In 1849 the BIA was transferred to the Department of the Interior. Additionally, the early part of that same century saw the federal government's first attempts to impose federal criminal laws on nonconsenting tribes. The effort to facilitate Euro-American encroachment on Native lands was led by the U.S. Congress, which awarded itself federal jurisdiction over Natives by passing the General Crimes Act in 1817. The tribes retained exclusive jurisdiction only over offenses in which both the offender and the victim were Native (Barsh 1980). In all other cases, tribes now held concurrent jurisdiction with the federal government.

Another intrusion by the federal government into Native affairs was launched in 1825, when Congress passed the Assimilative Crimes Act. This act expanded the number of crimes that could be tried by federal courts when offenses were committed on Native land. The act is limited to interracial crimes and is not applicable when crimes are committed between Natives on reservations (Deloria and Lytle 1983).

From the mid– to late nineteenth century, the overriding task of the federal government was, in theory, the "civilizing" or "Americanizing" of tribes (Prucha 1973). In practice, the goal seems to have been to obtain Native land and resources. This era featured the "Friends of the Indians," a group of Euro-Americans that worked in common to "save" Natives from their "primitive" ways. This well-placed group, which can be likened to Howard Becker's (1963) moral crusaders, applied considerable political pressure in an effort to get their reforms enacted. The reformers, solidly agreeing that the Americanization of Indians required that they be brought under the protection and restraints of Euro-American law, worked to bring a special set of courts and procedures to the reservations. These procedures were to hasten their illusive assimilation.

The influential reformers pressured the Department of the Interior to take action against the "savage and barbarous" practices of the Natives (Prucha 1973). The vehicle chosen to accomplish this task was the Court of Indian Offenses. These courts were composed of Native judges, handpicked by BIA Indian agents, who satisfied the agents, not tribal communities (Deloria and Lytle 1983). The judges were supposed to be men with high moral integrity who "engage in civilized pursuits"; the requirements stated also that "no person shall be eligible to such appointment who is a polygamist" (Morgan 1882; quoted in Prucha 1973, 301).[4] Preference was given to those who read and wrote English. The judges were to bring Natives "under the civilizing influence of law" (Teller 1883; quoted in Prucha 1973, 299). Indirect rule, along the British colonial model, was thus established with the formation of Indian police and judges in the latter part of the nineteenth century (for a full description, see Hagan 1966). These men were employed to police other Natives according to Euro-American law in another attempt to Americanize indigenous people.

The regulations for the Court of Indian Offenses were drawn up in 1883 by Thomas Morgan, then Commissioner of Indian Affairs. Morgan listed offenses and the appropriate punishments. The following constituted offenses: plural or polygamous marriages; immorality; intoxication; destroying property of other Natives (this speaks to mourning practices: destroying the property of the deceased was customary in many tribes); any Native dance "intended and calculated to stimulate the warlike passions of the young warriors of the tribes" (Teller 1883; quoted in Prucha 1973, 296); and the practices of medicine people, which were seen as "anti-progressive," because medicine people used their power in "preventing the attendance of the children at the public schools, using their conjurers' arts to prevent the people from abandoning their heathenish rites and customs" (Teller 1883; quoted in Prucha 1973, 297–298). In some tribes spiritual leaders had assumed broader roles after the slaying or arrests of war leaders, so by criminalizing their practices the courts seized the authority of traditional tribal leaders.

Misdemeanor offenses generally covered Native neglect to engage in what Euro-Americans defined as "work." The Protestant work ethic was upheld to Natives, and failure "to adopt habits of industry, or to engage in civilized pursuits or employments," brought swift punishment (Morgan 1892; quoted in Prucha 1973, 304). Clearly these courts were used to suppress Native worlds, which were made criminal, and especially to attack their religion. This repression of religion forged ahead at full steam until 1934, when the Indian Reorganization Act somewhat lessened the court's powers. The ban on alcohol, which came in the early nineteenth century, was not lifted until 1953.

In 1881 an important event occurred in Indian Country. A Lakota named Crow Dog killed another Lakota by the name of Spotted Tail (Harring 1994). As their tribal custom decreed, the matter was remedied by Crow Dog's family paying restitution to the victim's family. Under Lakota law Crow Dog would not be further punished, let alone executed. White people, however, were enraged over the much-publicized case and demanded that the United States seize jurisdiction over the tribes and punish Crow Dog "properly." *Ex parte Crow Dog* (1883) opined that the United States did not have the jurisdiction to prosecute a Native when the crime was against another Native. Euro-American reformers thought that to allow such a "primitive" form of justice to prevail was lawless (Deloria and Lytle 1983). Their furor led to the passage of the Major Crimes Act of 1885, whereby Congress unilaterally gave federal courts jurisdiction in Indian Country (when the offenders were Native) over seven major crimes. The act was later amended to include fourteen felonies.[5]

This delineation of certain crimes in Indian Country to be federal offenses outside tribal jurisdiction established a pattern that has held to the present. By taking jurisdiction over crimes, the federal government also assumed the power to punish. Significantly, the act applies only when the offender is Native, although the victim may be Native or non-Native, and the offense must be committed within the legal definition of Indian Country (Deloria and Lytle 1983).

Some of the daily operations of this act are seen by Dumars (1968), who contends that Native Americans charged with major crimes on an Indian reservation receive harsher treatment than non-Natives charged with the same crimes on a reservation. Using the example of assault with a deadly weapon, Dumars demonstrates that Natives convicted of this crime receive from federal judges penalties twice as harsh as those given non-Natives committing the same crime but falling under state jurisdiction. Hence, in their lurch to possess Indian Country, Euro-Americans in Congress defined crime differently for Natives than for themselves, with the Native definition requiring less proof for conviction in Euro-American courts (Deloria and Lytle 1983).

In 1887 another direct violation of treaties came with the passage of the General Allotment Act. This policy, again backed by Euro-American reformers, was aimed at the destruction of Native worlds by making their reproduction impossible. Reformers determined that the individualization of property in Indian Country would spark Native initiative. The "civilizing" design was intended to break up the alleged communistic notion of holding land in common and, most important, to open up Native land for Euro-American takeover (Prucha 1973). The president was awarded absolute authority to allot Native reservation lands to individual Natives and turn over the "surplus" to white people. As a result, Native lands were reduced from 138 million acres in 1887 to 48 million acres by 1934, and the reservations subjected to allotment are now checkerboards of white and Native land. The General Allotment Act left a tangled legacy of land ownership and jurisdictional patterns, persisting even today, that pushed Natives further into poverty.

The degree of Native acceptance into white communities, a supposed goal of the Friends of the Indians, demonstrates the treatment of Natives by the Euro-American legal framework. One way to test an ethnic group's acceptability is their eligibility for citizenship. In colonial times, for example, Natives were never considered citizens; accordingly, they did not hold voting rights, nor could they participate in colonial politics (Kawashima 1986). In 1871 voting rights were denied in Montana Territory to those living at Indian agencies, on reservations, or in Indian Country. Furthermore, the Montana Enabling Act, passed in 1889 (the year Montana secured statehood), again prevented Natives from voting in their homeland (Svingen 1987).[6]

The troublesome legal status of people of color in the United States during the nineteenth century is well documented in a series of court decisions. For example, in *People v. Hall* the California Supreme Court decided in 1854 that a California statute excluding Natives and African Americans from testifying in court cases involving whites additionally applied to Chinese Americans (Cushman and Cushman 1958). Forbidden from testifying against whites, people of color were deprived of the usual means of legal protection. For example, in 1851 in California a white man was released for the murder of a Native man because the only witness was a Native, and the law did not permit his testimony (Heizer 1974). In 1866 Congress, overriding President Johnson's veto, gave equal rights to all persons born in the United States—except Natives (Brown 1970). In 1884, in *Elk v. Wilkins*, a Native man was denied the right to vote in Nebraska on the grounds that he was not a citizen of the United States, although he was living off the reservation (Barsh and Henderson 1980). This decision explicitly ruled that Native people did not have the right to citizenship (Hoxie 1984).

The technological world of the nineteenth century was represented by the philosophy and accomplishments of Francis Amasa Walker, Commissioner of Indian Affairs during the 1870s. Using a scientific management theory, Walker proposed that the federal government impose on Natives "a rigid reformatory discipline" (Takaki 1979, 186). According to historian Ronald Takaki,

> The crucial term is *reformatory*. The "discovery of the asylum" in white society had its counterpart in the invention of the reservation for Indian society. Based on "the principle of separation and seclusion," the reservation would do more than merely maintain Indians: It would train and reform them. (1979, 186; emphasis in original)

Walker viewed Natives as biologically inferior beings with "strong animal appetites and no intellectual tastes or aspirations to hold those appetites in check" (quoted in Takaki 1979, 187). Once confined on reservations, Natives would be obligated to work as part of the Americanizing project.

As the nineteenth century closed, Native people were confined, imprisoned on reservations. Those who resisted had been forcibly removed from their homelands, with many massacred in the process. One outrageous example is the 1890 Wounded Knee massacre, in which the U.S. Army murdered over two hundred unarmed Natives, including many women and children. The Army later opposed compensation to the survivors on the grounds that the "battle" (massacre) had been essential in the dissolution of the Lakota Ghost Dance religion (Johansen and Maestas 1979). Cultural oppression of Natives remained blatant, and Native opposition—whether militaristic, legal, or spiritual—would not be tolerated by the federal government.

In the obstructive policies of the nineteenth century, which caused intense jurisdictional conflicts and unequal justice, the social construction of deviance becomes obvious. Euro-American interest groups' involvement in the development of new laws for Natives created a situa-

tion in which, as put forth by Austin Turk (1969), the interests of the more powerful groups were legitimate while those of the less powerful were made illegal.

The pervasive political, economic, and cultural control of Native nations by the federal government continued into the present century. For all its brutality and intensity, this colonial control has not terminated Native sovereignty. It has, however, suppressed its exercise. Cultural oppression facilitates economic exploitation, and twentieth-century federal policy toward Natives follows this pattern. Aside from laws, the federal government has actively pursued policies, rules, and regulations designed to suppress the Native worlds. For instance, in 1901 all agents and superintendents were notified to enforce the "short hair" order. To the federal government, long hair signified a primitive culture. All Native men who refused to cut their hair were refused rations, and those working for the government were released from their duties (Prucha 1984). During the 1920s the BIA strictly limited Native dancing, and those under age fifty were prohibited from participating in their traditional dances (Price 1973). A BIA document issued in 1924 noted that "there are large numbers of Indians who believe that their native religious life and Indian culture is frowned upon by the government, if not actually banned" (Price 1973, 207).

The BIA saw its powers enhanced with the passage of the Indian Reorganization Act (IRA) in 1934. This act was ostensibly intended to strengthen tribal authority and legal systems by letting tribes establish their own governing organizations—the elected tribal councils of today. However, it smacks heavily of indirect rule, again along the British colonial model, as the United States recognizes only the leadership of the councils. Natives were empowered to rule other Natives, incredibly complicating reservation life when traditional tribal leaders were usurped by elected tribal councils.

The IRA also converted Courts of Indian Offenses into tribal courts, and the modern tribal court system was born. Tribal codes enacted after 1934 followed the BIA model. Tribal courts and codes are subject to the approval of the BIA and are limited in their power to the handling of misdemeanors. Although this policy gave the appearance of maintaining the status quo, Deloria and Lytle (1983) offer that the new tribal courts did promise to resurrect the traditional customs of Native people. The balancing act for tribal courts today is to recuperate and retain

tribal traditions of justice despite being immersed in contemporary Euro-American jurisprudence. Tribes work to retain their ways and are reluctant to follow Euro-American legal procedures exclusively. On Indian reservations,

> The desired resolution of an intratribal dispute is one that benefits the whole Indian community (family) and not one designed to chastise an individual offender. Non-Indian critics may not understand such a concept of justice, but within Indian traditions it is an accepted and expected norm. (Deloria and Lytle 1983, 120)

Issues of sovereignty are vital to Native people and the tribal court system, no matter what the cost. Tim Giago, editor of *Indian Country Today*, contends that tribal courts on Indian reservations must acknowledge their sovereign status. Discussing the case of Peter MacDonald, a former Navajo tribal chair who is serving a fourteen-year sentence for conspiracy and bribery in tribal and federal courts, Giago expresses:

> [I]f the Navajo Nation really believed in sovereignty it would have tried Mr. MacDonald within the borders of their Nation instead of allowing federal officials to take him off the reservation and try him before an all-white jury in Prescott, Arizona. This was hardly a jury of his peers and few, if any, of the jury members understood anything about the Navajo Nation, its laws, customs, or traditions. (1995, 2)

THE COMPLICATED EFFECTS OF PUBLIC LAW 280

Plunder normally characterizes only the early stage of colonialism, although it is possible to find subtle forms of plunder by the United States in the twentieth century. For example, beginning in the late 1940s and lasting into the 1960s, the federal government shifted toward a policy of termination, another violation of treaties. Rather than struggling to dominate tribal land, the government started to do away with Native nations themselves, making their lands "open" lands. A simple

resolution of the House of Representatives in 1953, House Concurrent Resolution 108, terminated the sovereignty of one hundred Native nations.

Another element in the process was the transfer to certain states of federal jurisdiction over reservation areas. The authority for this transfer was Public Law 280, passed by Congress in 1954—one of the most bold and discriminating actions against Natives in the legal and judicial system. Moving without tribal consent, PL 280 initially handed five states jurisdiction over offenses committed by or against Natives on reservations; eventually, nine other states assumed limited jurisdiction. Upon the expansion of their legal domain over Natives, states mistakenly hoped to increase their revenue by taxing Native land and by receiving federal assistance to improve enforcement, corrections, and judicial agencies.

The timeworn argument was that reservations were "lawless." In 1952 Representative D'Ewart of Montana said that there was a "complete breakdown of law and order on many of the Indian reservations" and that the law was driven by "[t]he desire of all law abiding citizens living on or near Indian reservations for law and order" (quoted in Barsh and Henderson 1980, 128–129). The principal concern of Congress was, therefore, the reaction of white people to the perceived lawlessness (U.S. Commission on Civil Rights 1981). White communities that had settled on or near reservations, their growth partially a result of the allotment policy, were concerned about law and order outside their direct control and held the belief that Native law was irresponsible and federal law distant. PL 280 provided for their interests by endowing to various states criminal and civil jurisdiction on reservations. Witness the language used in a 1963 report titled "A Study of the Problems Arising from the Transfer of Law and Order Jurisdiction on Indian Reservations to the State of Montana":

> Indian people hesitate to give up this powerful position which they hold in the United States society. They do not fully realize however, their responsibility when they seek to protect this powerful position. They must maintain a standard of society which is acceptable. This probably is the greatest weakness in the Indian position on law and order. The trend in modern society requires that Indian people conform to reasonable acceptable community standards of law and order. . . . Any time that there is segregation in an area like law and order the attitude of segregation spreads into other areas. Segregation always sows the seeds of discrimination and racial problems. (Montana Office of the State Coordinator of Indian Affairs 1963)

Natives are depicted as irresponsible and "backward," as though they have not yet been civilized—all couched in terms of the fear of segregation. But segregation existed prior to 1963 and exists today in Montana.

Many Montana Native people were in opposition to PL 280 (known in Montana as House Bill 55). The chief proponent was state representative Jean Turnage, an enrolled member of the Confederated Salish and Kootenai Tribes (from Lake County on the Flathead Reservation) and a member of the Inter-Tribal Policy Board. Opponent Bill Youpee, chairman of the Fort Peck Tribal Council, expressed that the Inter-Tribal Policy Board was "influenced by outside interests" (*Great Falls Tribune*, 10 February 1963). The Flathead Tribal Council, under the direction of Walter McDonald, supported the transfer of jurisdiction to the state, although not all tribal members were in agreement. Moreover, all other tribes in Montana opposed such action, principally because PL 280 violated rights reserved in treaties and likewise violated the self-determination of sovereign nations. Another major issue was that PL 280 was a step toward the dreaded termination of all Indian reservations, as evidenced by House Resolution 108. PL 280 was passed by Congress in 1953, and in 1965, with the endorsement of the tribal council of the Confederated Salish and Kootenai Tribes, House Bill 55 (that is, PL 280) was implemented on the Flathead Reservation.

Many Natives perceive the imposition of state laws on reservations without tribal consent as blatant discrimination (U.S. Commission on Civil Rights 1981). Although the Indian Civil Rights Act of 1968 amended PL 280 to require tribal consent, this act also limits the penalties in tribal courts to imprisonment for six months and/or a fine of five hundred dollars, thereby effectively confining action in tribal courts to misdemeanors. Furthermore, the amendment authorizes states to retrocede jurisdiction already assumed—that is, relinquish it if burdensome. Tribes, however, are not empowered to demand retrocession (Barsh 1980).

PL 280 denies Native nations the right to govern themselves. There is also concern that under PL 280 state police and courts are treating

Natives and whites differently. Refusal to cross-deputize Native law enforcement personnel creates an imbalance whereby Euro-American police steadily send Natives to Euro-American courts and jails, while tribal police can only stand by and observe white criminal behavior. The result is a continuous and increasing supply of Native American "criminals." According to noted attorney Russel Barsh, "Arrests of Indians reportedly increase when per capitas or lease monies are [due to be] paid, to generate fines. Tribes contend that sentences are 'light and ineffective' for crimes against Indians, 'harsh and unjust' for crimes against non-Indians" (1980, 10).

PL 280 is curious in its uneven application. Not all states chose to apply its measures, and some selected only certain reservations within their boundaries. For instance, Montana has seven Indian reservations, but only on the Flathead Reservation is Euro-American jurisdiction extended through PL 280. Not surprisingly, Flathead includes a large white population due to various acts of Congress, including allotment and homesteading implemented at the turn of the century. A challenge would be to determine the proportion of Salish and Kootenai—the tribes of Flathead—among the Montana Natives involved in the state's criminal justice system. One would expect to find more Salish and Kootenai pass through the legal system than members of other tribes, with the exception of Landless Native Americans.[7]

Non-Natives are now immune from tribal prosecution, in both criminal and civil matters, due to a 1978 U.S. Supreme Court ruling in *Oliphant v. Suquamish*. In states where cross-deputization has not been worked out, many non-Natives who violate state law on reservations go unapprehended. This has been, and continues to be, a national Native American concern as tribal leaders fear white people will see the reservations as areas to "do anything they please without fear of arrest or judicial reprisal" (Wachtel 1980, 13). Moreover, in 1981 in *Montana v. United States*, the U.S. Supreme Court ruled that white people who own land on the Crow Reservation are not under the authority of Crow hunting and fishing laws on or near the Big Horn River. This decision violates the Crow treaty of 1868. Additionally, this case takes the ruling in *Oliphant* one step further toward the dissolution of tribal sovereignty (Churchill and Morris 1992).

Five statutory enactments of the U.S. Congress—the General Crimes Act, Major Crimes Act, Assimilative Crimes Act, PL 280, and the Indian Civil Rights Act—in addition to the court cases cited, all infringe upon tribal powers to tackle crime issues on reservations (Deloria and Lytle 1983). These statutes have forged a legal sword that slashes at tribal sovereignty, and the cuts are not clean as continual redefinition by these statutes creates the problem of determining which among multiple authorities may handle alleged Native criminals. The road to legal jurisdiction on reservations travels through mazes. It is not a product of logic other than that of sporadic legislative responses to the demand for Euro-American hegemony over Indian Country. Meanwhile, a major handicap for reservation Natives today is the multiplicity of jurisdiction, wherein

> The accused ordinarily confronts two jurisdictional "layers," general federal criminal laws applicable everywhere in the United States and concurrent state criminal law defining both related and separate offenses. On an Indian reservation the accused confronts as many as six jurisdictional layers, with as many as four possible forum-law outcomes: federal-federal, federal-state, state-state, and tribal-tribal. This does not mean that reservations are safer, only that it is harder for reservation residents to know fully their rights and liabilities, and easier for jurisdictional conflicts to arise. (Barsh 1980, 3)

The fundamental question, according to Deloria and Lytle (1983), is which level of government assumes jurisdiction over criminal offenses on reservations. Part of the answer requires determining the race of all involved to the extent of investigating past generations, the precise location within overlapping political boundaries where the alleged crime all or in part occurred, the appropriate statute of competing codes under which the violator can be prosecuted, and who has the political initiative at the moment. Indian reservations are the only places in the United States where the criminality of an act relies exclusively on the race of the offender and victim (Barsh 1980).[8]

PUBLIC LAW 280 AND RETROCESSION

Since 1968, some tribes have been successful in their efforts to retrocede state jurisdiction to federal control (O'Brien 1989). Other tribes, however, encounter stereotypic expectations that Native Americans

cannot behave responsibly enough to exercise effective law enforcement, thereby threatening the safety of non-Natives (Barsh 1980). This is the attitude that the Confederated Salish and Kootenai Tribes face in their pursuit of retrocession. Opponents to retrocession cite that white people do not want to be subjected to a justice system they fear will discriminate against them because they are white. What they do not understand is that the withdrawal of PL 280 will not result in the confinement of white people in Flathead's tribal jail because prior court cases have opined that tribes do not have jurisdiction over non-Natives.

In the 1990s the Confederated Salish and Kootenai Tribes seek to withdraw from PL 280 jurisdiction for two basic reasons: to further self-determination and promote tribal sovereignty, and to develop a justice system that is culturally appropriate (Confederated Salish and Kootenai Tribes 1991). The tribes argue that they have made economic progress—after all, this has been the goal of federal policy—since they consented in 1965 to the implementation of PL 280. They offer as evidence a tribal budget of over $70 million and twelve hundred tribal employees in the 1990s, compared to the eleven employees and budget of less than $250,000 in 1963. When PL 280 was first proposed in 1963, the tribes were not financially able to provide law enforcement for people on the reservation, but this is no longer the case. Moreover, the tribes cite that the notion of justice predates European contact and that judges and courts have always existed in the social and political structure of the tribes. Subsequently, they have integrated traditional justice frameworks with Euro-American jurisprudence.

The Major Crimes Act of 1885 postulated that tribes did not have tribal institutions sufficient to maintain law and order (Barsh 1980). This was not true in the nineteenth century and it is not true today. The Confederated Salish and Kootenai Tribes boast a competent justice system, a system more capable than some counties in Montana (Confederated Salish and Kootenai Tribes 1991). The current tribal justice system on Flathead includes a tribal court system with three divisions (a trial court, a youth court, and an appellate court), a law and order department, fish and game enforcement, advocate program, and social service programs.

In 1989 54 percent of all arrests in Lake County, the primary county on Flathead, were Native American (Confederated Salish and Kootenai Tribes 1991). The Confederated Salish and Kootenai Tribes recognize

that most arrests on the reservation are alcohol- or drug-related. Responding to this issue, the tribes developed an extensive substance abuse program. They argue that withdrawal from PL 280 will enable them to rehabilitate those arrested for misdemeanors (felonies would fall under federal jurisdiction). In fact, the tribes have more substance abuse counselors than Lake County (nine compared to one) and are, therefore, better equipped to handle substance abuse problems than the county.

RECUPERATING NATIVE WORLDS

Policies governing Native American affairs are legally bound to protect Native resources and treaty rights, but these policies have been perverted by Euro-American economic interests. The product is a system that imposes on indigenous populations cradle-to-grave control designed to obliterate worldview, political independence, and economic control. To resist is to be criminal, risking the wrath of multiple state law enforcement agencies. In the Americas, this exploitation has been the backbone of a colonial relationship now hundreds of years old yet still vigorous.

The Euro-American legal system, based on English common law and Euro-American statute law oriented to Euro-American values and philosophy, has never been able to accommodate within its bounds the different culture and aberrant status of the indigenous people. The goal of justice ostensibly sought by the legal system often results in the opposite when Natives are involved. The mechanisms of Euro-American law either are incapable of recognizing the cultural and legal separateness of Natives or are deliberately designed to destroy that independence (Washburn 1971).

Even when Native nations agreed to acculturate, they not only were thwarted but suffered additional castigation. There is probably no better documented case study of the cultural adaptation of a traditional legal system than that of the Cherokee Nation. *Fire and the Spirits* (1975), written by Rennard Strickland, examines the development of Cherokee legal institutions and the Cherokee Nation's attempt to acculturate. The Cherokee applied Euro-American laws that fit their needs and rejected those that did not. Their legal experience illustrates that it is in fact possible to create Native versions of Euro-American ways. The out-

come was not what Euro-Americans expected, as the Cherokee became deserving Native opponents, insisting that their customs should be honored. Yet the ways of Euro-Americans had been learned too well: Strickland concludes that in the end the Cherokee Nation would be obliterated. Damned if you do, damned if you don't; while assimilation is theoretically offered, equality is not a part of the bargain.

Although the Confederated Salish and Kootenai Tribes present another case of cultural adaptation with the blending of their traditional legal system and Euro-American jurisprudence, their fate may prove similar to the Cherokees'. The retrocession of PL 280 for the people of the Flathead Indian Reservation may never happen. Montana Senate Bill 368, which would give tribal police and courts additional criminal jurisdiction on reservations, died in 1993.

The Northern Cheyenne Tribe, a non–PL 280 reservation, presently struggles to reclaim their traditional system of law and order, one in which the Warrior Societies play a major role.[9] Evidently in agreement with the Cheyenne Tribal Court, the Warrior Societies recently employed traditional Cheyenne justice and banished two nonmembers from the reservation for a period of one hundred years (Crisp 1995). This action has not met with agreement from all tribal members, however, and the Northern Cheyenne remain divided over the actions of the Warrior Societies. A significant aspect of this case is that the Northern Cheyenne's justice system, as they are recreating it, demonstrates that modern tribal court systems and traditional systems can work together.

Chief Justice Robert Yazzie (1994) of the Navajo Tribal Court describes the Euro-American system of justice as one of hierarchies and power—a vertical system of justice. The Navajo word for "law," brought to them by the Holy People, is *beehaz-aanii*, which means "fundamental, absolute." Yazzie conveys that law is the source of a meaningful life, precisely because life emerges from it. In the Navajo system of law, one of horizontal justice, all parties are allowed to explain their views, and there is no one authority that ascertains the "truth." This is a system of restorative justice based on equality and participation, with a notion of justice that involves recuperating both the offender and victim.

The concept of solidarity is important to Navajo healing and justice. Although difficult to translate, Yazzie expresses that solidarity

> carries connotations that help the individual to reconcile self with family, community, nature, and the cosmos—all reality. That feeling of oneness with one's surroundings, and the reconciliation of the individual with everyone and everything else, is what allows an alternative to vertical justice to work. It rejects the process of convicting a person and throwing the keys away in favor of methods that use solidarity to restore good relations among people. Most importantly, it restores good relations with self. (1994, 30)

The healing process, called *peacemaking* in English, is a complex system of relationships where there is no coercion or control because there is no need for such power. Additionally, there are no plaintiffs or defendants, and no one is right or wrong. The Navajo have a different concept of equality. The focus is not on equal treatment *before* the law; people are envisioned as equal *in* the law. For example, the vertical system of justice—the Euro-American system—requires of the defendant a plea of innocence or guilt. In the Navajo language there is no word for *guilty*—a word that assumes fault and thus punishment. Yazzie advises that the word *guilty* is a nonsense word in Navajo, because the Navajo focus on healing and reintegration with the goal of feeding and preserving healthy, ongoing relationships.

Navajo law is also based on distributive justice. According to Yazzie, Navajo Court decisions emphasize aiding the victim, not finding fault. The victim's wishes of compensation and the offender's financial ability are taken into account. The offender and his or her family are responsible to the victim and must pay compensation. The focus of distributive justice is the well-being of everyone in the community. Taking the notion of responsibility further, Yazzie conveys:

> If I see a hungry person, it does not matter whether I am responsible for the hunger. If someone is injured, it is irrelevant that I did not hurt that person. I have a responsibility, as a Navajo, to treat everyone as if that person was my relative. Everyone is part of a community, and the resources of the community must be shared with all. (1994, 30)

The contemporary Navajo Peacemaker Court is founded upon the traditional principles of distributive justice and restoration over punishment. The Navajo operated under a vertical system of justice from 1892 to 1959 under the Court of Indian Offenses and from 1959 to the present day under the Courts of the Navajo Nation (Yazzie 1994). Intensely weary of the vertical system, in 1982 they created the Navajo

Peacemaker Court. The court selects a peacemaker, or *naat' aanii*—a person known for wisdom, integrity, and respect. His or her job is to ensure a decision in which everyone benefits. The court attempts to reclaim the original philosophical reasoning of traditional Navajo rather than simply blend cultures and philosophies.

The variance between Euro-American and Native worlds is apparent in how they work to maintain the social order. In Indian Country collective ways were developed to right an offensive activity with the larger harmony, recuperate the offender, and thereby protect the people. On the other hand, the Euro-American system of institutionalized justice featuring legislated law, aggressive enforcers, and punitive judges acts beyond controlling activity within the Euro-American world; it is also instrumental in fulfilling the Manifest Destiny of the Euro-American world—its own expansion. Intrusion into Indian Country was spearheaded by Euro-American law and the territory secured in the same manner. The federal government has embraced conflicting policies regarding Native people, shifting from genocide to expulsion, exclusion, and confinement, and later to supposed assimilation—the rhetoric was integration, the reality was confinement and domination. Amid the roller coaster of federal policy, one thing is crystal clear: at every stage of colonialism, Native people have been disempowered.

Some Euro-American criminologists agree that the Euro-American justice system represents the interests of the powerful and is inherently oppressive (Hartjen 1978; Quinney 1970; Turk 1976). The recognition that law and its administration is biased against certain categories of people is crucial to understanding Native American criminality. Nevertheless, one must first distinguish between Euro-American and Native worlds to grasp the role of Euro-American law in their collision.

To mechanically explain Native Americans by means of production, skin color, cultural practices, and so on is to peer through a tunnel—a tunnel engineered straight, perhaps, but a tunnel nonetheless. Absolutely, race/ethnicity, gender, class, and lifestyle are important concerns to Natives who feel the weight of their consequences both within Indian Country and in relations with Euro-Americans, but care must be taken not to let those issues obscure the broader battle between worlds and the emergence of neocolonial racism.

History tells us that Native "criminals" were not lawless "savages" but rather were living in the turbulent wake of a cataclysmic clash wherein

Native legal systems, along with everything else, collided with a most different world. Native worlds have been devastated by their relationship with Euro-Americans and their laws. The number of jailed Natives is a disheartening indication—a reminder that because deviance is a social construct, official crime statistics reveal discretion in defining and apprehending criminals. The behavior of reservation Natives, from both PL 280 and non–PL 280 reservations, is clearly subject to greater scrutiny, especially considering the number of criminal jurisdictions they fall under, and there is a greater presumption of guilt than for Euro-Americans. This assumption is based on the prevalence of Native Americans in the official crime statistics and the composition of prison populations. But the battle for jurisdiction in the remainder of Indian Country, where various Euro-American legal entities led by the federal government compete for primacy over tribes, is a telling example of the continuing struggle for sovereignty.

Criminal Empire: The Making of the Savage in a Lawless Land

Indigenous resistance in the 19th century was recast as criminal activities, enabling the U.S. and Canada to avert attention from their own illegality. The imposition of colonial law, facilitated by casting Indigenous men and women as savage peoples in need of civilization and constructing Indigenous lands as lawless spaces absent legal order, made it possible for the United States and Canada to *reduce* Indigenous political authority, domesticating Indigenous nations within the settler state, shifting and expanding the boundaries of both settler law and the nation itself by judicially proclaiming their own criminal behaviors as lawful.

On December 26th, 1862, 38 Dakota men were hanged before a crowd of some 4,000 spectators in Mankato, MN.[1] Thirteen years later at Battleford, Saskatchewan, 6 Cree and 2 Assiniboine leaders were hanged in front of hundreds of witnesses.[2] These would mark the largest mass executions in both countries.

Yet, these were neither isolated nor exceptional events. Various Indigenous leaders, such as Modoc[3], Tlingit[4], and Nisqually[5] leaders in the United States along with Tsilquotin[6], Ojibwe[7] and Metis[8] leaders in Canada would also be executed under the pretense of criminality within colonial law. Countless individuals would find themselves under the jurisdiction of these two states, prosecuted and imprisoned for alleged criminal activities.[9] This article traces how Indigenous resistance in the 19th century was recast as criminal activities, laying out the techniques and taxonomies of empire that enabled these two states to *reduce* Indigenous political authority, domesticating Indigenous nations within the settler state, while *producing* the settler nation-state and its accompanying legitimating juridical narratives.

I do so by charting the construction of Indigenous criminality and subsequent imposition of colonial law that enabled the United States and Canada to not just imagine but actively produce their claims of sovereignty.[10] This required distinct configurations of Indigenous criminality along gender lines. As Indigenous men's political authority had already been recognized in the public sphere by the United States and Canada via the treaty making process, their domestication into the nation-state required forceful violent constructions of Indigenous men as savages, criminals, and lawless figures. Indigenous women's political authority had largely been discounted in the treaty process by the US and Canada, which, not surprisingly, afforded limited to no recognition of white women's political authority in the 19th century. Therefore, the continued domestication of Indigenous women political authority was carried out with focus given to the private sphere, constructing Indigenous women as deviant, immoral beings who needed to learn proper forms of domesticity.

Framing Indigenous peoples as criminals enabled the US and Canada to avert attention from their own illegality. By discursively transforming treaties from relationships to land cession contracts, these two states sought to disguise the illegitimacy of their settlement, which had been rendered unlawful the moment they violated the treaty relationships and commitments that authorized their presence across Indigenous lands. The imposition of colonial law, facilitated by casting Indigenous men and women as savage peoples in need of civilization and composing Indigenous lands as lawless spaces absent legal order, made it possible for the United States and Canada to shift and expand the boundaries of both settler law and the nation itself by judicially proclaiming their own criminal behaviors as lawful. The federal Indian and aboriginal laws and policy these shifts produced occupied the dark shadows of empire. Indigenous nations and their attending sovereignty became contained in this liminal space, cast as foreign and then violently remade as domestic in order to subsume Indigenous sovereignty within the bounds of the state.[11] The United States and Canada continually drew and redrew boundaries while crafting and revising the juridical narratives that gave legality to these spaces.

It is in these shadows that we can see the making of a criminal empire. Within these liminal spaces, we can see how colonialism continuously transforms and realigns as proclaimed settler sovereignty is challenged and resisted by Indigenous nations. As Amy Kaplan reminds us, "imperialism does not emanate from the solid center of a fully

formed nation; rather, the meaning of the nation itself is both questioned and redefined through the outward reach of empire."[12] Blurring the distinctions between sovereignty, territory, and jurisdiction that barred unfettered acquisition and settlement of Indigenous lands, the United States and Canada harnessed the constructions of criminality to assert jurisdiction over sovereign Indigenous lands and bodies in order to remake the foreign (Indigenous nations) into the domestic (individual Indigenous subjects).

I conclude by arguing that the political authority of the United States and Canada paradoxically required the recognition of Indigenous sovereignty. These two nation-states could not, or would not, unequivocally dismiss or deny the existence of Indigenous sovereign authority. Instead, both nations developed and drew on legal narratives that discursively transformed and anchored the political attributes of Indigenous nations by framing treaties away from ongoing relationships to contractual events that were temporally and geographically fixed. By tethering treaties to a specific historical moment and framing these relationships as contractual events, the United States and Canada were able to preserve their own legitimacy that was contingent on these treaties while enabling the courts to demarcate the bounds of Indigenous sovereignty and contemporaneously chip away at Indigenous political authority by criminalizing and domesticating Indigenous nations.

Transformation of the Treaty Relationship

The Dakota – starving and aggravated by the criminal neglect of the United States to adhere to previous treaties, fraudulent treaty payouts that privileged corrupt traders and delayed annuities desperately needed to ameliorate deplorable reservation conditions – declared war on MN, initially targeting agency employees, traders, and clerks. Surrendering thirty-seven days after the war began, the Dakota were not treated as prisoners of war. Instead, Former MN governor Henry Sibley decided to convene a five-person military commission, an action outside his authority, to try the Dakota for "murder and outrages." The commissioners Sibley appointed were all military officers who had fought against the Dakota just days earlier and who were now being called upon to dispense impartial justice. Each trial averaged ten minutes, with some lasting less than five minutes. By November 5, 1862, 392 Dakota were tried for "crimes" connected to war, 323 of whom were convicted and 303 condemned to death.[13]

President Lincoln, wanting to temper the draconian sentences Sibley had hoped to impose while still imparting sentences severe enough to discourage Indigenous resistance and satisfy Minnesotan's call for revenge, ultimately ordered the execution of 38 Dakota. The hanging of 38 Dakota men occurred the same week that Lincoln issued the Emancipation Proclamation freeing the slaves.[14]

Twelve years later, in 1877, in the aftermath of the Battle at the Little Big Horn, in the Speech from the Throne, Canadian Prime Minister Alexander Mackenzie alluded to the violent military campaign against Indigenous nations in the United States. Defending the recently negotiated Treaty 6, a diplomatic accord between the Crown and Cree and Assiniboine First Nations across central Saskatchewan and Alberta, despite provisions he characterized as "of a somewhat onerous and exceptional nature," Mackenzie asserted, "the Canadian policy is nevertheless the cheapest, ultimately, if we compare the results with those of other countries; and it is above all a humane, just and Christian policy."[15] Mackenzie brought this point home, stating "Notwithstanding the deplorable war waged between the Indian tribes of the United States territories and the Government of that country during the last year, no difficulties has arisen with the Canadian tribes living in the immediate vicinity of the scene of the hostilities." This speech marked the beginning of one of the most deep-seated myths in Canadian history- that Canada was a benevolent and just nation.[16] Especially in comparison to the United States, who, by implication, was not.

Yet, Indigenous nations north of the border had also been actively resisting encroachment and settlement on their lands.[17] This had been a major impetus for the Numbered Treaties, including the hurried signing of Treaty 6. Chief Poundmaker had been blocking progress on telegraph lines near Battleford, making it clear that "lines could not be strung across Cree lands without a treaty."[18] A number of prominent leaders, including Poundmaker and Big Bear, refused to sign onto the treaty until they saw the Canadian Government live up to their promises.[19] Chief Big Bear expressed one of his central concerns to Commissioner Morris in 1876, stating "I will make a request that he (Morris) save me from what I most dread, that is the rope about my neck…. It was not given to us to have the rope about our neck."[20] While Morris would interpret these words to be a reference to hanging, others have argued Big Bear feared Canadian officials were trying to restrict indigenous political authority, and that "he feared being controlled or 'enslaved,' just as an animal is controlled when it has a rope around its neck."[21] In the years that immediately followed, however, Chief Big Bear's fears would come to fruition. Indigenous political autonomy and

authority would be increasingly constrained by colonial policy and law, made possible literally by tightening ropes around the necks of Indigenous leaders.

Across Treaty 6 territory, growing tensions spurred by settler encroachment on Indigenous lands and the implementation of policies to starve Indigenous nations in order to coercively promote their adhesion to the treaty[22], resulted in the Frog Lake Resistance (also known as the Northwest Rebellion) in 1885. Stemming from Cree resentment at their mistreatment by Canadian Indian Department employees on their reserve, Indigenous warriors killed 9 settlers. The trials that followed were no less fraught then the trials in Minnesota. Initially charged with treason, the inability to accurately translate the term in Cree rendered a defense impossible. Even the Crown recognized this fact and reduced many of the charges. Nonetheless, the Crown failed to question or answer how and when Indigenous peoples had been incorporated into Canada, as a charge of treason presumed. Weak evidentiary support[23] coupled with a partial judge and jury[24] resulted in hasty guilty verdicts.

In addition to the 8 Indigenous leaders hanged in1885, an additional 40, including Chiefs Big Bear and Poundmaker, were sentenced to the Stony Mountain Penitentiary for treason. Another 100 Indigenous people were tried for criminal offenses with 60 convicted. In fact, so many Indigenous people were sentenced following the 1885 resistance that a new wing was built onto the Stony Mountain Penitentiary, and kept full with Indigenous peoples in the years that followed.[25]

Indigenous resistance and its subsequent criminalization was indicative of the ruptures in Indigenous-state relations in the 19th century as the US and Canada sought to expand their national borders in violation of their treaty relations with Indigenous nations. Legal Scholar Sidney Harring found "The North-West Rebellion looms large in western Canadian history as the most important Indian war in a country largely without them. " He notes that "wars are not ordinarily the subjects of legal history, but Canada insisted on treating the rebellion as an internal act of treason, trying dozens of Indians for criminal offences in order to impose the legal framework of its Prairie Indian policy on the aftermath of the uprising."[26] The United States and Canada, in constructing Indigenous resistance as criminal activities, deflected their own criminality, or at least illegality in failing to honor and uphold their treaty commitments that had served as the impetus for this warfare.

Instead, both countries utilized Indigenous resistance as the rationale for the subsequent abrogation of treaty commitments. The 264 Dakota who had their executions commuted by Lincoln were imprisoned, with an additional 1600 Dakota women, children and elderly men held in an internment camp, with over 300 Dakota dying from the severe conditions. In 1863 the US congress abolished their reservation, declared all previous treaties with the Dakota null and void and began expelling the Dakota from MN.[27] Canadian Assistant Commission Hayter Reed, labeling Indigenous participants as disloyal, also insisted the Indigenous nations involved in the Resistance in Canada had violated their treaties, obscuring both the cause of Indigenous protest and further negating government responsibility to carry out these treaty relationships in good faith. Historian Sarah Carter notes, "In the case of the disloyal bands, he recommended that the tribal system be abolished and that the chiefs and councilor be deposed and deprived of their treaty medals. By the 'careful repression' of the leaders, [Reed determined] 'a further obstacle will be thrown in the way of future united rebellious movements.'"[28]

The United States and Canada sought to impress their power and authority onto Indigenous nations, by whatever means necessary. The public nature of the hangings was intended to induce Indigenous nations and their leaders to heel to the US and Canada. As Harring notes, "The political decision to try Indians and as well as the Metis for the rebellion showed that the Crown intended to stage these trials with the intent of breaking the back of Indian resistance to the federal government's Indian policy. The trials were show trials, designed to convince the Indians of the futility of further resistance and also to send dozens of Indian leaders, almost all Cree, to prison until they were no longer a threat to Canadian officials."[29] Indeed, Assistant Indian Commissioner Reed stated as much, writing to Indian Commissioner Edgar Dewdney, "I am desirous of having the Indians witness it- No sound threshing having been given them I think a sight of this sort would cause them to meditate for many a day."[30]

Prime Minister John A. Macdonald would also use the Resistance to silence Indigenous objections to Canadian settlement on their lands, failed treaty implementation and deplorable reserve conditions. He asserted, 'The execution of the Indians … ought to convince the Red man that the White man governs.'"[31] Indigenous resistance became the rational and justification for the development and application of greater colonial control over Indigenous bodies and lands that sought to dismantle the tribal system and restrict Indigenous mobility.[32]

State law, both through the development of policies and the ability of local agents to act outside the parameters of legality, became the mechanism that would animate the machinery of empire. Legal historian Shelley Gavigan notes, "In the aftermath of the events of 1885, the seemingly impossible occurred: Things became even more dire…"[33] Indigenous nations across Canada and the United States were increasingly being stripped of their political authority and brought under the long arm of colonial law. While fitting in both settler contexts, Harring notes that for Indigenous nations in Canada, "full access to the privileges of British law' more often meant the opposite of legal protection of their lands rights: *they went to prison*."[34]

Settler Law as the Machinery of Empire

The reconfiguration of Indigenous sovereign political authority followed the path of westward expansion, with colonial law laying the stage to legalize the violent atrocities visited on Indigenous nations at the hands of settlers and government actors who framed Indigenous resistance as criminal activity, restricted Indigenous mobility and imprisoned Indigenous political leaders. The local, material effects of this reconfiguration both produced and were produced by legal doctrines that configured the unlawful usurpation of Indigenous territory and political authority as lawful.

Robert Williams contends "that law, regarded by the West as its most respected and cherished instrument of civilization, was also the West's most vital and effective instrument of empire…"[35] Local agents and officials increasingly presumed jurisdiction over Indigenous peoples. For example, while Indigenous peoples on the Canadian prairies were arrested at a rate of less than 5 per year in the 1870's, this number drastically increased within a decade to 40-50 arrests per year. While perhaps a low number in relation to the Indigenous population, one scholar notes, "the significance of this large increase of arrests and imprisonment of Indians is not measured in simple numbers: imprisonment was an enormously powerful symbol of the meaning of police authority."[36]

The assertion of state jurisdiction over Indigenous peoples of the Canadian prairies was facilitated primarily through the creation of the North-West Mounted Police (NWMP). The NWMP were far more than a national police force. "It was a self-contained legal institution organized on a quasi-military model: Mounties arrested, prosecuted, judged, and jailed offenders under their jurisdiction. The commissioner and assistant commissioners were appointed stipendiary magistrates with full judicial powers extending even to capital crimes. Inspectors and captains were appointed justices of the peace (JPs) with authority to summarily try minor crimes." Harring found, "This legal function was not incidental to the force but was conceptualized at its core."[37]

The NWMP was a hybrid of military and law, deployed to ensure law preceded settlement, promoting an image of protection for the settlers needed to carry out westward expansion.[38] Popular mythology connotes the mounted police "established law where no law existed, spoke order into existence wherever order was threatened and laid broad and deep the foundations of peace and prosperity in the wide reaches of the Western country."[39] Yet, the NWMP facilitated the imposition of assimilative policies as they were uniquely poised to domesticate Indigenous nations. As Harring notes, "any kind of military fore could have asserted Canadian sovereignty in the west… But only a federal police force could bring Indians and Métis within the reach of Canadian law." (94)

While local agents and colonial officials at all levels of the Department of Indian Affairs (DIA) and NWMP had sought to restrict Indigenous mobility in the early 1880's, following the 1885 resistance, increased attention was given to supervision, restriction and control of Indigenous leaders.[40] Local agents were especially sensitive to any actions that were perceived as possibly leading to political mobilization. Thus, the pass system became instrumental in controlling Indigenous mobility and confining Indigenous peoples to their reserves by constructing Indigenous political action as criminal activity.[41] As Keith Smith remarks, "This restriction [on the rights of Indigenous peoples to travel freely] is best seen as a matric of laws, regulations and policy meant to 'elevate' Indigenous people while simultaneously securing the interests of non-Indigenous newcomers. Like colonialism itself, this restrictive complex was creative and adaptable and so could adjust as political, economic, or social conditions changed." He notes "the most notorious element of this network was the 'pass system,' a DIA policy that had no legal basis, but nonetheless required reserve residents to secure a pass from their Indian agents before leaving their reserve for any reason."[42]

While recognizing that local agents were acting beyond the purview of their authority, Assistant Indian Commissioner Hayter Reed nonetheless continued to press for the enforcement of the pass system, arguing that the "moral responsibilities of the Indian Department transcended treaty obligations.'" Reporting from Battleford in August 1885, Reed insisted, "I am adopting the system of keeping the Indians on their respective Reserves + not allowing any leave them without passes- I know this is hardly supportable by any legal enactment but one must do many things which can only be supported by common sense and by what may be for the general good- I get the Police to send out daily and send any Indians without passes back to their Reserves."[43] The pass system restricted Indigenous leaders by constructing their mobility as a measure of loyalty, labeling Indigenous men as hostile and disloyal if they left their reserves.

"The Majestry of Civilized Law" and the Making of a Lawless Land

The United States also sought to quell Indigenous political mobilization and restrict Indigenous mobility. Indian agents and Commissioners called for legislation that would enable the imposition of colonial laws over Indigenous lands and bodies to achieve this aim. Early treaties often made it clear that US authority didn't apply over Indians or their lands, thus it would take congressional legislation to legalize the imposition of colonial law over Indigenous nations.[44] However, by 1789, treaties would begin to contain clauses that brought Indigenous people under US jurisdiction for crimes against US citizens, moving away from a territorial based model toward a citizenship driven model.[45] While the early Indian trade and intercourse acts[46] (collectively referred to as the NonIntercourse Act) sought to implement treaties and enforce these treaties against settlers intent on violating the rights and lands of Indigenous nations, American criminality generated calls for greater imposition of colonial law within Indian country, a space that had been largely constructed as lawless (both construed as a space absent law because Indigenous legal traditions were deemed illegitimate and a space of illegality due to the unscrupulous activities of American traders and speculators). By 1817, the trade and intercourse act uniformly extended US jurisdiction over crimes committed by Indigenous peoples against American citizens.[47]

Yet, the trade and intercourse acts did little to dispel settler criminality. Commissioner of Indian Affairs George Manypenny, for example, detailed how illegality structured Indigenous-state relations in his annual report in 1856. He stated, "Humanity, Christianity, national honor, united in demanding the enactment of such laws as will not only protect the Indians, but as shall effectually put it out of the power of any public officer to allow these poor creatures to be despoiled of their lands and annuities by a swarm of hungry and audacious speculators, attorneys, and others, their instruments and coadjutors."[48] Manypenny urged the development of more stringent statutes, as the response to American criminality, arguing "the relation which the federal government sustains toward the Indians, and the duties and obligations flowing from it, cannot be faithfully met and discharged without ample legal provisions, and the necessary power and means to enforce them."[49]

Yet, initial calls for clearer and stricter laws in response to American criminality also generated proposals for the imposition of US law onto Indigenous bodies and lands, At the same time, the federal government was eager to decrease military expenditures and amplify their efforts to "civilize" American Indians. This ignited an aggressive campaign to get Congress to enact more assimilative laws. Seeing westward expansion as inevitable, Commissioners urged the federal government that western law was the only way to protect Indigenous peoples from settlers, but also a necessary weapon to wield if Indigenous peoples were going to be saved from their own savagery.

For example, in 1872 Commissioner Walker stated:

> The government should extend over them a rigid reformatory discipline, to save them from falling hopelessly into the condition of pauperism and petty crime. Merely to disarm the savages, and to surround them by forces which it is hopeless in them to resist, without exercising over them for a series of years a system of paternal control… is to make it pretty much a matter of certainty that by far the larger part of the roving Indians will become simply vagabonds in the midst of civilization, forming little camps… which will be festering sores on the communities near which they are located, the men resorting for a living to basket-making and hog-stealing; the women to fortune-telling and harlotry.[50]

This sentiment for the imposition of settler law over Indigenous peoples was the driving force of proposals put forward by the US Board of Indian Commissioners. In their 1871 report, they urged, "A serious detriment to the

progress of the partially civilized Indians is found in the fact that they are not brought under the domination of law, so far as regards crimes against each other." They further pleaded, "We owe it to them, and to ourselves, to teach them the majesty of civilized law, and to extend to them its protection against the lawless among themselves."[51]

Drawing on Canada's success with their police force and wanting to fill the power vacuum created by the withdrawal of troops while expediting the assimilation of American Indians, Congress authorized police units in 1878. This proposal had been strongly supported by United States Commissioner of Indian Affairs Ezra Hayt, who claimed, "A civilized community could not exist as such without law, and a semi-civilized and barbarous people are in a hopeless state of anarchy without its protections and sanctions."[52] The solution was a police force, made up of Indigenous peoples, to impose colonial laws onto their own people. These quasi-military units proliferated. Within three years, this experiment operated on forty-nine reservations and included eighty-four commissioned officers and 786 non-commissioned officers and privates.[53] Harring found, "the [US Bureau of Indian Affairs (BIA)] created a substantial system of policing and punishment that was administrative rather than legal, therefore effectively beyond the reach of federal or state courts."[54]

Policy and law worked in tandem with the shared aim of assimilating Indigenous peoples and subjugating Indigenous sovereignty. "Law for the Indians" became a slogan of the BIA, arguing that the imposition of settler law would expedite the civilization and assimilation of Indigenous peoples. Harring argues "the image of US law replacing the gun as the agent of civilization reveals the coercive core of the application of criminal law to Indians."[55] This shared aim of absorbing/domesticating Indigenous peoples into the United States and Canada, and diminishing or severing Indigenous sovereignty, was achieved through the assertion of criminal jurisdiction over individual Indigenous peoples. [56] This is seen by the fact that case law pertaining to Indigenous peoples in the 19th century focused primarily on two tenets: land title and criminal law.[57]

At the same time, settler law failed to protect Indigenous nations or punish settlers for depredations or murder of Indigenous people. In the US, violence against Indigenous nations was not just outside the restriction of law, but was partially funded by Indigenous treaty annuities as tribal money was allocated to pay out depredation claims. Indeed, "this legal process was so efficient and so many claims were granted that it came into conflict with the BIA's assimilation policy" by diverting treaty money away from assimilatory programs.[58] Law became a direct threat to Indigenous nations, both suppressing Indigenous legal and political institutions and failing to provide protection under American or Canadian law.[59] The construction of Indigenous resistance as criminal activity produced an environment where Indigenous lands could be legally stolen and Indigenous leaders could be legally murdered under the dominion of settler laws.[60]

Gendered Domestication in the Making of a Criminal Empire

Much like their male counterparts, Indigenous women also found their mobility restricted and their activities constructed through the lens of criminality and savagery. While Indigenous men's political authority had to be transformed within the public sphere, Indigenous women's authority would be relegated to the private sphere, configured through domesticity. Domesticity, "monitor[ing] the borders between civilized and the savage as it regulates the traces of savagery within its purview,"[61] became another mechanism to bring Indigenous bodies and lands inside the state system. Through Anglo-American conventions of modern domesticity, Indigenous women could be liberated from their "natural" yet "unreasonable" state of "savagery".[62]

The discourse of domesticity sought to determine boundaries and delineate defined spaces, as imperialism had produced a fear of catastrophic boundary loss that generated discourses centered on "an *excess* of boundary order coupled with fantasies of limitless power."[63] In this environment, Indigenous women's bodies, much like Indigenous lands, became marked as both criminal and lawless spaces, solely because of their racialized-gender and its accompanying western constructions of Indigenous women's sexuality. Gavigan notes "One theme in the historical literature concerning Aboriginal women and Canadian law and society concerns the rapid and pervasive construction, by settlers, missionaries, and government officials alike, of Aboriginal women as a menace and as sexually promiscuous, such that any expression of sexual independence or agency was interpreted as illustrative of a "wildness" that had to be "tamed" while being simultaneously exploited by male newcomers."[64] As such, Indigenous women's bodies were constructed as inherently deceptive, cunning terrains, lawless frontiers, virgin territory, in need of conquest and civilization, that were to be strictly controlled through law because of the perilousness these lawless spaces posed.

Policies aimed at the assimilation of Indigenous nations targeted Indigenous family-life. Sex, marriage, and domesticity rapidly fell under colonial surveillance.[65] Progress toward civilization became measured by home life. Government agents and the church sought to impose virtues that were seen as tethered to domesticity, such as modesty and cleanliness.[66] As Adele Perry notes, "Christian missionaries of all denominational stripes were interested in Aboriginal women and, more particularly, in reforming their relationships to domesticity, to conjugality, and to work." She asserts "This triple program reflected missionaries' profound unease with the different ways that First Nations people experienced and understood manliness and womanliness. The collective, moveable, and matrilineal households; their plural, mixed-race, or consensual relationships; and their physical labour or apparent lethargy all signaled a world of irreparable and dangerous difference."[67]

Government officials, much in the same way they invoked Indigenous resistance to distract from inept policies and corrupt practices, fixated on Indigenous women's "backward conditions." As Carter finds "Indian women were often blamed for the squalid living conditions and poor health of reserve residents; their abilities as housewives and mothers were disparaged as were their moral standards."[68] This depiction of Indigenous women and their sexuality as "out of control" became an attractive explanation for failing government policies and missionary work.[69] Furthermore, the sexualization of Indigenous women became a mechanism for colonial officials in power to justify the imposition of the settler law and policy that sought to reorder Indigenous life and subordinate indigenous authority with impunity.[70]

The perception of deviancy applied to Indigenous women and the concomitant need to save, not only these women, but all Indigenous peoples, from their demoralizing family structures, gave rise to a number of restrictive policies that stripped Indigenous women of their political authority.[71] Under the Indian Act, the principle legislation through which Canada administers its paternalistic relationship with Indigenous nations, widows could only inherit their husband's property if they could prove they were of a good, moral character.[72] Indian agents would decide what constituted a valid family unit in distributing treaty annuities. While neither state had the capacity to fully administer marriage, Indigenous law would only be recognized if these marriages followed western, Christian norms. Furthermore, both countries sought to expel polygamy, charging Indigenous men and women alike. Indigenous people were also accused of bigamy when they remarried, as Indigenous divorce law was not recognized.[73] In Canada, the ultimate domestication of Indigenous women's political authority occurred through the severance of their political status as Indians under the Indian Act when they married non-Indians.[74]

Kaplan finds that this spatial representation of domesticity and manifest destiny is exemplar of these gendered divisions; with the home a feminized safe haven, that is constructed as a bounded and ordered interior space while the male sphere is comprised of a boundless, infinitely expanding frontier in want of territorial conquest. She states, "To understand this spatial and political interdependence of home and empire, it is necessary to consider rhetorically how the meaning of the domestic relies structurally on its intimate opposition to the notion of the foreign. *Domestic* has a double meaning that links the space of the familial household to that of the nation, by imagining both in opposition to everything outside the geographic and conceptual border of the home."[75] While on the one hand, drawing strict boundaries between the private and the public, domesticity, on the other hand, served as the engine of national expansion, reaching beyond its bounds to render the exterior as interior through the violent appropriation of Indigenous lands.[76] This appropriation of Indigenous lands required Indigenous nations, foreign entities whose sovereign political authority was requisite for treaty-making, to be reconstituted as individual subjects of the state, made internal through the construction of Indigenous political authority as criminal, facilitating the imposition of settler law. Through the extension of criminal jurisdiction, the settler state was able to bring Indigenous bodies, through colonial gendered norms, into the national polity, and in the process, domestic Indigenous nations and their lands.

Narrating State Legitimacy and the Making of the Savage

Western law served as a violent tool for the United States and Canada to strip Indigenous nations of a vast majority of their lands and much of their political authority. In the United States, individual states increasingly asserted their jurisdiction over Indigenous peoples and their lands, in violation of treaties, the US Constitution, and Supreme Court decisions that explicitly recognize Indigenous political authority over the criminal matters of their own citizens as well as federal supremacy in dealing with Indian tribes and their citizens.[77] Indigenous peoples not only found themselves being prosecuted under state law but also found litigation to be the new site for the negotiation of their

political relationship with the federal government, with the US as the ultimate arbitrator. For example, during the fifty-two years between *Cherokee Nation* in 1831, in which Chief Justice John Marshal defined Indigenous nations as "domestic-dependent nations," and the expressed recognition of tribal political authority over criminal matters in *Crow Dog,* the Supreme Court would hear approximately 20 Indian law cases. In the twenty years following *Crow Dog,* the court would hear nearly 100 Indian law cases. This sharp increase followed the application of federal Indian policies that were produced in the shadows of legality, made lawful by judicial proclamation. As Harring notes, "Americans were not bound by Old World legal traditions or by abstract notions of morality; they felt free to write laws that would unleash the productive forces needed to develop a new land. The application of this legal order to Indian tribes ranks as a test of the absolute limits of legality and constitutionalism."[78] An analysis of these moments reminds us that neither these outcomes nor the nation-states they produced were inevitable but instead were in continuous flux.

Settler law and its formations of criminality served as the organizing taxonomy of the settler state. The United States and Canada, alike, framed Indigenous resistance as criminal. They used these depictions of Indigenous peoples as savage, lawless, and disloyal to act outside the bounds of the law, imposing policies and practices at the local level that had little basis in law. Subsequently, these two settler states deployed the same constructions of Indigenous savagery and lawlessness to expand the boundaries of settler law in order to bring their actions within its parameters. Nonetheless, the language mobilized by the United States and Canada to legitimate the imposition of settler law in response to criminality would take a slightly different form. The US would use the explicit language of savagery to diminish tribal sovereignty and subordinate Indigenous peoples.[79] While the language of savagery would result in the US Supreme Court upholding Indigenous sovereignty in *Ex Parte Crow Dog* in 1883, the Court would signal that a departure from this long-standing policy in dealing with Indigenous nations would require a "clear expression of the intention of Congress." Judicial acknowledgement of Indigenous political authority[80] and the constitutional entrenchment of the supremacy of treaties required a forceful approach in order to dislodge the political authority already attributed to Indigenous nations. The language of Indigenous savagery and lawlessness would provide the courts the rational for stripping Indigenous nations of important attributes of their sovereignty, as long as this intention was clearly expressed by Congress. Thus, the language of savagery would pave the way for Congress to enact the Major Crimes Act in 1885. The subsequent Indigenous resistance to this imposition of federal jurisdiction would give judicial birth to perhaps the most destructive legal doctrine of Federal Indian law, plenary power, with the courts arguing Congress has absolute, unlimited power of Indian affairs.[81] Declaring in *US v Kagama* (1886) "the power of the General Government over these remnants of a race once powerful, now weak and diminished in numbers, is necessary to their protections, as well as to the safety of those among whom they dwell," the language of dependency would be continually relied on to strip Indigenous nations of their political authority by deeming these powers "inconsistent with their status as dependent nations."

In Canada, the absence of explicit judicial recognition of Indigenous sovereignty and a continuous desire to see itself as a more humane and just nation than the United States, necessitated a more subtle- though equally violent and paternalistic- approach to subordinating Indigenous political authority within the settler state. Canada relied on the civilized/uncivilized binary to contend that Canadian policies and practices were in the best interest of Indigenous peoples. The push to civilize Indigenous nations would primarily be carried out through the Indian Act, which restricted Indigenous nations from seeking judicial remedies until 1951. Instead of diminishing Indigenous sovereignty through the trope of savagery, the Canadian Supreme Court primarily frames aboriginal and treaty rights through the language of culture, eschewing discussion of Indigenous sovereignty altogether.[82]

The juridical narratives produced by US and Canadian Supreme Court justices sought to fashion the settler state as capable of boundless expansion that was outside the restraints of law. At the same time, these narratives drew on this image of a lawless space, arguing the necessity of imposing western law over foreign territories and bodies. This enabled the settler state to transgress the boundaries of both law and the nation-state in order to map external, foreign spaces and peoples as internal, continuously and expansively affirming the boundaries of the settler nation. This is seen in the transgression of not just settlers into Indigenous territories but also their laws onto Indigenous lands.

In articulating their specificities and unpacking the formulations of Indigenous peoples that become fixed in these moments, we can see that the United States and Canada were not "fixed taxonomies" but rather "states of becoming," not "empires in distress" but instead "imperial polities in active realignments and formation."[83] The borderlands of empire, the liminal spaces occupied by Indigenous peoples, both in law and on the land, are sites of

this active realignment. It is in these liminal spaces, through this active realignment that the settler state is *producing* itself. Settler colonialism, then is not just reductive, it is productive, actively producing both the settler state and its accompanying legitimating narratives.

As Patrick Wolfe has noted and many others have taken up, nuanced, and expanded upon "settler colonialism is inherently eliminatory." This eliminatory logic is driven by the desire to acquire Indigenous lands. He notes "Territoriality is settler colonialism's specific, irreducible element."[84] Yet Wolfe recognizes that "on the one hand, settler society required the practical elimination of the native in order to establish itself on their territory. On the symbolic level, however, settler society subsequently sought to recuperate indigeneity in order to express its difference- and, accordingly, its independence- from the mother country."[85] As the editors of this collection remind us, settler colonialism, as an analytic, risks eliding both power relations and decolonial possibilities if too much focus is given to a Native/Settler binary. I argue this analytic also risks becoming over determined if focus is given exclusively to the eliminatory logic that Wolfe draws out to the exclusion of the productive nature of settler colonialism. Indeed, settler colonialism doesn't just try to eliminate but in its place, seeks to actively produce something new. In their attempts to "eliminate," or at least significantly diminish Indigenous political authority, the United States and Canada also sought to produce their own legality by reframing their criminal activities as lawful.

Indeed, the precarity of settler colonialism as an enabling logic of the state becomes visible when we look to the backdrop that led to the hangings this essay opened with. It was everyday assertions of Indigenous nationhood that would serve as the impetus for treaty making and would respond to the failures of these two states to implement these treaties in accord with Indigenous perspectives. Indigenous protest disrupted and destabilized the settler state. While Britain asserted sovereignty over North America in 1763 with the Royal Proclamation, this wildly imaginative attempt to reorder Indigenous space would have little effect on the ground, as Indigenous nations exercised political authority over their lands.

But importantly this assertion of British sovereignty constrained the settler states that sprang from this will for empire. The Royal Proclamation clearly articulated the process through which settlers could acquire Indigenous lands. It was only through the apparatus of treaty making that these colonial governments could legitimately acquire lands. These two nation-states required Indigenous sovereignty as this recognition of Indigenous sovereignty activated the authority of the treaties that give legitimacy to United States and Canadian settlement. Furthermore, Indigenous resistance quickly made it clear that British proclamations of sovereignty had little weight or bearing on the ground. The United States quickly turned to the treaty process, realizing this was the only legal and just method for land acquisition. Indigenous blockades and protests coupled with desires to mirror the rapidity of western expansion south of the border would also be the impetus for Canadian treaty making.

Indigenous nations primarily saw treaties as living relationships, diplomatic processes that enabled the expansion of intricate kin-based networks situated within a relational paradigm that saw the world as a deeply interconnected and interdependent place. While treaty-making prior to the nineteenth century was primarily centered on the establishment of political, military and economic alliances between Indigenous nations and newcomers, by the nineteenth century treaty making had become a vehicle for nation-building for the US and Canada as these polities began articulating a national identity through the creation and expansion of a bounded state. Treaty making became the primary apparatus through which the US and Canada sought to legitimate and expand their land base. Nineteenth century treaty making became tied up in state interest to quiet Indigenous title. Thus treaties became about extinguishment of Indigenous title, with cession becoming the given, the presumed.

This transformation of the treaty process follows the eliminatory logic of settler colonialism. They reconstructed treaties away from Indigenous visions of living relationships toward a contractual event. Treaty became about certainty and finality for the two states. Yet I argue that in this moment, with the treaty constructed as an event, we can see the double bind of settler colonialism.[86] Settler colonialism is both conditioned by the perceived need to eliminate the native while at the same time this eliminatory aspect of settler colonialism can never be fully achieved. While this eliminatory logic can never be fully achieved because Indigenous resistance and persistence would never permit it, I argue the eliminatory nature of settler colonialism can also never be fully achieved because state sovereignty is constituted through the recognition of Indigenous sovereignty.

The United States and Canada require Indigenous sovereignty as their own legitimacy as nation-states is constituted through the treaties that are intended to at least provide the perception of legality. This discursive function of treaties

for these two states is part of the double bind of the settler colonial logic. The US and Canada are deeply concerned with a perception of legality (which is coded to mean just and humane) that requires them to traverse to boundaries of law (and indeed stretch and reconfigure law so as not to step outside its bounds) in order to reconfigure Indigenous nations through this logic that is not so much eliminatory as it is concomitantly reductive and productive. Indeed, this is why I think Robert Williams contends that law was and remains the West's most vital and effective instrument of empire. He notes "laws utility in generating legitimating arguments for the acquisition, maintenance, and defense of colonial spheres of influence was seized on as a principal instrument of empire."[87] It is in these moments that we can see how settler logics operate to keep state sovereignty discursively intact while implementing and mobilizing settler sovereignty in increasingly material ways.

These are the moments when we can see how Canada and the US begin to make *real* that which has only been *imagined.* It is in these moments that these two states attempt to perfect settler sovereignty; they do so by claiming jurisdiction over Indigenous bodies, facilitated through the construction of Indigenous political activities as criminal. Yet, in both the US and Canada, the material and discursive implications of the domestication of Indigenous political authority fails to eliminate Indigenous sovereignty. Plenary power, while increasingly constraining how Indigenous nations in the United States are able to exercise their political authority, fails to obscure Indigenous sovereignty altogether. Instead it sits beside judicial recognition of tribal sovereignty. The Indian Act, while continuing to paternalistically order Indigenous life, nonetheless also inherently recognizes-by its very existence- the unique, political relationship Canada has with Indigenous nations. The production of Indigenous criminality that make "savages" and the "uncivilized" in a "lawless" land, while having material implications for Indigenous peoples as seen with high rates of incarceration and the continued subjugation of their sovereign authority, also brings forward the conditions and contexts that enabled these narrations, reminding the settler state that it remains a criminal empire.

Acknowledgements

I would like to express my gratitude to Juliana Hu Pegues, Alyosha Goldstein and Manu Vimalassery both for the invitation to present the beginning kernels of this work on one of the two panels they had organized around Jodi Byrd's *Transit of Empire* at the Native American and Indigenous Studies Association annual meeting in Austin, Texas in 2014, and further for the inclusion into this collection that sprang from those original panels. I am also indebted to Mishuana Goeman and the Women's Networking Brunch sponsored by the Committee on Gender and Sexuality Studies for inviting me to present a portion of this work at the American Studies Association Annual Meeting in Toronto, Ontario, October 7-11, 2015. I also received meticulous feedback from David Wilkins, which has significantly improved this work. I am also grateful to Jeani O'Brien and the American Indian Studies workshop at the University of Minnesota for their comments and suggestions.

[44] Initially, the United States recognized the validity of Indigenous legal traditions and jurisdiction in their treaties with Indigenous nations. For example, the Delaware Nation Treaty called for the application of both Delaware and US law over criminal matters between their respective citizens. The early treaties between 1778-1796 would primarily continue this tradition, utilizing a territorially based model to determine jurisdiction, despite the move in 1789 to begin including clauses that increasingly brought Indigenous peoples under US jurisdiction for crimes committed against US citizens. Gender, Sexuality, and Indigenous Lifeways

Queer Indigenous Studies

Critical Interventions in Theory, Politics, and Literature

Edited by
Qwo-Li Driskill, Chris Finley, Brian Joseph Gilley, and Scott Lauria Morgensen

The University of Arizona Press · Tucson

1

Decolonizing the Queer Native Body (and Recovering the Native Bull-Dyke)

Bringing "Sexy Back" and Out of Native Studies' Closet

Chris Finley

> Whence the Freudian endeavor (out of reaction no doubt to the great surge of racism that was contemporary with it) to ground sexuality in the law—the law of alliance, tabooed consanguinity, and the Sovereign Father, in short, to surround desire with all the trappings of the old order of power.
>
> —Michel Foucault[1]

Thinking about how gender reifies colonial power has begun to be an important analytic in Native studies with the publication of special issues on Native feminisms in *American Quarterly* (2008) and *Wicazo Sa Review* (2009), and the three exciting panels on Native feminisms at the 2008 Native American and Indigenous Studies Conference in Athens, Georgia.[2] While gender is not a main theoretical framework in Native studies, discussions of gender occur more frequently than do those about sexuality. In Native studies, gender is not as scary a topic as sexuality, especially discussions of Native sexualities. This reaction should be reconsidered. An important analysis of colonial power for Native studies and Native nations can be found in Michel Foucault's theories of sexuality and biopower. He argues that the modern racial state comes into being by producing "sex" as a quality of bodies and populations, which get targeted for life or death as a method of enacting state power. He says that historically this "gave rise . . . to comprehensive measures, statistical assessments, and interventions aimed at the entire social body or at groups taken as a whole. Sex was a means of access to both the life of the body and the life of the species."[3] Scholars in Native studies increasingly argue that biopower defines the colonization of Native peoples when it makes sexuality, gender, and race key arenas of the power of the settler state.[4]

Histories of biopower deeply affected Native people's relationship to the body and sexuality. Natives, and lots of other folks, like sex but are

terrified to discuss it. For many tribes, this shame around sex started in the boarding schools, and sexual shame has been passed down for generations. Throughout the imposition of colonialism in the United States, one of the methods Native communities have used to survive is adapting silence around sexuality. The silencing of sexuality in Native studies and Native communities especially applies to queer sexuality. While it does not differ from mainstream U.S. society, this attitude of silence has more intense consequences for Native peoples, because of the relationship of sexuality to colonial power. Sexuality is difficult terrain to approach in Native communities, since it brings up many ugly negative realities and colonial legacies of sexual violence. As Andrea Smith argues, sexual violence is both an ideological and a physical tool of U.S. colonialism.[5] Because of this reality, there is a high rate of sexual abuse in Native communities. Non-Native pedophiles target children in Native nations because there is little chance of perpetrators being brought to justice or caught by tribal police, since non-Natives on tribal lands are not bound to the same laws as Natives. Historically, and arguably in the present, Native women are targeted for medical sterilization. In some Native nations, tribal councils have adapted heterosexist marriage acts into their tribal government constitutions. All this proves that discussions of sexuality are happening in Native communities. Yet the relationship between colonial power and normalizing discourses of sexualities is not a part of these dialogues. Heterosexism and the structure of the nuclear family needs to be thought of as a colonial system of violence.

My goal here is to show how new and exciting work linking Native studies and queer studies can imagine more open, sex-positive, and queer-friendly discussions of sexuality in both Native communities and Native studies. This not only will benefit Native intellectualism but also will change the ways in which Native nationalisms are perceived and constructed by Native peoples, and perhaps non-Native peoples. How are queered Native bodies made into docile bodies open to subjugation by colonial and imperial powers? How does the queering of Native bodies affect Native sovereignty struggles? Can Native peoples decolonize themselves without taking colonial discourses of sexualities seriously? What might some of the results of a decolonizing revolutionary movement for Native people that challenged heteropatriarchy look like? How could a decolonizing movement that challenged biopower be constructed as a coalitional and community-building movement?

Heteropatriarchy, Biopower, and Colonial Discourse: Not So Sexy

Imagining the future of sexuality in Native studies and Native nations produces many stimulating possibilities for decolonization. One place where sexuality is discussed explicitly is in queer studies, yet this field only rarely addresses Native peoples and Native issues. The debates over the civil rights of queer peoples form one of the main topics of discussion in queer studies. Thinking about sovereignty and colonialism in relation to theory in queer studies would shift conversations of citizenship and subjectivity to rethinking the validity of the U.S. nation-state. Importantly, queer theory's critiques of heterosexism, subjectivity, and gender constructions would be very useful in the context of Native studies.

There are potential problems in intersecting queer studies with Native studies. For the most part, neither discipline has shown much interest in critically engaging the other.[6] It is my hope, along with other scholars in this collection, to change this relationship. I pursue that work here by: interrogating the queered colonial discourses that define Native people; critiquing the state for constructing Native people as nonheteronormative, since they do not conform to heteropatriarchy; and critiquing Native nation building that uses the U.S. nation-state as a model. In Native studies, discussions of sexuality, gender, and colonialism have the possibility of exposing heteronormative discourses of colonial violence directed at Native communities. Heteropatriarchy and heteronormativity should be interpreted as logics of colonialism. Native studies should analyze race, gender, and sexuality as logics of colonial power without reducing them to separate identity-based models of analysis, as argued by Andrea Smith in "Heteropatriarchy and the Three Pillars of White Supremacy: Rethinking Women of Color Organizing."[7] The simple inclusion of queer people or of sexuality as topics of discussion in Native studies and Native communities is not enough to effectively detangle the web of colonialism and heteropatriarchy. Taking sexuality seriously as a logic of colonial power has the potential to further decolonize Native studies and Native communities by exposing the hidden ways that Native communities have been colonized and have internalized colonialism. As Smith has argued, colonialism is supported through the structure of heteropatriarchy, which naturalizes hierarchies.[8] Heteropatriarchy disciplines and individualizes communally held beliefs by internalizing hierarchical gendered relationships and heteronormative

attitudes toward sexuality. Colonialism needs heteropatriarchy to naturalize hierarchies and unequal gender relations. Without heteronormative ideas about sexuality and gender relationships, heteropatriarchy, and therefore colonialism, would fall apart. Yet heteropatriarchy has become so natural in many Native communities that it is internalized and institutionalized as if it were traditional. Heteropatriarchal practices in many Native communities are written into tribal law and tradition. This changes how Natives relate to one another. Native interpersonal and community relationships are affected by pressure to conform to the nuclear family and the hierarchies implicit in heteropatriarchy, which in turn, are internalized. The control of sexuality, for Native communities and Native studies, is an extension of internalized colonialism. As Foucault argues in the first volume of *The History of Sexuality,* simply talking about sex and having more deviant sex does not challenge power relations produced by sexuality. Instead, the "excitement" of sexuality discourses reifies their power.[9] Purposeful deconstruction of the logics of power rather than an explosion of identity politics will help end colonial domination for Native peoples.

Colonialism disciplines both Native people and non-Native people through sexuality. The logics governing Native bodies are the same logics governing non-Native people. Yet the logic of colonialism gives the colonizers power, while Native people are more adversely affected by these colonizing logics. The colonizers may feel bad, stressed, and repressed by self-disciplining logics of normalizing sexuality, but Native people are systematically targeted for death and erasure by these same discourses. Rayna Green discusses the intersecting logics of race, gender, and sexuality in her work to show the unequal power relationship between the colonizer and the colonized.

Green's "The Pocahontas Perplex: The Image of Indian Women in American Culture" argues that colonial discourses represent Native women as sexually available for white men's pleasure.[10] These images of Native women equate the Native female body with the conquest of land in the "New World." In other words, the conflation of the "New World" with Native women's bodies presents Native women's heterosexual desire for white male settlers as justifying conquest and the settlement of the land by non-Natives. I would like to consider this sexualization, gendering, and racialization of the land by providing a queer reading. First, the land is heterosexualized within the heteropatriarchal order through the discovery, penetration, and ownership of the land by white men.

Of course, this narrative erases the fact that Native peoples were living on and owning these lands. The conflation of Native women's bodies with racialized and sexualized narratives of the land constructs it as penetrable and open to ownership through heteropatriarchal domination. Becoming critically aware of the heterosexual construction of land while queering Native peoples would be a queer Indigenous studies approach to rethinking conquest, even as it would shift ideas of sovereignty, subjectivity, recognition, nationalism, and self-determination to include queer Indigenous readings of the land.

While I agree with Green's formulation, her focus on Native women's conflation with land erases the sexual desirability of Native men in the colonial matrix. Green states, "But the Indian woman is even more burdened by this narrow definition of a 'good Indian,' for it is she, not the males, whom white men desire sexually."[11] Here, I want to include Native men as well as Native women as having been sexualized, gendered, and racialized as penetrable within colonial and imperial discourses. In other words, it is not only Native women who are (hetero)sexually controlled by white heteropatriarchy, for Native men are feminized and queered when put in the care of a white heteropatriarchal nation-state. Importantly, heteropatriarchy is effective whether Native women are read as queer or heterosexual, because "deviant" queer Native women need to be disciplined and controlled by colonial sexual and gendered "norms." Nevertheless, heteropatriarchy is more effective if Native women are read as heterosexual, since they can fit neatly as mothers and wives into its power hierarchies. All sexualization of Native peoples constructs them as incapable of self-governance without a heteropatriarchal influence that Native peoples do not "naturally" possess.

Under the disciplining logics of colonialism, Native women need to be heterosexualized to justify conquest. The "creation" story of the U.S. nation carefully includes a Native woman named Pocahontas who chooses her love for John Smith, and later John Rolfe, over the interests of her Native family. According to these colonial logics, Native women need to be managed, because they lack control over their sexuality and therefore their bodies. Native women embody the reproductive position of receiver of the fertile white colonial heteropatriarch and the mother of the U.S. nation. Under the logics of patriarchy and white supremacy, when a Native woman reproduces with a white man the child of this union becomes a white inheritor of the land. The child, although racially half Native, through white supremacy and patriarchy becomes white,

since inheritance under patriarchy is passed on through the father. Indigeneity, unlike blackness, is erased through miscegenation with whiteness, since colonizing logic stipulates that Native people need to disappear for the settlers to inherit the land. Then as soon as the Native mother gives birth, her indigeneity must disappear and die for her offspring to inherit the land and replace her body. For this whole narrative to work, the Native woman must be heterosexual and desire to have her body sexually and reproductively conquered through her love of the white man. Her body, and therefore her land, would now be owned and managed by the settler nation.

If the Native woman were read as queer, her heterosexual desire for white settlers to invade her nation would not be for the universal truth of love, since the sexual desire for white men would not exist. The narrative of universal love covering for imperial expansion and colonial violence would be exposed and destroyed. For this narrative to work, the Native woman *must* desire white heteropatriarchy through her desire of heteronormative sex and the love of white men. With a queer Native mother, the sex with the white settler may not have been consensual. In the absence of consent and the death of the mother sans the love story, conquest is revealed as a violent process with no regard for Native life. Colonialism naturalizes the heterosexual Native woman's desire for a white man to make conquest a universal love story.

In turn, in colonial narratives Native men must be queered as sexually unavailable object choices for Native women. While Native women are necessary for the imaginary origin story for the U.S. nation, Native men are not. In fact, Native men's presence in that story is erased. They must disappear to allow the white male heteropatriarch to rule over Native women without competition from Native men. For this to occur, Native men are constructed as nonheteronormative and unable to reproduce Native peoples. Native men are read as nonheteronormative because Native men do not correctly practice heteropatriarchy and govern Native women and children. Native gender norms and family structures, which vary from tribe to tribe, do not conform to Native men having control of the public space and the nuclear family or to caring for the land correctly. In other words, in a colonial reading, Native men "allow" matriarchal structures to govern society and extended families, while Native peoples do not make as much profit off the land as the settlers would. Native men are seen as sterile members of a dying race that needs a "genetically superior" white race to save it from the "unavoidable" extinction. Native men are constructed as nonheteronormative to justify the extinction of Native people. Since it is the father that gives the child the inheritance in patriarchy, white heteropatriarchy can slip in and "save" the Natives through the management of Native women and erasure of Native men.

Through the action of colonial discourses, the bodies of Native women and men are queered and racialized as disordered, unreproductive, and therefore nonheteronormative. By making Native bodies "disappear," the colonial logic of Native nonheteronormative sexualities justifies genocide and conquest as effects of biopower. On these terms, Native people are diseased, dying, and nonheteronormative, all of which threatens the survival of the heteronormative U.S. nation-state. Native people are eliminated discursively or actually killed to save the heteronormative body politic from possible contamination by Native nonheteronormativity. Yet through death and disappearance, nonheteronormative Natives are transformed into heteronormative spirit/subjects in discourses told by the colonizer to appropriate the land and culture of Native peoples while building a heteropatriarchal nation.

Nation-Building: Native Feminist Critiques and Decolonization as Foreplay for Sexy Native Nations

Taiaiake Alfred, a Mohawk Native, offers a decolonizing challenge to Native people. He does not center his construction of indigeneity in apolitical identity politics or solely on genealogy. Instead, he wants Native people to recreate the relations between themselves and their land base. He advocates fighting colonialism through regaining the spiritual strength and integrity colonialism has stolen from Native communities (as well as the hope Native people have given away to colonialism). This is a beautiful conception of sovereignty and self-determination. Alfred writes:

> Wasáse, as I am speaking of it here, is symbolic of the social and cultural force alive among Onkwehonwe dedicated to altering the balance of political and economic power to recreate some social and physical space for freedom to re-emerge. Wasáse is an ethical and political vision, the real demonstration of our resolve to survive as Onkwehonwe and to do what we must to force the Settlers to acknowledge our existence and the integrity of our connection to the land.[12]

Alfred wants freedom for Native people that can come only from decolonizing Native communities. For him, this is a political project that involves Native communities *and* the colonizing settlers. Alfred does not discuss how colonialism impacts Native women specifically or how colonial discourses of sexuality dispossess Native people from the land and from capacity for governance. Yet his alternative construction of sovereignty can be used to include sexuality as part of politics and land management.

Jennifer Nez Denetdale is one of the few Native scholars overtly discussing the politics of sexuality, gender, and Native nationalisms in her work. Denetdale's work exposes homophobia as part of modern Native nation building. To critique masculinist discourses working within Navajo nationalism, Denetdale, along with other Native feminists, has found it necessary to critique traditionalism in Native communities. This is an important intervention, because Native peoples are often read as existing outside of homophobic discourse or as more accepting of trans and queer people in Native communities because of traditional Native ideas regarding gender and sexuality. Denetdale writes: "With the imposition of Western democratic principles, Navajo women find themselves confronted with new oppressions in the name of 'custom and tradition.'"[13] Here, tradition is invoked to justify heteropatriarchy and male leadership in the Navajo Nation (as in other Native nations) by discouraging or forbidding Native women from taking leadership roles, on account of this being constructed as untraditional. Ironically, as Denetdale points out, Navajo women are allowed to participate in the Navajo Nation beauty pageant but not to hold a position on the tribal council. Denetdale supports Native sovereignty, but she also believes Native traditions should be historicized so that traditions are not abused and used to support forms of oppression, such as antiblack racism and heteronormativity. She writes:

> While it is necessary for Native scholars to call upon the intellectual community to support and preserve Indigenous sovereignty, it is crucial that we also recognize how history has transformed traditions, and that we be critical about the ways tradition is claimed and for what purposes. In some cases, tradition has been used to disenfranchise women and to hold them to standards higher than those set for men. Tradition is not without a political context.[14]

Denetdale explains that traditionalism is used in Native communities to silence women and to disenfranchise them from possessing political power. She does not dismiss Navajo traditions when she asks critical questions about whether certain traditions emerge in a historical trajectory or how Navajo men benefit by defining traditionalism in a historical vacuum. Her critique denaturalizes heteropatriarchal traditionalism by placing it inside histories of heteropatriarchal discourse instead of outside of modern constructions of power.[15] Native nations should be self-critiquing of Native constructions of nationalisms.

Native nations' use of heteronormative citizenship standards also disallows nonheteronormative identity formations from belonging in Native nations. Denetdale discusses this matter further when she also takes on the Diné Marriage Act passed by the tribal council of the Navajo Nation, in her paper entitled, "Carving Navajo National Boundaries: Patriotism, Tradition, and the Diné Marriage Act of 2005."[16] Denetdale examines how the intersection of heteropatriarchy, militarism, and homophobia strengthened the Navajo Nation in the post–9/11 moment. She criticizes her tribe for participating in oppressive colonial nation building by trying to enforce heteronormative marriage practices on Diné people. This sort of homophobic nationalism is similar to the U.S. nation-state's use of hyped-up homophobic nationalism and militarism in this time of war. Nationalism that is dependent on the exclusion of queer people has many consequences for Native communities. Denetdale tells how some Navajo youth left the Navajo Nation to move to urban areas and to find a queer community because of the backlash against nonheteronormative Navajos. This is a loss to the Navajo Nation. As Denetdale successfully argues, Native nations that mirror the U.S nation-state by relying on homophobia and heteropatriarchy to establish national belonging and exclusion are not ideal models to further Native sovereignty. She forcefully argues, "Critically examining the connections constructed between the traditional roles of Navajo warriors and present-day Navajo soldiering for the United States, as well as the connections made between family values and recent legislation like the Diné Marriage Act, are critical to our decolonization as Native peoples."[17] Denetdale, like many other Native scholars, advocates looking for a construction of sovereignty and Native nation building other than the model of the U.S. nation-state. She does not want to reproduce the oppressive colonial methods that exclude queers, women, and black Natives. Instead, she, like Alfred, challenges us in Native studies to conceptualize a more harmonious construction of sovereignty and Native nationhood. Native people and Native studies need to understand

how discourses of colonial power operate within our communities and within our selves through sexuality, so that we may work toward alternative forms of Native nationhood and sovereignty that do not rely on heteronormativity for membership.

Centering discourses of sexualities in Native studies engages gender, sexuality, and indigeneity as enmeshed categories of analysis, since examining gender is an important part of deconstructing sexualities and exposing colonial violence. Andrea Smith writes, "The very simplified manner in which Native women's activism is theorized prevents Native women from articulating political projects that both address sexism *and* promote indigenous sovereignty. In addition, this framework does not show the complex way in which Native women organizers position themselves with respect to other coalition partners."[18] I build my ideas upon the work of Indigenous feminist theorists whose ideas and articulations of indigeneity could transform other fields of study, such as white feminist and white queer theories. The scholarly work of Indigenous feminisms centers Native women and critiques white heteropatriarchy, colonialism, sexual violence, and the U.S. nation-state model of nationalism. I want to take this a step further, as some Native feminists have done, and add the intersection of these power relations with sexuality to reveal colonizing logics and practices embedded in constructing Native peoples as hypersexual and nonheteronormative. It is time to bring "sexy back" to Native studies and quit pretending we are boring and pure and do not think or write about sex. We are alive, we are sexy, and some of us Natives are queer. Native nationalisms have the potential to be sexy (and are already sexualized), but to be sexy from a Native feminist perspective, they need to be decolonizing and critical of heteropatriarchy.

Conclusion

Critical theory of biopower exposes the colonial violence of discourse on Native nonheteronormativity being used to justify Native genocide and the "disappearance" of Native people. Deconstructing Native sexualities within a biopolitical analysis has the ability to further unlock the closet of Native studies and expose how colonial power operates in Native nations. The silence in Native studies around issues of sexuality, even heterosexuality, does not benefit the work of decolonizing Native studies or articulating it as a project of freedom for Native people. Silence around Native sexuality benefits the colonizers and erases queer Native people from their communities.[19] Putting Native studies and queer studies in dialogue creates further possibilities to decolonize Native communities. Doing so will expose colonial violence in discursive practices that construct the Native body as hypersexualized, sexually disordered, and queer while presenting Native people as incapable of governance on Native land. Centering a queer studies framework within Native studies also calls Native communities to confront heteropatriarchal practices that have resulted from internalizing sexual colonization.

In response to Justin Timberlake's song "Sexy Back," the artist Prince stated, "Sexy never left."[20] The same can be said for Native studies and Native communities, because sex is always there, but Native sexualities are just beginning to be theorized. Sexuality discourses have to be considered as methods of colonization that require deconstruction to further decolonize Native studies and Native communities. Part of the decolonizing project is recovering the relationship to a land base and reimagining the queer Native body. What does this look like? We will have to imagine this and build this together. I want to imagine that Native peoples have a new bright future full of life and the spirits of our ancestors.

Queer Theory and Native Studies

The Heteronormativity of Settler Colonialism

Andrea Smith

Native studies and queer theorist Chris Finley (this volume) challenges Native studies scholars to integrate queer theory into their work. She notes that while some scholars discuss the status of gender-non-normative peoples within precolonial Native communities, virtually no scholars engage queer theory. This absence contributes to a heteronormative framing of Native communities. "It is time to bring 'sexy back' to Native studies and quit pretending we are boring and pure and do not think or write about sex," Finley insists. "We are alive, we are sexy, and some of us Natives are queer."[1] Furthermore, she notes, while there are emerging feminist and decolonial analyses within Native studies that point to the gendered nature of colonialism, it is necessary to extend this analysis to examine how colonialism also queers Native peoples. Thus, her charge goes beyond representing queer peoples within Native studies (an important project); it also calls on *all* scholars to queer the analytics of settler colonialism. Qwo-Li Driskill further calls for the development of a "two-spirit" critique that remains in conversation with, while also critically interrogating, queer and queer of color critique.[2]

Queer theory has made a critical intervention in GLBT studies by moving past simple identity politics to interrogate the logics of heteronormativity. According to Michael Warner, the "preference for 'queer' represents, among other things, an aggressive impulse of generalization; it rejects a minoritizing logic of toleration or simple political interest-representation in favor of a more thorough resistance to regimes of the normal." Native studies, however, has frequently intersected more with GLBT studies than with queer theory in that it has tended to focus on the status of "two-spirit" peoples within Native communities.[3] While this scholarship is critically important, I argue that Native studies additionally has more to contribute to queer studies by unsettling settler colonialism. At the same time, while queer theory does focus on normalizing logics, even those engaged in queer of color critique generally neglect the normalizing logics of settler colonialism, particularly within the U.S. context.

Heterosexualism and the Colonial / Modern Gender System

Maria Lugones

Hypatia, Volume 22, Number 1, Winter 2007, pp. 186-209 (Article)

Published by Indiana University Press

Heterosexualism and the Colonial / Modern Gender System

MARÍA LUGONES

The coloniality of power is understood by Anibal Quijano as at the constituting crux of the global capitalist system of power. What is characteristic of global, Eurocentered, capitalist power is that it is organized around two axes that Quijano terms "the coloniality of power" and "modernity." The coloniality of power introduces the basic and universal social classification of the population of the planet in terms of the idea of race, a replacing of relations of superiority and inferiority established through domination with naturalized understandings of inferiority and superiority. In this essay, Lugones introduces a systemic understanding of gender constituted by colonial/modernity in terms of multiple relations of power. This gender system has a light and a dark side that depict relations, and beings in relation as deeply different and thus as calling for very different patterns of violent abuse. Lugones argues that gender itself is a colonial introduction, a violent introduction consistently and contemporarily used to destroy peoples, cosmologies, and communities as the building ground of the "civilized" West.

In a theoretico-praxical vein, I am offering a framework to begin thinking about heterosexism as a key part of how gender fuses with race in the operations of colonial power. Colonialism did not impose precolonial, European gender arrangements on the colonized. It imposed a new gender system that created very different arrangements for colonized males and females than for white bourgeois colonizers. Thus, it introduced many genders and gender itself as a colonial concept and mode of organization of relations of production, property relations, of cosmologies and ways of knowing. But we cannot understand this gender system without understanding what Anibal Quijano calls "the coloniality of power" (2000a, 2000b, 2001–2002). The reason to historicize gender

Hypatia vol. 22, no. 1 (Winter 2007)

formation is that without this history, we keep on centering our analysis on the patriarchy; that is, on a binary, hierarchical, oppressive gender formation that rests on male supremacy without any clear understanding of the mechanisms by which heterosexuality, capitalism, and racial classification are impossible to understand apart from each other. The heterosexualist patriarchy has been an ahistorical framework of analysis. To understand the relation of the birth of the colonial/modern gender system to the birth of global colonial capitalism—with the centrality of the coloniality of power to that system of global power—is to understand our present organization of life anew.

This attempt at historicizing gender and heterosexualism is thus an attempt to move, dislodge, complicate what has faced me and others engaged in liberatory/decolonial projects as hard barriers that are both conceptual and political. These are barriers to the conceptualization and enactment of liberatory possibilities as de-colonial possibilities. Liberatory possibilities that emphasize the light side of the colonial/modern gender system affirm rather than reject an oppressive organization of life. There has been a persistent absence of a deep imbrication of race into the analysis that takes gender and sexuality as central in much white feminist theory and practice, particularly feminist philosophy. I am cautious when I call it "white" feminist theory and practice. One can suspect a redundancy involved in the claim: it is white because it seems unavoidably enmeshed in a sense of gender and of gendered sexuality that issues from what I call the light side of the modern/colonial gender system. But that is, of course, a conclusion from within an understanding of gender that sees it as a colonial concept. Yet, I arrive at this conclusion by walking a political/praxical/theoretical path that has yet to become central in gender work: the path marked by taking seriously the coloniality of power. As I make clear later in this essay, it is also politically important that many who have taken the coloniality of power seriously have tended to naturalize gender. That position is also one that entrenches oppressive colonial gender arrangements, oppressive organizations of life.

So, on the one hand, I am interested in investigating the intersection of race, class, gender, and sexuality in a way that enables me to understand the indifference that persists in much feminist analysis. Women of color and Third World feminisms have consistently shown the way to a critique of this indifference to this deep imbrication of race, gender, class, and sexuality. The framework I introduce is wholly grounded in the feminisms of women of color and women of the Third World and arises from within them. This framework enables us to ask harsh but hopefully inspiring questions. The questions attempt to inspire resistance to oppression understood in this degree of complexity. Two crucial questions that we can ask about heterosexualism from within it are: How do we understand heterosexuality not merely as normative but as consistently perverse when violently exercised across the colonial modern gender system so as to

construct a worldwide system of power? How do we come to understand the very meaning of heterosexualism as tied to a persistently violent domination that marks the flesh multiply by accessing the bodies of the unfree in differential patterns devised to constitute them as the tortured materiality of power? In the work I begin here, I offer the first ingredients to begin to answer these questions. I do not believe any solidarity or homoerotic loving is possible among females who affirm the colonial/modern gender system and the coloniality of power. I also think that transnational intellectual and practical work that ignores the imbrication of the coloniality of power and the colonial/modern gender system also affirms this global system of power. But I have seen over and over, often in disbelief, how politically minded white theorists have simplified gender in terms of the patriarchy. I am thus attempting to move the discussion of heterosexualism, by changing its very terms.

I am also interested in investigating the intersection of race, class, gender and sexuality in a way that enables me to understand the indifference that men, but, more important to our struggles, men who have been racialized as inferior, exhibit to the systematic violences inflicted upon women of color.[1] I want to understand the construction of this indifference so as to make it unavoidably recognizable by those claiming to be involved in liberatory struggles. This indifference is insidious since it places tremendous barriers in the path of the struggles of women of color for our own freedom, integrity, and well-being and in the path of the correlative struggles toward communal integrity. The latter is crucial for communal struggles toward liberation, since it is their backbone. The indifference is found both at the level of everyday living and at the level of theorizing of both oppression and liberation. The indifference seems to me not just one of not seeing the violence because of the categorial[2] separation of race, gender, class, and sexuality. That is, it does not seem to be only a question of epistemological blinding through categorial separation.

Feminists of color have made clear what is revealed in terms of violent domination and exploitation once the epistemological perspective focuses on the intersection of these categories.[3] But that has not seemed sufficient to arouse in those men who have themselves been targets of violent domination and exploitation any recognition of their complicity or collaboration with the violent domination of women of color. In particular, theorizing global domination continues to proceed as if no betrayals or collaborations of this sort need to be acknowledged and resisted.

Here, I pursue this investigation by placing together two frameworks of analysis that I have not seen sufficiently jointly explored. I am referring, on the one hand, to the important work on gender, race and colonization done, not exclusively, but significantly by Third World and women of color feminists, including critical race theorists. This work has emphasized the concept of intersectionality and has exposed the historical and the theoretico-practical

exclusion of nonwhite women from liberatory struggles in the name of women.[4] The other framework is the one Quijano introduced and which is at the center of his work, that of the coloniality of power (2000a, 2000b, 2001–2002).[5] Placing both of these strands of analysis together permits me to arrive at what I am tentatively calling "the modern/colonial gender system." I think this understanding of gender is implied in both frameworks in large terms, but it is not explicitly articulated, or not articulated in the direction I think necessary to unveil the reach and consequences of complicity with this gender system. I think that articulating this colonial/modern gender system, both in large strokes, and in all its detailed and lived concreteness will enable us to see what was imposed on us. It will also enable us to see its fundamental destructiveness in both a long and wide sense. The intent of this writing is to make visible the instrumentality of the colonial/modern gender system in subjecting us—both women and men of color—in all domains of existence. But it is also the project's intent to make visible the crucial disruption of bonds of practical solidarity. My intent is to provide a way of understanding, of reading, of perceiving our allegiance to this gender system. We need to place ourselves in a position to call each other to reject this gender system as we perform a transformation of communal relations.[6] In this initial essay, I present Quijano's model that I will complicate, but one that gives us—in the logic of structural axes—a good ground from within which to understand the processes of intertwining the production of race and gender.

The Coloniality of Power

Quijano thinks the intersection of race and gender in large structural terms. So, to understand that intersection in his terms, it is necessary to understand his model of global, Eurocentered capitalist power. Both race[7] and gender find their meanings in this model (*patrón*).[8] Quijano understands that all power is structured in relations of domination, exploitation, and conflict as social actors fight over control of "the four basic areas of human existence: sex, labor, collective authority and subjectivity/intersubjectivity, their resources and products" (2001–2002, 1). Global, Eurocentered, capitalist power is organized characteristically around two axes: the coloniality of power and modernity (2000b, 342). The axes order the disputes over control of each area of existence in such a way that the coloniality of power and modernity thoroughly infuse the meaning and forms of domination in each area. So, for Quijano, the disputes/struggles over control of "sexual access, its resources and products" define the domain of sex/gender and the disputes, in turn, can be understood as organized around the axes of coloniality and modernity.

This is too narrow an understanding of the oppressive modern/colonial constructions of the scope of gender. Quijano also assumes patriarchal and

heterosexual understandings of the disputes over control of sex, its resources, and products. Quijano accepts the global, Eurocentered, capitalist understanding of what gender is about. These features of the framework serve to veil the ways in which nonwhite colonized women have been subjected and disempowered. The heterosexual and patriarchal character of the arrangements can themselves be appreciated as oppressive by unveiling the presuppositions of the framework. Gender does not need to organize social arrangements, including social sexual arrangements. But gender arrangements need not be either heterosexual or patriarchal. They need not be, that is, as a matter of history. Understanding these features of the organization of gender in the modern/colonial gender system—the biological dimorphism, the patriarchal and heterosexual organizations of relations—is crucial to an understanding of the differential gender arrangements along "racial" lines. Biological dimorphism, heterosexualism, and patriarchy are all characteristic of what I call the light side of the colonial/modern organization of gender. Hegemonically, these are written large over the meaning of gender. Quijano seems unaware of his accepting this hegemonic meaning of gender. In making these claims I aim to expand and complicate Quijano's approach, while preserving his understanding of the coloniality of power, which is at the center of what I am calling the modern/colonial gender system.

The coloniality of power introduces the basic and universal social classification of the population of the planet in terms of the idea of 'race' (Quijano 2001–2002, 1). The invention of race is a pivotal turn as it replaces the relations of superiority and inferiority established through domination. It reconceives humanity and human relations fictionally, in biological terms. It is important that what Quijano provides is a historical theory of social classification to replace what he terms the "Eurocentric theories of social classes" (2000b, 367). This move makes conceptual room for the coloniality of power. It makes conceptual room for the centrality of the classification of the world's population in terms of races in the understanding of global capitalism. It also makes conceptual room for understanding historical disputes over control of labor, sex, collective authority, and intersubjectivity as developing in processes of long duration, rather than understanding each of the elements as predating the relations of power. The elements that constitute the global, Eurocentered, capitalist model of power do not stand separately from each other and none is prior to the processes that constitute the patterns. Indeed, the mythical presentation of these elements as metaphysically prior is an important aspect of the cognitive model of Eurocentered, global capitalism.

In constituting this social classification, coloniality permeates all aspects of social existence and gives rise to new social and geocultural identities (Quijano 2000b, 342). "America" and "Europe" are among the new geocultural identities. "European," "Indian," "African" are among the "racial" identities.

This classification is "the deepest and most enduring expression of colonial domination" (2001–2002, 1). With expansion of European colonialism, the classification was imposed on the population of the planet. Since then, it has permeated every area of social existence, constituting the most effective form of material and intersubjective social domination. Thus, *coloniality* does not just refer to racial classification. It is an encompassing phenomenon, since it is one of the axes of the system of power and as such it permeates all control of sexual access, collective authority, labor, subjectivity/intersubjectivity and the production of knowledge from within these intersubjective relations. Or, alternatively, all control over sex, subjectivity, authority, and labor are articulated around it. As I understand the logic of "structural axis" in Quijano's usage, the element that serves as an axis becomes constitutive of and constituted by all the forms that relations of power take with respect to control over that particular domain of human existence. Finally, Quijano also makes clear that, though coloniality is related to colonialism, these are distinct as the latter does not necessarily include racist relations of power. Coloniality's birth and its prolonged and deep extension throughout the planet is tightly related to colonianism (2000b, 381).

In Quijano's model of global, Eurocentered, capitalist power, *capitalism* refers to "the structural articulation of all historically known forms of control of labor or exploitation, slavery, servitude, small independent mercantile production, wage labor, and reciprocity under the hegemony of the capital-wage labor relation" (2000b, 349). In this sense, the structuring of the disputes over control of labor is discontinuous: not all labor relations under global, Eurocentered capitalism fall under the capital/wage relation model, though this is the hegemonic model. It is important in beginning to see the reach of the coloniality of power that wage labor has been reserved almost exclusively for white Europeans. The division of labor is thoroughly racialized as well as geographically differentiated. Here, we see the coloniality of labor as a thorough meshing of labor and race.

Quijano understands modernity, the other axis of global, Eurocentered capitalism, as "the fusing of the experiences of colonialism and coloniality with the necessities of capitalism, creating a specific universe of intersubjective relations of domination under a Eurocentered hegemony" (2000b, 343). In characterizing modernity, Quijano focuses on the production of a way of knowing, labeled rational, arising from within this subjective universe since the seventeenth century in the main hegemonic centers of this world system of power (Holland and England). This way of knowing is Eurocentered. By *Eurocentrism* Quijano understands the cognitive perspective not of Europeans only, but of the Eurocentered world, of those educated under the hegemony of world capitalism. "Eurocentrism naturalizes the experience of people within this model of power" (2000b, 343).

The cognitive needs of capitalism and the naturalizing of the identities and relations of coloniality and of the geocultural distribution of world capitalist power have guided the production of this way of knowing. The cognitive needs of capitalism include "measurement, quantification, externalization (or objectification) of what is knowable with respect to the knower so as to control the relations among people and nature and among them with respect to it, in particular the property in means of production" (Quijano 2000b, 343). This way of knowing was imposed on the whole of the capitalist world as the only valid rationality and as emblematic of modernity.

Europe was mythologically understood to predate this pattern of power as a world capitalist center that colonized the rest of the world and, as such, the most advanced moment in the linear, unidirectional, continuous path of the species. A conception of humanity was consolidated according to which the world's population was differentiated in two groups: superior and inferior, rational and irrational, primitive and civilized, traditional and modern. *Primitive* referred to a prior time in the history of the species, in terms of evolutionary time. Europe came to be mythically conceived as preexisting colonial, global, capitalism and as having achieved a very advanced level in the continuous, linear, unidirectional path. Thus, from within this mythical starting point, other human inhabitants of the planet came to be mythically conceived not as dominated through conquest, nor as inferior in terms of wealth or political power, but as an anterior stage in the history of the species, in this unidirectional path. That is the meaning of the qualification "primitive" (Quijano 2000b, 343–44).

We can see then the structural fit of the elements constituting global, Eurocentered capitalism in Quijano's model (pattern). Modernity and coloniality afford a complex understanding of the organization of labor. They enable us to see the fit between the thorough racialization of the division of labor and the production of knowledge. The pattern allows for heterogeneity and discontinuity. Quijano argues that the structure is not a closed totality (2000b, 355).

We are now in a position to approach the question of the intersectionality of race and gender[9] in Quijano's terms. I think the logic of "structural axes" does more and less than intersectionality. Intersectionality reveals what is not seen when categories such as gender and race are conceptualized as separate from each other. The move to intersect the categories has been motivated by the difficulties in making visible those who are dominated and victimized in terms of both categories. Though everyone in capitalist Eurocentered modernity is both raced and gendered, not everyone is dominated or victimized in terms of their race or gender. Kimberlé Crenshaw and other women of color feminists have argued that the categories have been understood as homogenous and as picking out the dominant in the group as the norm; thus *women* picks out white bourgeois women, *men* picks out white bourgeois men, *black* picks out

black heterosexual men, and so on. It becomes logically clear then that the logic of categorial separation distorts what exists at the intersection, such as violence against women of color. Given the construction of the categories, the intersection misconstrues women of color. So, once intersectionality shows us what is missing, we have ahead of us the task of reconceptualizing the logic of the intersection so as to avoid separability.[10] It is only when we perceive gender and race as intermeshed or fused that we actually see women of color.

The logic of structural axes shows gender as constituted by and constituting the coloniality of power. In that sense, there is no gender/race separability in Quijano's model. I think he has the logic of it right. But the axis of coloniality is not sufficient to pick out all aspects of gender. What aspects of gender are shown depends on how gender is actually conceptualized in the model. In Quijano's model (pattern) gender seems to be contained within the organization of that "basic area of existence" that Quijano calls "sex, its resources, and products" (2000b, 378). That is, there is an account of gender within the framework that is not itself placed under scrutiny and that is too narrow and overly biologized as it presupposes sexual dimorphism, heterosexuality, patriarchal distribution of power, and so on.

Though I have not found a characterization of gender in what I have read of his work, Quijano seems to me to imply that gender difference is constituted in the disputes over control of sex, its resources, and products. Differences are shaped through the manner in which this control is organized. Quijano understands sex as biological attributes[11] that become elaborated as social categories. He contrasts the biological quality of sex with phenotype, which does not include differential biological attributes. On the one hand, "the color of one's skin, the shape of one's eyes and hair do not have any relation to the biological structure" (2000b, 373). Sex, on the other hand, seems unproblematically biological to Quijano. He characterizes the "coloniality of *gender* relations,"[12] that is, the ordering of gender relations around the axis of the coloniality of power, as follows:

> 1. In the whole of the colonial world, the norms and formal-ideal patterns of sexual behavior of the genders and consequently the patterns of familial organization of "Europeans" were directly founded on the "racial" classification: the sexual freedom of males and the fidelity of women were, in the whole of the Eurocentered world, the counterpart of the free—that is, not paid as in prostitution—access of white men to "black" women and "indians" in America, "black" women in Africa, and other "colors" in the rest of the subjected world.
> 2. In Europe, instead, it was the prostitution of women that was the counterpart of the bourgeois family pattern.

3. Familial unity and integration, imposed as the axes of the model of the bourgeois family in the Eurocentered world, were the counterpart of the continued disintegration of the parent-children units in the "nonwhite" "races," which could be held and distributed as property not just as merchandise but as "animals." This was particularly the case among "black" slaves, since this form of domination over them was more explicit, immediate, and prolonged.
4. The hypocrisy characteristically underlying the norms and formal-ideal values of the bourgeois family are not, since then, alien to the coloniality of power. (Quijano 2000b, 378, my translation.)

As we see in this complex and important quote, Quijano's framework restricts gender to the organization of sex, its resources, and products and he seems to make a presupposition as to who controls access and who become constituted as resources. Quijano appears to take for granted that the dispute over control of sex is a dispute among men, about men's control of resources which are thought to be female. Men do not seem understood as the resources in sexual encounters. Women are not thought to be disputing for control over sexual access. The differences are thought of in terms of how society reads reproductive biology.

Intersexuality

In "Definitional Dilemmas," Julie Greenberg tells us that legal institutions have the power to assign individuals to a particular racial or sexual category:[13] "Sex is still presumed to be binary and easily determinable by an analysis of biological factors. Despite anthropological and medical studies to the contrary, society presumes an unambiguous binary sex paradigm in which all individuals can be classified neatly as male or female (2002, 112). Greenberg argues that throughout U.S. history the law has failed to recognize intersexuals, in spite of the fact that 1 to 4 percent of the world's population is intersexed. That is, they do not fit neatly into unambiguous sex categories; "they have some biological indicators that are *traditionally* associated with males and some biological indicators that are *traditionally* associated with females. The manner in which the law defines the terms *male*, *female*, and *sex* will have a profound impact on these individuals" (112, emphases added).

The assignations reveal that what is understood to be biological sex is socially constructed. From the late nineteenth century until World War I, reproductive function was considered a woman's essential characteristic. The presence or absence of ovaries was the ultimate criterion of sex (Greenberg 2002, 113). But

there are a large number of factors that can enter into "establishing someone's 'official' sex": chromosomes, gonads, external morphology, internal morphology, hormonal patterns, phenotype, assigned sex, and self-identified sex (Greenberg 2002, 112). At present, chromosomes and genitalia enter into the assignment, but in a manner that reveals biology is thoroughly interpreted and itself surgically constructed.

> XY infants with "inadequate" penises must be turned into girls because society believes the essence of manhood is the ability to penetrate a vagina and urinate while standing. XX infants with "adequate" penises, however, are assigned the female sex because society and many in the medical community believe that the essence of womanhood is the ability to bear children rather than the ability to engage in satisfactory sexual intercourse. (Greenberg 2002, 114)

Intersexed individuals are frequently surgically and hormonally turned into males or females. These factors are taken into account in legal cases involving the right to change the sex designation on official documents, the ability to state a claim for employment discrimination based upon sex, the right to marry (Greenberg 2002, 115). Greenberg reports the complexities and variety of decisions on sexual assignation in each case. The law does not recognize intersexual status. Though the law permits self-identification of one's sex in certain documents, "for the most part, legal institutions continue to base sex assignment on the traditional assumptions that sex is binary and can be easily determined by analyzing biological factors" (Greenberg 2002, 119).

Greenberg's work enables me to point out an important assumption in the model that Quijano offers us. This is important because sexual dimorphism has been an important characteristic of what I call "the light side" of the colonial/modern gender system. Those in the "dark side" were not necessarily understood dimorphically. Sexual fears of colonizers led them to imagine the indigenous people of the Americas as hermaphrodites or intersexed, with large penises and breasts with flowing milk.[14] But as Paula Gunn Allen (1986/1992) and others have made clear, intersexed individuals were recognized in many tribal societies prior to colonization without assimilation to the sexual binary. It is important to consider the changes that colonization brought to understand the scope of the organization of sex and gender under colonialism and in Eurocentered global capitalism. If the latter did only recognize sexual dimorphism for white bourgeois males and females, it certainly does not follow that the sexual division is based on biology. The cosmetic and substantive corrections to biology make very clear that "gender" is antecedent to the "biological" traits and gives them meaning. The naturalizing of sexual differences is another product of the modern use of science that Quijano points out in the case of "race." Not all

different traditions correct and normalize intersexed people. So, as with other assumptions, it is important to ask how sexual dimorphism served and continues to serve global, Eurocentered, capitalist domination/exploitation.

Nongendered and Gynecratic Egalitarianism

As global, Eurocentered capitalism was constituted through colonization, gender differentials were introduced where there were none. Oyéronké Oyewùmí (1997) has shown us that the oppressive gender system that was imposed on Yoruba society did a lot more than transform the organization of reproduction. Her argument shows us that the scope of the gender system colonialism imposed encompasses the subordination of females in every aspect of life. Thus Quijano's understanding of the scope of gendering in global, Eurocentered capitalism is much too narrow. Allen argued that many Native American tribes were matriarchal, recognized more than two genders, recognized "third" gendering and homosexuality positively, and understood gender in egalitarian terms rather than in the terms of subordination that Eurocentered capitalism imposed on them. Gunn's work has enabled us to see that the scope of the gender differentials was much more encompassing and it did not rest on biology. Allen also showed us a gynecentric construction of knowledge and approach to understanding "reality" that counters the knowledge production of modernity. Thus she has pointed us in the direction of recognizing the gendered construction of knowledge in modernity, another aspect of the hidden scope of "gender" in Quijano's account of the processes constituting the coloniality of gender.

Nongendered Egalitarianism

In *The Invention of Women*, Oyéronké Oyewùmí raises questions about the validity of patriarchy as a valid transcultural category (1997, 20). She does so, not by contrasting patriarchy and matriarchy, but by arguing that "gender was not an organizing principle in Yoruba society prior to colonization by the West" (31). No gender system was in place. Indeed, she tells us that gender has "become important in Yoruba studies not as an artifact of Yoruba life but because Yoruba life, past and present, has been translated into English to fit the Western pattern of body-reasoning" (30). The assumption that Yoruba society included gender as an organizing principle is another case "of Western dominance in the documentation and interpretation of the world, one that is facilitated by the West's global material dominance" (32). She tells us that "researchers always find gender when they look for it" (31). "The usual gloss of the Yoruba categories *obinrin* and *okunrin* as 'female/woman' and 'male/man,' respectively, is a mistranslation. These categories are neither binarily opposed nor hierarchical" (32–33). The prefixes *obin* and *okun* specify a variety of

anatomy. Oyewùmí translates the prefixes as referring to the anatomic male and the anatomic female, shortened as *anamale* and *anafemale*. It is important to note that she does not understand these categories as binarily opposed.

Oyewùmí understands gender as introduced by the West as a tool of domination that designates two binarily opposed and hierarchical social categories. 'Women' (the gender term) is not defined through biology, though it is assigned to anafemales. Women are defined in relation to men, the norm. Women are those who do not have a penis; those who do not have power; those who cannot participate in the public arena (Oyewùmí 1997, 34). None of this was true of Yoruba anafemales prior to colonization.

> The imposition of the European state system, with its attendant legal and bureaucratic machinery, is the most enduring legacy of European colonial rule in Africa. One tradition that was exported to Africa during this period was the exclusion of women from the newly created colonial public sphere. . . . The very process by which females were categorized and reduced to "women" made them ineligible for leadership roles. . . . The emergence of women as an identifiable category, defined by their anatomy and subordinated to men in all situations, resulted, in part, from the imposition of a patriarchal colonial state. For females, colonization was a twofold process of racial inferiorization and gender subordination. The creation of "women" as a category was one of the very first accomplishments of the colonial state. It is not surprising, therefore, that it was unthinkable for the colonial government to recognize female leaders among the peoples they colonized, such as the Yorùbá. . . . The transformation of state power to male-gender power was accomplished at one level by the exclusion of women from state structures. This was in sharp contrast to Yorùbá state organization, in which power was not gender-determined. (123–25)

Oyewùmí recognizes two crucial processes in colonization, the imposition of races with the accompanying inferiorization of Africans, and the inferiorization of anafemales. The inferiorization of anafemales extended very widely—from exclusion from leadership roles to loss of control over property and other important economic domains. Oyewùmí notes that the introduction of the Western gender system was accepted by Yoruba males, who thus colluded with the inferiorization of anafemales. So, when we think of the indifference of nonwhite men to the violences exercised against nonwhite women, we can begin to have some sense of the collaboration between anamales and Western colonials against anafemales. Oyewùmí makes clear that both men and women resisted cultural changes at different levels. Thus, while

> in the West the challenge of feminism is how to proceed from the gender-saturated category of "women" to the fullness of an unsexed humanity. For Yorùbá obinrin, the challenge is obviously different because at certain levels in the society and in some spheres, the notion of an "unsexed humanity" is neither a dream to aspire to nor a memory to be realized. It exists, albeit in concatenation with the reality of separate and hierarchical sexes imposed during the colonial period. (156)

We can see, then, that the scope of the coloniality of gender is much too narrow. Quijano assumes much of the terms of the modern/colonial gender system's hegemonic light side in defining the scope of gender. I have gone outside the coloniality of gender in order to examine what it hides, or disallows from consideration, about the very scope of the gender system of Eurocentered global capitalism. So, though I think that the coloniality of gender, as Quijano pointedly describes it, shows us very important aspects of the intersection of race and gender, it follows rather than discloses the erasure of colonized women from most areas of social life. It accommodates rather than disrupt the narrowing of gender domination. Oyewùmí's rejection of the gender lens in characterizing the inferiorization of anafemales in modern colonization makes clear the extent and scope of the inferiorization. Her understanding of gender, the colonial, Eurocentered capitalist construction is much more encompassing than Quijano's. She enables us to see the economic, political, and cognitive inferiorization as well as the inferiorization of anafemales regarding reproductive control.

Gynecratic Egalitarianism

> To assign to this great being the position of "fertility goddess"
> is exceedingly demeaning: it trivializes the tribes
> and it trivializes the power of woman.
>
> —Paula Gunn Allen

As she characterizes many Native American tribes as gynecratic, Paula Gunn Allen emphasizes the centrality of the spiritual in all aspects of Indian life and thus a very different intersubjectivity from within which knowledge is produced than that of the coloniality of knowledge in modernity. Many American Indian tribes "thought that the primary potency in the universe was female, and that understanding authorizes all tribal activities" (Allen 1986/1992, 26). Old Spider Woman, Corn Woman, Serpent Woman, Thought Woman are some of the names of powerful creators. For the gynecratic tribes, Woman is at the center and "no thing is sacred without her blessing, her thinking" (Allen 1986/1992, 13).

Replacing this gynecratic spiritual plurality with one supreme male being as Christianity did, was crucial in subduing the tribes. Allen proposes that transforming Indian tribes from egalitarian and gynecratic to hierarchical and patriarchal "requires meeting four objectives:

1. The primacy of female as creator is displaced and replaced by male-gendered creators (generally generic) (1986/1992, 41).
2. Tribal governing institutions and the philosophies that are their foundation are destroyed, as they were among the Iroquois and the Cherokee (41).
3. The people "are pushed off their lands, deprived of their economic livelihood, and forced to curtail or end altogether pursuits on which their ritual system, philosophy, and subsistence depend. Now dependent on white institutions for their survival, tribal systems can ill afford gynocracy when patriarchy—that is, survival—requires male dominance" (42).
4. The clan structure "must be replaced in fact if not in theory, by the nuclear family. By this ploy, the women clan heads are replaced by elected male officials and the psychic net that is formed and maintained by the nature of nonauthoritarian gynecentricity grounded in respect for diversity of gods and people is thoroughly rent" (42).

Thus, for Allen, the inferiorization of Indian females is thoroughly tied to the domination and transformation of tribal life. The destruction of the gynocracies is crucial to the "decimation of populations through starvation, disease, and disruption of all social, spiritual, and economic structures" (42). The program of degynocratization requires impressive "image and information control." Thus "recasting archaic tribal versions of tribal history, customs, institutions and the oral tradition increases the likelihood that the patriarchal revisionist versions of tribal life, skewed or simply made up by patriarchal non-Indians and patriarchalized Indians, will be incorporated into the spiritual and popular traditions of the tribes" (42).

Among the features of the Indian society targeted for destruction were the two-sided complementary social structure; the understanding of gender; and the economic distribution that often followed the system of reciprocity. The two sides of the complementary social structure included an internal female chief and an external male chief. The internal chief presided over the band, village, or tribe, maintaining harmony and administering domestic affairs. The red, male, chief presided over mediations between the tribe and outsiders (Allen 1986/1992, 18). Gender was not understood primarily in biological terms. Most individuals fit into tribal gender roles "on the basis of proclivity,

inclination, and temperament. The Yuma had a tradition of gender designation based on dreams; a female who dreamed of weapons became a male for all practical purposes" (196).

Like Oyewùmí, Allen is interested in the collaboration between some Indian men and whites in undermining the power of women. It is important for us to think about these collaborations as we think of the question of indifference to the struggles of women in racialized communities against multiple forms of violence against them and the communities. The white colonizer constructed a powerful inside force as colonized men were co-opted into patriarchal roles. Allen details the transformations of the Iroquois and Cherokee gynecracies and the role of Indian men in the passage to patriarchy. The British took Cherokee men to England and gave them an education in the ways of the English. These men participated during the time of the Removal Act.

> In an effort to stave off removal, the Cherokee in the early 1800s under the leadership of men such as Elias Boudinot, Major Ridge, and John Ross, and others, drafted a constitution that disenfranchised women and blacks. Modeled after the Constitution of the United States, whose favor they were attempting to curry, and in conjunction with Christian sympathizers to the Cherokee cause, the new Cherokee constitution relegated women to the position of chattel. (Allen 1986/1992, 37)

Cherokee women had had the power to wage war, to decide the fate of captives, to speak to the men's council, they had the right to inclusion in public policy decisions, the right to choose whom and whether to marry, the right to bear arms. The Women's Council was politically and spiritually powerful (36–37). Cherokee women lost all these powers and rights, as the Cherokee were removed and patriarchal arrangements were introduced. The Iroquois shifted from a Mother-centered, Mother-right people organized politically under the authority of the Matrons, to a patriarchal society when the Iroquois became a subject people. The feat was accomplished with the collaboration of Handsome Lake and his followers.

According to Allen, many of the tribes were gynecratic, among them the Susquehanna, Hurons, Iroquois, Cherokee, Pueblo, Navajo, Narragansett, Coastal Algonkians, Montagnais. She also tells us that among the eighty-eight tribes that recognized homosexuality, those who recognized homosexuals in positive terms included the Apache, Navajo, Winnebago, Cheyenne, Pima, Crow, Shoshoni, Paiute, Osage, Acoma, Zuñi, Sioux, Pawnee, Choctaw, Creek, Seminole, Illinois, Mohave, Shasta, Aleut, Sac and Fox, Iowa, Kansas, Yuma, Aztec, Tlingit, Maya, Naskapi, Ponca, Maricopa, Lamath, Quinault, Yuki, Chilula, and Kamia. Twenty of these tribes included specific references to lesbianism.

Michael Horswell (2003) comments usefully on the use of the term *third gender*. He tells that third gender does not mean that there are three genders. It is rather a way of breaking with sex and gender bipolarities. The "third" is emblematic of other possible combinations than the dimorphic. The term *berdache* is sometimes used for "third gender." Horswell tells us that male berdache have been documented in nearly 150 North American societies and female berdache in half as many groups (2003, 27). He also comments that sodomy, including ritual sodomy, was recorded in Andean societies and many other native societies in the Americas (27). The Nahuas and Mayas also reserved a role for ritualized sodomy (Sigal 2003, 104). Interestingly, Pete Sigal tells us that the Spanish saw sodomy as sinful, but Spanish law condemned the active not the passive partner in sodomy to criminal punishment. In Spanish popular culture, sodomy was racialized by connecting the practice to the Moors and the passive partner was condemned and seen as equal to a Moor. Spanish soldiers were seen as the active partners to the passive Moors (102–4).

Allen has not only enabled us to see how narrow Quijano's conception of gender is in terms of the organization of the economy and of collective authority, but she has also revealed that the production of knowledge is gendered, as is the very conception of reality at every level. Allen supported the questioning of biology in the construction of gender differences and introduces the important idea of gender roles being chosen and dreamt. Allen also showed us that the heterosexuality characteristic of the modern/colonial construction of gender relations is produced, mythically constructed. But heterosexuality is not just biologized in a fictional way; it is compulsory and permeates the whole of the coloniality of gender in the renewed, large sense. In this sense, global, Eurocentered capitalism is heterosexualist. I think it is important to see, as we understand the depth and force of violence in the production of both the light and the dark sides of the colonial/modern gender system, that this heterosexuality has been consistently perverse, violent, and demeaning, turning people into animals and turning white women into reproducers of "the (white) race" and "the (middle or upper) class." Horswell's and Sigal's work complements Allen's, particularly in understanding the presence of sodomy and male homosexuality in colonial and precolonial America.

The Colonial/Modern Gender System

Understanding the place of gender in precolonial societies is pivotal to understanding the nature and scope of changes in the social structure that the processes constituting colonial/modern Eurocentered capitalism imposed. Those changes were introduced through slow, discontinuous, and heterogeneous processes that violently inferiorized colonized women. The gender system introduced was one thoroughly informed through the coloniality of power.

Understanding the place of gender in precolonial societies is also essential to understanding the extent and importance of the gender system in disintegrating communal relations, egalitarian relations, ritual thinking, collective decision making and authority, and economies. Thus, it is important to understand the extent to which the imposition of this gender system was as constitutive of the coloniality of power as the coloniality of power was constitutive of it. The logic of the relation between them is of mutual constitution.[15] But it should be clear by now that the colonial, modern, gender system cannot exist without the coloniality of power, since the classification of the population in terms of race is a necessary condition of its possibility.

To think the scope of the gender system of global, Eurocentered capitalism it is necessary to understand the extent to which the very process of narrowing of the concept of gender to the control of sex, its resources, and products constitutes gender domination. To understand this narrowing and to understand the intermeshing of racialization and gendering, we must consider whether the social arrangements prior to colonization regarding the sexes gave differential meaning to them across all areas of existence. This will enable us to see whether control over labor, subjectivity/intersubjectivity, collective authority, sex—Quijano's "areas of existence"—was itself gendered. Given the coloniality of power, I think we can also say that having a dark and a light side is characteristic of the co-construction of the coloniality of power and the colonial/modern gender system. Considering critically both biological dimorphism and the position that gender socially constructs biological sex helps us understand the scope, depth, and characteristics of the colonial/modern gender system. The sense is that the reduction of gender to the private, to control over sex and its resources and products is a matter of ideology, of the cognitive production of modernity that has understood race as gendered and gender as raced in particularly differential ways for Europeans/whites and colonized/nonwhite peoples. Race is no more mythical and fictional than gender—both are powerful fictions.

In the development of twentieth-century feminism, the connections among gender, class, and heterosexuality as racialized were not made explicit. That feminism centered its struggle and its ways of knowing and theorizing against a characterization of women as fragile, weak in both body and mind, secluded in the private, and sexually passive. But it did not bring to consciousness that those characteristics only constructed white bourgeois womanhood. Indeed, beginning from that characterization, white bourgeois feminists theorized white womanhood as if all women were white.

It is part of their history that only white bourgeois women have consistently counted as women so described in the West. Females excluded from that description were not just their subordinates. They were also understood to be animals in a sense that went further than the identification of white women with nature, infants, and small animals. They were understood as animals in the deep sense

of "without gender,"[16] sexually marked as female, but without the characteristics of femininity.[17] Women racialized as inferior were turned from animals into various modified versions of "women" as it fit the processes of global, Eurocentered capitalism. Thus, heterosexual rape of Indian or African slave women coexisted with concubinage, as well as with the imposition of the heterosexual understanding of gender relations among the colonized—when and as it suited global, Eurocentered capitalism, and heterosexual domination of white women. But the work of Oyewùmí and Allen has made clear that there was no extension of the status of white women to colonized women even when they were turned into similes of bourgeois white women. Colonized females got the inferior status of gendering as women, without any of the privileges accompanying that status for white bourgeois women, although the histories Oyewùmí and Allen have presented should make clear to white bourgeois women that their status is much inferior to that of Native American or Yoruba women before colonization. Oyewùmí and Allen have also explained that the egalitarian understanding of the relation between anafemales, anamales, and "third gender" people has left neither the imagination nor the practices of Native Americans and Yoruba. But these are matters of resistance to domination.

Erasing any history, including oral history, of the relation of white to nonwhite women, white feminism wrote white women large. Even though historically and contemporarily white bourgeois women knew perfectly well how to orient themselves in an organization of life that pitted them for very different treatment than nonwhite or working-class women.[18] White feminist struggle became one against the positions, roles, stereotypes, traits, and desires imposed on white bourgeois women's subordination. They countenanced no one else's gender oppression. They understood women as inhabiting white bodies but did not bring that racial qualification to articulation or clear awareness. That is, they did not understand themselves in intersectional terms, at the intersection of race, gender, and other forceful marks of subjection or domination. Because they did not perceive these deep differences they saw no need to create coalitions. They presumed a sisterhood, a bond given with the subjection of gender.

Historically, the characterization of white European women as fragile and sexually passive opposed them to nonwhite, colonized women, including female slaves, who were characterized along a gamut of sexual aggression and perversion, and as strong enough to do any sort of labor. For example, slave women performing backbreaking work in the U.S. South were not considered fragile or weak.

> First came, led by an old driver carrying a whip, forty of the largest and strongest women I ever saw together; they were all in a simple uniform dress of a bluish check stuff, the skirts reaching

> little below the knee; their legs and feet were bare; they carried themselves loftily, each having a hoe over the shoulder, and walking with a free, powerful swing, like *chasseurs* on the march. Behind came the cavalry, thirty strong, mostly men, but a few of them women, two of whom rode astride on the plow mules. A lean and vigilant white overseer, on a brisk pony, brought up the rear. . . . The hands are required to be in the cotton field as soon as it is light in the morning, and, with the exception of ten or fifteen minutes, which is given to them at noon to swallow their allowance of cold bacon, they are not permitted to be a moment idle until it is too dark to see, and when the moon is full, they often times labor till the middle of the night. (Takaki 1993, 111)

Patricia Hill Collins has provided a clear sense of the dominant understanding of black women as sexually aggressive and the genesis of that stereotype in slavery:

> The image of Jezebel originated under slavery when Black women were portrayed as being, to use Jewelle Gomez' words, "sexually aggressive wet nurses." Jezebel's function was to relegate all Black women to the category of sexually aggressive women, thus providing a powerful rationale for the widespread sexual assaults by White men typically reported by Black slave women. Jezebel served yet another function. If Black slave women could be portrayed as having excessive sexual appetites, then increased fertility should be the expected outcome. By suppressing the nurturing that African-American women might give their own children which would strengthen Black family networks, and by forcing Black women to work in the field, "wet nurse" White children, and emotionally nurture their White owners, slave owners effectively tied the controlling images of jezebel and mammy to the economic exploitation inherent in the institution of slavery. (Collins 2000, 82)

But it is not just black slave women who were placed outside the scope of white bourgeois femininity. In *Imperial Leather*, as she tells us of Columbus's depiction of the earth as a woman's breast, Anne McClintock evokes the "long tradition of male travel as an erotics of ravishment."

> For centuries, the uncertain continents—Africa, the Americas, Asia—were figured in European lore as libidinously eroticized. Travelers' tales abounded with visions of the monstrous sexuality of far-off lands, where, as legend had it, men sported gigantic penises and women consorted with apes, feminized men's breasts

> flowed with milk and militarized women lopped theirs off. . . . Within this porno tropic tradition, women figured as the epitome of sexual aberration and excess. Folklore saw them, even more than the men, as given to a lascivious venery so promiscuous as to border on the bestial. (1995, 22)

McClintock described the colonial scene depicted in a sixteenth-century drawing in which Jan van der Straet "portrays the 'discovery' of America as an eroticized encounter between a man and a woman."

> Roused from her sensual languor by the epic newcomer, the indigenous woman extends an inviting hand, insinuating sex and submission. . . . Vespucci, the godlike arrival, is destined to inseminate her with his male seeds of civilization, fructify the wilderness and quell the riotous scenes of cannibalism in the background. . . . The cannibals appear to be female and are spit roasting a human leg. (25–26)

In the nineteenth century, McClintock tells us, "sexual purity emerged as a controlling metaphor for racial, economic and political power" (47). With the development of evolutionary theory "anatomical criteria were sought for determining the relative position of races in the human series" (50) and "the English middle-class male was placed at the pinnacle of evolutionary hierarchy. White English middle class women followed. Domestic workers, female miners and working class prostitutes were stationed on the threshold between the white and black races" (56). Along the same lines, Yen Le Espiritu tells us that

> representations of gender and sexuality figure strongly in the articulation of racism. Gender norms in the United States are premised upon the experiences of middle-class men and women of European origin. These Eurocentric-constructed gender norms form a backdrop of expectations for American men and women of color—expectations which racism often precludes meeting. In general, men of color are viewed not as the protector, but rather the aggressor—a threat to white women. And women of color are seen as over sexualized and thus undeserving of the social and sexual protection accorded to white middle-class women. For Asian American men and women, their exclusion from white-based cultural notions of the masculine and the feminine has taken seemingly contrasting forms: Asian men have been cast as both hypermasculine (the "Yellow Peril") and effeminate (the "model minority"); and Asian women have been rendered both superfeminine (the "China Doll") and castrating (the "Dragon Lady"). (1997, 135)

This gender system congealed as Europe advanced the colonial project(s). It took shape during the Spanish and Portuguese colonial adventures and became full blown in late modernity. The gender system has a light and a dark side. The light side constructs gender and gender relations hegemonically, ordering only the lives of white bourgeois men and women and constituting the modern/colonial meaning of men and women. Sexual purity and passivity are crucial characteristics of the white bourgeois females who reproduce the class and the colonial and racial standing of bourgeois, white men. But equally important is the banning of white bourgeois women from the sphere of collective authority, from the production of knowledge, from most control over the means of production. Weakness of mind and body are important in the reduction and seclusion of white bourgeois women from most domains of life, most areas of human existence. The gender system is heterosexualist, as heterosexuality permeates racialized patriarchal control over production, including knowledge production, and over collective authority. Heterosexuality is both compulsory and perverse among white bourgeois men and women since the arrangement does significant violence to the powers and rights of white bourgeois women and serves to reproduce control over production and white bourgeois women are inducted into this reduction through bounded sexual access.

The dark side of the gender system was and is thoroughly violent. We have begun to see the deep reductions of anamales, anafemales, and "third gender" people from their ubiquitous participation in rituals, decision making, and economics; their reduction to animality, to forced sex with white colonizers, to such deep labor exploitation that often people died working. Quijano tells us that "the vast Indian genocide of the first decades of colonization was not caused, in the main, by the violence of the conquest, nor by the diseases that the conquerors carried. Rather is was due to the fact that the Indians were used as throwaway labor, forced to work till death" (2000a, my translation).

I want to mark the connection between the work that I am citing here as I introduce the modern colonial gender system's dark side and Quijano's coloniality of power. Unlike white feminists who have not focused on colonialism, these theorists very much see the differential construction of gender along racial lines. To some extent, they understand gender in a wider sense than Quijano; thus they think not only of control over sex, its resources and products, but also of labor as both racialized and gendered. That is, they see an articulation between labor, sex, and the coloniality of power. Oyewùmí and Allen, for example, have helped us realize the full extent of the reach of the colonial/modern gender system into the construction of collective authority, all aspects of the relation between capital and labor, and the construction of knowledge.

Important work has been and has yet to be done in detailing the dark and light sides of what I am calling the modern colonial gender system.[19] In

introducing this arrangement in very large strokes, I mean to begin a conversation and a project of collaborative, participatory, research and popular education wherein we may begin to see in its details the long sense of the processes of the colonial/gender system enmeshed in the coloniality of power into the present, to uncover collaboration, and to call each other to reject it in its various guises as we recommit to communal integrity in a liberatory direction. We need to understand the organization of the social so as to make visible our collaboration with systematic racialized gender violence, so as to come to an inevitable recognition of it in our maps of reality.

Notes

1. I use the U.S.–originated *women of color* throughout this piece as a coalitional term against multiple oppressions. It is a problematic term and not necessarily one of self-identification for many of the women who had the modern/colonial gender system imposed on them. Those women were and continue to be the target of systematic and extensive state and interpersonal violence under global, Eurocentered capitalism.

2. I use *categorial* to mark arrangements in accordance with categories. I certainly do not mean *categorical*.

3. There is a very large and significant literature on this question of intersectional. Here I refer only to a few pieces: Spelman 1988; Barkley Brown 1991; Crenshaw 1995; Espiritu 1997; Collins 2000; and Lugones 2003.

4. To the work mentioned already, I want to add Amos and Parmar 1984; Lorde 1984; Allen 1986; Anzaldúa 1987; McClintock 1995; Oyewùmí 1997; and Alexander and Mohanty 1997.

5. Anibal Quijano's has written extensively and influentially on this topic. The interpretation I offer is gathered from 1991, 2000a, 2000b, 2001–2002.

6. Popular education can be a method of collective critical exploration of this gender system both in the large stroke, and most importantly, in its detailed space/time concreteness toward a transformation of communal relations.

7. Quijano understands race to be a fiction. He always places quotation marks around the term to signify this fictional quality. When terms "European," "Indian," are in quotation marks, they signify a racial classification.

8. Quijano prefers *pattern* to *model* as a translation for *patrón*. His reason is that model suggests something to follow or copy. Because this use of *pattern* is often awkward, I use *model*.

9. In dropping the quotation marks around race here, I do not mean to disagree with Quijano about the fictive quality of race. Rather I want to begin to emphasize the fictive quality of gender, including the biological "nature" of sex and heterosexuality.

10. See my *Pilgrimages/Peregrinajes* (2003) and "Radical Multiculturalism and Women of Color Feminisms" (n.d.) for an unpacking of this logic.

11. I have not seen these attributes summarized by Quijano. So, I do not know whether he is thinking of chromosomal combinations or of genitalia and breasts.

12. I want to mark that Quijano calls this section of his "Colonialidad del Poder y Clasificación Social" (2000b), not the coloniality of sex but of gender.

13. The relevance of contemporary legal disputes over the assignation of gender to intersexed individuals should be clear since Quijano's model includes the contemporary period.

14. See McClintock 1995.

15. I am sure that those who read this piece will recognize much of what I am saying and some may think that it has already been said. That is quite fine with me, so long as it is accompanied by a theoretico-practical recognition of this mutual constitution, one that shows throughout the theoretical, the practical, and the theoretico-practical work. But I think something that may well be new here is my approach to the logic of intersectionality and my understanding of the mutuality of construction of the coloniality of power and the colonial/modern gender system. I think they are both necessary, but it is only the logic mutuality of construction that yields the inseparability of race and gender.

16. Spelman's interpretation (1988) of Aristotle's distinction between free men and women in the Greek polis and slave males and slave females suggested this claim to me. It is important to note that reducing women to nature or the natural is to collude with this racist reduction of colonized women. More than one Latin American thinker who decries Eurocentrism, relates women to the sexual and the reproductive.

17. It is important to distinguish between being thought of as without gender because an animal, and not having, even conceptually, any gender distinctions. That is, having gender is not a characteristic of being human for all people.

18. The deep distinction between white working-class and nonwhite women can be glimpsed from the very different places they occupied in the evolutionary series referred to by McClintock (1995, 4).

19. I am clear now that there is an ambiguous in-between zone between the light and the dark side that conceives/imagines/constructs white women servants, miners, washerwomen, prostitutes as not necessarily caught through the lens of the sexual or gender binary and as racialized ambiguously, but not as white. See McClintock 1995. I am working on the inclusion of this crucial complexity into the framework.

EXTERMINATION OF THE *JOYAS*

Gendercide in Spanish California

Deborah A. Miranda (Ohlone-Costanoan Esselen Nation, Chumash)

Attempting to address the many communities from which she spoke, Paula Gunn Allen once asserted: "I cannot do one identity. I'm simply not capable of it. And it took me years to understand that that's one of the features of my upbringing. I was raised in a mixed cultural group—mixed linguistic, mixed religion, mixed race—Laguna *itself* is that way. So I get really uncomfortable in any kind of mono-cultural group."[1] Although Allen does not speak specifically of another community—her lesbian family—in this quotation, her legacy of activism and writing document the unspoken inclusion of sexual orientation within her list of identities. Like Allen, my own identity is not monocultural: by blood, I am Esselen and Chumash (California Native) as well as Jewish, French, and English. I was born at UCLA Medical Center, raised in trailer parks and rural landscapes, possess a PhD, and teach at a small, private southern liberal arts university. I am fluent in English, can read Spanish, and was called to an *aliyah* at the bat mitzvah of my partner's niece. Who am I? Where is home?

In my poetry and my scholarship, I have worked through issues of complex identities for much of my life, primarily those relating to my position as a mixed-blood woman with an Indian father and European American mother. But one of the most urgent questions in my life—the intersection of being Indian and being a lesbian—has always been more complicated, less easily articulated, than anything else. Here again, Allen's body of work has been most helpful. In a poem titled "Some Like Indians Endure," Allen plays with concepts of just what makes an Indian an Indian—and asks if those qualities, whatever they are, are necessarily exclusive to Indians. At the heart of this poem is this thought:

> I have it in my mind that
> dykes are indians
> they're a lot like indians . . .

GLQ 16:1–2
DOI 10.1215/10642684-2009-022

they were massacred
lots of times
they always came back
like the gas
like the clouds
they got massacred again. . . .[2]

This poem illustrates the multiple directions of Allen's thought: while defending the concept of Indian as something different and distinguishable from colonizing cultures around it, Allen simultaneously compares the qualities of being Indian with those of being lesbian. She comes up with lists of similarities for both identities, the lengthiness of which overwhelms her ability to keep the two apart. While Allen recognizes balance and wholeness in both her Laguna and lesbian identities, this is not necessarily something that completely expresses my own situation.

While researching material for my book "Bad Indians: A Tribal Memoir," however, I came across a page of the ethnologist J. P. Harrington's field notes that provided a doorway for me to enter into a conversation about complex identities with my ancestors.[3] Tracing my California Native ancestors from first contact with Spanish missionaries through contemporary times, my research required that I immerse myself in a rich variety of archival resources: correspondence between missionaries and their supervisors in Spain; mission records of baptism, birth, and death as well as finances and legal cases; the as-told-to testimonies of missionized Indians both before, during, and after the mission era; as well as newspapers, family oral history, photographs, and ethnological and anthropological data from earliest contact through the "salvage ethnology" era and into the present.[4] None of these archival materials came from unfiltered Indian voices; such records were impossible both because of their colonizing context and the prevalence of an oral tradition among California Indians that did not leave textual traces. The difficulties of using non-Indian archives to tell an Indian story are epic: biases, agendas, cultural pride, notions of Manifest Destiny, and the desire to "own" history mean that one can never simply read and accept even the most basic non-Native detail without multiple investigations into who collected the information, what their motivations were, who preserved the information and their motivations, the use of rhetorical devices (like the passive voice so prevalent in missionization histories: "The Missions were built using adobe bricks" rather than "Indians, often held captive and/or punished by flogging, built the Missions without compensation"). Learning how to "re-read" the archive through the eyes of a mixed-blood California Indian lesbian poet and scholar was an education in and of itself, so the fact that this essay emerges from

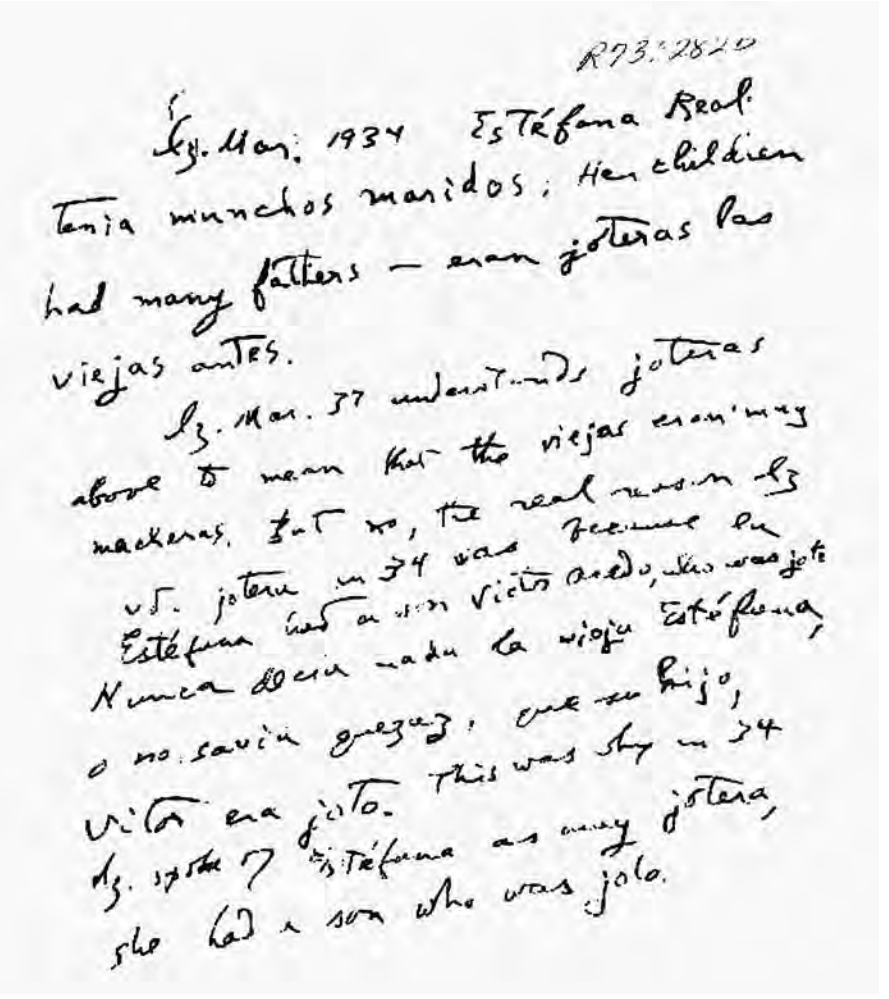

Figure 1. Harrington field note R73:282B, in Elaine Mills, ed., *The Papers of John Peabody Harrington in the Smithsonian Institution, 1907–1957* (White Plains, NY: Kraus International, 1981)

one short, handwritten piece of information gleaned by Harrington from one of my ancestors about older ancestors should not be surprising.

To tell the story of this field note, for which I use the shorthand title "Jotos" (Spanish slang for "queer" or "faggot"), I must pull threads of several stories together. The field note is like a petroglyph; when I touch it, so much else must be known, communicated, and understood to see the power within what looks like a simple inscription, a random bit of Carmel Mission Indian trivia. Once read, this note opens out into deeper and deeper stories. Some of those stories are full of grief—like the one that follows—yet they are all essential to possessing this

archival evidence and giving it a truly indigenous reading. When I say "indigenous reading," I mean a reading that enriches Native lives with meaning, survival, and love, which points to the important role of archival reconstruction in developing a robust Two-Spirit tradition today.[5] In the last two decades, the archaeology of sexuality and gender has also helped create new ways to use these biased primary sources, and I hope to pull together the many shards of information available in order to glimpse what contemporary California Indians might use in our efforts to reclaim and reinvent ourselves.[6] This essay, then, examines methods employed by the Spaniards to exterminate the *joya* (the Spanish name for third-gender people); asks what that extermination meant to California Indian cultures; explores the survival of this third gender as first *joyas*, then *jotos* (Spanish for homosexual, or faggot); and evaluates the emergence of spiritual and physical renewal of the ancestral third gender in California Indian Two-Spirit individuals.[7] It is both a personal story and a historical struggle about identity played out in many indigenous communities all over the world.

Waging Gendercide 101

Spanish colonizers — from royalty to soldier to padre — believed that American Indians were intellectually, physiologically, and spiritually immature, if not actual animals.[8] In the area eventually known as California, the genocidal policies of the Spanish Crown would lead to a severe population crash: numbering one million at first contact, California Indians plummeted to about ten thousand survivors in just over one hundred years.[9] Part of this massive loss were third-gender people, who were lost not by "passive" colonizing collateral damage such as disease or starvation, but through active, conscious, violent extermination. Speaking of the Chumash people living along the southern coast (my grandmother's tribal roots), Pedro Fages, a Spanish soldier, makes clear that the soldiers and priests colonizing Mexico and what would become California arrived with a deep abhorrence of what they viewed as homosexual relationships. In his soldier's memoir, written in 1775, Fages reports:

> I have substantial evidence that those Indian men who, both here and farther inland, are observed in the dress, clothing, and character of women — there being two or three such in each village — pass as sodomites by profession (it being confirmed that all these Indians are much addicted to this abominable vice) and permit the heathen to practice the execrable, unnatural abuse of their bodies. They are called *joyas,* and are

> held in great esteem. Let this mention suffice for a matter which could not be omitted,—on account of the bearing it may have on the discussion of the reduction of these natives,—with a promise to revert in another place to an excess so criminal that it seems even forbidden to speak its name. . . . But we place our trust in God and expect that these accursed people will disappear with the growth of the missions. The abominable vice will be eliminated to the extent that the Catholic faith and all the other virtues are firmly implanted there, for the glory of God and the benefit of those poor ignorants.[10]

Much of what little we know about *joyas* (Spanish for "jewels," as I discuss below) is limited to observations like that of Fages, choked by Eurocentric values and mores. The majority of Spanish soldiers and priests were not interested in learning about California Indian culture and recorded only as much as was needed to dictate spiritual and corporeal discipline and/or punishment; there are no known recorded interviews with a *joya* by either priest or Spaniard, let alone the salvage ethnologists who arrived one hundred years later. In this section, I provide an overview of what first contact between *joya* and Spaniard looked like, and how that encounter leaves scars to this day in California Indian culture. The key word here is not, in fact, encounter, but *destruction*.

Weapons of Mass Destruction: The Mastiffs

As I show, while the Spanish priests' disciplinary methods might be strict and intolerant, they were at least attempting to deal with *joyas* and *joya* relationships in ways that allowed these Indians to live, albeit marginalized and shamed.

Spanish soldiers had a different, less patient method. They threw the *joyas* to their dogs. Shouting the command "Tómalos!" (take them, or sic 'em), the Spanish soldiers ordered execution of *joyas* by specially bred mastiffs and greyhounds.[11] The dogs of the conquest, who had already acquired a taste for human flesh (and were frequently fed live Indians when other food was unavailable), were the colonizer's weapon of mass destruction.[12] In his history of the relationship between dogs and men, Stanley Coren explains just how efficient these weapons were: "The mastiffs of that era . . . could weigh 250 pounds and stand nearly three feet at the shoulder. Their massive jaws could crush bones even through leather armor. The greyhounds of that period, meanwhile, could be over one hundred pounds and thirty inches at the shoulder. These lighter dogs could outrun any man, and their slashing attack could easily disembowel a person in a matter of seconds."[13] Columbus brought dogs along with him on his second journey and claimed that

Figure 2. Theodor de Bry, "Balboa Throws the Indians Who Have Committed the Abominable Crime of Sodomy to Be Torn to Bits by Dogs," engraving from Bartolomé de las Casas, *Narratio regionum Indicarum per Hispanos quosdam deuestatarum verissima* (Frankfurt: De Bry and Saurii, 1598)

one dog was worth fifty soldiers in subduing the Natives.[14] On September 23, 1513, the explorer Vasco Nuñez de Balboa came on about forty indigenous men, all dressed as women, engaged in what he called "preposterous Venus." He commanded his men to give the men as "a prey to his dogges," and the men were torn apart alive.[15] Coren states matter-of-factly that "these dogs were considered to be mere weapons and sometimes instruments of torture."[16] By the time the Spaniards had expanded their territory to California, the use of dogs as weapons to kill or eat Indians, particularly *joyas*, was well established.

Was this violence against *joyas* classic homophobia (fear of people with same-sex orientation) or gendercide? I argue that gendercide is the correct term. As Maureen S. Heibert comments:

> Gendercide would then be . . . an attack on a group of victims based on the victims' gender/sex. Such an attack would only really occur if men or

> women are victimized because of their *primary* identity as men or women. In the case of male gendercide, male victims must be victims first and foremost because they are men, not male Bosnians, Jews, or Tutsis. Moreover, it must be the perpetrators themselves, not outside observers making ex-poste analyses, who identify a specific gender/sex as a threat and therefore a target for extermination.
>
> *As such, we must be able to explicitly show that the perpetrators target a gender victim group based on the victims' primary identity as either men or women.*[17]

Or, I must add, as a third gender? Interestingly, although Heibert doesn't consider that possibility, her argument supports my own definition of gendercide as an act of violence committed against a victim's primary gender identity.

Consider the immediate effect of Balboa's punishment of the "sodomites": when local Indians found out about the executions "upon that filthy kind of men," the Indians turned to the Spaniards "as if it had been to Hercules for refuge" and quickly rounded up all the other third-gender people in the area, "spitting in their faces and crying out to our men to take revenge of them and rid them out of the world from among men as contagious beasts."[18] This is not homophobia (widely defined as irrational fear of or aversion to homosexuals, with subsequent discrimination against homosexuals); obviously, the Indians were not suddenly surprised to find *joyas* in their midst, and dragging people to certain death went far beyond discrimination or culturally condoned chastisement. This was fear of death; more specifically, of being murdered. What the local indigenous peoples had been taught was gendercide, the killing of a particular gender *because of their gender.* As Heibert says in her description of gendercide above, "It must be the perpetrators themselves, not outside observers making ex-poste analyses, who identify a specific gender/sex as a threat and therefore a target for extermination." Now that the Spaniards had made it clear that to tolerate, harbor, or associate with the third gender meant death, and that nothing could stand against their dogs of war, the indigenous community knew that demonstrations of acquiescence to this force were essential for the survival of the remaining community—and both the community and the Spaniards knew exactly which people were marked for execution. This tragic pattern in which one segment of indigenous population was sacrificed in hopes that others would survive continues to fester in many contemporary Native communities where people with same-sex orientation are no longer part of cultural legacy but feared, discriminated against, and locked out of tribal and

familial homes. We have mistakenly called this behavior "homophobia" in Indian Country; to call it gendercide would certainly require rethinking the assimilation of Euro-American cultural values and the meaning of indigenous community.

Thus the killing of the *joyas* by Spaniards was, indeed, "part of a coordinated plan of destruction"—but it was only one strategy of gendercide.

(Re-)Naming

Father Juan Crespi, part of the 1769 "Sacred Expedition" from Mexico to Alta California, traveled with an exploration party through numerous Chumash coastal villages. "We have seen heathen men wearing the dress of women," he wrote. "We have not been able to understand what it means, nor what its purpose is; time and an understanding of the language, when it is learned, will make it clear."[19] Crespi's willingness to wait for "an understanding of the language" was not, unfortunately, a common sentiment among his countrymen, and although he describes but does not attempt to name these "men wearing the dress of women," it wasn't long before someone else did.

Erasure of tribal terms, tribal group names, and personal tribal names during colonization was a strategy used by European colonizers throughout the Americas. The act of naming was, and still is, a deeply respected and important aspect of indigenous culture. Although naming ceremonies among North American Indians followed many traditions, varying according to tribe and often even by band or time period, what has never changed is an acknowledgment of the sense of power inherent in a name or in the person performing the act of naming, and the consequent right to produce self-names as utterances of empowerment. Renaming both human beings and their own names for people or objects in their world is a political act of dominance. As Stephen Greenblatt writes of Christopher Columbus's initial acts of renaming lands whose indigenous names the inhabitants had already shared with him, "The founding action of Christian imperialism is a christening. Such a christening entails the cancellation of the native name—the erasure of the alien, an exorcism, an appropriation, and a gift . . . [it is] the taking of possession, the conferral of identity."[20] To replace various tribal words for a Spanish word is indeed an appropriation of sovereignty, a "gift" that cannot be refused, and perhaps more properly called an "imposition."

Therefore, when Spaniards arrived in Alta California and encountered a class of Indians we would now identify as being "third gender," it makes sense that in exercising power over the land and inhabitants, one of the first things the Spaniards did was invent a name for the third-gender phenomenon, a name applied only to California Indians identified by Spaniards as men who dressed as

women and had sex with other men. Interestingly, although Spanish morality disapproved of "sodomy" within their own culture and had a collection of words and euphemisms available to describe "el acto pecado nefando" ("the silent/unspoken sin") and its participants (*hermafrodita*, *sodomía*, *bujarrón*, *nefandario*, *maricón*, *amujerado*), they did not choose to apply these existing Spanish labels to California Indians.[21] Instead, overwhelmingly, primary sources use the word *joya*. As early as 1775, only six years after Crespi made his observation, the term *joya* was already in widespread use. In describing the customs of Indian women in 1775, Fages writes, "The Indian woman takes the little girls with her, that they may learn to gather seeds, and may accustom themselves to carrying the basket. In this retinue are generally included some of the worthless creatures which they call *joyas*."[22] Although Fages states that "they" (Indians) use the word *joyas*, the slippage is obvious when we note that in 1776 or 1777, the missionaries at Mission San Antonio also reported that

> the priests were advised that two pagans had gone into one of the houses of the neophytes, one in his natural raiment, the other dressed as a woman. Such a person the Indians in their native language called a *joya*. Immediately the missionary, with the corporal and a soldier, went to the house to see what they were looking for, and there they found the two in an unspeakably sinful act. They punished them, although not so much as deserved. The priest tried to present to them the enormity of their deed. The pagan replied that that *joya* was his wife . . . along the Channel of Santa Barbara . . . many *joyas* are found.[23]

In precontact California, the linguist Leanne Hinton writes, "Over a hundred languages were spoken here, representing five or more major language families and various smaller families and linguistic isolates."[24] Adding in estimates of hundreds of different dialects, it seems clear that every California tribe would have had its own word for third-gendered people, not the generic *joya* that Spanish records give us. For example, at Mission San Diego, Father Boscana describes the biological men who dressed and lived as women or, as he put it, those who were accustomed to "marrying males with males." He writes, "Whilst yet in infancy they were selected, and instructed as they increased in years, in all the duties of the women — in their mode of dress — of walking, and dancing; so that in almost every particular, they resembled females. . . . To distinguish this detested race at this mission, they were called '*Cuit*,' in the mountains, '*Uluqui*,' and in other parts, they were known by the name of '*Coias*.'"[25] *Joya*, then, is a completely new term

and must have been fashioned one way or another by the Spaniards, perhaps from an indigenous word that sounded like "joyas" or as commentary on the *joyas*' fondness for women's clothing, jewelry, and hairstyles (Spanish explorers in Mexico called hummingbirds *joyas voladores*, or "flying jewels").[26] It seems doubtful that the Spaniards would retain a beautiful name like "jewel" to describe what they saw as the lowest, most bestial segment of the Indian community unless it was meant as a kind of sarcasm to enact a sense of power and superiority over the third-gendered people. James Sandos has some sense of this as well, writing that "the Spanish called them (jewels), a term that may have been derisive in Spanish culture but inadvertently conveyed the regard with which such men were held in Chumash culture."[27] By "derisive," Sandos perhaps means that the Spaniards were making fun of what they perceived to be a ridiculous and shameful status.

Another possibility for the origins of *joya* lies in a linguistic feat, the pun. For years, people have assumed that the California town La Jolla (the double *l* in Spanish is pronounced as a *y*) is simply a misspelling of *joya*. However, Nellie Van de Grift Sanchez writes: "*La Jolla*, a word of doubtful origin, said by some persons to mean a 'pool,' by others to be from *hoya*, a hollow surrounded by hills, and by still others to be a possible corruption of *joya*, a 'jewel.' The suggestion has been made that La Jolla was named from caves situated there which contain pools."[28] Yet another similar sounding Spanish word is *olla*, which means jar or vessel. What all these things have in common—a pool, a hollow, a vessel—is that each is a kind of container, a receptacle. Ethnologists and Spaniards alike agree that the *joya*'s role as a biological male living as a female meant, among many other things, *joyas* were sexually active with "normative" men as the recipients of anal sex. In fact, a *joya* would never consider having sex with another *joya*—this was not forbidden, simply unthinkable—so this may truly have been a case of "I'm not *joya* but my boyfriend is!"

All in all, the renaming of the *joyas* was not likely meant to be a compliment, but strangely enough, it does reflect the respect with which precontact California Natives regarded this gender. Perhaps, as with the word *Indian*, *joya* has strong potential for reappropriation and a new signification of value. By choosing this word and not one of their established homolexemes, this act of renaming reinforces the notion that Spanish priests and soldiers sensed something else—an indefinable gender role, a "new" class of people?—going on here, something more or different than the deviant "sodomites" of their own culture.

On an individual basis, the changing of California Indian personal names is recorded in the mission baptism records.[29] An Indian from Cajats was baptized

at Mission Santa Barbara in 1819, stripped of the name Liuixucat and renamed Vitor Maria.[30] Yautaya from Chucumne, near Mission San Jose, became Robustiano in 1823.[31] In 1832 an Indian from Liuayto, near the San Francisco Mission, came in with the name Coutesi but was baptized Viador.[32] These same three people, brought into missions for baptism at ages thirty-two, thirty-three, and forty-five, respectively, had notations on their baptism records of another kind of naming: "*armafrodita o joya*," "*joya*," or "*joya o amugereado*." The padres applied Spanish words meaning "hermaphrodite" or "effeminate," as well as (in all three cases) *joya*. Vitor Maria died in 1821, just two years after baptism. Robustiano died in 1832, nine years after baptism. There is no death record for Viador, who may have been one of the many mission runaways. Interestingly, *joya* or other gender identifiers do not appear on the death records available, unlike the baptisms. Had Vitor and Robustiano learned to hide their gender, or was it simply accepted and no longer noted? It seems most likely that in the interest of survival (coming into the missions as grown adults, in this late era, usually meant starvation and/or capture), a *joya* would at least attempt a form of assimilation such as assuming male dress and work roles. However, as Sandos comments, "If contemporary study is any guide, these berdache, especially when they entered the missions, were important links between the new, European-imposed culture and traditional Chumash ways."[33] The entrance of older *joyas*, raised to revere and preserve cultural and spiritual continuity, into California missions where Native culture was disparaged and forbidden, must have provided a powerful infusion of Native language, religion, and values that contributed to or delayed assimilation. (Indeed, on a larger scale, tremendously high death rates combined with perilously low birth rates meant a constant "restocking" of the missions with "wild" Indians captured from farther and farther away as time went on, creating a situation where the Spanish language and European farming/herding skills were not passed from one generation to the next but had to be retaught to each incoming wave. This breakdown in transference of culture actually allowed California Natives a chance to retain more indigenous culture, albeit at great personal loss.)

Punishment, Regendering, and Shame

The Spanish priests, viewing themselves *in loco parentis*, approached the *joya*'s behaviors through the twin disciplinary actions of physical and spiritual punishment and regendering. Both of these terms are euphemisms for violence. The consequences for being a *joya*—whether dressing as a woman, doing women's work, partnering with a normative male, or actually being caught in a sexual liaison with

a man—included flogging with a leather whip (braided leather typically as thick as a fist), time in the stocks, and *corma* (a kind of hobbling device that restricted movement but allowed the Indian to work). Enforced, extended rote repetition of unfamiliar prayers on knees, verbal harassment and berating, ridicule, and shaming in front of the *joya*'s community were other forms of discipline. The Ten Commandments were beaten into Indians who spoke fragmented Spanish by priests who spoke little if any Indian language, so misunderstandings were frequent and devastating. In a culture where corporal punishment was unknown, even for children, the Spaniards quickly learned that "the punishing of Indians with lashes . . . in the case of the old and married produces shame and sarza of mind, so that at times the victims die of chagrin and melancholy, or desert to the mountains, or, *if women, are rejected by their husbands*."[34] As *joyas* were treated like women by their tribal communities, married or partnered to "normative" men, they too would be subject to rejection by their partners or community. Father Boscana wrote that *joyas*, "being more robust than the women, were better able to perform the arduous duties required of the wife, and for this reason, they were often selected by the chiefs and others, and on the day of the wedding a grand feast was given."[35] Often, *joyas* were driven from their communities by tribal members at the instigation of the priests and made homeless; this, after a lifetime of esteem and high status, must have been a substantial blow to both physical well-being and emotional health.

In one case, Father Palóu described a group of natives visiting at Mission Santa Clara; soldiers and priests noticed that one native among the women was actually a man. Father Palóu wrote:

> Among the gentile [Indian] women (who always worked separately and without mixing with the men) there was one who, by the dress, which was decorously worn, and by the heathen headdress and ornaments displayed, as well as the manner of working, sitting, etc., had all the appearances of a woman, but judging by the face and the absence of breasts, though old enough for that, they concluded that he must be a man, but that he passed himself off always for a woman and always went with them and not the men. Taking off his aprons they found that he was more ashamed than if he really had been a woman. They kept him there three days, making him sweep the plaza, but giving him plenty to eat. But he remained very cast down and ashamed. After he had been warned that it was not right for him to go about dressed as a woman and much less thrust himself in with them, as it was presumed that he was sinning with them, they let him go.

> He immediately left the Mission and never came back to it, but from the converts it was learned that he was still in the villages of the gentiles and going about as before, dressed as a woman.[36]

Close reading ("thrust himself in") suggests that the priest and soldiers completely misunderstood the situation, and assumed that this man was "sinning"—that is, sneaking into the women's work area dressed as a woman to flirt or have sex with them. The idea that a man would *choose* to dress and work as a woman with other women—and that the community accepted and in fact benefited from that choice—was inconceivable to the Spaniards. Probably because of this misunderstanding, this *joya* was able to escape and find another community (at least temporarily). After a taste of regendering by the Spaniards, no doubt even unfamiliar villages looked better than remaining with one's own family and friends. At this point in the missionization process, leaving for life with the "gentiles" was still a possibility.
